Manners and Customs.

Next to the complexion of the people, which varies from fair to black, the tourist's attention in India is drawn by their dress and personal decoration. In its simplest form a Hindu's dress consists of a piece of cloth round the loins. Many an ascetic, who regards dress as a luxury, wears nothing more, and he would dispense with even so much if the police allowed him to. The Mahomedan always covers his legs, generally with trousers, sometimes with a piece of cloth tied round the waist and reaching to the ankles. Hill men and women, who at one time wore a few leaves before and behind and were totally innocent of clothing, do not appear to-day within the precincts of civilisation and will not meet the tourist's eye. Children, either absolutely nude or with a piece of metal hanging from the waist in front, may be seen in the streets in the most advanced cities, and in the homes of the rich. The child Krishna, with all the jewels on his person, is nude in his pictures and images.

Dress—The next stage in the evolution of the Hindu dress brings the loincloth nearly down to the feet. On the Malabar coast, as in Burma, the ends are left loose in front. In the greater part of India, they are tucked up behind—a fashion which is supposed to befit the warrior, or one end is gathered up in folds before and the other tucked up behind. The simplest dress for the trunk is a scarf thrown over the left shoulder, or round both the shoulders like a Roman toga. Under this garment is often worn a coat or a shirt. When an Indian appears in his full indigenous dress, he wears a long robe, reaching at least down to the calves: the sleeves may be wide, or long and sometimes puckered from the wrist to the elbow. Before Europeans introduced buttons, a coat was fastened by ribbons, and the fashion is not obsolete. The Mahomedan prefers to button his coat to the left, the Hindu to the right. A shawl is tied round the waist over the long coat, and serves as a belt, in which one may carry money or a weapon, if allowed. The greatest variety is shown in the head-dress. More than seventy shapes of caps, hats, and turbans, may be seen in the city of Bombay. In the Punjab and the United Provinces, in Bengal, in Burma and in Madras other varieties prevail. Cones and cylinders, domes and truncated pyramids, high and low, with sides at different angles, folded brims, projecting brims: long strips of cloth wound round the head or the cap in all possible ways, ingenuity culminating perhaps in the "parrot's beak" of the Maratha turban—all these fashions have been evolved by different communities and in different places, so that a trained eye can tell from the head-covering whether the wearer is a Hindu, Mahomedan or Parsi, and whether he hails from Poona or Dharwar, Ahmedabad or Bhavnagar.

Fashion Variations—Fashions often vary with climate and occupation. The Bombay fisherman may wear a short coat and a cap, and may carry a watch in his pocket; yet, as he must work for long hours in water, he does not cover his legs, but suspends only a coloured kerchief from his waist in front. The Pathan

of the cold north-west wears loose baggy trousers, a tall head-dress befitting his stature and covers his ears with its folds as if to keep off cold. The poorer people in Bengal and Madras do not cover their heads, except when they work in the sun or must appear respectable. Many well-to-do Indians wear European dress at the present day, or a compromise between the Indian and European costumes; notably the Indian Christians and Parsis. Most Parsis however have retained their own head-dress, and many have not borrowed the European collar and cuffs. The majority of the people do not use shoes: those who can afford them wear sandals, slippers and shoes, and a few cover their feet with stockings and boots after the European fashion in public.

Women's Costumes.—The usual dress of a woman consists of a long piece of cloth tied round the waist, with folds in front, and one end brought over the shoulder or the head. The folds are sometimes drawn in and tucked up behind. In the greater part of India women wear a bodice: on the Malabar coast many do not, but merely throw a piece of cloth over the breast. In some communities petticoats, or drawers, or both are worn. Many Mussalman ladies wear gowns and scarfs over them. The vast majority of Mahomedan women are *gosha* and their dress and persons are hidden by a veil when they appear in public: a few converts from Hinduism have not borrowed the custom. In Northern India Hindu women have generally adopted the Mussalman practice of seclusion. In the Dekhan and in Southern India they have not.

As a rule the hair is daily oiled, combed, parted in the middle of the head, plaited and rolled into a chignon, by most women. Among high caste Hindu widows sometimes shave their heads in imitation of certain ascetics, or monks and nuns. Hindu men do not, as a rule, completely shave their heads, Mahomedans in most cases do. The former generally remove the hair from a part of the head in front, over the temples, and near the neck, and grow it in the centre, the quantity grown depending upon the fancy of the individual. Nowadays many keep the hair cropped in the European fashion, which is also followed by Parsis and Indian Christians. Most Mussalmans grow beards, most Hindus do not, except in Bengal and elsewhere, where the Mahomedan influence was paramount in the past. Parsis and Christians follow their individual inclinations. Hindu ascetics, known as Sadhus or Bairagis as distinguished from Sanyasis, do not clip their hair, and generally coil the uncombed hair of the head into a crest, in imitation of the god Shiva.

Hindu women wear more ornaments than others of the corresponding grade in society. Ornaments bedeck the head, the ears, the nose, the neck, the arms, wrists, fingers, the waist until motherhood is attained, and by some even later—and the toes. Children wear anklets. Each community affects its peculiar ornaments, though imitation is not uncommon. Serpents with several heads, and flowers, like

the lotus, the rose, and the champaka, are among the most popular object of representation in gold or silver.

Caste Marks.—Caste marks constitute a mode of personal decoration peculiar to Hindus, especially of the higher castes. The simplest mark is a round spot on the forehead. It represents prosperity or joy, and is omitted in mourning and on fast-days. It may be red, or yellowish as when it is made with ground sandalwood paste. The worshippers of Vishnu draw a vertical line across the spot, and as Lakshmi is the goddess of prosperity, it is said to represent her. A more elaborate mark on the forehead has the shape of U or V, generally with the central line, sometimes without it, and represents Vishnu's foot. The worshippers of Shiva adopt horizontal lines, made with sandalwood paste or ashes. Some Vaishnavas stamp their temples, near the corners of the eyes, with figures of Vishnu's conch and disc. Other parts of the body are also similarly marked. The material used is a kind of yellowish clay. To smear the arms and the chest with sandalwood paste is a favourite kind of oil, especially in the hot season. Beads of Tulsi or sacred Basil, and berries of Rudraksha *elaeagnus parviflorus*, strung together are worn round their necks by Vaishnavas and Shalvas,

respectively. The Lingayats, a Shaiva sect suspend from their necks a metallic casket containing the Linga or phallus of their god. Bairagis, ascetics, besides wearing Rudraksha rosaries round their necks and matted hair, smear their bodies with ashes. Religious mendicants suspend from their necks figures of the gods in whose name they beg. Strings of cowries may also be seen round their necks. Muslim dervishes sometimes carry peacock's feathers.

Hindu women mark their foreheads with a red spot or horizontal line. High caste widows are forbidden to exhibit this sign of happiness, nor may they deck themselves with flowers or ornaments. Flowers are worn in the chignon. Hindu women smear their faces, arms, and feet sometimes with a paste of turmeric, so that they may shine like gold. The choice of the same colour for different purposes cannot always be explained in the same way. The red liquid with which the evil eye is averted may be a substitute for the blood of the animal slaughtered for the purpose in former times. In many other cases this colour has no such associations. The Muslim dervish affects green, the Sikh Akali is fond of blue, the Sanyasi adopts orange for his robe, and no reason can be assigned with any degree of certainty.

Indian Names.

The personal name of most Hindus denotes a material object, colour, or quality, an animal, a relationship, or a deity. The uneducated man, who cannot correctly pronounce long Sanskrit words, is content to call his child, father, brother, uncle, or mother, or sister, as the case may be. This practice survives among the higher classes as well. Appa Saheb, Anna Rao, Babaji, Bapu Lal, Bhal Shankar, Tatacharya, Jyibhai, are names of this description, with honorific titles added. It is possible that in early society the belief in the re-birth of departed kinsmen lent popularity to this practice. Nothing could be more natural than to call a man white, black, or red - gold or silver : gem, diamond, ruby, pearl, or merely a stone : small or tall, weak or strong : a lion, a snake, a parrot, or a dog : and to name a woman after a flower or a creeper. Thus, to take a few names from the epics, Pandu means white, and so does Arjuna : Krishna black. Bhuma terrible : Nakula a mongoose. Shunaka a dog : Shuka a parrot. Shringa a horn. Among the names prevalent at the present day Hira is a diamond : Ratna or Ratan a jewel. Sonu or Chinna gold. Velli or Belli, in the Dravidian languages, means white metal or silver. Men are often called after the days of the week on which they were born, and hence they bear the names of the seven heavenly bodies concerned. When they begin to assume the names of the Hindu deities, they practically enter upon a new stage of civilisation. It is doubtful whether the Animists ever venture to assume the names of the dreaded spirits worshipped by them. To pronounce the name

of a devil is to invite him to do harm. If the spirits sometimes bear the names of human beings, the reason seems to be that they were originally human.

High-caste practices.—The high caste Hindu, on the other hand, believes that the more often the name of a deity is on his lips, the more merit he earns. Therefore he deliberately names his children after his gods and goddesses, so that he may have the opportunity of pronouncing the holy names as frequently as possible. These are also sonorous and picturesque. Shiva is happy. Vishnu is a pervader. Govinda is the cowherd. Krishna : Keshava has fine hair : Rama is a delighter : Lakshmana is lucky : Narayana produced the first living being on the primordial waters : Ganesha is the Lord of Shiva's hosts. Dinakara is the luminary that makes the day : Subrahmanya is a brother of Ganesha. Sita is a farrow : Savitri a ray of light : Tara a star : Radha prosperity : Rakmini is she of golden ornaments. Dhama of the glowing heart. Shiva and Vishnu has each got at least a thousand names, and they may be freely drawn upon and paraphrased in naming one's children : and the whole Hindu pantheon is as crowded as it is large.

Family names.—When a person rises in importance, he adds to his personal name a family or caste name. It was once the rule, that the title Sharma might be added to a Brahman's name, Varma to a Kshatriya's, Gupta to a Vaishyas, and Dasa to a Shudra's. This rule is fairly well observed in the case of

the first two titles, but the meaning of the other two has changed. Dasa means a slave or servant, and the proudest Brahman cannot disdain to call himself the servant of some god. Thus, although Kalidas, the famous poet, was a Shudra, Ramadas, the famous guru of Shivaji, was a Brahmin. The Vaishnavas have made this fashion of calling oneself a servant of some god exceedingly popular, and in Western India high caste Hindus of this sect very commonly add Das to their names. The Brahmins of Southern India add Aiyer or Aiyangar to their names. Shastri, Acharya, Bhat, Bhattacharya, Upadhyaya, Mukhopadhyaya, changed in Bengal into Mukerji, are among the titles indicative of the Brahmanical profession of studying and teaching the sacred books. Among warlike classes, like the Rajputs and Sikhs, the title Singh (lion) has become more popular than the ancient Varma. The Sindhi Mal, as in Gidumal, means brave and has the same force. Raja changed into Raya, Rao and Rai was a political title, and is not confined to any caste. The Bengali family names like Bose and Ghose, Dutt and Mitra, Sen and Guha, enable one to identify the caste of their bearers, because the caste of a family or clan cannot be changed. Shet, chief of a guild or a town, becomes Chetty, a Vaishya title, in Southern India. Mudalvar and Nayudu, meaning leaders, are titles which were assumed by castes of political importance under native rulers. Nayar and Menon are the titles of important castes in Malabar. Ram, Lal, Nand, Ohand, are among the additions made to personal names in Northern India. Suffixes like Ji, as in Ramji or Jamsheji, the Kanarese Appa, the Telugu Garu, the feminine Bai or Devi, are honorific. Prefixes like Babu, Baba, Lala, Sobhu, Pandit, Raja, and the Burmese Maung are also honorific.

Professional names.—Family names sometimes denote a profession. In some cases they might have been conferred by the old rulers. Mehta, Kulkarni, Deshpande, Chitnavis, Mahalnavis are the names of offices held in former times. One family name may mean a flour seller, another a cane-seller, and a third a liquor-seller. To insert the father's name between one's personal and the family name is a common practice in Western India. It is rare elsewhere. When a family comes from a certain place, the suffix 'kar' or 'wallah' is added to the name of the place and it makes a family surname in Western India. Thus we may have Chiplunkars and Suratwallahs, or without these affixes we may have Bhavnagris, Malabaris and Bilmorias, as among Parsis. Thus Vasudev Pandurang Chiplunkar would be a Hindu, whose personal name is Vasudev, his father's name Pandurang, and family name derived from the village of Chiplun, is Chiplunkar. In Southern India the village name precedes the personal name. The evolution of Musalman names follows the same lines as Hindu names. But Muslims have no god or goddesses, and their names are derived from their religious and secular history. These names and titles are often as long and picturesque as Hindu appellations. The agnomens Baksh, Din, Ghulam, Khwaje, Fakir, Kazi, Munshi, Sheikh, Syed, Begum, Bibi and others, as well as honorific additions like Khan have meanings which throw light on Muslim customs and institutions. The Parsis also have no gods and goddesses, and their personal names are generally borrowed from their sacred and secular history. Their surnames frequently indicate a profession or a place, as in the cases of Hindus in Western India. Bathwallah, Readymoney, Contractor, Saklatwallah, Adenwallah and others like them are tell-tale names.

Indian Art.

In India there has never been so marked a separation between what are now known as the Fine Arts, and those applied to industry as was the case in Europe during the nineteenth century. As, however, Industrial art forms the subject of a special article in this book, the term Indian Art will here be confined to Architecture, Sculpture and Painting.

Historical.—The degree of proficiency attained in art by Indians prior to B.C. 250, can only be conjectured by their advancement in literature, and by the indirect evidences of indebtedness shown by the works of the historic period, to those which preceded them, or direct records of artistic work of an earlier date than B.C. 250 do not exist. The chief historic schools of architecture are as follows.—

Name	Dates.	Locality of the best Examples.
Buddhist	.. B.C. 250— A.D. 750.	Ellora, Ajanta Kaji, Sanchi.
Jaina A.D. 1000— 1300.	Ellora, Mount Abu, Palitana.
Brahmunical.	.. A.D. 530 to the present day,	Ellora, Elephanta, Orissa, Bhuvanagar, Dharwar.

Name	Dates.	Locality of the best Examples
Chalukyan	.. A.D. 1000— 1200.	Umber, Somnathpur, Ballur
Dravidian	.. A.D. 1350— 1750.	Ellicra, Tanjore, Madura, Tinnevely.
Pathan	.. A.D. 1200— 1550	Delhi, Mandu, Jaunpore
Indo-Saracenic	A.D. 1520— 1760.	Lahore, Delhi, Agra, Amber, Bijapur.

Buddhist Architecture is mainly exemplified by the rock-cut temples and monasteries found in Western India and in the *Topes* or sacred mounds. The interior decorations, and external facades of the former, and the rails and gates surrounding the latter point unmistakably to their being derived from wooden structures of an earlier period. The characteristic features of these temples are horse-shoe openings in the facades to admit light, and colonnades of pillars with richly ornamented caps in the interior halls. Jaina Architecture is found in its most highly developed form in the Dilwara temples at Mount Abu. The ground plan consists of a shrine for the god or saint.

porch, and an arcaded courtyard with niches for images. The characteristic of the style is grace and lightness, with decorative carving covering the whole interior, executed with great elaboration and detail. Constructional methods suggest that original types in wood have been copied in marble.

Brahminical, Chalukyan and Dravidian styles differ little in essential plan, all having a shrine for the god, preceded by pillared porches. The outer forms vary. The northern Brahminical temples have a curved pyramidal roof to the shrines, which in the southern or Dravidian style are crowned by a horizontal system of storied towers, and each story, decreasing in size, is ornamental with a central cell and figures in high relief. The Chalukyan style is affected by its northern and southern neighbours, taking features from each without losing its own special characteristics of which the star-shaped plan of the shrine, with the five-fold bands of external ornament, is the principal feature. Pathan Architecture was

introduced into India by the Mahomedan invasion of the thirteenth century. At old Delhi are the best examples in the Kutub Mosque and Minar. The characteristics of the style are severity of outline, which is sometimes combined with elaborate decoration due, it is stated, to the employment of Hindu craftsmen. The mosques and tombs at Ahmedabad already show Hindu influence; but purer examples are to be found at Jaunpore and Mandu. Indo-Saracenic Architecture reached the climax of its development during the reigns of the Moghul Emperors, Akbar, Jehangir and Shah Jahan. It eclipsed in richness of material and refinement of taste the building efforts of previous periods, its crowning example being the Taj Mahal at Agra. The buildings erected during the Adil Shahi dynasty at Bijapur at a slightly later date, exhibit a certain Turkish influence, especially in the great tomb of Mahmoud. Though less refined and lacking the attraction of precious materials in their decoration, these splendid edifices are held in higher esteem by some critics than those of the Moghals, on account of their simplicity, grandeur and finer proportions. The era of great civil architecture in India was revived by the Mahomedan powers. Splendid palaces and fortresses were built at Madras, Delhi, Agra, Fattelpore-Sikri and Bijapur, and the example thus set was copied by the Hindu princes at Jaipur, Udaipur and elsewhere in India. The application of great architectural treatment, unequalled in extent elsewhere, is to be seen in the Ghats or steps enclosing lakes and on the banks of rivers. The most notable constructional contribution of the Mahomedans to Indian architecture was the introduction of the true arch and dome.

Sculpture.—The use of sculpture and painting in isolated works of art was practically non-existent in India until modern times. One or two reliefs and certain gigantic figures may be quoted as exceptions, but taken generally it may be stated that these arts were employed as the decorative adjuncts of architecture. No civil statuary, such as is now understood by the term, was executed; for no contemporary portrait figures, or busts in marble, or bronze, have come down to us from the ruins of ancient India, as they have from those of

Egypt, Greece and Rome. Sculpture has been used exclusively as the handmaid of religion, and to this fact may be attributed the stereotyped forms to which it became bound. The lavish use of sculpture on Indian temples often exceeds good taste, and mars the symmetry and dignity of their mass and outline; but for exuberance of imagination, industrious elaboration and vivid expression of movement, Indian sculpture is perhaps without its equal elsewhere in the world. The most impressive specimens are the earliest, found in the Buddhist and Brahminical cave temples of Ellora, Ajanta and Elephanta. The great Trimurthi in the last named of these temples ranks for mystery and expressive grandeur with the greatest masterpieces of art.

Painting.—Much of the carved stonework upon ancient Indian buildings was as in ancient Greece decorated with colour, but the only paintings, in the modern acceptance of the term, now existing, which were executed prior to the Moghul period, are those upon the walls of the cave temples at Ajanta, Bagh, and in Ceylon. These remarkable works were produced at intervals during the first 600 years of the Christian era. They exhibit all the finer characteristics of the best Indian sculpture, but with an added freedom of expression due to the more tractable vehicle employed. The Ajanta Caves remained hidden in the Deccan jungles for nearly twelve hundred years, until accidentally rediscovered by officers of the Madras army in 1920. They are painted in a species of tempera; and when first brought to light were well preserved, but they have greatly deteriorated owing to the well meant, but misguided action of copyists, and the neglect of the authorities. The Nizam's Government have in recent years done a great deal towards the preservation and study of these mural paintings. The second period of Indian painting owed its origin to the introduction of Persian methods of painting by the Moghul Emperor Akbar; and the establishment of the indigenous Moghul school was due to the encouragement and fostering care of his successors, Jehangir and Shah Jahan. Unlike the works of the Ajanta painters, which were designed upon a large scale, the pictures of the Moghul school were miniatures. They were executed in a species of opaque water-colour upon paper or vellum, resembling to some extent the illuminated missals produced by the monks in Europe during the middle ages. Some of the finest of the earlier specimens in India are of a religious character; this phase of development being closely allied to the art of the calligraphist. As its range extended, a remarkable school of portrait painters arose notable for restrained but extremely accurate drawing, keen insight into character, harmonious colour, fine decorative feeling, and extraordinary delicacy and finish in the painting of detail. The artists of a Hindu off-shoot of this movement, known as the Rajput school, were less interested in portraiture than in depicting poetical and imaginative subjects. The pictures of both branches of the Moghul school, although highly decorative in character, were not intended for exhibition upon the walls of rooms, according to Western practice, and when not used as illustrations or decorations

no manuscript books, were preserved in portfolios.

Modern Painting—As the reign of Shah Jahan exhibits the high tide of artistic development in India, so the reign of his successor Aurangzeb marks the period of its rapid decline. The causes of this are attributable to the absence of encouragement by this Emperor; to his long periods of absence from the court at Delhi or Agra, entailed by the continuous wars he waged in his efforts to bring the whole of the Peninsula under his rule; and partly to the fact of the school of Moghul painting becoming stereotyped in its practice. Foreign designers, painters and craftsmen who had been attracted to India by the great works carried out by Akbar, Jehangir and Shah Jahan left the country, and their places were taken by no successors. The indigenous artists left to themselves in the isolated courts of small Indian princes, or collected in schools in remote districts, employed themselves mainly upon repeating the works of a previous age, instead of seeking new motifs for artistic treatment. At the time when the British East India Company ceased to be only a guild of merchants and became a great administrative power in 1757, very little vitality survived in the ancient art of the country. During the century of its administrative history between the battle of Plassey and the Indian Mutiny, the "Company" was too fully occupied in fighting for its existence, extending its borders and setting the internal economy of its ever increasing territories, to be able to give much attention to conserving any remnant of artistic practice which had survived. Without any deliberate intention of introducing western art into the country, Greek and its derivative style of architecture were adopted for public and private buildings in Calcutta, Bombay and Madras because these were found to be more suitable for their purpose than buildings of indigenous pattern. The practical result was the same; for the Indian craftsmen employed upon their erection were confronted with styles affording no scope for the application of their traditional ornament and concerning which they had no knowledge or sympathy. As there were no sculptors in India capable of modelling or carving civil sculpture, the monuments to distinguish public servants were imported from Europe, and the portraits, or other paintings which decorated the interior walls of the buildings, were furnished by European painters who visited India or by artists in Europe. Although a considerable amount of research work of a Voluntary nature was done by Archaeologists, no official interest was taken in artistic education until the Government of India was transferred to the British Crown in 1859.

The Schools of Art then instituted throughout England in the 19th Century were imitated in India, and were attached to the educational system, which had been previously modelled upon a definitely European basis. The work of the Schools of Art in regard to industrial art is referred to elsewhere, and as several of them have confined their activities almost exclusively to this branch of the subject it is sufficient to mention only the work of a few of the Indian Art Schools in the present article. The Calcutta

school, except for occasional experiments in the application of the graphic arts to lithography, engraving and stained glass, has become chiefly a school of painting and drawing. That at Bombay covers a wider field, for in addition to classes for modelling, painting and design it possesses a special school of architecture, and a range of technical workshops, in which instruction is given in the applied arts. It is in the principles underlying the instruction in painting that the schools at Calcutta and Bombay have taken almost diametrically opposite roads to reach the end they both have in view, namely, the revival of the art of painting in India by means of an indigenous school of Indian painters. Mr. Havell, who several years ago was the Principal of the Calcutta School, (he left India in 1907) banished from within its walls every vestige of European art, and claimed that the traditional art of India, in its old forms, is not dead, but merely sleeping or smothered by the blanket of European culture laid upon it for the last 150 years, and needed but to be released from this incubus to regain its pristine vigour.

Bombay School of Art—The attitude towards the development of art in modern India taken by its successive Principals Messrs Lockwood Kipling, Griffiths, Greenwood, and Cecil Burns, was on wider lines than that favoured by Mr Havell. In general the view this School of Art has taken is that with European literature dominating the system under which the educated classes in India are trained and with European ideas, and science permeating the professional commercial, industrial, and political life of the country, it is not possible for modern artists in India to work on purely archaic models, and that to copy these would be as unprofitable as it would be for the artists of Europe to harness themselves to the conventions of the Greek and Roman sculptors or to those of the mediæval painters; that with European pictures, often of inferior quality illustrating every educational text-book, and sold in the shops of every large city, it is essential for the proper education of art students that they should have before them the masterpieces of European art, and that, with the wide adoption of European styles of architecture in India, it is necessary for a school of art to possess the best examples of ornament applicable to the great historic styles, for the purpose of study and reference. There are certain basic principles common to the technique of all great art, such as fine and accurate drawing in its widest sense, composition and design, and the science of colour harmony.

Among the developments during Mr. Burns' administration were the founding of the Architectural School, the extension of drawing classes in the Government Schools, and the appointment of an Inspector of Drawing to inspect and report on the drawing classes in the schools. A Pottery Department was also started and was abolished in 1926. Mr. Burns retired in 1918 and was succeeded in 1919 by Mr. W. E. Gladstone Solomon, K I H, R B.O., who retired in 1937. He was succeeded by the present Director, Mr C. R. Gerrard, A R O A, R B A, R.O.I.

Mr. Solomon entirely reorganised the courses of study. He also, as Chairman of the Government Art Examinations, revised and recon-

structed the code which governs these tests in co-operation with the Board of Examiners. The result is an efficient system of tests of efficiency in Painting, Sculpture and Architecture, and the latest development in the curriculum has been the introduction in 1935 of a section devoted to the study of Commercial Art. The popularity of the improved curriculum is shown by the great influx of students to the School of Art. These now number some six hundred including at least sixty-five ladies. It is noteworthy that whereas no candidates had entered for the Government Diploma of Sculpture prior to 1920 in the year 1937 no fewer than 54 competed in this very advanced test of capacity. The Life Classes which were organised at the end of 1919 have been pronounced by competent judges as well up to the level of the Life Classes of the European Schools of Art. But proficiency in technique forms only one side of the present system of training; for even in Europe, too much of the study from Life is quite capable of negating its own object. In India, where the decorative instinct is inherent, and where the possibilities of freehand drawing are understood, the danger of overdoing the Life Class is even more palpable. So side by side with these realistic aids to study, and at the same period, a class of Indian Decorative Painting was inaugurated in the Bombay School of Art on a basis of scholarships under the patronage of the Governor of Bombay (Lord Lloyd). As this class specialises in Mural Painting it has long been popularly known as the Class of Mural Painting. This class has executed the decorations for many public and private buildings, and painted the ceiling and panels of a specially constructed Indian Room which was exhibited at Wembley in 1924, and found a purchaser in England.

The School of Art has of late years enjoyed the patronage of successive Governors of Bombay and, largely due to the efforts of Sir Leslie Wilson, the Government of India inaugurated a competition of Indian Artists in 1927 for the decoration of wall spaces in the new buildings at New Delhi. The result of the Competition was notified in October 1928, when five artists of Bombay, and the Bombay and Lahore Schools of Art were commissioned to paint Mural Decorations in the

new Secretariat buildings. The Bombay School undertook the decoration of Committee Room "A" (in the North Block) and the paintings, which were executed in oils on canvas, were finished, and successfully placed in position on the dome and walls by the middle of September 1929. These decorations were original compositions of life size figures, symbolising the main periods of Indian Art, and the different branches of the Fine and Applied Arts. In April 1929, the Government of Bombay converted the Bombay School into a Department independent of the Director of Public Instruction, the Principal (Mr. W. E. Gladstone Solomon) being made Director. In October 1930 the latter organised an exhibition of the work of all Departments of this School of Art in India House, London. The Exhibition was very well patronised by the public and extremely well received by the art critics and the Press. Her Majesty the Queen Empress graciously patronised the exhibition and selected several of the paintings displayed.

Exhibition in London.—The India Society of London organised an Exhibition of Modern Indian Art in London, which was opened by H. H. the Duchess of York at the New Burlington Galleries on December 10, 1934. The most instructive feature of this Exhibition was that the representation of India was secured by means of Regional Committees which collected pictures and sculptures from their own districts. Thus the respective sections of the Exhibition devoted to Bombay and Bengal were compared, and the work from Western India received a most favourable welcome from most of the prominent art critics and journals in England. The Regional Committee of Bombay had selected a varied and fairly representative collection of paintings, sculpture, and architectural drawings. At the request of this Committee, the Government of Bombay deputed Mr. Gladstone Solomon to supervise, arrange, and catalogue the Bombay exhibits in London. The whole enterprise was a successful demonstration of the aims and ideals of the Bombay School of Painting, and since this Exhibition the long-standing controversy as to the Bombay methods of art training has collapsed though it is hardly to be expected that it will not occasionally reassert itself in sporadic outbursts hereafter.

Indian Architecture.

The architecture of India has proceeded on lines of its own, and its monuments are unique among those of the nations of the world. An ancient civilization, a natural bent on the part of the people towards religious fervour of the contemplative rather than of the fanatical sort, combined with the richness of the country in the sterner building materials—these are a few of the factors that contributed to making it what it was, while a stirring history gave it both variety and glamour. Indian architecture is a subject which at the best has been studied only imperfectly, and a really comprehensive treatise on it has yet to be written. The subject is a vast and varied one, and it may be such a treatise never will be written in the form of one work at any rate. The spirit of Indian Art is foreign to the European and few

can entirely understand it, while art criticism and analysis is a branch of study that the Indian has not as yet developed to its full extent. Hitherto the best authority on the subject has been Fergusson, whose compendious work is that which will find most ready acceptance by the general reader. But Fergusson attempted the nearly impossible task of covering the ground in one volume of moderate dimensions and it is sometimes held that he was a man of too purely European a culture, albeit wide and eclectic, to admit of sufficient depth of insight in this particular direction. Fergusson's classification by races and religions is, however, the one that has been generally accepted hitherto. He asserts that there is no stone architecture in India of an earlier date than two and a half centuries before the Christ-

ian era, and that "India owes the introduction of the use of stone for architectural purposes, as she does that of Buddhism as a state religion, to the great Asoka, who reigned B.C. 272 to 236."

Buddhist Work.

Fergusson's first architectural period is when the Buddhist, of which the great tower at Sanchi with its famous Northern gateway is perhaps the most noted example. Then we have the Gandharan topes and monasteries. Perhaps the examples of Buddhist architecture of greatest interest and most ready access to the general student are to be found in the Chaitya halls or rock-cut caves of Karli, Ajanta, Nasik, Ellora and Kanheri. A point with relation to the Gandhara work may be alluded to in passing. This is the strong European tendency, variously recognized as Roman, Byzantine but most frequently as Greek, to be observed in the details. The foliage seen in the capitals of columns bears strong resemblance to the Greek acanthus, while the sculptures have a distinct trace of Greek influence, particularly in the treatment of drapery, but also of hair and facial expression. From this it has been a fairly common assumption amongst some authorities that Indian art owed much of its best to European influence, an assumption that is strenuously combated by others as will be pointed out later.

The architecture of the Jains comes next in order. Of this rich and beautiful style the most noted examples are perhaps the Dilwars temples near Mount Abu, and the unique "Tower of Victory" at Chittore.

Other Hindu Styles.

The Dravidian style is the generic title usually applied to the characteristic work of the Madras Presidency and the South of India. It is seen in many rock-cut temples as at Ellora, where the remarkable "Kylas" is an instance of a temple cut out of the solid rock, complete, not only with respect to its interior (as in the case of mere caves) but also as to its exterior. It is, as it were, a life-size model of a complete building or group of buildings, several hundred feet in length, not built, but sculptured in solid stone, an undertaking of vast and; to our modern ideas, unprofitable industry. The Pagoda of Tanjore, the temples at Srirangam, Chidambaram, Vellore, Vijayanagar, &c., and the palaces at Madura and Tanjore are among the best known examples of the style.

Amongst a vast number of Hindu temples the following may be mentioned as particularly worthy of study—Those at Mukteswara and Bhuvaneshwar in Orissa, at Khajuraho, Bindrabun, Udaipur, Benares, Gwalior, &c. The palace of the Hindu Raja Man Singh at Gwalior is among the most beautiful architectural examples in India. So also, are the palaces of Amber, Datliya, Uricha, Dig and Udaipur.

Indo-Saracenic

Among all the periods and styles in India the characteristics of none are more easily recognizable than those of what is generally called the "Indo-Saracenic" which developed after the Mahomedan conquest. Under the new influences now brought to bear on it the architecture of India took on a fresh lease of activity and underwent remarkable modifi-

cations. The dome, not entirely an unknown feature hitherto, became a special object of development, while the arch, at no time a favourite constructional form of the Hindu builders, was now forced on their attention by the predilections of the ruling class. The minaret also became a distinctive feature. The requirements of the new religion—the mosque with its wide spaces to meet the needs of organized congregational acts of worship—gave opportunities for broad and spacious treatments that had hitherto been to some extent denied. The Moslem hatred of idolatry set a tabu on the use of sculptured representations of animate objects in the adornment of the buildings, and led to the development of other decorative forms. Great ingenuity came to be displayed in the use of pattern and of geometrical and foliated ornament. This Moslem trait further turned the attention of the builders to a greater extent than before to proportion, scale and mass as means of giving beauty, more richness of sculptured surface and the æsthetic and symbolic interest of detail being no longer to be depended on to the same degree.

Agra and Delhi may be regarded as the principal centres of the Indo-Saracenic style—the former for the renowned Taj Mahal, for Akbar's deserted capital of Fatehpur Sikri, his tomb at Secundra, the Moti Musjid and palace buildings at the Agra fort. At Delhi we have the great Jumma Musjid, the Fort, the tombs of Humayon, Sufdar Jung, &c., and the unique Qutb Minar. Two other great centres may be mentioned, because in each there appeared certain strongly marked individualities that differentiated the varieties of the style there found from the variety seen at Delhi and Agra, as well as that of one from that to the other. These are Ahmedabad in Gujarat and Bijapur on the Dekhan, both in the Bombay Presidency.

At Ahmedabad with its neighbours Sirkhej and Champanir there seems to be less of a departure from the older Hindu forms, a tendency to adhere to the lintel and bracket rather than to have recourse to the arch, while the dome though constantly employed, was there never developed to its full extent as elsewhere, or carried to its logical structural conclusion. The Ahmedabad work is probably most famous for the extraordinary beauty of its stone "jail"—or pierced lattice-work, as in the palm tree windows of the Sidi Sayyid Musjid.

Bijapur.

The characteristics of the Bijapur variety of the style are equally striking. They are perhaps more distinctively Mahomedan than those of the Ahmedabad buildings in that here the dome is developed to a remarkable degree, indeed the tomb of Mahmud—the well-known "Gol Gumbaz"—is cited as showing the greatest space of floor in any building in the world roofed by a single dome, not even excepting the Pantheon. The lintel also was here practically discarded in favour of the arch. The Bijapur style shows a bold masculine quality and a largeness of structural conception that is unequalled elsewhere in India, though in richness and delicacy it does not attempt to rival the work of the further North

II. MODERN.

The modern architectural work of India divides itself sharply into two classes. There is first that of the indigenous Indian "Master-builder" to be found chiefly in the Indian States, particularly those in Rajputana. Second there is that of British India, or of all those parts of the peninsula wherever Western ideas and methods have most strongly spread their influence, chiefly, in the case of architecture, through the medium of the Department of Public Works. The work of that department has been much annuadverted upon as being all that building should not be, but, considering it has been produced by men of whom it was admittedly not the meter, and who were necessarily contending with lack of expert training on the one hand and with departmental methods on the other, it must be conceded that it can show many notable buildings. Of recent years there has been a tendency on the part of professional architects to turn their attention to India, and a number of these has even been drafted into the service of Government as the result of a policy initiated in Lord Curzon's Viceroyalty.

To the work of the indigenous "master-builder" public attention has of recent years been drawn with some insistence, and the suggestion has been pressed that efforts should be directed towards devising means for the preservation of what is pointed out—and now universally acknowledged—to be a remarkable *sui vital*—almost the only one left in the world—of "living art," but which is threatened with gradual extinction by reason of the spread of Western ideals and fashions. The matter assumed some years ago the form of a mild controversy centring round the question of the then much discussed project of the Government of India's new capital at Delhi. It was urged that this project should be utilised to give the required impetus to Indian art rather than that it should be made a means of fostering European art which needed no such encouragement at India's expense. The advocates of this view appear for the most part to have been adherents of the "indigenous Indian" school of archaeologists already mentioned, and to have based their ideas on their own reading of

the past. They still muster a considerable following not only amongst the artistic public of England and India, but even within the Government services. Their opponents, holding what appears to be the more official view both as to archaeology and art, have pointed to the "death" of all the arts of the past in other countries as an indication of a natural law, and deprecate as waste of energy all efforts to resist this law, or to institute what they have termed "another futile revival"! The British in India, they contend, should do as did the ancient Romans in every country on which they planted their conquering foot. As those were want to replace indigenous art with that of Rome, so should we set our seal of conquest permanently on India by the erection of examples of the best of British art. This is the view which, as we have indicated, appears to have obtained for the moment the more influential hearing, and the task of designing and directing the construction of the principal buildings in the new Capital was accordingly entrusted jointly to two famous British architects, neither of whom can be unduly influenced by either past or recent architectural practice so far as India is concerned. The building of New Delhi is perhaps too recent an event for the passing of a definite verdict. The work of Sir Edwin Lutyens and Sir Herbert Baker abides the judgement of posterity. If that work has had its severe critics, it has also received the commendation of many.

The controversy of East and West, however vital to the interests of the country's architecture, is too purely technical for its merits to be estimated by the general reader or discussed here. Its chief claim on our attention lies in the fact that it affords an added interest to the tourist, who may see the fruits of both schools of thought in the modern buildings of British India as well as examples of the "master builders" work in nearly every native town and bazaar. The town of Lashkar in Gwalior State may be cited as peculiarly rich in instances of picturesque modern Indian street architecture, while at Jaipur, Udaipur, Benares, etc., this class of work may be studied in many different forms both civil and religious.

Industrial Arts.

The ancient industrial arts of India formed two distinct groups. The first included those allied to, and dependent upon, architecture; the second comprises those applied to articles devoted to religious ritual; military weapons and trappings, domestic accessories; and to personal adornment.

The articles of the first group were intended for some fixed and definite position, and the style of their design and the character of their workmanship were dictated by that of the building with which they were incorporated. Those of the second group were movable, and the range of their design was less constricted and their workmanship was more varied

Examples of work in both groups are so numerous, and the arts comprise such a diversity of application, that only a cursory survey can be attempted within the limits of a short review. Although the design and treatment differ in the two groups, the materials used were often the same. These materials cover a very wide range but space only permits of reference to work applied to the four materials upon which the Indian craftsman's skill has been most extensively displayed. These are stone, wood, metal and textiles.

Before dealing separately with each of these materials a few words upon the principal Indian styles are necessary. The two distinctive styles

are Hindu and Mahomedan. The former may be termed indigenous, dating as it does from remote antiquity; the latter was a variation of the great Arabian style, which was brought into India in the fourteenth century, and has since developed features essentially Indian in character. The art of both Hindus and Mahomedans is based upon religion and the requirements of religious ritual. The obvious expression of this is shown in the different motifs used for their ornament. In Hindu art all natural forms are accepted and employed for decorative purposes; but in that of the Mahomedans, nearly all natural forms are rejected and forbidden. The basis of Mahomedan decoration is therefore mainly geometrical. In each of them, racial characteristics are strikingly exhibited. The keynote of Hindu work is exuberance, imagination and poetry; that of Mahomedan, reticence, intellect and good taste. The Hindus are lavish, and often indiscriminating in their employment of ornament; the Mahomedans use more restraint.

Stone Work.—Carved stone work is the principal form of decoration employed in Hindu temples. In variety and scope it ranges, from the massive figures in the Buddhist and Brahminical Cave Temples, and the detached sculpture of the temples of Southern India, to the delicately incised reliefs and elaborately fretted ornament of the Jain temples at Mount Abu. A curious fact in relation to Hindu work is that priority of date appears to have no relation to artistic development. It is not possible to trace, as in the case of Greek, Roman and Mediæval craftwork, the regular progressive steps from art in its primitive state to its culminating point and its subsequent decay. Styles in India seem to spring into existence fully developed; the earlier examples often exhibiting finer craftsmanship than those of a later date. There can be little doubt that stone carving in India was simply the application of the wood carvers' art to another material.

The stone carving on Mahomedan buildings except where Hindu carvers have been allowed a free hand, is much more restrained than that on Hindu temples. The fact that geometrical forms were almost exclusively used dictated lower relief and greater refinement in the carving; while the innate good taste of the designers prompted them to concentrate the ornament upon certain prominent features, where its effect was heightened by the simplicity of the rest of the building. The invention displayed in working out geometrical patterns for work screens, inlay, and other ornamental details appears to be inexhaustible; while wonderful decorative use has been made of Arabic and Persian lettering in panels and their framing. To obtain a rich effect the Hindus relied upon the play of light and shade upon broken surfaces, the Mahomedans to attain the same end used precious materials; veneering the surfaces of their buildings with polished marble which they decorated with patterns of mosaic composed of jade, agate, onyx and other costly stones. Although the art of inlaying and working in hard stones was of Italian origin, it proved to be one eminently suited to the genius of the Indian craftsman; and many wonderful examples of their skill in the form of book rests, tables, thrones, footstools, vases and sword handles

are extant to show the height of proficiency they attained.

Woodwork.—With a fine range of timbers suitable for the purpose, wood has played a great part in the construction and decoration of Indian buildings. Unfortunately, much of the ancient woodwork has been destroyed by the action of the climate and the teeming insectivorous life of India; and that which escaped these enemies was wiped out by fire and the sword. It is therefore only possible to conjecture the height of artistic development these buildings and their decorations displayed by the copies in stone which have been preserved. Few if any examples of a date earlier than the sixteenth century are to be found. Many of these, and specimens of a later date to be seen in towns and cities throughout the country, are masterpieces of design and craftsmanship. The carved timber fronts and inner courtyards of houses in Ahmedabad, Nasik, and other parts of Western India are notable for their picturesqueness and beauty the structural beams, the overhanging balconies, with their screens and supporting brackets, being carved in a manner which unites richness of effect with good taste and propriety. Of furniture, as the term is now understood, few examples were in use in India before Europeans introduced their own fashions. These were confined to small tables and stools, book rests, clothes chests and screens, the designs of which conformed somewhat closely to the architectural style of the period. Many of these were decorated with inlays of coloured woods, ivory and metal; while in some cases the wooden basis was entirely plated with copper, brass or silver. In Southern India, where close grained sandalwood is grown, jewel cases and boxes are enriched with carving executed with the attention to detail and the finish generally associated with the carving of ivory. Coloured lac was freely used to decorate many articles of furniture, especially those turned on the lathe; and rich colour effects were obtained in this, perhaps the most distinctive and typically Indian development of decoration as applied to woodwork.

Metal Work.—With the exception of weaving, the metal working industry employed and still employs the greatest number of artistic craftsmen in India. Copper and brass have always been the two metals most widely used for domestic purposes by Mahomedans and Hindus. The shapes of many of these humble vessels are among the most beautiful to be found in the country. They exhibit that sense of variety and touch of personality which are only given by the work of the human hand; and the shapes are those which grow naturally from the working of the material with the simplest implements. In the technical treatment of brass and copper Indian craftsmen have shown a taste and skill unsurpassed by those of other nations, except in the department of fine casting. In this, and in the working of gold and silver, a higher standard of technical and constructive exactness has been reached by the metal workers of Europe and Japan. It may be taken as an axiom that the more beautiful the shape of an article is, and this especially applies to metal work, the less need exists for the decoration of its surface. It is

equally true that the highest test of craftsmanship is the production of a perfect article without any decoration. The reason being that the slightest technical fault is apparent on a plain surface, but can be hidden or disguised of one which is covered with ornament. The goldsmiths and silversmiths of India were extremely skilful and industrious, but judged by this test their works often exhibit a lack of care and exactness in the structural portion and a completely satisfactory example of perfectly plain work from the hands of the gold and silversmiths of India is rarely to be met with. Much of the excessive and often inappropriate ornamentation of the articles that they produced owed its application as much to the necessity of hiding defective construction as it did to any purely decorative purpose.

Textiles.—The textile industry is the widest in extent in India and is that in which her craftsmen have shown their highest achievements. Other countries, east and west of India have produced work equal at least in stone, wood, and metal; but none has ever matched that of her weavers in cotton and silk, or excelled them in the weaving of silken fabrics. Some of the products of the looms of Bengal are marvels of technical skill and perfect taste, while the plum blossom quality

of the old Cashmere shawls is an artistic achievement which places them in a class by themselves. Weaving being essentially a process of repetition, was the first to which machinery was applied, and modern science has brought power loom weaving to such a state of perfection that filaments of a substance finer even than those of Dacca, which astonished our ancestors, are now produced in the mills of Lancashire. But for beauty of surface and variety of texture no machine-made fabrics have ever equalled the finest handwork of the weavers of India. Many of the most beautiful varieties of Indian textile work have disappeared, killed by the competition of the power loom. In other branches of art as applied to textiles India does not hold so pre-eminent a position as in that of weaving. The printed silks and calicoes of the seventeenth and eighteenth centuries deservedly held a high place in the estimation of Western nations, whose craftsmen learnt many valuable lessons from the technical skill, and artistic taste they display. Nothing approaching the tapestries made in Europe in the middle ages has been produced in India. The nearest approach to these is in carpets and rugs. This art was introduced from Persia; but Indian craftsmen have never succeeded in equalling the finest work of their instructors either in colour or designs.

Archæology.

Although India is one of the most ancient lands in the world and the cradle of an ancient civilization, it has long remained in the background owing to the absence of written histories going back to the earliest period as in the case of other ancient lands such as Egypt and Mesopotamia. Just over a hundred years ago the foundation of Indian Archæology was laid by Prinsep, who first deciphered the ancient Brahmi script and thus opened the way to the knowledge of the edicts of the Emperor Asoka and other ancient documents, which till then were a sealed book to the natives of the soil. Since then a large number of scholars both Indian and European have helped in building up the edifice of Indian Archæology which though fairly comprehensive is still incomplete in several respects.

The story of Indian Archæology commences with the beginnings of human existence in the vast sub-continent. The rough and chipped stone implements discovered in various parts of the country, particularly in the eastern districts of the Madras Presidency, and the valleys of the Sabarmati, Narmada and the Godavari have yielded hundreds of implements which show the first attempts made by man to work his tools with which to master his surroundings. Two of these paleolithic implements were found in association with the bones of extinct animals, one from Bhutra in Narsingpur district, C.P. on the banks of the Narmada and the other from Mungi on the upper Godavari. The age of the paleoliths determined mostly by geological considerations may be anywhere from 50,000 to 200,000 years, and the great interval of time between the microlithic and the paleolithic periods is shown by nearly

a hundred feet of alluvial and wind-blown loess deposits in the valley of the Sabarmati river. Last year the Archæological survey's investigations in the Baroda State have thrown a flood of light on the early stone age cultures of Gujarat. Another outstanding attempt made by a scientific expedition under Dr de Terra of the Yale University has established some kind of sequence between the stone cultures of the foot-hills of the Punjab and brought them in relation with the different ice ages of Kashmir.

The whole field of prehistory is gradually receiving much attention, which is expected to systematise our knowledge of the earliest inhabitants of India. Neolithic man, who used a large variety of polished stone implements, was more widely distributed throughout the country, particularly in the Peninsula and the Vindhyan regions. To this period must also be dated some of the earliest megalithic tombs which occur in a great variety of forms in the central and southern parts of the Peninsula, although a vast majority belong to the iron age and some even persists to our age. The knowledge of metals superseded at a later stage but its development has been different in northern and southern India. Thus in northern India the copper implements of the Gangetic Valley and the copper and bronze antiquities of the Indus culture exclude any knowledge of iron. In the south, however, the neolithic settlements of the Bellary district seem to have been immediately followed by the knowledge of the smelting of iron, as evidenced by the large scale furnaces which stand in the shape of cinder mounds. It is clear, however, that while copper and bronze was known in the north in the fourth millennium B.C. the south may have been content with the

use of stone implements right up to the first millennium B C until stone was supplanted by iron. It is remarkable that in some of the localities in the ancient Deccan, comprising the Bombay Karnatic, the Ceded Districts of Madras, south Hyderabad and North Mysore, stone implements and painted pottery, are followed by antiquities of the regular historic period. This gives the hope that a sequence can be established and links forged between the history and prehistory of the Deccan.

The most interesting and well developed phase of the prehistoric civilization of India is, however, that represented by the recent excavations at Harappa in the Punjab and Mohenjo-daro in Sind. These have completely revolutionized ideas on this subject and proved that as far back as the 3rd or 4th millennium B C and probably much earlier still, India was in possession of a highly developed civilization with large and populous cities, well built houses, temples and public buildings of brick and many other amenities enjoyed at that period by the peoples of Mesopotamia and Egypt. Both at Mohenjo-daro and Harappa there are the remains of some 5 or 6 cities super-imposed one upon the ruins of another.

The structures that have so far been exposed at Mohenjo-daro belong to the three latest cities on the site. Those of the third or earliest are the best in style, those of the first the poorest. Most of the structures are dwelling houses or shops, but there are others which appear to have been temples and one—of particularly massive proportions—is a large bath, surrounded by fenestrated galleries and halls. Another massive and extensive building found at Harappa appears to have been a public granary. All were built of well burnt brick and most of them were of two or more storeys with staircases giving access to the upper rooms. In and around the ruins have been found many minor antiquities including gold and silver jewellery, some remarkable statuary in stone and copper, engraved seals of stone and ivory and paste, some of them exquisite specimens of glyptic art, copper implements and vessels, terracotta figurines and toys, shell ornaments and potteries both painted and plain all denoting a well-developed artistic sense.

These discoveries establish the existence in Sind and the Punjab during the 4th and 3rd millennia B C of a highly developed city life, and the presence, in many of the houses, of wells and bathrooms as well as an elaborate drainage system betoken a social condition of the citizens at least equal to that found in Sumer and superior to that prevailing in contemporary Babylonia and Egypt. The inhabitants of these cities lived largely no doubt by agriculture and it is a point of interest that the specimens of wheat found at Mohenjo-daro and Harappa resemble the common variety grown in the Punjab today. Besides bread, their food appears to have included beef, mutton, and pork, the flesh of tortoises, turtles and gharial, fresh fish from the Indus and dried fish from the sea coast. Among their domesticated animals were the humped Indian bull, the buffalo, a short horned bull, the sheep, pig, dog and elephant. Besides gold and silver they used copper, tin, bronze and lead, they were familiar with the arts of spinning and

weaving and with cultivation of cotton and had attained a high degree of proficiency in the jeweller's and potter's arts.

That they possessed a well-developed system of writing is evidenced by the discovery of over a thousand tablets engraved with well-executed animal devices and pictographic legends in an unknown script. The method of disposal of the dead at Mohenjo-daro is uncertain but at Harappa two types of burial have been met with, namely, complete burials or fractional along, with funerary pottery, and "pot burials." Only 27 of the latter were found to contain skulls and human bones and are seemingly post exposure fractional burials.

Sir Aurel Stein's survey of Baluchistan and very recently of Bahawalpur State has added to our knowledge, a number of ancient sites of the prehistoric epoch. Among the 20 or more sites in Sind, discovered mostly by the efforts of the late Mr. Majumdar, at least three are now recognised as representing distinct phases, some earlier and some later, than the main culture of Harappa and Mohenjo-daro.

The Indus Valley culture has now been traced in the North-east as far as Rupar in the Ambala District, relatively close to the watershed of the Sutlej and Jumna and it is therefore highly improbable that this civilization was confined to the Indus Valley. There can hardly be any reasonable doubt that future researches will trace it or its successors into the Valley of the Ganges. On the south-east, this prehistoric culture has been traced upto Limbdi State in Kathiawar. Of the long period of more than 2,000 years that separate the pre-historic monuments referred to above from the historic period of India, little or nothing is yet known, but there is every hope that this gap in our knowledge may be filled in by further excavations in the western U P. From the time of the Mauryas, i.e., 4th century B C, the history of architecture and the formative arts of India is clear and can be traced with relative precision. The financial stringency caused by the world war cannot allow the programme of excavation to be carried as might be wished.

Mauryan Monuments—The earliest monuments of the historical period that have come down to us relate to the Mauryan period from which time onwards the main currents of Indian Archæology are pretty clear, thanks to the systematic research of the last half a century, and in particular the field work of the last four decades. The Mauryan monuments include certain caves in the Barabar hills, the remains of a pillared hall near Patna (ancient Pataliputra), remains of the wooden palisade near Patna, a number of stupas at different places, built of large sized bricks traditionally attributed to Asoka, and a wealth of minor antiquities such as sculptures, terracottas, beads, etc., recovered in the excavations at Patna, Taxila (Bir mound), Benares and Sarnath and in course of the sewage operations at Patna. The best example of Mauryan sculpture is the exquisite lion capital at Sarnath which represents the art of the Imperial court of Asoka which though Indian in tradition, was enlivened by fresh contact with the Perso-Greek world. Other sculptures of the period include a well modelled female and two male statues from Patna now in the Calcutta Museum, and other

statues from Benagar (Central India Parkham near Madras) These characterised by a feeling of volume and mass exhibit rather primitive conception of modelling characteristic of Indian popular art. The rock and pillar edicts of Asoka (Circa 250 B.C.), deserve special mention. His major rock edicts are engraved in seven places ranging from Shahbazzarhi in the Peshawar District to Jonnagiri in the Karnul District in the south. Amongst the thirteen pillars of Asoka (besides the Elephant capital of a 14th at Sankisa and a fragment of a 15th at Benares) ten bear his inscriptions. Of these the Lauriya-Nandargarh column in the Champaran District, Tirhut, is practically unimpaired. The capital of each column, like the shaft, was monolithic, and comprised three members, viz., a Persepolitan bell, abacus, and crowning sculpture in the round. Special mention must be made here of the *stupa* at Piprahwa opened by Peppé in 1893, which yielded a large stone box containing an inscribed staitite or soap-stone reliquary with a number of relics and beautiful precious stones now preserved at the Indian Museum, Calcutta. The inscription written in characters of the 4th-3rd century B.C., speaks of the relics being of the Buddha himself and enshrined by his kinsmen, the Sakyas.

Sunga Art—The Mauryas were followed in the second century B.C. by the Sungas in the east, while in north-west India Græco-Bactrian rulers were extending their sway. The Buddhist stupa at Bharhut (Nagaud State, Central India) is the most typical and remarkable monument of this period illustrating the simple but expressive character of the art. The fragments of the railing around the Bharhut stupa, now kept in the Indian Museum, Calcutta, show how the artists have succeeded in depicting the stories of Buddha's life and his former existence both in human and animal forms, such as the monkey, deer or elephant. Besides dedicatory inscriptions the labels inscribed on the Bharhut panels are of unique importance. Antiquities of this period particularly terracottas figurines have been found in the excavations of city sites all over North India, notably Kosam and Bhita near Allahabad Ahichchhatra near Bareilly, Benares and Patna.

Sanchi Monuments—The best preserved in the series of early Buddhist monuments in India are the magnificent Buddhist remains at Sanchi in Bhopal State. Here the main stupa of which the core probably belongs to the time of Asoka, was later faced with stone and surrounded by a stone railing with four great gateways, one at each cardinal point, sometime about the first century B.C. The four gateways and another in front of stupa III are elaborately decorated inside and out with figure sculptures and bas-reliefs also referring to Buddha's life or the *jataka* legends, in a more developed style than Bharhut. Besides the stupas, a number of other buildings, temples, apsidal halls and monasteries of different periods form a splendid galaxy, illustrating the principal phases of the religion of the Buddha, from its early days to its decline.

Taxila—The extensive remains of the ancient city of Taxila, near Rawalpindi, are among the most important in the country, constituting three different cities that flourished in successive epochs and a number of monastic establishments entered around stupas, situated in the suburbs

or perched on the tops of hillocks in the vicinity. For over a quarter of century, Sir John Marshall's labours here have served to elucidate the splendid history and culture of this centre, the meeting-place of the three great civilizations of India, Greece and Persia. The most prosperous city was the Indo-Scythian city, now known as Sirkap, dating from a century on either side of the Christian era with regularly planned streets and houses, the antiquities from which, including exquisite jewellery, beads, coins, all kinds of household objects and pottery, etc., form the bulk of the exhibits of the fine Museum on the spot.

The Græco Buddhist School of Gandhara—Sometime in the 1st century A.D. a new school arose in the north-west in what is known as the Gandhara country (comprising the region from Taxila to Peshawar and beyond including the Kabul valley) indicating a flood of new artistic ideas based on the Græco-Roman models, brought in by the contact of the Græco-Scythian and Parthian rulers. The enthusiastic following which the religion of Buddha then received in this region led to a phenomenal building activity in the shape of stupas and monasteries which were profusely decorated with sculptures, freezes and motifs revealing the influence of western art. One innovation introduced by the Gandhara school was the image of Buddha which the older indigenous school refrained from attempting, the person of Buddha being invariably indicated by means of symbolical representations. The Museums at Lahore and Peshawar and to a less extent the Indian Museum bear witness to the prolific activity of the Gandhara sculptors at such centres as Takhti-Bahi, Sahri-Bahlol, Lorian Tangai, Jamalgarhi and Shahji-ki-Dheri, near Peshawar. The period of the Kushana Emperor, Kanishka (2nd century A.D.) was the climax of Gandhara art, and along with the extension of Kushana rule in the interior, the new forces made themselves felt in the Gangetic valley, particularly Mathura. A second Gandhara school which flourished in the third and fourth centuries A.D. and shows an exuberance of stucco reliefs is also now recognised.

Mathura—Mathura one of the most important religious and art centres in northern India, from ancient times was galvanised into activity from the second century A.D. onwards. Here the abundance of red sand-stone in the neighbourhood was availed of by the followers of all the religions and some of the earliest Brahmanical and Jain images were manufactured here, while the fusion of indigenous and western art was manifested in a peculiarly attractive and playful though sensuous art. From Mathura the Buddha image and some of the Hellenistic motifs travelled further to the east and south and even the distant Buddhist school of the lower Krishna valley as at Amravati, Nagarjunikonda and other places such motifs as the garland bearer have been found. By the fourth century A.D. the Hellenistic element in Indian art was, however, completely absorbed when under the stimulus of the Gupta Empire Indian art reached its golden age.

The Gupta Age—The rise of the Gupta dynasty in northern India early in the fourth century was a signal for the high water mark of Indian achievement in literature, art and sculpture. A thoughtful synthesis of the best impulses of Indian art and the foreign influence

was brought about in this period of which the keynote was a broad intellectualism and a balance between spiritual thought and material expression. The best sculpture of this period has been found in Sarnath, Muttra, Deogarh and Garhwa in the United Provinces, while examples of terracotta and minor arts have been found in all north Indian excavations. Sarnath, where Buddhism first saw the light of the day, was the most prosperous centre of Buddhism at this time and, significantly enough, is the centre of a Buddhist revival in India, the Mulagandhakuti vihara founded here by the Mahabodhi Society, having received from the Government of India three Buddhist relics recovered from excavations at Nagarjunikonda in Madras, Mirpurkhas in Sind and Taxila in the Punjab. In the field of religion the Brahmanical faith was steadily in the ascendancy while Buddhism still held its own, the intellectualism of the age finding expression in a broad spirit of tolerance. Simplicity of conception and restrained ornament is the keynote of the architecture of this period, examples of which are found at Sanchi, Bhumara, Deogarh and other places. A well known monument of the Gupta period is the iron pillar standing in the middle of the open court of the mosque near the Qutb Minar near Delhi, which has an inscription referring to king Chandra (identified with Chandragupta II) circa A.D. 379-413. It is wonderful to find that a bar of wrought iron of such dimension should have been made in India at this early period and still more surprising that not a speck of rust appears anywhere on it in spite of the weather action of 15 centuries. Other interesting examples of wrought iron are the beams from Konarak, 12th century, and the iron pillar at Dhar CI, dating back to the time of the Paramara king Bhoja early 11th century.

Caves—Of the rock cut caves which are among the wonders of India, nine-tenths belong to Western India. The most important groups of caves are situated in Bhaja, Bedsa, Karli, Kanheri, Junnar, Nasik and Badami in the Bombay Presidency, Ellora and Ajanta in Nizam's Dominions, Udaygiri and Bagh in Gwalior State, Barabar and Nagarjuni 16 miles north of Gaya, Udayagiri and Khandagiri 20 miles from Cuttack in Orissa and the Seven Pagodas near Madras. The caves belong to the three principal sects into which ancient India was divided, viz., the Buddhists, Hindus and Jains. The earliest caves so far discovered are those of Barabar and Nagarjuni which were excavated by Asoka and his grandson Dasaratha, and dedicated to Ajivikas, a naked sect founded by Mankhaliputta Gosala. The next earliest caves are those of Bhaja, Pithkhora and cave No. 9 at Ajanta and No. 19 at Nasik. They have been assigned to 200 B.C. by Fergusson and Dr. Burgess, although Sir John Marshall ascribes a later date, about the middle of the first century B.C. The Buddhist caves are generally of two types—the *chaityas* or chapel caves and *viharas* or monasteries for the residence of monks, particularly during the rainy season. The first are with vaulted roofs and horse-shoe shaped windows over the entrance and have interiors consisting of a nave and side aisles with a small *stupa* at the inner circular end, one of the most striking examples being the great *chaitya* cave at Karli in Poona district. They are thus remarkably similar to Christian basilicas. The second class consists of a hall surrounded by a number of cells. In the later

viharas there was a sanctum in the centre of the back wall containing a large image of Buddha. Hardly a *chaitya* is found without one or more *viharas* adjoining it. Of the Hindu caves, the Udaygiri group near Bhilsa in Gwalior State is the earliest, (early 5th century). In Western India, the group at Badami is earliest in date, but that at Elephanta near Bombay is perhaps the most frequented and best known. Here the sculptures, all Saiva in character include the famous Trimurti (properly Mahesamurti) which ranks among the world's most forceful sculptures. The famous *rathas* and caves, popularly known as the Seven Pagodas at Mahabalipuram (6th century A.D.) in Chingleput District near Madras have some spirited sculpture and complete models of structural temples out of living rock, mostly attributable to the Pallava Kings in the seventh century A.D. But by far the most renowned cave-temple of the Hindus is that known as Kailasa at Ellora. It is on the model of a complete structural temple but carved out of solid rock. It also is dedicated to Shiva and was excavated by the Rashtrakuta king Krishna I (A.D. 768), who may still be seen in the paintings in the ceilings of the upper porch of the main shrine. Of the Jain caves the earliest are at Khandagiri and Udayagiri, those of the mediæval type, in Indra Sabha at Ellora and Sittannavasal in Pudukkottai State, which contain paintings of the 7th century A.D., and those of the latest period, at Ankal in Nasik.

Fresco Paintings—The ceilings of many of these caves were once adorned with fresco paintings. The earliest cave paintings are those at Ramgarh in Sirgutta State in the Eastern States agency, but the most famous and the best preserved are those at Ajanta, which were executed at various periods between 350-650 A.D. and have elicited high praise as works of art. Copies were first made by Major Gill, but most of them perished by fire at the Crystal Palace in 1866. The lost ones were again copied by John Griffiths of the Arts School, Bombay, half of whose work was similarly destroyed by a fire at South Kensington. They were last copied by Lady Herringham during 1901-11. Her pictures, which are in full scale, are at present exhibited at the Indian Section of the Victoria and Albert Museum, South Kensington, and have been reproduced in a volume brought out by the India Society. Another group of caves where equally interesting though less well preserved paintings exist is found at Bagh in Gwalior State. These caves form the subject of a monograph issued by the India Society. Recently the subject of paintings has drawn much attention and fresh discoveries of fresco paintings, mostly fragmentary, have been reported from places in Southern India, such as Badami, Conjeevaram, Tanjore, Tirumalaipuram and Padmanabhapuram, which provide an almost continuous chain of examples illustrating the development of this art through the centuries from the Chalukya and Pallava times (6-7 Century A.D.) to the Vijayanagar Empire.

Structural Temples—Of this class the earliest examples are the Varaha temple at Deogarh, District Jhansi, another temple at Sanchi, the brick temples at Bhutargaon in the district of Cawnpore, and the temples at Tigowa, Nachna, Eran and Bhumara all of which belong to the Gupta period and a later one at "in

Intermediate between these two main styles comes the architecture of the Deccan, called Chalukyan by Fergusson. In this style the plan becomes polygonal and star-shaped instead of quadrangular, and the high-storeyed spire is converted into a low pyramid in which the horizontal treatment of the Dravidian is combined with the perpendicular of the Indo-Aryan. Some fine examples of this type exist at Dambal, Rattihalli, Tilliwali and Hingali at Dharwar, Bombay Presidency, and at Ittagi and Warangal in Nizam's Dominions. But it is in Mysore among the temples at Halebidu, Belur, and Somnathpur that the style is found in its full perfection.

Saracenic Architecture—This begins in India with the 13th century after the permanent occupation of the Muhammadans. Their first mosques were constructed of the materials of Hindu and Jaina temples, and sometimes with comparatively slight alterations

æology.

The *Qutub-ul-Islam* mosque near the Quth Minar at Delhi and the *Arhar-din-a-jhompra* mosque at Ajmer are the best examples of this kind. The Muhammadan architecture of India varied at different periods and under the various dynasties, imperial and local. The early Pathan architecture of Delhi was massive and at the same time was characterised by elaborate richness of ornamentation. The Qutb Minar and tombs of Iltutmish and Ala-ud-din Khilji are typical examples. The tomb of Ghiasuddin Tughlak at Tughlakabad, the Lodi tombs, and lastly the tomb of Sher Shah at Sasaram in Bihar clearly illustrate the subsequent progress of Pathan architecture. Of the Sharqi style we have three mosques in Jaunpur besides several tombs. At Mandu in the Dhar State, a third form of Saracenic architecture sprang up, and we have here the Jamī Masjid, Hoshang's tomb, Jahaz Mahal and Hindola Mahal as the most notable instances of the secular and ecclesiastical styles of the Malwa Pathans. The Muhammadans of Bengal again developed their style, somewhat feeble and ornate, and Gaur and Pandua teem with the ruins of the buildings of this type, the most important of which are the Adina Masjid of Sikandar Shah, the Eklakhi mosque, Baradwari Masjid, Latian Masjid, small golden mosque and so forth. The Bahmani dynasty of Gulbarga and Bidar were also great builders, and adorned their capitals with important buildings. The most striking of these is the great mosque of Gulbarga, which differs from all mosques in India in having the whole central area covered over so that what in others would be an open court is here roofed by sixtythree small domes. "Of the various forms which the Saracenic architecture assumed," says Fergusson, "that of Ahmedabad may probably be considered to be the most elegant." It is notable for its carved stone work, and the work of the perforated stone windows in Sidi Sayyid's mosque, the carved niches of the minars of many other mosques, the sculptured *Mihrabs* and domed and panelled roofs, is so exquisite that it will rival anything of the sort executed elsewhere at any period. No other style is so essentially Hindu. In complete contrast with this was the form of architecture employed by the Adil Shahi dynasty of Bijapur. There is here relatively little trace of Hindu forms or details. The principal buildings now left at Bijapur are the Jamī Masjid, Gagan Mahal, Military Mahal, Ibrahim Rauza and mosque and the Gol Gumbaz. Like their predecessors, the Pathans of Delhi, the Moghuls were a great building race. Their style first began to evolve itself during the reign of Akbar in a combination of Hindu and Muhammadan features. Noteworthy among the emperor's buildings are the tomb of Humayun, and the palaces at Fatehpur Sikri and Agra. Of Jahangir's time his tomb at Lahore and the tomb of Ibad-ud-daula at Agra are the most typical structures. "The force and originality of the style gave way under Shah Jahan to a delicate elegance and refinement of detail." And it was during his reign that the luxurious buildings in the forts at Delhi and Agra and the most splendid of the Moghul tombs, the Taj Mahal at Agra, the tomb of his wife Mumtaz Mahal, was constructed. The Moti Masjid in Agra Fort is another surpassingly pure and elegant monument of his time.

Inscriptions—We now come to inscriptions, of which numbers have been brought to light in India and are particularly numerous in South India. They have been engraved on varieties of materials, but principally on stone and copper. The former are mostly associated with temples of which they record the construction or donations, while the copper plate records are usually grants of land made by Kings on special occasions. In either case, the mention of the exploits of the donor and his ancestors and the dates (where specified) give the student of history, valuable contemporary material, which has made possible to reconstruct India's history, from century to century and dynasty by dynasty. The earliest of these are found incised in two distinct kinds of alphabet, known as Brahmi and Kharoshthi, the latter being confined to the north-west of India. Brahmi was read from left to right, and from it have been evolved all the modern vernacular scripts of India. The Kharoshthi script was written from right to left, and was a modified form of the ancient Aramaic alphabet introduced into the Punjab during the period of the Persian domination in the 5th century B C. It was prevalent up to the 4th century A D, and was supplanted by the Brahmi. The earliest dateable inscriptions are the celebrated edicts of Asoka to which a reference has been made above. One group of these has been engraved on rocks, and another on pillars. They have been found from Shahbargarh 40 miles north-east of Peshawar to Nighva in the Nepal Tarai, from Girnar in Kathiawar to Dhauli in Orissa, from Kalsi in the Lower Himalayas to Jonnagiri in Madras showing by the way the vast extent of territory held by him. The reference in his Rock Edicts to the five contemporary Greek Princes, Antiochus II of Syria, Ptolemy Philadelphus, and so forth is exceedingly interesting, and fixes B C 269 as the date of his coronation. His Rumminder pillar inscription, again, discovered in Nepal Tarai, now settles, beyond all doubt, the birth-place of Buddha which was for long disputed. Another noteworthy record is the inscription of the Besnagar pillar at Besnagar, near Bhilsa, C I, which records the erection of this column, which was a Garuda pillar, in honour of the god Vasudeva by one Heliodoros, son of Dion, an envoy of King Antialcidas of Taxila. Heliodoros is herein called a *Bhagavata* which shows that though a Greek he had become a Hindu and a Vaishnava. Another inscription worth noticing in this connection is that of Cave No 10 at Nasik, in which Ushavadata, who calls himself a Saka or an Indo-Scythian, granted three hundred thousand kine and sixteen villages to gods and Brahmins and annually fed one hundred thousand Brahmins. Here is another instance of a foreigner having embraced Hinduism. Thus for the political, social, economical and religious history of India at the different periods the inscriptions are invaluable records, and are the only light but for which we are 'forlorn and blind'.

Numismatics—The part played by Numismatics in reconstructing India's ancient history may also here be mentioned in brief. For the Indo-Greek, Indo-Scythian and Indo-Parthian periods, coins are our almost exclusive source of information, having revealed the names of scores of rulers, otherwise unknown. The entire genealogy, succession and regnal years of the kings of Kathiawar and surrounding terri-

tories, known as the Western Kshatrapas (2nd to 4th centuries A D) has been built up on their numerous coins. The history of various tribes, families and rulers in different regions of Northern India is made up of information pieced together from their numismatic issues and the chronology of most of the historical excavations has been fixed by the finds of coins in the different strata.

Archæological Department—As the archæological monuments of India must attract the attention of all intelligent visitors, they would naturally feel desirous to know something of the Archæological Department. The work of this Department is primarily twofold, conservation, and research and exploration. None but spasmodic efforts appear to have been made by Government in these directions till 1870 when they established the Archæological Survey of India and entrusted it to General (afterwards Sir) Alexander Cunningham, who was also the first Director-General of Archæology. The next advance was the initiation of the local Surveys in Bombay and Madras three years after. The work of these Surveys, however, was restricted to antiquarian research and description of monuments, and the task of conserving old buildings was left to the fitful efforts of the local Governments, often without expert guidance or control. It was only in 1878 that the Government of India under Lord Lytton awoke to this deplorable condition, and sanctioned a sum of 3½ lakhs to the repair of monuments in United Provinces, and soon after appointed a conservator, Major Cole, who did useful work for three years. Then a reaction set in, and his post and that of the Director-General were abolished. The first systematic step towards recognising official responsibility in conservation matters was taken by Lord Curzon's Government who established most of the Archæological Circles that now obtain placed them on a permanent footing and united them together under the control of a Director-General, provision being also made for subsidising local Governments out of imperial funds, when necessary. The Ancient Monuments Preservation Act was passed for the protection of historic monuments and relics especially in private possession and also for State control over the excavation of ancient sites and traffic in antiquities. Under the direction of Sir John Marshall, Kt, C I E, late Director-General of Archæology, a comprehensive and systematic campaign of repair and excavation was prosecuted and at present the Central Government bears all expenditure in connection with the preservation and maintenance of monuments, as well as with excavation and research. Under later Directors-General it was continued with equal vigour (the present D G is Rao Bahadur K N Dikshit) and the result of it is manifest in the present altered conditions of many old and historic buildings and in the scientific excavation of buried sites such as Taxila, Pataliputra, Sanchi in the Bhopal State, Sarnath near Benares, Nalanda in Bihar, Paharpur in Bengal and Nagarjunikonda in Madras and in the Indus Valley at Harappa in the Punjab and Mohen-jodaro in Sind. The latest systematic excavations are those at Ramnagar (ancient Aluchehatra) in Bareilly District, U P., where an extensive walled town inhabited from the second century B C to the ninth century A D has been unearthed stratum by stratum. Of all these works, those of most general interest are the Harappa and Mohen-jodaro.

for here the Archaeological Department have unearthed remains of prehistoric cities dating back to 3000 B C and further. The Archaeological Survey has devoted considerable attention to the organization and development of museums as centres of research and education. It maintains the archaeological section of the Indian Museum at Calcutta, small museums at the Forts at Delhi and Lahore, and at the Taj, the Central Asian Antiquities Museum at New Delhi and has erected local museums at the excavated sites of Taxila, Sarnath, Nalanda, Mohen-jodaro and Harappa with the object of keeping the principal movable antiquities recovered at these sites in close association with the structural remains to which they belong, so that they may be studied amid their natural surroundings and not lose focus and meaning by being transported to some distant place. Duplicates of antiquities from Mohen-jodaro and other places have, however, been widely distributed among other Museums.

The epigraphical material dealt with by the Archaeological Survey has enabled the history and chronology of the various dynasties of India to be established on a firmer basis and in greater detail. The "Epigraphia Indica" is now in the 25th volume, a revised edition of the Asoka inscriptions has been recently published, while the companion volume of post Asokan Brahmi inscriptions is under preparation along with two others devoted to the records of the Gupta and Kalachuri epochs. The volume of work done in South India, which is particularly rich in lithic records, will be apparent from the fact that over 20,000 inscriptions have been copied and noticed in the Annual Reports on South Indian epigraphy and a large number published *in extenso*.

The example of British India has stimulated several among the progressive Indian States to create their own Archaeological Departments. Prominent among these must be mentioned Hyderabad, Mysore, Gwalior, Baroda and Jaipur. In Hyderabad the systematic and scientific treatment of the frescoes at Ajanta is an outstanding achievement of the Archaeological Department, which was created in the year 1914. Besides this, attention has been devoted to the rock cut temples at Ellora and many other structural temples. Among the Islamic monuments the great mosque of Gulbarga and the Brahmani mosque at Bidar have been fully conserved. Of late, systematic excavation of ancient sites at Maski and Paithan has been a regular

feature of the Department's work the latest excavations at the site of Kondapur have brought to light the remains of a prosperous city of the Andhra period. The Mysore Archaeological Department has nearly completed half a century of its existence. The first Director, Mr. B. L. Rice, published some 10,000 inscriptions in 12 volumes of the Epigraphia Karnatica. This progress has been well maintained, and the conservation work has rescued many famous temples, such as the Kesava temple at Somanathpur, and the temples at Belur and Halebid. Excavations conducted at Chandravalli and Brahmagiri have been very fruitful. In Gwalior the Department established in 1915 has done excellent work in exploration of ancient sites, such as Pawaya, Ujjain, Jeonagar and Mandasor. The conservation of the Bagh caves and other ancient monuments and the maintenance of a good museum are among the other achievements of the Department. In Jaipur excavations conducted by the late Rai Bahadur Daya Ram Sahni have revealed the existence of a unique Buddhist establishment at Bairat and a city site near the Sambhar lake. The latest excavations by the Department at Rairth, an ancient commercial and industrial mart have brought to light large hoards of punch-marked and other coins of early date. The recently started Archaeological Department of the Baroda State has done a valuable work in the listing of monuments and the exploration of several sites including Amreli in Kathiawad and Pattan in Gujarat. Indore, Mayurbhanj, Travancore, Jodhpur, Kashmir, Pudukkottai, Patna, Rewah and Cochin are among the States that maintain Archaeological Departments of their own.

The recently amended Ancient Monuments Preservation Act has established a system of licenses for scientific excavations to non-official bodies. The first Society to take part in this work was the American School of Indic and Iranian Studies which, co-operating with the Boston Museum of Fine Arts, organized an expedition for work in Chanhu-daro in Sind in 1930. Here, several phases of the prehistoric culture of the Indus Valley represented by Harappa were unearthed. Unfortunately the work was discontinued after the first season. The University of Calcutta have conducted excavations at Bangarh in North Bengal for a number of years, with success and the Punjab Exploration Fund have done work at the site of Bhera in the District of Punjab.

Indian Time.

For many years Indian time was in a state of chaotic confusion. What was called Madras or Railway time was kept on all the railways and each great centre of population kept its own local time, which was not based on any common scientific principle and was divorced from the standards of all other countries. It was with a view to remedying this confusion that the Government of India took the matter up in 1904, and addressed to the Local Government, and through them to all local bodies, a long letter which reviewed the situation and made suggestions for the future. The essential point in this letter are indicated below.

"In India we have already a standard time which is very generally, though by no means

universally, recognised. It is the Madras local time, which is kept on all railway and telegraph lines throughout India and which is 5h. 21m. 10s. in advance of Greenwich. Similarly Rangoon local time is used upon the railways and telegraphs of Burma, and is 6h. 24m. 47s. ahead of Greenwich. But neither of these standards bears a simple and easily remembered relation to Greenwich time.

The Government of India have several times been addressed by Scientific Societies, both in India and in England, and urged to fall into line with the rest of the civilised world. And now the Royal Society has once more returned to the attack. The Committee of that Society which advises the Government of India upon matters

connected with its observatories, writes — 'The Committee think that a change from Madras time to that corresponding to a longitude exactly 5½ hours east of Greenwich would be an improvement upon the existing arrangements: but that for international scientific purposes the hourly zone system, making the time 5 hours in advance of Greenwich in the west, and 6 hours in advance in the east of India would be preferable.

'Now if India were connected with Europe by a continuous series of civilised nations with their continuous railway systems all of which had adopted the European hour-zone system, it would be imperative upon India to conform and to adopt the second suggestion. But as she is not, and as she is as much isolated by uncivilised States as Cape Colony is by the ocean, it is open to her to follow the example of that and some other similarly situated colonies and to adopt the first suggestion.

'It is believed that this will be the better solution. There are obvious objections to drawing an arbitrary line right across the richest and most populous portions of India, and so as to bisect all the main lines of communication, and keeping times differing by an hour on opposite sides of that line. India has become accustomed to a uniform standard in the Madras time of the railways; and the substitution for it of a double standard would appear to be a retrograde step, while it would, in all probability, be strongly opposed by the railway authorities. Moreover, it is very desirable that whatever system is adopted should be followed by all Europeans and Indians alike, and it is certain that the double standard would puzzle the latter greatly; while by emphasising the fact that railway differed from local time, it might postpone or even altogether prevent the acceptance of the former instead of the latter by people generally over a large part of India. The one great advantage which the second possesses over the first alternative is, that under the former, the difference between local and standard time can never exceed half an hour; whereas under the latter it will even exceed an hour in the extreme cases of Karachi and Quetta. But this inconvenience is believed to be smaller than that of keeping two different times on the Indian system of railways and telegraphs.

'It is proposed, therefore, to put on all the railway and telegraph clocks in India by 8m. 50s. They would then represent a time 5½ hours faster than that of Greenwich, which would be known as Indian Standard Time. and the difference between standard and local time at the places mentioned below would be approximately as follows, the figures representing minutes, and F. and S. meaning that the

standard time is in advance of or behind local time respectively — Dibrugarh 51 S., Shillong 38 S., Calcutta 24 S., Allahabad 2 F., Madras 9 F., Lahore 33 F., Bombay 39 F., Peshawar 44 F., Karachi 62 F., Quetta 62 F.

'This standard time would be as much as 54 and 55 minutes behind local time at Mandalay and Rangoon, respectively; and since the railway system of Burma is not connected with that of India, and already keeps a time of its own, namely, Rangoon local time, it is not suggested that Indian Standard Time should be adopted in Burma. It is proposed, however, that instead of using Rangoon Standard Time as at present, which is 6h. 24m. 47s in advance of Greenwich, a Burma Standard Time should be adopted on all the Burmese railways and telegraphs, which would be one hour in advance of Indian Standard Time, or 6½ hours ahead of Greenwich time, and would correspond with 97° 30' E longitude. The change would bring Burma time into simple relation both with European and with Indian time, and would (among other things) simplify telegraphic communication with other countries.

'Standard time will thus have been fixed for railways and telegraphs for the whole of the Indian Empire. Its general adoption for all purposes, while eminently advisable, is a matter which must be left to the local community in each case.'

It is difficult to recall, without a sense or bewilderment, the reception of this proposal by various local bodies. To read now the fears that were entertained if Standard Time was adopted is a study in the possibilities of human error. The Government scheme left local bodies to decide whether or not they would adopt it. Calcutta decided to retain its own local time, and to-day Calcutta time is still twenty-four minutes in advance of Standard Time. In Bombay the first reception of the proposal was hostile, but on reconsideration the Chamber of Commerce decided in favour of it and so did the Municipality. Subsequently the opposing element in the Municipality brought in a side resolution, by which the Municipal clocks were put at Bombay time which is thirty-nine minutes behind Standard Time. On the 1st January 1906 all the railway and telegraph clocks in India were put at Indian Standard Time; in Burma the Burma Standard Time became universal. Calcutta retains its former Calcutta time, but in Bombay local time is retained only in the clocks which are maintained by the Municipality and in the establishments of some orthodox Hindus. Elsewhere Standard Time is universal.

Coinage, Weights and Measures.

As the currency of India is based upon the rupee, statements with regard to money are generally expressed in rupees. Down to about 1873 the gold value of the rupee (containing 165 grains of pure silver) was approximately equal to 2s., or one-tenth of a £, and for that period it is easy to convert rupees into sterling by striking off the final cipher (Rs 1,000 = £100). But after 1873, owing to the depreciation of silver as compared with gold throughout the world,

there came a serious and progressive fall in the exchange, until at one time the gold value of the rupee dropped as low as 1s. In order to provide a remedy for the heavy loss caused to the Government of India in respect of its gold payments to be made in England, and also to relieve foreign trade and finance from the inconvenience due to constant and unforeseen fluctuations in exchange, it was resolved in 1893 to close the mints to the free

coinage of silver, and thus force up the value of the rupee by restricting the circulation. The intention was to raise the exchange value of the rupee to 1s. 4d., and then introduce a gold standard at the rate of Rs. 15=£1. From 1899 onwards the value of the rupee was maintained, with insignificant fluctuations, at the proposed rate of 1s. 4d. until February 1920 when the recommendation of the Committee appointed in the previous year that the rupee should be linked with gold and not with sterling at 2s instead of 1s. 4d. was adopted. This was followed by great fluctuations. (See article on Currency System).

Notation.—Another matter in connection with the expression of money statements in terms of rupees requires to be explained. The method of numerical notation in India differs from that which prevails throughout Europe. Large numbers are not punctuated in a way that could only work satisfactorily so long as the dealings of towns and villages were self-contained and before roads and railways opened up trade between one and the other. If we take, for instance, the maund denomination of weight common all over India, we shall find that in a given city there are nearly as many maunds as there are articles to weigh. If we consider the maund as between district and district the state of affairs is worse. Thus in the United Provinces alone, the maund of sugar weighs 48½ seers in Cawnpore, 40 in Muttra, 72½ in Gorakhpur, 40 in Agra, 50 in Moradabad, 43½ in Saharanpur, 50 in Bareilly, 46 in Fyzabad, 48½ in Shahjahanpur, 51 in Goshangunge. The maund varies throughout all India from the Bengal or railway maund of 82-2/7 lbs. to the Factory maund of 74 lbs 10 oz. 11 drs., the Bombay maund of 28 lbs., which apparently answers to the Forest Department maund in use at the Fuel Depot, and the Madras maund, which some authorities estimate at 25 lbs and others at 24 lbs. and so on.

Committees of Inquiry.—These are merely typical instances which are multiplied indefinitely. There are variations of every detail of weights and measures in every part of India. The losses to trade arising from the confusion and the trouble which this state of things causes are heavy. Municipal and commercial bodies are continually returning to the problem with a view to devising a practical scheme of reform. The Supreme and Provincial Governments have made various attempts during 40 years past to solve the problem of universal units of weights and measures and commerce and trade have agitated about the question for the past century. The Indian railways and Government departments adopted a standard tola (180 grains), seer (80 tolas) and maund (40 seers) and it was hoped that this would act as a successful "lead" which would gradually be followed by trade throughout the empire, but the expectation has not been realised.

The Government of India considered the whole question in consultation with the provincial Governments in 1890-1894 and various special steps have at different times been taken in different parts of India. The Government of Bombay appointed a committee

in 1911 to make proposals for reform for the Bombay Presidency. Their final report has not been published, but they presented in 1912 an *ad interim* report which has been issued for public discussion. In brief, it points out the practical impossibility of proceeding by compulsory measures affecting the whole of India. The Committee stated that over the greater part of the Bombay Presidency a standard of weights and measures would be heartily welcome by the people. They thought that legislation compulsorily applied over large areas subject to many diverse conditions of trade and social life would not result in bringing about the desired reform so successfully as a "lead" supplied by local legislation based on practical experience. The want of coherence, *savoir faire*, or the means of co-operation among the people at large pointed to this conclusion. The Committee pointed out that at a good example of the results that in hundreds of thousands and millions, but in lakhs and crores. A lakh is one hundred thousand (written out as 1,00,000), and a crore is one hundred lakhs or ten millions (written out as 1,00,00,000). Consequently, according to the exchange value of the rupee, a lakh of rupees (Rs. 1,00,000) may be read as the equivalent of £10,000 before 1873, and as the equivalent of (about) £3,667 after 1899, while a crore of rupees (Rs. 1,00,00,000) may similarly be read as the equivalent of £1,000,000 before 1873, and as the equivalent of (about) £366,667 after 1899. With the rupee at 1s 6d. a lakh is equivalent to £7,500 and a crore is equivalent to £750,000.

Coinage.—Finally, it should be mentioned that the rupee is divided into 16 annas, a fraction commonly used for many purposes by both Indians and Europeans. The anna was formerly reckoned as 1½d., it may now be considered as exactly corresponding to 1d. The anna is again sub-divided into 12 pices.

Weights.—The various systems of weights used in India combine uniformity of scales with immense variations in the weights of units. The scales used generally throughout Northern India and less commonly in Madras and standardised in Bombay Presidency under the Bombay Weights and Measures Act, 1932, may be thus expressed as one maund=40 seer, one seer=80 tolas. The actual weight of seer varies greatly from district to district and even from village to village in India except in Bombay Presidency. In the standard system the tola is of 180 grains, and seer thus weighs 2,057 lb. and the maund 82 2/7 lbs. This standard is also used in official reports.

Retail.—For calculating retail prices, the universal custom in India is to express them in terms of seers to the rupee. Thus, when prices change what varies is not the amount of money to be paid for the same quantity, but the quantity to be obtained for the same amount of money. In other words, prices in India are quantity prices, not money prices. When the figure of quantity goes up, this of course means that the price has gone down, which is at first sight perplexing to an English reader. It may, however, be mentioned that quantity prices are not altogether unknown in England especially at small shops, where pennyworths

many groceries can be bought. Eggs, likewise, are commonly sold at a varying number for the shilling. If it be desired to convert quantity prices from Indian into English denominations without having recourse to money prices (which would often be misleading), the following scale may be adopted—based upon the assumption that a seer is exactly 2 lb., and that the value of the rupee remains constant at 1s. 4d., 1 seer per rupee=(about) 3 lb. for 2s., 2 seers per rupee=(about) 6 lb. for 2s., and so on.

The name of the unit for square measurement in India generally is the *bigha*, which varies greatly in different parts of the country. But areas have been expressed in this work either in square miles or in acres.

Proposed Reforms—Indian weights and measures have never been settled upon an organised basis suitable for commerce and trade characteristic of the modern age. They vary from town to town and village to village. A good lead is apparent in the East Khandesh District of the Presidency, where the District Officer, Mr. Simcox, gradually during the course of three years, induced the people to adopt throughout the district uniform weights and measures, the unit of weight in this case being a tola of 180 grains. But the committee abstained from recommending that the same weights and measures should be adopted over the whole Presidency, preferring that a new system started in any area should be as nearly as possible similar to the best system already prevailing there.

Committee of 1913.—The whole problem was again brought under special consideration by the Government of India in October, 1913, when the following committee was appointed to inquire into the entire subject anew—

C. A. Silberrard (*President*)
A. Y. G. Campbell,
Rustomji Fardoonji

This Committee reported, in August 1915, in favour of a uniform system of weights to be adopted in India based on the 180 gram tola, viz—

8 khaaskhas	= 1 chawal
8 chawals	= 1 rattī
8 rattīs	= 1 masha
12 mashes or 4 tanks	= 1 tola
5 tolas	= 1 chatak
16 chataks	= 1 seer
40 seers	= 1 maund

The tola is the tola of 180 grains, equal to the rupee weight. The viss has recently been fixed at 3·60 lbs or 140 tolas.

Government Action.—The Government of India at first approved the principles of the Report and left the Provincial Governments to take action, but they passed more detailed orders in January, 1922. In these they again, for the present and subject to the restrictions imposed by the Government of India Act and the devolution rules, left it entirely to local Governments to take such action as they think advisable to standardise dry and liquid measures of capacity within their provinces. Similarly, they announced their decision not to adopt all India standards of length or area.

As regards weights they decided in favour of the standard mentioned under the heading "Weights", earlier in this article, this having been recommended by a majority of the Weights and Measures Committee and having received the unanimous support of the Local Governments. At the same time they provisionally undertook to assist provincial legislation or standardisation and stated that if subsequently, opinion developed strongly in favour of the Imperial standardisation of weights, the Government of India would be prepared to undertake such legislation, but for the time being they considered that any such step would be premature.

By 1939 opinion in favour of legislation by the Government of India for the standardisation of weights crystallised to the extent that the Indian Legislature passed the Standards of Weight Act (Act No IX of 1939) applicable to the whole of British India. The Act received the assent of the Governor-General of India on the 28th March, 1939, and was published in Part IV of the Gazette of India of the 1st April, 1939. The Act laid down the following standard weights—

- the standard tola, being a weight of 180 standard grains,
- the standard seer, being a weight of 80 standard tolas or 14,400 standard grains,
- the standard maund, being a weight of 40 standard seers,
- the standard pound, being a weight of 7,000 standard grains,
- the standard ounce, being one-sixteenth part of the weight of a standard pound,
- the standard hundred-weight, being a weight of 112 standard pounds,
- the standard ton, being a weight of 2,240 standard pounds.

Under sub-section (2) of section 4 of the Act, the Central Government undertook to supply to each Provincial Government a complete set of duly authenticated standard weights. Accordingly in October, 1941, Government of India supplied to the Provincial Government of Bihar a complete set of Reference Standard Weights, which was placed under the charge of the Senior Marketing Officer, Bihar.

The enforcement of standard weights throughout the Province of Bihar, as laid down in Act IX of 1939 of the Central Government, was awaiting a supplementary provincial legislation which may be possible under normal conditions. But Government of Bihar in their notification No 185 D R dated the 7th May, 1942, in exercise of the power conferred by sub-section (1) of section 92 of the Government of India Act, 1935, have directed that the Standards of Weight Act, 1939 (IX of 1939), shall apply to the Chota Nagpur Division and to the Santal Parganas District, as a special measure. In Bihar it was felt that it may be convenient to start with the enforcement of standard weights alone in the first instance, and the measures of capacity may be left alone for some time to allow the buyers and sellers to adjust the measures on the basis of the standard weights."

The following are the Standard Weights and Measures according to the Bombay Weights and Measures Act of 1932.—

Weights—

The Bombay Tola of 180 grains.
The Bombay Seer of 80 tolas.
The Bombay Maund of 40 seers.
The sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$ and $\frac{1}{16}$ and the multiples 2, 4 and 8 of the tola, seer and maund.
The pound avoirdupois equal to 7,000 grains and the sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{16}$, $\frac{1}{32}$ and 8 ounces, the multiples 1, 2, 4, 7, 11, 28 lbs. (a quarter), 56 lbs., 112 lbs. (1 cwt) and 2,240 lbs (1 ton)

Dry measures—

The Bombay Seer.
The sub-multiples $\frac{1}{2}$, $\frac{1}{4}$ and $\frac{1}{8}$ seer.
The Bombay Chhatrak— $\frac{1}{16}$ seer.
The Adras— $\frac{1}{2}$ seer
The Adholl—2 seers
The Bombay Payall of 4 seers
The Bombay Maund of 16 paxalls
The Bombay Map of 2 maunds.

Liquid measure—

The Bombay seer
The sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$ and $\frac{1}{16}$ seer.
The multiples 2, 4 and 8 seer.
The Imperial gallon,
The Pint— $\frac{1}{2}$ gallon.

Length—

The Inch— $\frac{1}{36}$ th yard, and
The Foot—3rd yard.
The Furlong of 220 yards
The Mile of 1,760 yards
The Yard is that unit of length which is exactly equal to the certified yard kept in the custody of the Mint Master, Bombay.

Area and volume—

The Square Yard, Square Foot and Square Inch
The Cubic Yard, Cubic Foot and Cubic Inch and sub-multiples of a Cubic Inch
The area of $\frac{1}{2}$ of the guntha.
The Guntha of 121 square yards and the acre of 4,840 square yards for land measurement
The Square of 100 square feet.
The Brast of 100 cubic feet

The Peoples of India.

It is essential to bear in mind, when dealing with the people of India, that it is a continent rather than a country. Nowhere is the complex character of Indians more clearly exemplified than in the physical type of its inhabitants. No one would confuse the main types, such as Gurkhas, Pathans, Sikhs, Rajputs, Burmans, Nagas, Tamils, etc., nor does it take long to carry the differentiation much farther. The typical inhabitants of India—the Dravidians—differ altogether from those of Northern Asia, and more nearly resemble the tribes of Malaya, Sumatra and Madagascar. Whatever may be their origin, it is certain that they have settled in the country for countless ages and that their present physical characteristics have been evolved locally. They have been displaced in the North-West by successive hordes of invaders, including Aryans, Scythians, Pathans and Moghals, and in the North-East by Mongoloid tribes allied to those of Burma, which is India only in a modern political sense. Between these foreign elements and the pure Dravidians is borderland where the contiguous races have intermingled.

The people of the Indian Empire are divided by Sir Henry Risley (Caste, Tribe and Race, Indian Census Report, 1901, the Gazetteer of India, Ethnology and Caste, Volume I, Chapter 6) into seven main physical types. There would be eight if the Andamanese were included, but this tiny group of Negrillos may be disregarded.

The Turko-Iranian, represented by the Baloch, Brahui and Afghans of Baluchistan and the North-West Frontier Province. Probably formed by a fusion of Turki and Persian elements, in which the former predominate. Stature above mean; complexion fair; eyes mostly dark but occasionally grey; hair on face plentiful; head broad, nose moderately narrow, prominent, and very long. The feature in these people that strikes one most prominently is the portentous length of their noses, and it is probably this peculiarity that has given rise to the tradition of the Jewish origin of the Afghans.

The Indo-Aryan occupying the Punjab, Rajputana, and Kashmir, and having as its characteristic members the Rajputs, Khattris, and Jats. This type, which is readily distinguishable from the Turko-Iranian, approaches most closely to that ascribed to the traditional Aryan colonists of India. The stature is mostly tall; complexion fair, eyes dark; hair on face plentiful, head long; nose narrow, and prominent but not specially long.

The Scytho-Dravidian, comprising the Maratha Brahmans, the Kunbis, and the Coorgs of Western India. Probably formed by a mixture of Scythian and Dravidian elements. This type is clearly distinguished from the Turko-Iranian by a lower stature, a greater length of head, a higher nasal index, a shorter nose, and a lower orbito-nasal index. All of these characters, except perhaps the last, may be due to a varying degree of intermixture with the Dravidians. In the higher groups the amount of crossing seems to have been slight, in the lower Dravidian elements are more pronounced.

The Aryo-Dravidian or Hindustani, found in the United Provinces, in parts of Rajputana and in Bihar and represented in its upper strata by the Hindustani Brahman and in its lower by the Chamar. Probably the result of the intermixture, in varying proportions, of the Indo-Aryan and Dravidian types. The head-form is long with a tendency to medium; the complexion varies from lightish brown to black; the nose ranges from medium to broad, being always broader than among the Indo-Aryans; the stature is lower than in the latter group and usually below the average according to the scale. The higher representatives of this type approach the Indo-Aryans while the lower members yet in many respects not very far removed from the Dravidians. The type is essentially a mixed one, yet its characteristics are readily definable, and no one would take even an

upper class Hindustani for a pure Indo-Aryan or a Chamar for a genuine Dravidian. The distinctive feature of the type, the character which gives the real clue to its origin and stamps the Aryo-Dravidian as racially different from the Indo-Aryan is to be found in the proportion of the nose

The Mongolo-Dravidian, or Bengali type of Lower Bengal and Orissa, comprising the Bengal Brahmins and Kayasthas, the Mahomedans of Eastern Bengal, and other groups peculiar to this part of India. Probably a blend of Dravidian and Mongoloid elements, with a strain of Indo-Aryan blood in the higher groups. The head is broad, complexion dark, hair on face usually plentiful; stature medium; nose medium, with a tendency to broad. This is one of the most distinctive types in India, and its members may be recognised at a glance through out the wide area where their remarkable aptitude for clerical pursuits has procured them employment. Within its own habitat the type extends to the Himalayas on the north and to Assam on the east, and probably includes the bulk of the population of Orissa, the western limit coincides approximately with the hilly country of Chota Nagpur and Western Bengal.

The Mongoloid type of the Himalayas, Nepal, Assam, and Burma, represented by the Kanets of Lahul and Kulu, the Lepchas of Darjeeling and Sikkim, the Limbus, Murms and Gurungs of Nepal, the Bodo of Assam; and the Burmese. The head is broad; complexion dark, with a yellow tinge, hair on face scanty; stature short or below average; nose fine to broad, face characteristically flat; eyelids often oblique.

The Dravidian type extending from Ceylon to the valley of the Ganges, and pervading Madras, Hyderabad, the Central Provinces, most of Central India and Chota Nagpur. Its most characteristic representatives are the Paniyans of Malabar and the Santals of Chota Nagpur. Probably the original type of the population of India, now modified to a varying extent by

the admixture of Aryan, Scythian, and Mongoloid elements. In typical specimens the stature is short or below mean; the complexion very dark, approaching black, hair plentiful, with an occasional tendency to curl; eyes dark; head long; nose very broad, sometimes depressed at the root, but not so as to make the face appear flat. This race, the most primitive of the Indian types, occupies the oldest geological formation in India, the medley of forest-clad ranges, terraced plateau, and undulating plains which stretch roughly speaking, from the Vindhya to Cape Comorin. On the east and the west of the peninsular area the domain of the Dravidian is continuous with the Ghats, while further north it reaches on one side to the Aravallis, and on the other to the Rajmahal Hills. Where the original characteristics have been unchanged by contact with Indo-Aryan or Mongoloid people, the type is remarkably uniform and distinctive. Labour is the birthright of the pure Dravidian whether hoeing tea in Assam, the Duars, of Ceylon, cutting rice in the swamps of Eastern Bengal or doing scavenger's work in the streets of Calcutta, Rangoon and Singapore, he is recognizable at a glance by his black skin, his squat figure, and the negro-like proportion of his nose. In the upper strata of the vast social deposit which is here treated as Dravidian these typical characteristics tend to thin and disappear, but even among them traces of the original stock survive in varying degrees.

The areas occupied by these various types do not admit of being defined as sharply as they must be shown on an ethnographic map. They melt into each other insensibly; and although at the close of a day's journey from one ethnic tract to another, an observer whose attention had been directed to the subject would realise clearly enough that the physical characteristics of the people had undergone an appreciable change, he would certainly be unable to say at what particular stage in his progress the transformation had taken place.

TOWN AND COUNTRY.

The percentage of the urban population to the total is 13 which shows an increase of 2 per cent since the last census, due partly to the natural increase of the pre-existing urban population and partly to migration from rural areas. The percentage of urban population ranges from 2.7 in Assam to 26.0

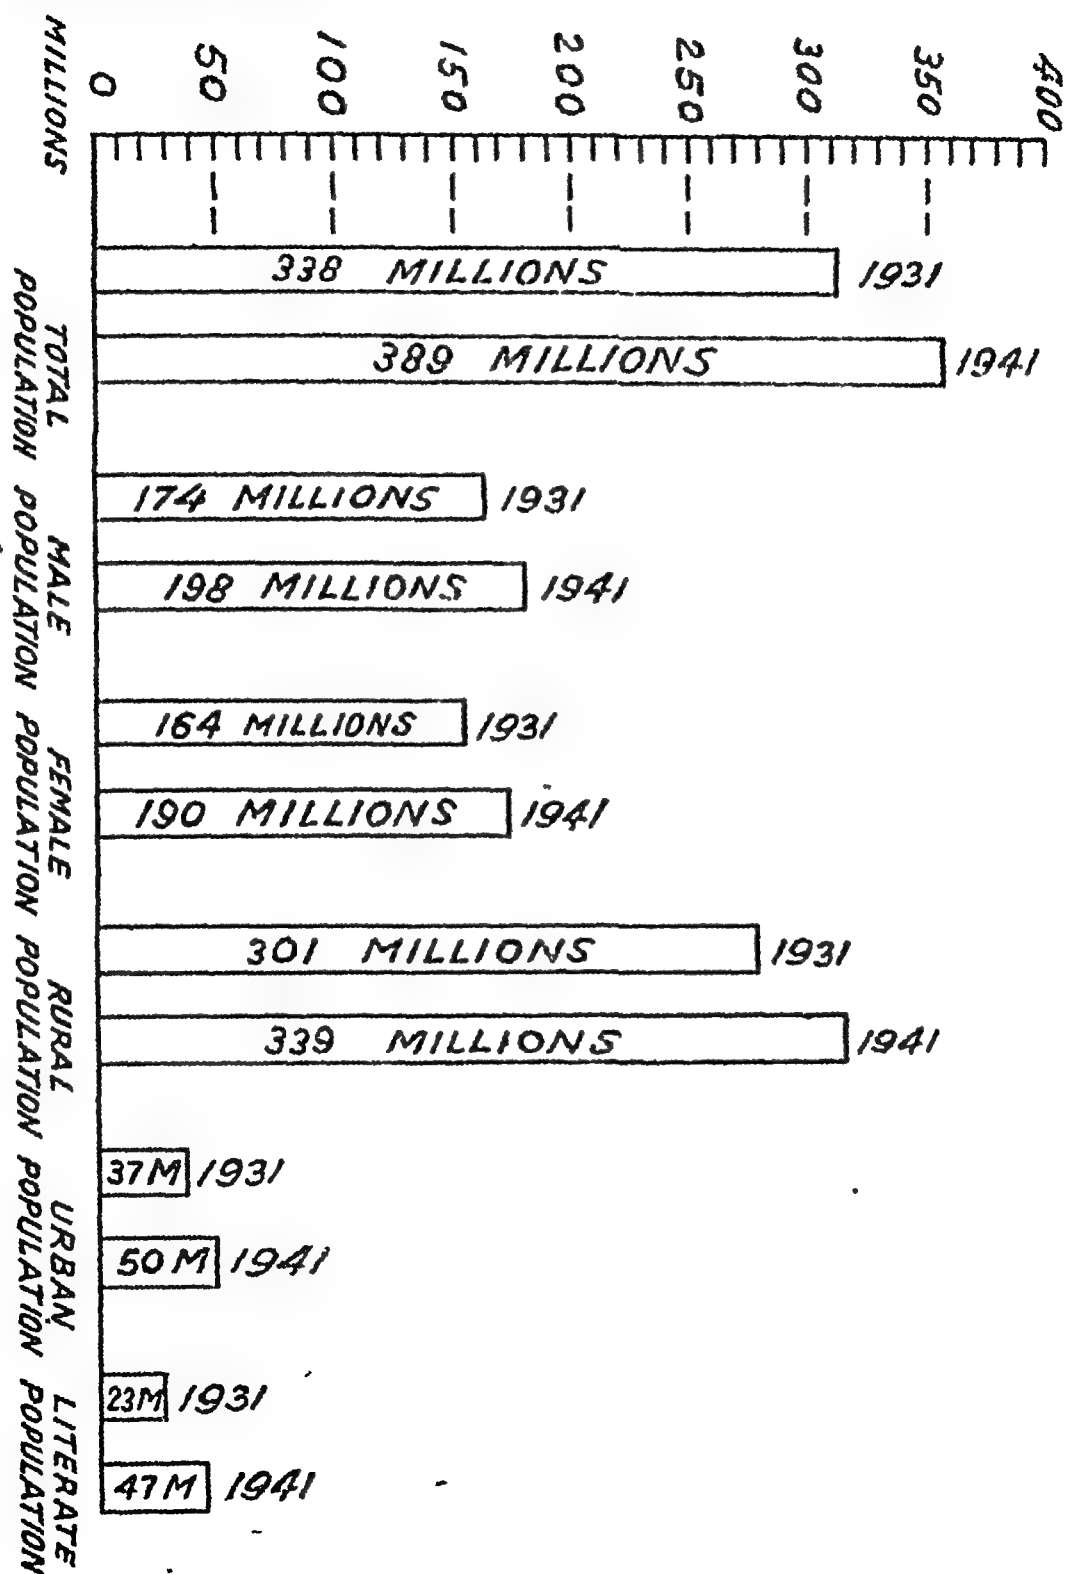

in Bombay which is the most urbanised of the major provinces. Compared to this, the urban population in France is 49 per cent, in Northern Ireland 50.8 per cent, in Canada 53.7 per cent in the U. S. A. 56.2 per cent, and in England and Wales 80 per cent.

DISTRIBUTION OF RURAL AND URBAN POPULATION

	1941		1931		Percentage of total Population					
	Places	Population (Million)	Places	Population (Million)	1941	1931	1921	1911	1901	1891
Total Population	657,996	388.8	666,924	338.1	100	100	100	100	100	100
Rural Areas	655,257	339.2	664,444	300.7	87	89	89	89	90	90
Urban Areas	2,739	49.6	2,480	37.4	13	11	10	9	9	9

Changes in Population.

The Chart below gives at a glance the changes in India's population in the decade 1931-41—the total, sex, urban rural and literacy.

COMMUNITIES.

Religion as a census criterion of differentiation had considerable drawbacks and was this year replaced by the concept of community. The community tables represent the answers of the citizens to the question on community origin. In some fields a certain degree of overlap exists, notably where tribes are concerned, since where tribal origin was returned in answer to the main question, this was the basis of tabulation. In some areas, however, *eg.* notably Assam, Christianity claims many adherents, and had the ordinary course of sorting been possible, these overlaps would have been followed up and a full picture presented. This is one of the many ways in which the contracted tabulation gave

rise to considerable difficulties. The table below gives the communities returned, but the figure of Christians refers only to those who in answer to the question about origin declared themselves Indian Christians. The number of persons professing Christianity is, however, considerable above those and, for example, in Assam alone 319,000 persons would have to be added to this figure, and indications are that Christians in this province have increased by 60% over the decade.

The figure for tribes, therefore, gives the number of persons of tribal origin, a point of considerable importance. It does not cover religion or the degree of assimilation.

Community		British India (millions)	States (millions)
Hindus	Scheduled Castes	39.8	8.8
	Others	150.8	56.0
Muslims		79.4	12.3
Tribes		16.8	8.3
Sikhs		4.2	1.5
Christians		3.5	2.5
Others		1.2	1.0

RELIGIONS.

Hindus largely predominate in the centre and south of India, and in the Madras Province they are no less than 87 per cent. of the population. Hindus are in the majority in Bihar, Orissa, the United Provinces, the Central India tracts, Rajputana and Bombay. Muslims monopolize the North-West Frontier Province, Baluchistan and Kashmir and are considerably in excess in the Punjab and Eastern Bengal and Sind. They form about 31 per cent of the population of Assam, 15 per cent in the United Provinces. The Sikhs are localized in the Punjab and the Jains in Rajputana, Ajmer-Merwara and the neighbouring States. The tribes are chiefly found in Bihar, Orissa, the Central Provinces and Assam, but Bengal, Madras, Rajputana, Central India also returned a considerable number under this head. More than half of the total number of Christians reside in South

India including the Hyderabad State. The remainder are scattered over the continent, the larger numbers being returned in the Punjab, the United Provinces, Bengal, Bihar and Bombay. The Parsees and Jews are chiefly residents of the Bombay Presidency.

The Christian community now numbers just 6.3 millions of persons in India or 1.7 per cent of the population. This constitutes an increase of 5 per cent over the last census. Nearly 60 per cent of Christians are returned from the Madras Province and its States, and the community can claim 40 persons in every 1,000 of the population of Madras and as large a proportion as 29 per cent in Cochin and 32 per cent in Travancore. Elsewhere the Christians are scattered over the larger Provinces and States of India, the Punjab, Bihar and Orissa.

MAIN STATISTICS OF THE INDIAN EMPIRE.

The Census.

The Census of India was taken on March 1, 1941. Full figures are not available but an approximate estimate puts the population at 388.8 millions. The following percentages of increase in population in particular areas indicate the extent to which it has grown since the census of 1931 placed the population of India at, 338.1 millions

Areas	Percentage of increase in population
BRITISH INDIA.	
Madras	11.6
Bombay	15.8
Bengal	20.3
U. P.	18.6
Punjab	20.5
Sihar	12.3
P	9.8
Assam	18.3
Orissa	8.8
N. W. F. P.	25.3
Sind	16.7
Baluchistan	8.2
INDIAN STATES.	
Baroda	16.6
Kashmere	10.3
Hyderabad	12.1
Mysore	11.8
Cochin	18.1
Indore	13.9
Manipur (Assam)	14.9
Gwalior	13.7
Deccan States	13.3
Orissa States	12.7
Rajputana States	18.1

On the occasion of the Census of 1931 the Congress Party had declared a boycott of the Census, while during the Census of 1941 all parties worked zealously to ensure correct recording by enumerators. During the Budget debates in March, 1941, allegations were made by several members of the Assembly that the Census operation had been vitiated by communal over-zealousness of citizens and of enumerators. Mr. M. W. M. Yeatts, C.I.E., I.C.S., Census Commissioner for India defended his staff against criticism of partiality and in the course of an interesting review of the remarkable achievement of enumerators said,—"The Indian

census is a thing of which the country should be very proud, very proud indeed. When I was in America in 1939, I was rather interested to find that two Indian administrative achievements were comparatively well-known and appreciated. One of them was the Survey of India and the other was the Census. There is here a population of 390 millions—a fifth of the world. Your census from A to Z costs you under 50 lakhs. This is only made possible by the people of the country coming forward and taking their unpaid share. Just think what it would cost if you were to pay these men. In America they pay their men four cents a head. The American census for a third of our population costs 12 crores, that is 24 times the cost of the Indian census. The English cost of census is Rs. 150 per thousand. The Indian figure comes to under 15. If you paid your enumerators one anna per head you would add 2½ crores to the cost of the census. If you paid them one pice per head you would add 62½ lakhs to the whole cost. You had nearly 3 million enumerators last time. Now you have a million and a half at least. You are able to conduct this so cheaply because the people of this country take this enquiry on their shoulders. That is an enormously creditable thing and one that our people should realise. It is a very advanced position for this great country—that this big social enquiry should be carried on by the people and within their financial resources. It is a much more advanced position than is the case in some countries that are considered to be ahead of us. Strictly speaking you could say that the census is the most truly all-India effort that we have. As for the men who have taken census, I must say that I have great regard for the Indian enumerator. Take the ordinary basis of enumeration in a village. Really half the village may take part because things like determining of age will often be settled after consultation with the older grown-up people, the stand-by in the village who remember what happened fifty years ago. Very largely it is a public operation and it is a very good thing that it should be so."

Mr. Yeatts broke new ground in many directions and the census of 1941 was a very different phenomenon from that of previous decades. The one-night theory was abandoned in favour of a period system to give full scope for the economical and efficient use of the widely differing provincial systems. It has to be remembered here as everywhere that India's census is unpaid. The number of enumerators as a consequence was more than halved in British India and approximately half for the whole country. The old schedule of former days was abandoned and the enumeration carried out directly on to the slips which were later sorted to produce the tables. These slips themselves represented another radical departure, since they carried no words in any language and could therefore be run off by the hundred millions at a single press in Calcutta. A location code was devised which enabled district and other identifying detail to be printed on the slip in the course of its preparation.

For the first time direct enumeration was undertaken beyond the north-west frontier in Dir, Chitral, Swat and Kurram by applying to these areas the full census system. Separate scrutiny was conducted of the Migratory Powsindas in the north-west. The most interesting innovation is the taking of 1/50 random samples of the entire population. These samples are to be kept at the headquarters of each province, or census unit, and can be used for ascertaining, for instance, as to what proportion of the population is supported by agriculture and make other deductions.

For reasons of economy the Government of India did not sanction the full grant of expenses with the result that although Census has been carried out on an elaborate scale the results are not to be tabulated except for variation of population. Tables giving such important information as age, or means of livelihood, or literacy by age are not to be prepared at present. Thus insurance companies and local bodies interested in social services will not get the help they used to receive from the Census Report. It is expected that a large number of Indian States will not follow the example of British India and that they will arrange for the full course of tabulation.

Certain general conclusions drawn from the Census operation may be mentioned. The need for simple literacy is appreciated all over the

country and literacy shows the most marked rise in the case of women amounting to several hundred per cent. There has been a definite movement towards towns and especially larger towns and industrial centres. Public health measures initiated early in this century have begun to show results in lower infantile mortality, longer life and better public health.

Previous censuses included Burma and Aden the figures for which have been removed now. Last census took place on the night of 26th February revealing an Indian population as below —

India	338 1 millions
British territory	256 8 millions
States	81 3 millions

The present figures of 338 8, 295 8 and 93 0, show increases of 50 millions over the whole country and 39 millions in British India.

The small table shows the percentage rate of increase between 1891 and 1941 for India, Provinces and States.

	Percentage increase (1891-1941)
India	39 1
Provinces	38 9
States	39 8

CENSUS OF INDIA, 1941—Population of Provinces and States.

† 1891-1931

* Not available

AGE AND SEX.

The table below shows the age distribution of 10,000 males and females of the Indian population by 10-yearly age groups at the last two censuses:—

Age-group.	1931.		1921.		Age-group.	1931.		1921.	
	Males.	Fe-males.	Males.	Fe-males.		Males.	Fe-males.	Males.	Fe-males.
0—10 ..	2,802	2,880	2,078	2,810	40—50 ..	968	591	1,013	967
10—20 ..	2,086	2,062	2,087	1,800	50—60 ..	501	545	619	606
20—30 ..	1,768	1,856	1,640	1,766	60—70 ..	209	281	347	377
30—40 ..	1,431	1,351	1,461	1,308	70 and over.	115	125	160	180
					Mean age ..	23.2	22.8	24.8	24.7

The mean age in India is only 23.02, as against 30.6 in England and Wales. The rate of infant mortality in India in the decade 1921-31 shows an appreciable reduction on the rate of the previous decade, even if allowance

be made for the heavy mortality of the influenza years. It is in the towns that the highest infantile mortality is found. The table below shows the rates from 1925 to 1930 for presidency towns and certain provincial capitals.

INFANTILE MORTALITY RATES PER 1,000 LIVE-BIRTHS DURING.

City.	1925.	1926.	1927.	1928.	1929.	1930.
Bombay	357	255	316	314	301	298
Calcutta	326	372	340	276	259	268
Madras	279	282	240	289	259	246
Rangoon	352	320	294	341	321	278
Lucknow	260	287	256	301	260	320
Lahore	222	241	201	204	214	187
Nagpur	258	302	254	299	291	270
Delhi	183	238	201	210	259	199

Special causes contribute to the high mortality on infants in India.

Owing to the custom of early marriage, cohabitation and child-birth commonly take place before the woman is physically mature and this, combined with the primitive and insanitary methods of midwifery, seriously affects the health and vitality of the mother and through her of the child. If the child survives the prenatal and natal chances of congenital debility and the risks of child-birth, it is exposed to the dangers of death in the early months of life from diarrhoea or dysentery. According to the Executive Health Officer of Bombay city, by far the greater number of infantile deaths are due to infantile debility and malformation, including premature birth, respiratory diseases coming next, then convulsions, then diarrhoea and enteritis.

Sex Ratio.—The figures of the population of India by sexes, as recorded by the latest

census, show a further continuation of the steady fall in the proportion of females to males that has been going on since the beginning of this century. This shortage of females is characteristic of the population of India as compared to that of most European countries. The female infant is definitely better equipped by nature for survival than the male, but in India the advantage she has at birth is probably neutralised in infancy by comparative neglect and in adolescence by the strain of bearing children too early and too often. A good deal of recent work on sex ratios has tended to the view that an increase in masculinity is an indication of declining population, but this is not the case in India as a whole. The all India ratio is 902 females for 1,000 males for Muslim and 944 females for 1,000 males for Hindus. The only provinces in which there is actually an excess of women over men are Madras and Orissa, though the Central Provinces can be added if Berar be excluded.

SOCIAL AND ECONOMIC CONDITIONS.

Literacy.—The number of persons in India literate in the sense of being able to write a letter and read the reply.

Literacy, in the sense of ability to write a letter and to read the answer to it, has grown enormously in the past, although it is at present not very high in comparison with countries in the west. One hundred and twenty out of every 1,000 of the population are now literate, as against 95 ten years ago and less than 40 half

a century ago. Bombay leads the provinces in the matter of literacy; Among the states Travancore, Cochin and Baroda have a higher percentage of literacy than the British Provinces.

The country taken as a whole, female literacy is comparatively absent in India proper except in Kerala Cochin and Travancore States have more than one literate female to every two literate males. Female literacy has increased by 150% during the decade.

Indian Roads.

India's road system may be briefly described as follows —

There exist four great trunk roads, stretching diagonally across the country, which form the framework with which most of the important subsidiary roads are linked. These trunk roads have been in existence for an immense period and are rich in historical association. The most famous is, the ancient marching route—known as the Grand Trunk Road—which stretches right across the northern part of the country from the Khyber to Calcutta, the other three connect Calcutta with Madras, Madras with Bombay and Bombay with Delhi, and the four of them together account for about 5,000 out of the 64,000 miles of metalled road in British India. None of these roads however can be considered safe "all weather" trunk roads according to modern standards. The Madras-Calcutta road in particular is far from being bridged throughout its entire length, and its improvement even in the Madras Presidency would be likely to absorb a large proportion of their funds for some years to come; whilst further North, where it enters Orissa, it has to cross so many large waterways that it will be quite impossible to make it a complete trunk road in the modern sense within any predictable period. And even the other three roads require a great deal of improvement, on the Grand Trunk Road from Calcutta to the North West Frontier, for example, there is as yet no road bridge over the river Sone in Bihar, and on all of them there are places where floods are liable to cause serious interruption to traffic.

Subsidiary Roads—As regards the subsidiary roads, the best and most numerous are to be found in Southern India. As one would expect, the worst served regions are Rajputana, Sind and parts of the Punjab on the one hand, and Orissa and Bengal on the other, the former owing to its aridity and sparse population, and the latter because of the numerous unbridged and mostly unbridgeable waterways which dissect it. In addition there are numerous other parts of the country, such as the lower Himalayas, which suffer from a dearth of communications owing to the difficult terrain. Besides surfaced roads, there is a very large mileage of "kutch" roads in India amounting to approximately 200,000 miles, some of which are good for motor traffic during the dry weather.

Road Development Committee—On the whole it is reasonable to say that India's road system, even before the advent of motor transport, was altogether insufficient for her needs, and it is the increasing realisation of this fact that led to the appointment of the special Road Development Committee in 1927 whose functions were to examine the question of the development

of road communications in view of the increasing use of motor transport and suggest ways and means of financing it. The recommendations put forward by the Committee were carefully considered by the Government of India, whose conclusions upon them were embodied in a resolution and provided that the increase from four to six annas per gallon in the import and excise duties on motor spirit, which had been effected in March 1929, should be maintained for a period of five years in the first instance, and that the additional duty should be allotted as a block grant for expenditure on road development, and credited to a separate Road Development Account, whose unexpended balances should not lapse at the end of the financial year.

Road Development Account—The original resolution dealing with the disposal of the Road Development Account has since been amended twice, the resolution at present in force having been passed by the Legislative Assembly in February, 1937. Its main features may be described as follows. The special tax on petrol introduced in 1929 shall continue to be levied for road development, the proceeds of which, after retaining a reserve of 15% for administration, research and special grants-in-aid, shall be allocated for expenditure in the different provinces, Indian States, etc., in the ratio of the petrol consumption in the various areas. These sums may be spent on the construction, re-construction or substantial improvement of roads and bridges including the cost of preparation of road schemes—but not for ordinary road upkeep or maintenance—on interest and amortization charges on road loans sanctioned hitherto by the Government of India and also on administration of Provincial Boards of Communications and establishment connected with the control of motor transport. A new clause inserted in the present resolution lays down that "if in the opinion of the Governor-General in Council the Government of any Governor's province has at any time,—

- (a) failed to take such steps as the Governor-General in Council may recommend for the regulation and control of motor vehicles within the province, or
- (b) delayed without reasonable cause the application of any portion of the Road Fund allocated or re-allocated as the case may be for expenditure within the province.

The Governor-General in Council may resume the whole or part of any sums which he may at that time hold for expenditure in that province. The actual statement of the Account up to date is as follows —

The position of the Road Fund as at end of 1940-41.

	Lakhs Rs
Gross Receipts -	
(1) to end of 1939-40	1,435 94
(2) for 1940-41	156 98
	1,592 92
Deduct grants to date for Civil Aviation	15 42
Net credit to the Road Fund	1,577 50
Deduct sums credited to the Reserve to date	252 98
Balance available for allocation	1,324 52
<i>Sums allocated to.</i>	
(a) Governor's Provinces (including Burma prior to separation) 1,043.25*	1,238 40
(b) Chief Commissioner's Provinces, and N W F P Tribal Area 33 90	
(c) Indian States and Administered Areas in States 161 31	
Balance (representing mainly the unallotted revenue for 1940-41 received after the close of the year)	86-06
	1,324 52

* Excluding Rs 80 60 lakhs allocated to Burma before separation, this figure becomes Rs. 962 65 lakhs

Road Administration—On the administrative side, roads are a provincial subject and may be divided into two main classes, Provincial Roads under the Public Works Department and Local Roads in charge of local bodies. The extent to which the administration of roads has been delegated to Local bodies varies considerably from province to province but in British India as a whole about 80% of the extra municipal mileage is under the charge of District Boards or District Councils including a certain mileage, mainly in Madras and the Central Provinces, which is termed "Provincial" but maintained under their agency. Within Municipal areas all roads, other than sections of main roads passing through the towns, are controlled by the respective Municipalities

The Road Fund—Up to the introduction of the Road Fund in 1929 all Provincial roads were financed exclusively from the General Revenues of the provinces and local roads from local revenue supplemented by provincial grants. Since 1929, however, the Road Fund is being distributed to Provinces and is available for construction, reconstruction or improvement of roads, but not for ordinary road upkeep. The object of creating the Road Fund was to supplement and not to replace the normal expenditure on "original" road works from provincial and local revenues but unfortunately the years

following the introduction of the Fund have been marked by acute financial stringency, with the result that provincial governments and local bodies have had to make drastic curtailments in the allotments made for roads from their revenue

The effect of these curtailments has been to starve the construction and development of feeder roads, as the Road Fund was being used exclusively for roads of inter-provincial and inter-district importance. The Government of India, however, have now laid down that at least 25% of the provincial shares in the Road Fund should be used on feeder roads and that not more than 25 per cent. can be used on roads which compete with the Railways.

Until 1937, questions affecting roads and road transport had been dealt with by the Government of India through the Department of Industries and Labour, while Railways came under the Commerce Department, each under a separate Member of the Viceroy's Executive Council. With a view to co-ordinating the different means of communications, however, a portfolio for Communications was introduced in November, 1937, the Member in charge of which is responsible for Roads and Railways as well as Indian Navigation, Aviation, Telegraphs, &c

Road Mileage—The grand total of the mileage of extra-municipal roads maintained by public authorities in British India was 285,313 on March 31, 1938; of this, the total mileage for Governor's Provinces amounted to 278,502 and for Central Areas 6,811.

The total mileage of roads with modern surface, either bituminous or cement was 9,10; and the total mileage of water bound macadam roads was 54,967, making a total mileage of roads which were either modern surface (bituminous or concrete) or water bound macadam of 64,070.

The total mileage of lower types of road was 221,243. These roads are of three types firstly, roads with artificially admixed granular material, gravel, moorum, etc., on natural soil, having a total mileage of 19,542; secondly roads of natural soil which are motorable in fair weather, having a total mileage of 102,554; thirdly, roads of natural soil which are unmotorable, having a total mileage of 99,147.

The total mileage of Roads that are motorable was thus 186,166, out of which 83,612 miles were motorable throughout the year, and the remaining 102,554 miles motorable in fair weather.

No less than 244,840 miles of roads were maintained by local bodies, while the P. W. D and M. E. S. maintained 40,473 miles.

The province with the greatest road mileage was Bengal with 91,192, out of which, however, only 3,887 was modern surfaced or macadam, while the province with the greatest mileage of modern or surfaced roads was Madras with 21,441 miles out of a total provincial mileage of 35,717. Bombay had 11,134 miles of modern or surfaced roads out of a total provincial road mileage of 19,571.

There are in addition, the roads maintained by municipalities and those in States, the total mileages of which are not known.

Including the amounts spent from the Road Development Fund, the total expenditure on extra-Municipal roads during recent years is as follows, the figures given being the latest available —

The Government of India.

The impulse which drove the British to India was not conquest but trade. The Government of India represents the slow evolution from conditions established to meet trading requirements. On September 24, 1599, a few years before the deaths of Queen Elizabeth and Akbar, the merchants of London formed an association for the purpose of establishing direct trade with the East and were granted a charter of incorporation. The Government of this Company in England was vested in a Governor with a General Court of Proprietors and a Court of Directors. The factories and affairs of the Company on the East and West Coasts of India, and in Bengal, were administered at each of the principal settlements of Madras (Fort St. George), Bombay and Calcutta (Fort William), by a President or Governor and a Council consisting of the senior servants of the Company. The three "Presidencies" were independent of each other and subordinate only to the Directors in England.

Territorial Responsibility Assumed.

The collapse of government in India consequent on the decay of Moghul power and the intrigues of the French on the East Coast forced the officers of the Company to assume territorial responsibility in spite of their own desires and the insistent orders of the Directors. Step by step the Company became first the dominant, then the paramount power in India. In these changed circumstances the system of government by mutually independent and unwieldy councils of the merchants at the Presidency towns gave rise to grave abuses. Parliament intervened, and under the Regulating Act of 1773, a Governor-General and four councillors were appointed to administer the Presidency of Fort William (Bengal), and the supremacy of that Presidency over Madras and Bombay was for the first time established. The subordinate Presidencies were forbidden to wage war or make treaties without the previous consent of the Governor-General of Bengal in Council, except in cases of imminent necessity. Pitt's Act of 1784, which established the Board of Control in England, vested the administration of each of the three Presidencies in a Governor and three councillors, including the Commander-in-Chief of the Presidency Army. The control of the Governor-General-in-Council was somewhat extended, as it was again by the Charter Act of 1793. Under the Charter Act of 1833 the Company was compelled to close its commercial business and it became a political and administrative body holding its territories in trust for the

Crown. The same Act vested the direction of the entire civil and military administration and sole power of legislation in the Governor-General-in-Council, and defined more clearly the nature and extent of the control to be extended over the subordinate governments. After the Mutiny, there was passed, in 1858, an Act transferring the Government of India from the Company to the Crown. This Act made no important change in the administration in India, but the Governor-General, as representing the Crown, became known as the Viceroy. The Governor-General was the sole representative of the Crown in India; he was assisted by a Council, composed of high officials, each of whom was responsible for a special department of the administration.

Functions of Government.

The functions of the Government in India are perhaps the most extensive of any great administration in the world. It claims a share in the produce of the land and in some provinces it has restricted the alienation of land from agriculturists to non-agriculturists. It undertakes the management of landed estates where the proprietor is disqualified. In times of famine it undertakes relief work and other remedial measures on a great scale. It manages a vast forest property and is the principal manufacturer of salt and opium. It owns the bulk of the railways of the country, and directly manages a considerable portion of them; it has constructed and maintains most of the important irrigation works; it owns and manages the post and telegraph systems; it had until 1st April 1926 the monopoly of the Note issue, and it alone can set the mints in motion. It lends money to municipalities, rural boards, and agriculturists and occasionally to owners of historic estates. It controls the sale of liquor and intoxicating drugs and has direct responsibilities in respect to police, education, medical and sanitary operations and ordinary public works of the most intimate character. The Government has also close relations with the Indian States which collectively cover more than one-third of the whole area of India and comprise more than one-fifth of its population. The distribution of these great functions between the Government of India and the provincial administrations has fluctuated. It was definitely regulated by the Reform Act of 1919, and the democratic principle then widely implanted is greatly developed in the constitutions for the Provinces and the centre enacted by the Imperial Parliament in 1935.

THE REFORMS OF 1919 AND 1935.

Great changes were made in the system of government in British India by the Government of India Act, 1919, which, together with the rules framed under it—almost as important in their provisions as the Act itself—came into general operation in January 1921, having received the Royal Assent on 23rd December 1919. (For detailed particulars see *The Indian Year Book*, 1936-37 and preceding years.) Still vaster changes in the direction of Indian Self-Government and of Dominion

Status were brought about by the Government of India Act, 1935, which received the Royal Assent on 2nd August 1935. The new Act embodied two main principles—(1) Provincial Autonomy, with a Government responsible to an elected Legislature in every Province, and (2) at the centre a Responsible Government of India, based on a federation of British Indian Provinces and Indian States. Detailed provisions for the whole scheme are made in the Act of 1935, which includes 321 sections and 10

Provision is further made to enable the Government to be carried on if at any time the Governor is satisfied that a situation has arisen in which the government of the Province cannot be carried on in accordance with the provisions of the Act.

Chief Commissioners' Provinces—The following are by the Act constituted as Chief Commissioners' Provinces—British Baluchistan,

Delhi, Ajmer-Merwara, Coorg, the Andaman and Nicobar Islands, Panth pipoda Provision is made for the possible creation of others. A Chief Commissioner's Province is to be administered by the Governor-General acting, to such extent as he thinks fit, through a Chief Commissioner to be appointed by him in his discretion.

DIVISION OF POWERS.

The Act provides for the institution of a Federal Court consisting of a Chief Justice of India and such other judges as His Majesty may deem necessary, the seat of the Court being Delhi and its original jurisdiction extending to disputes between the Federation, any of the Provinces or any of the Federated States, its appellate jurisdiction to include certain classes of appeals from the High Courts of British India and of the Indian States and appeals lying from it to His Majesty in Council. The Federal Court held its first sitting on 6th December 1937. Chief Justice Sir Maurice Gwyer, Judge owing to the death of Sir Shah Sulaiman, Sir S. Varadachariar. One post of Judge is at present vacant.

The Act also prescribes that the Executive authority of the Federation in respect of railway construction, maintenance and operation shall be exercised by a Federal Railway Authority, for the establishment and activities of which it provides.

Provisions are made in the Act in relation to the recruitment and control of the Public Services and for the appointment of a Public Service Commission for the Federation and of one for each Province. The duties and powers of these Commissions in regard to the Services are laid down in the Act, which also provides that two or more Provinces may agree to have one Commission between them.

Provincial Legislation—The Act provides for a new division of functions between the Central and Provincial authorities and the following is the new Provincial Legislative List, which came into operation on 1st April 1937:—

1. Public order (but not including the use of His Majesty's naval, military or air forces in aid of the civil power); the administration of justice; constitution and organisation of all courts, except the Federal Court, and fees taken therein; preventive detention for reasons connected with the maintenance of public order; persons subjected to such detention.

2. Jurisdiction and powers of all courts except the Federal Court, with respect to any of the matters in this list; procedure in Rent and Revenue Courts.

3. Police, including railway and village police.

4. Prisons, reformatories, Borstal institutions and other institutions of a like nature, and persons detained therein; arrangements with other units for the use of prisons and other institutions.

5. Public debt of the Province.

6. Provincial Public Services and Provincial Public Service Commission,

7. Provincial pensions, that is to say, pensions payable by the Province or out of Provincial revenues.

8. Works, lands and buildings vested in or in the possession of His Majesty for the purposes of the Province.

9. Compulsory acquisition of land.

10. Libraries, museums and other similar institutions controlled or financed by the Province.

11. Elections to the Provincial Legislature subject to the provisions of this Act and of any Order in Council made thereunder.

12. The salaries of the Provincial Ministers, of the Speaker and Deputy Speaker of the Legislative Assembly, and, if there is a Legislative Council, of the President and Deputy President thereof, the salaries, allowances and privileges of the members of the Provincial Legislature; and, to such extent as is expressly authorised by Part III of this Act, the punishment of persons who refuse to give evidence or produce documents before Committees of the Provincial Legislature.

13. Local government, that is to say, the constitution and powers of municipal corporations, improvement trusts, district boards, mining settlement authorities and other local authorities for the purpose of local self-government or village administration.

14. Public health and sanitation; hospitals and dispensaries; registration of births and deaths.

15. Pilgrimages, other than pilgrimages to places beyond India.

16. Burials and burial grounds.

17. Education, including Universities other than those specified in paragraph 13 of List I.

18. Communications, that is to say, roads, bridges, ferries, and other means of communications not specified in List I, minor railways subject to the provisions of List I with respect to such railways, municipal tramways, ropeways; inland waterways and traffic thereon subject to the provisions of List III with regard to such waterways, ports, subject to the provisions in List I with regard to major ports; vehicles other than mechanically propelled vehicles.

19. Water, that is to say, water supplies, irrigation and canals, drainage and embankments, water storage and water power.

20. Agriculture, including agricultural education and research, protection against pests and prevention of plant diseases; improvement of stock and prevention of animal diseases.

6. Marriage and divorce; infants and minors adoption.

7. Wills, intestacy, and succession, save as regards agricultural land.

8. Transfer of property other than agricultural land, registration of deeds and documents

9. Trusts and Trustees.

10. Contracts, including partnership, agency, contracts of carriage, and other special forms of contract, but not including contracts relating to agricultural land.

11. Arbitration.

12. Bankruptcy and insolvency; administrators-general and official trustees.

13. Stamp duties other than duties or fees collected by means of judicial stamps, but not including rates of stamp duty.

14. Actionable wrongs, save in so far as included in laws with respect to any of the matters specified in List I or List II.

15. Jurisdiction and powers of all courts except the Federal Court, with respect to any of the matters in this list.

16. Legal, medical and other professions.

17. Newspapers, books and printing presses.

18. Lunacy and mental deficiency, including places for the reception or treatment of lunatic and mental deficients.

19. Poisons and dangerous drugs.

20. Mechanically propelled vehicles.

21. Boilers.

22. Prevention of cruelty to animals

23. European vagrancy, criminal tribes.

24. Inquiries and statistics for the purpose of any of the matters in this Part of this List.

25. Fees in respect of any of the matters in this Part of this List, but not including fees taken in any Court.

PART II.

26. Factories.

27. Welfare of labour; conditions of labour, provident funds; employers' liability and workmen's compensation, health insurance, including invalidity pensions, old age pensions.

28. Unemployment insurance.

29. Trade unions, industrial and labour disputes.

30. The prevention of the extension from one unit to another of infectious or contagious diseases or pests affecting men, animals or plants.

31. Electricity

32. Shipping and navigation on inland waterways as regards mechanically propelled vessels, and the rule of the road on such waterways carriage of passengers and goods on inland waterways.

33. The sanctioning of cinematograph films for exhibition.

34. Persons subjected to preventive detention under Federal authority

35. Inquiries and statistics for the purpose of any of the matters in this Part of this List

36. Fees in respect of any of the matters in this Part of this List, but not including fees taken in any Court.

An amending bill was introduced in Parliament in 1939 to make certain readjustments found necessary in the operation of the 1935 Act. To safeguard provincial exchequers taxes on mechanical or other road vehicles or on the sale or consumption of electricity were added to the provincial list. It was further provided *inter alia* that in the event of a war emergency being proclaimed by the Governor-General the Central Government may assume executive in addition to legislative authority over any field and can also with the specific sanction of the Governor-General empower Federal officers with functions ordinarily the concern of provincial administrations

THE CENTRAL GOVERNMENT.

The structural changes made by the Act of 1919 in the system of government outside the "Governors' provinces" were of comparatively minor scope, though considerable modifications were made in the relationship hitherto subsisting between the Provincial Governments on the one hand and the Government of India and the Secretary of State in Council on the other. The Act of 1935 provides for further extensive changes at the centre, but these will only come into force when the Indian States accede to Federation and meanwhile, at the Centre, the constitution established by the Act of 1919 prevails, subject to certain modifications required to bring it into harmony with the new conditions in the Provinces. The Act of 1935 has also taken the relations between the Crown and the States outside the purview of the Governor-General in Council and entrusted them to a new authority called His Majesty's Representative for the exercise of the functions of the Crown in its relations with Indian States (Crown Representative for short). The officers of Governor-General and Crown Representative are held by the same person. The only concrete change made in the constitution of the Central Government

by the 1919 Constitution were the removal of the statutory bar to the appointment of more than six members of the Governor-General's Executive Council (which, however, had the far-reaching consequence that three of the eight members of the Council are now Indians) and the reconstitution in a much more enlarged representative and independent form of the central legislature. This became, like the Legislative Council in a Governor's province, a legislature with all the plenary powers generally given to such a body save such as are specifically withheld by the terms of the Act. It consists of two Chambers. The "Council of State" is a body of 60 members, including 34 elected (including one member to represent Berar, who, though technically nominated, is nominated as the result of elections held in Berar) and 26 nominated, of whom not more than 20 might be officials. The "Indian Legislative Assembly" consists of 141 members, of whom 102 are elected (including as in the case of the Council of State one Berar member who, though actually elected, has technical to be a nominee). Of the 39 nominated members, not fewer than one-third are required to be non-officials. The members of the Governor-

General's Executive Council have not been made *ex-officio* members of either Chamber, but each of them has to be appointed a member of one of other Chamber, and can vote only in the Chamber of which he is a member. Any member of the Executive Council may, however, speak in either Chamber. The President of the Upper Chamber is a nominee of the Governor-General. So also, for the first four years after the constitution of the Chamber, was the President of the Legislative Assembly. But after that period the Lower Chamber elected its own President and it elected its own Deputy-President from the outset. The normal lifetime of each Council of State is five years, and of each Legislative Assembly three years; but either Chamber, or both simultaneously, may be dissolved at any time by the Governor-General who has also the power to extend the lifetime of either Chamber in special circumstances.

Election—The method of election for both Chambers is direct, and although the number of electors is considerably smaller than for the Provincial Councils, it is a great advance on the very restricted and for the most part indirect franchise established under the Act of 1909 for the unicameral central legislature which then existed. Generally speaking, the electoral scheme for the Lower Chamber on the same model as that which the Act of 19 prescribed for the Provincial Councils already described except that, *firstly*, the property qualification for voters (and consequently for candidates) is higher in order to obtain manageable constituencies, and past service with the colours is not *per se* a qualification for the franchise, and *secondly*, that the constituencies necessarily cover a considerably larger area than constituencies for the Provincial Council. The distribution of seats in both Chambers, and the arrangement of constituencies, are on a provincial basis; that is a fixed number of the elective seats in each Chamber is assigned to representatives of each province and these representatives are elected by constituencies covering an assigned area of the province.

The following table shows the original allotment of the elective seats plus one since added for the North-West Frontier Province:—

		Legislative Council of	
		Assembly.	State.
Madras	16	5
Bombay	16	6
Bengal	17	6
United Provinces	16	5
Punjab	12	4
Bihar and Orissa	12	3
Central Provinces	6	2
Assam	4	1
North-West Frontier Province	1	..
Burma	4	2
Delhi	1	..
		105	34

The Government of India Act, 1935, by separating Burma from India eliminated the Burma members.

Since the area which returned perhaps 80 members to a Provincial Council is the same as the area which returns perhaps 12 members

to the Legislative Assembly—namely, the entire province in each case—it follows that on the direct election system this area must be split into constituencies which are much larger than the constituencies for the local Councils, and just as it is generally correct to say that the normal area unit for those rural constituencies for the latter which are arranged on a territorial basis was made in the district, it may be said that the normal area unit in the case of the Legislative Assembly is the Division (the technical term for the administrative group of districts controlled by a Divisional Commissioner).

The Franchise.—The general result of the first franchise arrangements under the Act was thus that there was in each province a body of electors qualified to vote for, and stand for election to, the Provincial Council, and that a selected number of these voters were qualified to vote for and stand for election to those seats in the Indian Legislative Assembly which were assigned to the province. The qualifications for candidature for the Indian Legislative Assembly were made the same in each province, *mutatis mutandis*, as for candidature for the Provincial Council, except that in all provinces, so long as the candidate could show that he resides somewhere within the province, no closer connection with his particular constituency was insisted upon.

The franchise for the Council of State differs in character from that for the Provincial Council and the Indian Legislative Assembly. The concern of the framers of the Act and rules was to secure for the membership of this body a character as closely as possible approximating to a "Senate of Elder Statesmen" and thus to constitute a body capable of performing the function of a true revising Chamber. With this object, in addition and as an alternative to a high property qualification—adopted as a rough and ready method of enfranchising only persons with a stake in the country—the rules admit as qualifications certain personal attributes which are likely to connote the possession of some past administrative experience or a high standard of intellectual attainment. Examples of these qualifications are past membership of either Chamber of the Legislature as now constituted, or of its predecessor, or of the Provincial Legislature, the holding of high offices in local bodies (district boards, municipalities and corporations), membership of the governing bodies of Universities, and the holding of titles conferred in recognition of Indian classical learning and literature.

Powers.—The powers and duties of the Indian Legislature under the 1919 Act differed but little in character within the "central" sphere from those of the provincial Councils under the same Act within their provincial sphere, and it acquired the same right of voting supplies for the Central Government. But as no direct attempt was made to introduce responsible government at the centre, the step in that direction having been avowedly confined to the provinces, and as consequently the Executive Government of India remained legally responsible as a whole for the proper fulfilment of its charge to the Secretary of State and Parliament, it followed that the powers conferred

on the Governor-General to disregard a decision of the Indian Legislature were less restricted than the similar power of the Provincial Governor, that is to say, they covered the whole field and were not confined in their application

to certain categories of subjects

The new provisions, made in the Government of India Act, 1935, affecting the Government of India, were described in an earlier part of this chapter.

THE INDIA OFFICE.

The Act of 1919 made no structural changes in the role of the India Office in the administration of Indian affairs. Slight alterations were effected in the number and tenure of office of the members of the Secretary of State's Council, and some relaxations were made in the statutory rigidity which formerly bound their procedure and that of the Office in general. But provisions were made which undoubtedly as time went on had a material effect on the activities of the Office. A High Commissioner for India was appointed for the purpose of taking over, as the direct agent of the Government of India, that portion of India Office functions which is of the nature of agency, as distinct from administrative supervision and control. His functions relate mainly to the control of Indian Government Trade Commissioners in Europe and America; arrangements in connection with exhibitions and fairs outside India, sale and distribution of Central Government publications; representation of India on Inter-Empire Organisations and at Conferences, relief and repatriation of destitute Indians, purchase of stores outside India: provision of

educational and study facilities for Indian students and Government officials on leave or deputation, recruitment of persons for special posts, and payment of leave salary and pensions of officers in Europe, etc. Concurrently with this change, it became possible to defray from British revenues the salaries of the Secretary of State and of the Parliamentary Under-Secretary, and that portion of the cost of salaries of India Office staff and general maintenance which was attributable to the exercise of its administrative as distinct from purely agency functions.

The Act of 1935 provides for the appointment by the Secretary of State of not less than three nor more than six persons whose duty it shall be to advise him on any matter relating to India on which he may desire their advice. It also prescribes that the salary of the Secretary of State and the expenses of his Department shall be paid out of monies provided by Parliament. The Governor-General is given in his sphere of responsibility reserve powers corresponding with those already mentioned as being vested in the Governors of Provinces in theirs and in respect of them he is made responsible through the Secretary of State to Parliament.

PERSONNEL AND PROCEDURE.

The Governor-General and the members of his Executive Council are, under the Government of India Act 1919 as continued by the Act of 1935, pending the establishment of Federation, appointed by the Crown. No limit of time is specified for their tenure of office, but custom has fixed it at five years. As an emergency measure during the war, the membership of the Viceroy's Executive Council was increased to 15 in July, 1942. These members hold charge of the portfolios of War, Defence, Civil Defence, Finance, Home, Supply, Indians Overseas, Law, Commerce, Information, War Transport, Posts & Air (Civil Aviation), Education, Health and Lands, Labour. The Hon'ble Sir A. Ramaswami Mudaliar (India's representative on the Imperial War Cabinet and Pacific War Council) will retain his seat on the Executive Council. The Commerce Department deals generally with commerce, industries, industrial property, insurance and actuarial work and with blue water shipping. The Department of Communications deals with post and telegraphs, civil aviation, meteorology, ports, inland navigation and roads. Railways form a separate department, but are under the same member of the Council as the Communications Department. The Secretary for Communications attends the meetings of the Railway Board as an ex-officio member. The Department of Labour deals with labour subjects. In addition it assumes responsibility for labour in docks and for the administration of certain statutes affecting labour on the railways. It deals also with public works and irrigation, mines, technical education so far as that concerns industry, printing and stationery and various

items of safety legislation and administration. Ecclesiastical affairs are placed under the Defence Department.

The Viceroy acts as his own member in charge of External Affairs. The Commander-in-Chief in practice always is a member of the Council. He holds charge of the Defence Department. The Council may assemble at any place in India which the Governor-General appoints. In practice it meets only in Delhi and Simla except for a meeting or two in Calcutta after Christmas, when the Viceroy is usually in residence in the Bengal Capital.

In regard to his own Department each Member of Council is largely in the position of a Minister of State, and has the final voice in ordinary departmental matters. But any question of special importance, and any matter in which it is proposed to over-rule the views of a Provincial Government, must ordinarily be referred to the Viceroy. Any matter originating in one department which also affects another must be referred to the latter, and in the event of the Departments not being able to agree, the case is referred to the Viceroy. The Members of Council meet more or less frequently as a Cabinet to discuss questions which the Viceroy desires to put before them, or which a member who has been over-ruled by the Viceroy has asked to be referred to Council. If there is a difference of opinion in the Council the decision of the majority ordinarily prevails, but the Viceroy can over-rule a majority if he considers that the matter is of such grave importance as to justify such a step. Each

The Province of Assam which, as shown on the map, covers a total area of 67,334 sq miles, excluding Tribal territory, encloses Indian States with an extent of 12,320 sq miles, deducting which the nett area of British territory is 55,014 sq. miles. It is formed of the Assam or Brahmaputra valley, the valley of the Surma to the south, and portions of the hills which surround these valleys on the North, East and South or separate the valleys from one another to the West lie the plains of Bengal.

Population.—*British territory*—The total population of the Province (British territory) in 1931 was 862,251, of which nearly 5½ millions were Hindus, over 2½ millions Muslims, a million belonged to tribal religions and a quarter of a million were Christians. 43 per cent of the population were recorded as speaking Bengali, 21 per cent Assamese other languages spoken in the province are Hindi, Uriya, Mundari, Nepali and a great variety of languages classified under the general heading of the Tibeto-Burman languages. Owing to the great areas of waste and rivers, the average density of the province was only 137 which, compared with that of most other parts of India, is low.

Agricultural Products—The river basins are naturally fertile and present in the main few difficulties to the cultivator. Rice is the staple food crop, nearly 5,425,943 acres being devoted to this crop. Rainfall being high, the problem in general is to dispose of the surplus water and to control the action of floods rather than irrigation in the usual sense. Tea and jute are the most important crops grown for export. The area under tea consists of 439,159 acres. About 41,131 acres are devoted to sugarcane. A good deal of short staple cotton is grown in the hills.

Meteorological Conditions.—Rainfall is everywhere abundant, and ranged from 51.22 to 284.07 inches in 1938, leaving aside the highest recorded rainfall in this part of India which was the maximum reached at Cherrapunji in the Khasi Hills (569.50), this is one of the wettest places in the world. Temperatures are moderate. Earthquakes of considerable severity have taken place, by far the worst being that which occurred in 1897.

Accounts of the petroleum occurrences in Assam have been published in the memoirs of the Geological Survey of India. The petroleum localities in this province are confined to a curved belt of country along the basins of the Brahmaputra and the Surma. This belt is traceable over a distance of some 800 miles from N. E. Assam through Cachar and Chittagong to the Arakan coast, where it has a S. S. E. trend.

Mines and Minerals.—The only minerals in Assam worked on a commercial scale are coal, limestone and petroleum oil. The most extensive coal measures hitherto worked are in the Naga Hills and the Lakhimpur districts, where about 2,22,198 tons were raised in 1940. Important deposits also exist in the Garo Hills. Limestone is quarried in the Khasi and Jaintia Hills. Petroleum is worked only in Lakhimpur and Cachar, and has only been refined in Lakhimpur.

Manufactures and Trade.—Silk is manufactured in the Assam valley, the weaving being done by women. Cotton weaving is also largely practised by the women, and almost every house in that valley used to contain a loom; the cloth is being gradually displaced by imported goods

of finer texture and colour but vigorous efforts at revival are being made by Government. Tea manufacture is the most important industry of the province. Boat-building, brass and metal and earthenwares, and limestone burning are other industries, but agriculture employs about 89 per cent of the population. Assam carries on a considerable trade with the adjoining foreign tribes and countries.

Communications—Much of the trade of Assam is carried by river. The extensive system of rivers makes the province less dependent upon roads than other parts of India but there has been much advance in recent years in road communication. A fleet of steamers maintained by the India General Navigation Company and the Rivers Steam Navigation Company plies on the rivers in both Valleys. An alternate day service of passenger-boats runs between Goalundo and Dibrugarh. There are two trunk roads on either bank of the Brahmaputra most of which are metalled or gravelled. There are excellent metalled roads from Shillong to Gauhati, Shillong to Sylhet, Shillong to Cherrapunji, and also between Dimapur, on the Assam Bengal Railway, and Imphal, the capital of the Manipur State. The Government of Assam had in 1928 carried out a considerable programme of road improvement and another programme which aimed at the improvement of nearly 800 miles of road either by metalling or graveling and the construction of 12 big bridges is complete. In September, 1937, a further road improvement programme totalling Rs 1,05,25,000 was drawn up, from which 22 schemes amounting to Rs 41,11,054 were selected as a priority class. The Government of India have recently approved a programme running up to 31-3-45 under which 15 at these priority class schemes amounting to Rs 32,00,000 will be financed from the Road Fund. The work on some of these projects is already completed. In addition to the above the Government of Assam propose spending annually about Rs. 1,50,000 out of the Tea Rates Road Fund and about Rs 1,23,000 out of the Provincial Motor Taxation Road Fund on the improvement of secondary or feeder roads. *Kutcha* roads are being maintained by means of mechanical plant which has proved successful in maintaining, throughout the year, a surface fit for motor vehicles. Motor traffic has increased on all sides and the demands for better roads have been insistent. The open mileage of railway has also shown a steady improvement and several branch lines to the Assam Bengal Railway system have been added in recent years. The main Assam Bengal Railway line runs from Chittagong Port, in Bengal, through the North Cachar Hills to Tinsukia, a station on the Dibru-Sadiya Railway, and connects the Surma and Brahmaputra Valleys. A branch of the line runs from Badarpur to Silchar at the Eastern end of the Surma Valley and another runs west down the Assam Valley from Lumding to Pandu where it effects a junction with the Eastern Bengal Railway. The Eastern Bengal Railway connects Assam with the Bengal system *via* the Valley of the Brahmaputra. Railhead is now at Rangapara north of Tezpur. Both Assam Bengal Rly and Eastern Bengal Rly have been amalgamated from 1-4-42 and have been named Bengal and Assam Rly.

THE FINANCES OF ASSAM.

In common with the other Provinces of India, Assam secured substantial financial autonomy under the Reform Act of 1935. The present financial position for 1942-43 is set out in the following table—

HEADS OF REVENUE.	Budget Estimate for 1942-43	HEADS OF EXPENDITURE	Budget Estimate for 1942-43.

Administration.—The province of Assam was originally formed in 1874 in order to relieve the Lieutenant-Governor of Bengal of part of the administration of the huge territory then under him. In 1905, as the result of further deliberations, it was decided to add to the small Province of Assam the eastern portion of its unwieldy neighbour and to consolidate those territories under a Lieutenant-Governor. The Province of Eastern Bengal and Assam as then constituted was again broken up on the 1st of April, 1912, the Eastern Bengal Districts were united with the Bengal Commissionerships of Burdwan and the Presidency to form the Presidency of Bengal under a Governor-in-Council, Bihar, Chota-Nagpur and Orissa were formed into a separate province, while the old Province of Assam was re-constituted under a Chief Commissioner.

Under the Indian Reforms Act of 1919 the Province was raised in status to that of administration by a Governor-in-Council and was thereby ranked with the older major provinces of India.

The capital is Shillong, partly in British and partly in Khasi State territory, which has for a number of years been growing rapidly and is now in parts over-crowded. The town has grown up on somewhat rustic lines in very beautiful country on the slopes of the Shillong Range which rises above it to a height of 6,450 feet above the sea. It was destroyed in the earthquake of 1897 and has been rebuilt with methods of construction more fitted to withstand the shocks of earthquake.

GOVERNOR.

His Excellency Sir ANDREW GOURLAY CLOW, KCSI, OIE, IOS

PERSONAL STAFF OF HIS EXCELLENCY THE GOVERNOR

Secretary, J P. Mills, OIE, IOS

ASSAM LEGISLATIVE COUNCIL.

President—The Hon'ble Rai Bahadur Heramba Prosad Barua, M A , B L

Deputy President—Mrs Zubeida Ataur Rahman.

ELECTED MEMBERS

Rai Sahib Apurba Kumar Ghosh, M A , B L (*Goalpara General*), Babu Satyendra Mohor Lahiri, M A , B L (*Kamrup General*), Kamala Prasad Agaiwala, B L (*Darrang General*), Rai Bahadur Johaimall Agarwalla (*Nowgong General*), Babu Gazanand Agarwalla (*Sibsagar General*), Rai Bahadur Rameshwailall Sahana (*Lakhimpur General*), Rai Bahadur Hem Chandra Dutt, B L (*Cachar General*), Sarat Chandra Bhattacharya (*Hills General*), Babu Man Mohon Chaudhury (*Sylhet West General*), Samarendra Narayan Chaudhuri (*Sylhet East General*), Maulavi Abdul Halim, M Sc., B L (*Lower Assam Valley Muhammadan*), Khan Bahadur Maulavi Rukunoddin Ahmed, B L (*Upper Assam Valley Muhammadan*), Maulavi Abdul Mayeed Choudhury (*Surma Valley East Muhammadan*), Khan Bahadur Maulavi Gous Uddin Ahmed Chaudhury (*Surma Valley Central Muhammadan*), Khan Bahadur Maulavi Golam Mastafa Chaudhury (*Surma Valley North-West Muhammadan*), Khan Sahib Maulavi Abdur Rahim Chaudhury, B L (*Surma Valley South-West Muhammadan*), W R Gawthrop (*Assam Valley European*), H Emblen (*Surma Valley European*)

NOMINATED MEMBERS

Mrs Zubeida Ataur Rahman, Hon'ble Rai Bahadur Heramba Prosad Barua, M A , B L, Romesh Chandra Das, M A , B L , Bhumbol Deori, B L

The Bengal Province.

The Province of Bengal comprises the Burdwan and Presidency Divisions, the district of Darjeeling and the Rajshahi, Dacca and Chittagong Divisions. The area of the Province is 82,955 square miles, with a population of 51,087,338. Included in the geographical unit of Bengal are the Indian States of Cooch Behar and Tripura, which are in direct political relationship with the Government of India. The area of the British territory is 77,521 square miles. The general range of the country is very low, and a great fertile plain extends southward from Jalpaiguri to the forests and swamps known as the Sunderbans, which lie between the area of cultivation and the Bay of Bengal.

The People.

Of the inhabitants of the Province 27,810,100 or 54.44 per cent. are Mahomedans and 22,212,069 Hindus. These two major religions embrace all but 2.09 per cent of the population, Christians, Buddhists and Animists combined, number 1,048,049.

Bengali is spoken by ninety-two per cent of the population of the Province and Hindi and Urdu by 3.7 per cent.

Industries.

According to the returns of the census of 1931, 10,593,384 persons or 20.7 per cent of the population derive their support from pasture and agriculture, and of these 6,041,495 are cultivators, and 2,718,939 are agricultural labourers. The area under jute in 1941-42 was 1,532,855 acres against 25,49,600 in 1939-40. Bengal is the most important rice-producing area in Northern India, and it is computed that 87 per cent of the cultivated area of the Province is devoted to its production. Other crops include barley, wheat, pulses and oil-seeds. Sugar is produced both from the sugar-cane and from the date-palm, and tobacco is grown for local consumption in nearly every district of Bengal. The area under tea in 1937 was 202,200 acres. There were 440 plantations employing a daily average of 184,762 permanent and 7,841 temporary hands.

Manufacture and Trade—Agriculture is the principal industry of Bengal. In addition to this there are the jute mill industry, the tea industry (confined to the districts of Jalpaiguri including the Dooars and Darjeeling), the coal mining industry and the sugar industry. The jute mills in and around Calcutta and in the tripartite tracts of the districts of Howrah and Hooghly constitute the principal manufacturing industry of the Province.

There was some improvement in the jute trade of Bengal (which began to decline since the year 1928-29) owing to a rise in the price of raw jute, as a result of the policy of voluntary restriction of jute crop, undertaken by the Government of Bengal in 1934-35. The increased production of jute during the next three seasons, however, proved that the propaganda of voluntary restriction was a failure. With the foreign demand of jute and its manufactures gradually falling off, stock in the Mills began to increase enormously with the result

that the prices declined and the industry was about to face a serious crisis of unrestricted production. The situation was to a certain extent eased by the timely promulgation in September 1938, by the Government of Bengal, of the "Bengal Jute Ordinance," which restricted the hours of work in the mills. The measure had a desired effect on the prices which began to rise again. The heavy demand of the jute manufactures by the Government of U.S.A., however, did away with the necessity of the restriction imposed by the "Ordinance" which was thereupon withdrawn only to be shortly afterwards, replaced by the voluntary restriction agreement. The year was notable for sharp fluctuation in the prices of jute. Huge orders for sandbags consequent upon the outbreak of war, brought about a sharp rise in the prices. The benefit derived by the industry in the earlier stages thus proved to be only short-lived and new problems confronted the industry.

After the fall of France and the consequent loss of European markets, the industry experienced considerable difficulty. The problem of freight caused a sharp decline in exports of jute goods. Government orders also were on a smaller scale. The unprecedentedly large jute crop created a large surplus. Only the Delhi agreement between the Bengal Government and the mills, which made it obligatory on the part of the mills to purchase a stipulated quantity of jute at minimum prices and the improvement in trade demand early in 1941 helped the industry to turn the corner. The outlook, however, is now rendered uncertain because of the dangers to the Pacific shipping route, but it is hoped that the policy of regulation of production and manufacture by the Indian Jute Mills' Association and the regulation of crop by the Bengal Government will help the industry through the difficult times.

The trade of Bengal during 1939-40 showed an improvement over the previous year. The value of Bengal's exports during this period was almost double that of her import and was the highest recorded since 1929-30. Imports of private merchandise rose from Rs 51.39 crores in 1938-39 to Rs 56.12 Crores in 1939-40, which exports increased from Rs 78.89 crores in 1938-39 to Rs 105.49 crores in 1939-40. Despite its many uncertainties and difficulties, the year 1939-40 was an exceptionally favourable one for the trade of Bengal.

Administration.

The present form of administration in Bengal dates from January 1937. In 1912 the Government of the Province underwent an important change, when, in accordance with the Proclamation of His Majesty the King-Emperor at Delhi, the Province was raised from the status of a Lieutenant-Governor to that of a Governor-in-Council, thus bringing it into line with the Presidencies of Madras and Bombay. In 1921, under the Reform Scheme, the Local Government was reconstituted, certain of the departments being placed under the control of Ministers appointed from among elected members of the Legislative Council. There are normally four members of the Executive Council who are in

charge of the "reserved subjects," and three Ministers, who are in charge of the "transferred subjects." With the enforcement of the Government of India Act of 1935 on April 1, 1937, complete provincial autonomy came into being. The entire administration vests in the Governor who is assisted by a Council of Ministers holding office during his pleasure but answerable to a wholly elective legislature comprising two houses. Except in regard to his special responsibilities, the Governor corresponds to a constitutional monarch. The services no longer find a place in the legislatures and are subordinate to the Ministers. Dyarchy has disappeared and there is complete responsible Government.

The unit of administration is the District Magistrate and Collector. As Collector he supervises the gathering of the revenue and is the head of all the Departments connected with it, while as District Magistrate he is responsible for the administration of criminal justice in the district. The immediate superior of the District Magistrate is the Divisional Commissioner. Commissioners are the channels of communication between the local officers and the Government. In certain revenue matters they are, in their turn, subject to the Board of Revenue in Calcutta; in other matters they are under the direct control of Government.

Justice.

The administration of justice is entrusted to the High Court of Calcutta which consists of the Chief Justice who is a Barrister and 18 Puisne Judges including three additional judges who are Barristers, Civilians or Vakils. Below the High Court are the District and Additional Judges, the Small Causes Court and Subordinate Judges and Munsifs. Of these officers, the District and Additional Judges and a certain number of Subordinate Judges are also endowed with the powers of a Criminal Court while the remainder have jurisdiction in Civil matters only. Criminal Justice is administered by the High Court, the Courts of Session and the Courts of the various classes of Magistrates. On its appellate side, the High Court disposes of appeals from the order of a Court of Session, and it also confirms, modifies or annuls sentences of death passed by Sessions Courts. Calcutta has six Stipendiary Presidency Magistrates, including one temporary Additional Magistrate in charge of the Traffic Court. One of the Presidency Magistrates is in charge of the Children's Court, is helped by Hony. Women Magistrates. It has also two Municipal Magistrates and it possesses a Court of Small Causes with Judges who dispose of cases of the class that are usually heard in County Courts in England.

In addition a number of Union Benches and Courts have been established in selected rural areas for the disposal by honorary agency of petty criminal cases and civil disputes.

Local Self-Government.

By Bengal Act III of 1884, and its subsequent amendments, which hitherto regulated municipal bodies in the interior, the powers of Commissioner of municipalities were increased and the elective franchise was extended. Bengal Act III of 1884 was repealed by Act XV of 1932 by which material changes have been introduced, e.g.,

the franchise of the electors have been further widened; women have been enfranchised, the proportion of elected commissioners has been increased and the term of office of the Commissioner has been extended from three to four years. Municipal expenditure now comprises a large number of objects, including veterinary institutions, employment of health officers, vaccinators and sanitary inspectors, the training and employment of female medical practitioners, the provision of model dwelling houses for the working classes, the holding of industrial, sanitary and health exhibitions and the improvement of breed of cattle. The Commissioners also have large powers in regard to the water supply and the regulation of buildings.

The Municipal Government of Calcutta is governed by Act III of 1923. This Act, which replaces Act III of 1899, makes the Corporation paramount in matters relating to municipal administration. The Act provides for the appointment of a Mayor, who replaces the chairman of the old Act, a Deputy Mayor, and Executive Officer, and Deputy Executive officers, all elected by the Corporation. The appointment of the Chief Executive Officer is subject to the approval of Government. The total number of councillors, after the enactment of the Calcutta Municipal (Second Amendment) Act, 1932, is 91 with 5 Aldermen elected by the Councillors. Of the 91 seats, 81 are elected, of which 21 are reserved for Muhammadans. Ten of the councillors are nominated by Government and the rest elected by the general or special constituencies. In order to improve the insanitary and congested areas of the city, the Calcutta Improvement Trust has been created with extensive powers. In the mofussil, district and local boards exercise considerable powers, with regard to public works, education and medical relief.

Bengal Act V of 1919 introduces the new system of self-government by the creation of village authorities vested with the powers and duties necessary for the management of village affairs and entrusted with powers of self-taxation. The new village authority, called the union board, replaces gradually the old chaukidari panchayats and the union committees and deals with the village police, village roads, water supply, sanitation, primary schools and dispensaries. The Act also empowers Government to create out of the members of the union boards, village benches and courts for the trial of petty criminal and civil cases arising within the union. The Act has been extended to all districts in the Province and up to March 1934 over 4,737 Union Boards were actually constituted.

Public Works.

The Public Works Department consists of Public Works and Railway Departments and is under the charge of Secretary to Government in the Department of Agriculture and Industries.

The Public Works Department deals with questions regarding the construction and maintenance of public buildings and also regarding roads, bridges, etc.

The Railway Department deals with questions regarding acquisition of lands required by the several Railways, the alignment of new lines of Railways, and with Tramway projects.

There is a Chief Engineer who is the principal professional adviser of Government.

N.B.—Under the New Constitution, the present organisation of Public Works (including Railways) together with Irrigation as well as Road Fund and Bengal Motor Vehicles Act transferred from the Local Self-Government Department will form the Department of Communication and Works

Marine.

The Marine Department deals with questions connected with the administration of the port of Calcutta and the Government Dockyard, Narayanganj, and inland navigation, including the control and administration of Government launches except the police launches.

Irrigation.

The Irrigation Department deals with irrigation, navigation, flood protection by means of embankments and drainage, the latter including relief from congestion of drainage by regulating the available supplies of water to suit the requirements of agriculture combined with the supply of water for irrigation in cases in which a supply is available.

Police.

The Bengal Police force comprises the Military Police, the District Police and the Railway Police. The Bengal Police are under the control of the Inspector-General of Police, the present Inspector-General being a member of the Imperial Police Service. Under him are Deputy Inspectors-General for the Dacca range, the Rajshahi range, the Presidency range, the Burdwan range and the Bakarganj range and also one Deputy Inspector-General in Charge of the CID and the Intelligence Branch. Each district is in charge of a Superintendent, and some of the more important districts have one or more Additional Superintendents. The Railway Police is divided into three distinct charges, each under a Superintendent. The cadre comprises Assistant Superintendents, Deputy Superintendents, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, Head Constables and Constables. There is also a Village Police, composed of daffadars and chowkidars, who receive a monthly salary which is collected from the villages or unions by the Panchayat or Union Board. There is a training college and school at Sardah in the district of Rajshahi where newly appointed officers and men of the Bengal Police learn their duties. The Calcutta City Police is a separate force maintained by Government under a Commissioner who is responsible direct to Government. The Commissioner has under him Deputy Commissioners, Assistant Commissioners, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, Head Constables and Constables. A school for the training of recruits for the Calcutta Police force has been established at Calcutta. The annual cost of the Police is over 228 lakhs.

The head of the Medical Department is the Surgeon General with the Government of Bengal. In the districts the Civil Surgeons are responsible

for medical work. There are 44 hospitals and dispensaries in Calcutta, 11 of which are supported by the Government and 860,540 persons were treated at these institutions of whom 57,177 were in-patients. In the Mofussil districts there are 1,200 hospitals and dispensaries, the number of patients treated in them as well as in several huts, fairs, melas, subsidised and temporary dispensaries and in various medical centres was 9,083,248.

Education.

In the Province of Bengal education is imparted partly through Government agency and partly through private bodies, assisted to some extent by Government grants-in-aid. Government maintains four Arts Colleges in Calcutta (of which one is a college for women, one is for Mahomedans and one the Sanskrit College), one at Hughli, one at Krishnagar, three, including the Islamic Inter College, at Dacca, one at Rajshahi and one at Chittagong. It also maintains two training colleges, one at Calcutta and one at Dacca, for teachers who teach in secondary schools through the medium of English, and 5 normal schools, one in each division, for the training of teachers in secondary schools who teach through the medium of the vernacular; also an engineering college at Shibpur and an engineering school at Dacca, two medical colleges, a veterinary college, a school of art and a commercial school in Calcutta, and a Textile Institute at Serampore. It also provides at the headquarters of all districts except Burdwan and Midnapore, and also at certain other mofussil centres, English high schools for the education of boys, while to some Government Arts Colleges high schools are attached. In Calcutta there are five Government high schools for boys, two of which are attached to the Presidency College and one to the Sanskrit College. Government high schools for girls exist only in the headquarters stations of Calcutta, Dacca, Mymensingh, Comilla and Chittagong. The other secondary schools, with the exception of a few middle schools managed either by Government or by municipal and district boards, are under private control. The administration of primary education in all areas, which are not under municipalities, rests with the district boards, grants being given from provincial revenues to the boards, which contribute only slightly from their own funds. Only in backward localities are such schools either entirely managed, or directly aided, by Government. Apart from the institutions referred to above, 80 institutions called Guru Training Schools are maintained by the Department for the training of primary school teachers. For the education of Mahomedans, there are senior Madrasas at Calcutta, Dacca, Chittagong, Hughli and Rajshahi which are managed by Government. There are also certain Government institutions for technical and industrial education. All institutions for technical and industrial education (except B. E. College, the Ahsanullah School of Engineering, Dacca, the Government Commercial Institute and the Government School of Art, Calcutta) are now under the control of the Director of Industries. A large proportion of educational work of every grade is under the control of various missionary bodies, which are assisted by Government grants-in-aid.

The municipalities are required to expend a certain proportion of their ordinary income on education. They are mainly responsible for primary education within their jurisdiction, but schools in these areas are eligible also for grants from Government. These bodies maintain a high school at Burdwan, a high school at Santipur, a high school at Kushtia and a high school at Chittagong.

In 1935-36 there were in the Presidency :—
RECOGNISED INSTITUTIONS FOR MALES

	Institutions.	Scholars

Males	1,069	49,974
Females	281	12,903

The Department is administered by a Director of Public Instruction, assisted by an Assistant Director, a special officer appointed temporarily, an Assistant Director for Muhammadan Education and a Director of Physical Education. Each division is in charge of a Divisional Inspector assisted by a certain

number of Additional or Second Inspector and Assistant Inspectors for Mahomedan Education according to the requirements of the several divisions. Similarly the administrative charge of the primary education of each district is in the hands of a District Inspector assisted by Sub-Divisional Inspectors and Sub-Inspectors of Schools, the latter class of officers being in some instances helped by officers of humbler status called Assistant Sub-Inspectors and Inspecting Pandits and Maulvis. High education is controlled by the Universities of Calcutta and Dacca established in 1857 and 1921 respectively, administered by the Chancellor (the Governor of Bengal), the Vice-Chancellor (appointed by Government) and a number of ex-officio, elected and nominated fellows. The University of Calcutta maintains a Law College, called University Law College, Calcutta. Dacca University also has a Law Department attached to it. Calcutta University is mainly an examining body, but it has now made itself responsible for advanced teaching for which purpose it employs an agency which is mainly distinct from the staffs of the affiliated Colleges.

The University at Dacca is of the residential type. There is a Board for Secondary and Intermediate Education at Dacca. It conducts the Matriculation and Intermediate Examinations for the students of Institutions at Dacca and also the Islamic Matriculations and Intermediate Examinations.

The Education of Europeans is mainly conducted by private agency, assisted by Government grants. Government however maintain a special Inspector, and also a school for boys, a school for girls (both residential) at Kurseong, and attached to the latter a Training College (for women only).

THE FINANCES OF BENGAL.

After a sequence of deficit budgets for several years, Bengal looked forward hopefully to an improvement in her financial position as a direct result of the special steps taken by the Central Government and by Parliament through the India Act to alleviate Bengal's plight. Under Provincial Autonomy she was better off to the extent of Rs 75 lakhs a year than before. In the year 1935-36, despite the grant from Central revenues of an amount equal to half the proceeds of the jute export duty, the budget showed a deficit of Rs 51½ lakhs. The Niemeyer report, however, as subsequently implemented, gave a further sum of Rs 42 lakhs annually from an increased share in the jute export duty, and also an annual relief of Rs 39 lakhs by cancelling the Province's accumulated debt to the Centre. Thus Bengal was able to face the future with more confidence. The Budget for the year 1937-38 was a surplus Budget. The year 1938-39 appears to have marked the beginning of another sequence of deficit budgets. The budget for 1941-42, as recently presented to the legislature again reveals a deficit estimate at more than a crore of rupees. Although the finances of the Province, as revealed in the revised estimates and actuals of the preceding years, show a continuous improvement, the expenditure of the Province appears to have reached a stage where, it may be said, the Government are living a little beyond their means.

As in the case of Bombay Presidency, the province known hitherto as Bihar and Orissa has suffered a territorial diminution owing to the constitution of the Orissa Division as a separate province. The following details therefore appertain to the new Bihar province after the separation of Orissa as from April 1, 1936. Bihar lies between 20° 30' and 27° 30' N latitude and between 82° 31' and 88° 26' E longitude and includes the provinces of Bihar and Chota Nagpur, and is bounded on the north by Nepal and the Darjeeling district of Bengal, on the east by Bengal and the Bay of Bengal, on the south by the new provinces of Orissa, and on the west by the United Provinces of Agra and Oudh and the Central Provinces.

The area of the territories which constitute the Governorship of Bihar is 69,348 square miles. The States in Chota Nagpur which were included in the Province have since the 1st April 1933 been transferred to the control of the Resident, Eastern States and no longer form part of the Province. Chota Nagpur is a mountainous region which separates them from the Central Indian Plateau. Bihar comprises the valley of the Ganges from the spot where it issues from the territories of the Governor of the United Provinces of Agra and Oudh till it enters Bengal near Rajmahal. South of Bihar lies Chota Nagpur. Following the main geographical lines there are four Civil Divisions with headquarters at Patna, Muzaffarpur (for Tirhut), Bhagalpur and Ranchi (for Chota Nagpur). The headquarters of Government are at Patna. The new capital which lies between the Military Cantonment of Dinapore and the old civil station of Bankipore is known as "Patna," the old town being called "Patna City."

The People.

The Province has a population of 36,340,000 persons. Even so with 521 persons per square mile, Bihar is more thickly populated than Germany. There are only four towns, which can be classed as cities, namely, Patna, Gaya, Jamshedpur and Bhagalpur. During the last ten years the population of Patna has been steadily increasing. Hindus form an overwhelming majority of the population. Though the Muhammadans form about one-tenth of the total population they constitute more than one-fifth of urban population of the province. Animists account for 5.7 per cent. These are inhabitants of the Chota Nagpur plateau and the Santal Parganas, the latter district being a continuation of the plateau in a northerly direction.

Industries

Although there is a great deal of mineral wealth in Chota Nagpur and important industries are developing in connection with it, still for the bulk of the population of the province agriculture continues to be the basic occupation. Over 80 per cent of the population depends wholly on Agriculture, while only 7.8 depends on industries. The soil throughout the whole of that portion of the Indo-Gangetic plain lying within the provincial boundaries is extremely fertile, particularly in North Bihar, in parts of which the density of the population is more than 900 people

to the square mile. The province occupies a transitional position between Bengal with its damp climate so suitable for the paddy crop and the provinces to the north and west where large irrigation schemes have had to be provided to enable the soil to produce its bounty. As in Bengal, rice is by far the most important crop as it occupies normally an area of approximately 12 million acres or about 52 per cent of the net cropped area of the province. In 1939-40 the area under rice was 9,579,100 acres. As canal irrigation is available only in the Son valley and to a moderate extent in Champaran District, the importance of the south-west monsoon to the province of Bihar cannot be over-estimated.

In addition to the rice crop, however, other grain crops are grown on a tolerably large scale. Of the monsoon cereals, maize is grown in a normal area of more than 16 lakhs of acres while in the cold weather wheat and barley are extensively grown and occupy approximately 12 to 14 lakhs of acres respectively. The cultivation of oilseeds like castor, mustard and linseed forms a large and important part of the agriculture of Bihar, the normal area under spring oilseeds being estimated at more than 17 lakhs of acres. The areas under maize, wheat, barley and spring oilseeds in 1939-40 were 1,481,000 acres, 1,138,300 acres, 1,205,000 acres and 1,510,700 acres respectively.

After the United Provinces, Bihar is the most important white sugar area in India, some 26 per cent of the total production of white sugar in the country being turned out in Bihar factories. The importance of the agricultural aspect of the industry cannot be overestimated as probably 5,15,54,32; 90 rupees have been paid to the growers in the past season for cane purchased and crushed by the factories. Apart from this, forceful employment at a large labour year. The number of factories in the province has risen from 12 in 1931-32 to 32 at the present time. Jute is also an important crop and is confined almost entirely to the Purnea district on the Bengal border where about 94 per cent of the total crop in the province is produced. The total area under the jute crop was about 3 lakhs of acres in 1939-40 but little of the produce is manufactured within the province. Tobacco is a crop of increasing importance in the province and one which is likely to expand in importance. The area under the crop in 1939-40 was 112,300 acres. There are two factories at present in the province.

Manufactures

Opium was formerly, with indigo, the chief manufactured product of Bihar, but in consequence of the agreement with the Chinese Government the Patna Factory has been closed. At Monghyr the Peninsular Tobacco Company have erected one of the largest cigarette factories in the world and as a result tobacco is being grown much more extensively. The Tata Iron and Steel Works at Jamshedpur in Singhbhum district are also one of the largest in the world and numerous subsidiary industries are springing up in their vicinity. The most important of these are the Tinplate Company of India, Agricultural Implements, Ltd., Enfield

Cable Company of India, Enamelled Ironware, Limited, and Indian Steel Wire Products. The population of Jamshedpur is rapidly approaching 100,000 and it consumes $1\frac{1}{2}$ million tons of coal annually. This part of the province has also some of the richest and most extensive iron mines in the world and supplies the iron and steel works in both Bengal and Bihar with raw materials, but the raising of coal is still the most important of the mineral industries in the province. The coalfields in the Manbhum District have undergone an extraordinary development in the past twenty years, while valuable new fields are being developed at Ramgarh, Bokaro and Karanpura in Hazaribagh. This same district is the most important mica mining centre in the world both on account of the quality as well as the size of its output. Manbhum, Palaman, Ranchi, the Santal Parganas and Gaya are also the chief centres for the production of lac and the manufacture of shellac, the latter of which is exported from India to the value of ten crores annually. Cement is the other important industry of the province which is produced from the limestones available in Palaman and Shahabad.

Administration.

The Province on first constitution was administered by a Lieutenant-Governor-in-Council, thus being unique in India as the only Lieutenant Governorship with a Council. Under the Reform Act of 1919 it was raised to the status of a Governorship, with an Executive Council and Ministers. The principles of the provincial administration are fully explained elsewhere.

Public Works.

The Public Works Department in the Province of Bihar consists of two separate branches, viz.:—(1) the Buildings and Roads which includes Railways, Electrical and Public Health Engineering Branches and (2) Irrigation. There is only one Chief Engineer, in charge of both the branches, who is also Secretary to the Provincial Government with a temporary Additional Chief Engineer and Deputy Secretary and an Engineer Officer as Under-Secretary in the Buildings and Roads branch and a Deputy Chief Engineer who also acts as Dy. Secy. to Govt. and a technical Assistant Secretary in the Irrigation branch under him. The Electrical work of the Province is carried out by an Electric Inspector and Electrical Engineer and a staff of subordinates; while the Public Health Engineering works are looked after by a Public Health Engineer who is in charge of the P. H. Engineering Department and a staff of subordinates.

Justice.

The administration of justice is controlled by the High Court of Judicature at Patna. In the administration of civil justice below the High Court are the District Judges as Courts of Appeal, the Subordinate Judges and the Munsiffs. The jurisdiction of a District Judge or Subordinate Judge extends to all original suits cognizable by the Civil Courts. It does not, however, include the powers of a Small Cause Court, unless these be specially conferred. The ordinary jurisdiction of a Munsif extends to all suits in which the amount or value of the subject matter in dispute does not exceed Rs. 1,000 though the limit may be extended to Rs. 4,000.

On the criminal side the Sessions Judge hears appeals from Magistrates exercising first class powers while the District Magistrate is the appellate authority for Magistrates exercising second and third class powers. The District Magistrate can also be, though in point of fact he very rarely is, a court of first instance. It is usual in most districts for a Joint Magistrate or a Deputy Magistrate to receive complaints and police reports, cases of difficulty or importance being referred to the District Magistrate who is responsible for the peace of the district. In the Santal Parganas and in the Chota Nagpur Division the Deputy Commissioners and their subordinates hear rent-suits. In the Santal Parganas the Deputy Commissioner and his subordinates also exercise civil powers.

Land Tenure.

Almost the whole of the province of Bihar is covered by the permanent Settlement of 1793. A number of estates are held direct by Government, having come into the direct management of Government in various ways. Other estates are managed temporarily by the Board of Revenue under the Court of Wards Act, while in Chota Nagpur a number of estates are managed by Managers appointed under the Chota Nagpur Enumbered Estates Act. There are two Tenancy Acts in force in the Province:—In Bihar the Bihar Tenancy Act is in force. This is the same as the Bengal Tenancy Act, 1885, with a number of important differences consequent on recent amendments of the Act. In Chota Nagpur, which is largely inhabited by aboriginal peoples, the Chota Nagpur Tenancy Act, an Act specially adopted to their requirements, is in force. It has also recently undergone several important amendments beneficial to the people of Chota Nagpur. There is a third tenancy system in the Santal Parganas where the tenancy law is contained in Regulation III of 1872 and II of 1886 and the record-of-rights prepared in the settlement. Finally in a small part of South Bihar where there is a large aboriginal population a special chapter of the Bihar Tenancy Act designed to prevent alienation of land by aborigines is in force.

Throughout the province a system of periodic settlements is in vogue. In these settlements the maps and cadastral ledgers are revised and fair rents may be settled. In many districts the settlement records are now out of date and in one or two it is nearly 40 years since the last settlement was undertaken.

In the greater part of the Santal Parganas and in many parts of Chota Nagpur the headmen system prevails. The usual practice is that the headmen are responsible for the collection of the rents and their payment to landlords after deduction of a percentage as their remuneration. Special steps have been taken in the settlements to record the rights and duties of the headmen and the special rights and privileges of certain privileged classes of tenants among the aborigines.

Police.

The Departments of Police, Prisons and Registration are each under the general direction of Government, supervised and inspected by an Inspector-General with a staff of assistants. The Commissioner of Excise and Salt is also Inspector-General of Registration.

Under the Inspector-General of Police are

three Deputy Inspectors-General and 24 Superintendents. There are also 25 Assistant Superintendents of Police and 28 Deputy Superintendents. The force is divided into the District Police, the Railway Police and the Military Police. There is a college for the training of officers and a School for the training of recruit constables. Both the institutions have selected Police officers on their staff. A Criminal Investigation Department has also been formed for the collection and distribution of information relating to professional criminals and criminal tribes whose operations extend beyond a single district and to control, advise, and assist in investigations of crime of this class and other serious action which its assistance may be invoked. There are three companies of Unmounted Military Police and one Squadron of Mounted Military Police which are maintained as reserves to deal with serious and organised disturbances and perform no ordinary civil duties. There are also five platoons of armed police stationed at Patna to serve as a provincial reserve.

Education.

The position of education in the Province, with the numbers attending schools, is set out in the section Education and the tables attached thereto (q. v.) showing in great detail the educational status of the administration. The mass literacy movement which has been inaugurated in Bihar for the education of adults is an interesting feature of the educational programme of the province.

There is a University at Patna, whose functions are described under the Indian Universities (q. v.)

Medical.

The Medical Department is under the control of the Inspector-General of Civil Hospitals who is a Member of the Indian Medical Service. Under him there are 16 Civil Surgeons who are responsible for the medical work of the districts at the headquarters of which they are stationed. 24 Dispensaries are maintained by Government in addition to 606 Dispensaries maintained by Local bodies, Railways, private persons, etc. 8,525,087 patients including 91,847 in-patients were treated in all the dispensaries in 1939. The total income of the dispensaries maintained by Government and Local Bodies including that of the private aided institutions amounted to Rs 32,84,328.

There is a large mental hospital for Europeans at Ranchi receiving patients from Assam, Bihar, Bengal, Baluchistan, the C. P., the N. W. F. P., Orissa, the Punjab and the United Provinces and another similar institution for Indians for the treatment of mental patients from Bihar, Orissa and Bengal. A sanatorium has been established at Itki in the district of Ranchi for the treatment of tuberculosis. There is a Medical College at Patna with a large and well equipped hospital attached to it including an institute for Radium treatment. There is a Medical School at Darbhanga which also has a large hospital attached to it. Centres for anti-rabic treatment have been opened at Patna and other suitable places in the province.

The province has a laboratory for the preparation of cholera phage and bacterio-phage which are supplied to other provincial Government also for use in the prevention of epidemics.

ADMINISTRATION.

GOVERNOR

His Excellency Sir Thomas Alexander Stewart, KCSI, KCIIE, IOS

PERSONAL STAFF

Secretary to Governor, W G Lacey, CIE, IOS

Military Secretary to Governor, Major R J Tweedy, 19th King George V's Own Lancers

Aide de-Camps, F E Bioach, IP and A B Powell, ICS

Honorary A D Cs, Lieut R H Bion, Bihar Light Horse, Lieut R P Yadava, 11/19th Hyderabad Regiment, Risaldar Major & Hony Capt Abdul Latif, Khan Bahadur, IDS M, late 2nd Royal Lancers (Gardner's Horse).

ADVISERS TO H E THE GOVERNOR

BIHAR LEGISLATIVE ASSEMBLY.

Speaker The Hon'ble Mr Ramdayalu Sinha, B A, LL B

Deputy Speaker Abdul Bari, M A.

Shrikrishna Sinha (South Sadr Monghyr General Rural), Anugrah Narayan Sinha (Aurangabad General Rural), Dr Saiyid Mahmud (North Champaran Sadr Muhammadan Rural), Jaglal Chaudhuri (South-West Purnea General Rural, Reserved seat), Krishna Ballabh Sahay (Central Hazaribagh General Rural), Jagat Narayan Lal (Patna Division General Urban), Sarangdhar Sinha (Patna City General Urban), Binodanand Jha (Deoghar cum Jamtara General Rural), Shivanandan Prasad Mandal (Madhupura General Rural), Jimut Bahan Sen (Chota Nagpur Division General Urban), Jagjivan Ram (East Central Shahabad General Rural, Reserved seat), Sayeedul Haqq (Central Darbhanga Muhammadan Rural), Shyam Narayan Singh (East Bihar General Rural), Srimati Saraswati Devi (Bhagalpur Town Women's General Urban), Srimati Kamakhya Devi (Patna Women's General Urban), Srimati Sharda Kumari Devi (Muzaffarpur Town Women's General Urban), Dr Raghunandan Prashad (South Sadr Monghyr General Rural Reserved seat), Vindhayeshvari Prashad Varma (Tirhut Division General Urban), Jamuna Karjee (East Madhubani cum Bahera General Rural); Abdul Bari (North Santal Parganas Muhammadan Rural), Birendra Bahadur Sinha (South Gaya General Rural), Devendra Nath Samanta (Singhbhum General Rural); Harikishore Pd. (Banka General Rural), Harihar Sinha (Sasaram General Rural), Prabhunath Sinha (East Gopalganj cum Mashrak and Marhaura General Rural); Hargobind Misra (Buxar General Rural), Pandit Gupteshwar Pandey (Bhabua General Rural), Harinandan Singh (North-East Shahabad General Rural), Budhan Rai Verma (East Central Shahabad General Rural); Indra Dewan Saran Singh (Central Patna General Rural), Shyam Nandan Sinha (Dinapore General Rural), Pandit Sheel Bhadra Yajee (Barh General Rural), Bundi Ram (Navada General Rural, Reserved seat), Dip Narayan Sinha (North-East Hajipur General Rural), Ramcharitra Singh (West Begusarai General Rural); Kumar Kahka Prashad Singh (Jamui General Rural), Harivans Sahay (South-West Champaran Sadr General Rural), Vishwanath Singh (North Bethah General Rural), Thakur Ramnandan Sinha (North Sitamarhi General Rural), Ramashis Thakur (West Sitamarhi General Rural), Biresh Dutta Sinha (West Saran Sadr General Rural), Dwarkanath Tiwari (East Saran Sadr General Rural), Narayan Prashad Sinha (North-East Suwan General Rural), Shiveshvar Prasad Narayan Sinha Sharma (South-West Suwan General Rural), Gorakh Prashad (East Champaran Sadr General Rural); Gaurishankar Dalmia (Bhagalpur Division General Urban), Ganesh Prashad (North-West Champaran Sadr General Rural), Pandit Baidyanath Misra (South Bethah General Rural), Ram Basawan (Bhadas General Rural Reserved seat), Balgobind Bhagat (North Bethah General Rural, Reserved seat), Shivanandan Ram (East Muzaffarpur Sadr General Rural, Reserved seat), Mahesh Prasad Sinha (East Muzaffarpur Sadr General Rural); Jamuna Prasad Sinha (Navada General Rural), Rajeshwar Prasad Narayan Sinha (North-West Samastipur General Rural), Chet Nath Jha (South Madhubani General Rural), Niranada Mukharji (North Sadr Monghyr General Rural); Pramatha Bhattasali (Singhbhum General Rural); Rajendra Narayan Chaudhuri (North Madhubani General Rural), Suryanandan Thakur (Darbhanga Sadr General Rural); Ramcharan Sinha (South-East Samastipur General Rural); Brahmadeo Narayan Singh (East Begusarai General Rural), Pandit Mewalal Jha (South Bhagalpur Sadr General Rural); Shivadhari Sinha (North Bhagalpur Sadr cum Kishanganj General Rural), Upendra Mohan Das-Gupta (South Manbhum General Rural); Tika Ram Majhi (South Manbhum General Rural, Reserved seat), Rasika Ho (Singhbhum General Rural, Reserved seat), Ahmad Ghafoor (North-West Darbhanga Muhammadan Rural), Nur Hassan (Saran Sadr Muhammadan Rural), H B Chandra (Monghyr cum, Jamalpur Factory Labour); Rameshwar Prashad Sinha (South-West Hajipur General Rural) a Rajendra Misra (Supaul General Rural), Sukhlal Singh (Giridih cum Chatra General Rural), Karu Dusadhi (Giridih cum Chatra General Rural, Reserved seat), Deoki Nandan Prashad (Ranchi Sadr General Rural); Ramdin Tiwari (North-West Purnea General Rural), Kishori Lal Kundu (East Purnea General Rural), Dheer Narayan Chand (South-West Purnea General Rural), Buddhinath Jha (Godda General Rural), Bhagban Chandra Das (Santal Parganas Sadr General Rural); Hopna Santal (Central Hazaribagh General Rural, Reserved seat), Charan Murmu (Santal Parganas Sadr General Rural, Reserved seat), Debu Murmu (Palaur cum Rajmahal General Rural, Reserved seat), Brijlall Dokania (Palaur cum Rajmahal General Rural); Ram Bhagat (Ranchi Sadr General Rural, Reserved seat), Hafiz Zafar Hasan (Patna Division Muhammadan Urban), Jadubans Sahay (South-West Palamau General Rural), Ambika Charan Mallik (North Manbhum General Rural), Ram Prasad (East Bihar General Rural, Reserved seat), Jugal Kishore Narayan Sinha (North Gaya General Rural), Keshvar Ram (Darbhanga Sadr General Rural, Reserved seat), Sunder Malito (South-East Samastipur General Rural, Reserved seat); Ram Baras Das (Madhupura General Rural, Reserved seat), Purna Chandra Mitra (Kishin General Rural), Rajkishore Sinha (North-East Palamau General Rural), Khetra Nath Sen Gupta (Hazaribagh Mining Labour), Jitu Ram (North-East Palamau General Rural, Reserved seat), Chakreshwar Kumar Jain (The Bihar Chamber of Commerce), Muhammad Islamuddin (North-East Kishanganj Muhammadan Rural), Saiyid Rafiuddin Ahmad Rizvi (South Monghyr Muhammadan Rural), Dr Sachchidananda Sinha (University), Munindra Nath Mookherjee (The Indian Mining Federation), Abdul Jalil (Tirhut Muhammadan Urban); Badrul Hasan (Hajipur Muhammadan Rural); Shaikh Muhammad Husain (Padlmau Muhammadan Rural), Khan Bahadur Saghurul Haqq (Gopalganj Muhammadan

Rural), Tajamul Husain (Sitamarhi Muhammadan Rural), Hafiz Shaikh Muhammad Sani (Bettiah Muhammadan Rural), Khan Bahadur Nawab Abdul Wahab Khan (Bhagalpur Division Muhammadan Urban), Shaikh Shafiqul Haqq (South-East Purnea Sadr Muhammadan Rural), Sayid Muhammad Minnatullah (Madhipura cum Supaul Muhammadan Rural), Muhammad Mahmud (Bhagalpur Sadr cum Banka Muhammadan Rural), Chanduri Sharafat Husain (Shahabad Muhammadan Rural), Chaudhuri Mahammad Nazim Hasan (North Monghyr Muhammadan Rural), Shaifuddin Hasan (East Patna Muhammadan Rural), Shaikh Ziaur Rahman (Ariaria Muhammadan Rural), Muhammad Shah (North-East Darbhanga Muhammadan Rural), Muhammad Abdul Majeed (South Champaran Sadr Muhammadan Rural), Muhammad Yunus (West Patna Muhammadan Rural), Rameshwar Prasad Singh, M B E (Patna Division Landholders), Qazi Muhammad Ilyas (Manbhum Muhammadan Rural), Muhammad Latifur Rahman (West Gaya Muhammadan Rural), Bria Lal Kandarp Nathi Shah Deo (Gumla cum Simdega General Rural), Maharaj Kumar Rajkishore Nathi Shah Deo (Chota Nagpur Division Landholders), Muhammad Tahir (North Purnea Sadr Muhammadan Rural), P S Keelan (The Indian Mining Association), B. Wilson Haigh, M I Chem. E (Chota Nagpur European), E G Munns (The Bihar Planters' Association), Muhammad Qasim (Saran Sadr Muhammadan Rural), Gulu Dhopa (Central Manbhum General Rural, Reserved seat), Ignes Beck (Indur Christian), Boniface Lakia (Gumla cum Simdega General Rural Reserved seat), S Mohiuddin Ahmad (Chota Nagpur Division Muhammadan Urban), Kumar Ajit Prasad Singh Deo (Central Manbhum General Rural), Lady Anise Imam (Patna City Muhammadan Women's General Urban), Chandreshwar Prasad Narayan Sinha, C I E (Tirhut Division Landholders), Khan Bahadur Haji Shaikh Mahmud Hasan Khan (Hazaribagh Muhammadan Rural), Sayid Naimul Haq (South Santal Parganas Muhammadan Rural), W H Meyrick, O B E (Patna and Tirhut cum Bhagalpur European), Sayid Najmul Hasan (East Gaya Muhammadan Rural), Shaikh Muhammad Fazlur Rahman (North-West Kishanganj Muhammadan Rural), Surya Mohan Thakur (Bhagalpur Division Landholders), Zainuddin Hosain Meerza (South Kishanganj Muhammadan Rural), Shaikh Ramzan Ali (Ranchi cum Singhbhum Muhammadan Rural), Sayid Jafar Imam (Patna City Muhammadan Urban), Pandit Gobindpati Tiwari (West Gopalganj General Rural), Natha Ram (Jamshedpur Factory Labour), The Hon'ble Mr Ramdayalu Sinha (Speaker) (East Sitamarhi cum Katra and Minapore General Rural).

BIHAR LEGISLATIVE COUNCIL.

President—The Hon'ble Sir Rajivanjan Prasad Sinha, Kt, M A

Secretary—Sayid Anwar Yunsoof, BAR-AT LAW

Rai Bijraj Krishna (Elected by the Bihar Legislative Assembly), Bansu Lal (Elected by the Bihar Legislative Assembly), Punditdeo Sharma (Elected by the Bihar Legislative Assembly), Gajendra Narayan Singh (Elected by the Bihar Legislative Assembly), Radha Govind Prasad (Elected by the Bihar Legislative Assembly), Shah Muhammad Uman (Elected by the Bihar Legislative Assembly), Gur Sahay Lal (Nominated), Rai Bahadur Satish Chandra Sinha (Hazaribagh cum Manbhum General), Tribeni Prasad Singh (Elected by the Bihar Legislative Assembly), Bijaynanda Prasad (Nominated), Abdul Ahad Muhammad Noor (Elected by the Bihar Legislative Assembly), Sayid Muhammad Mehdi (Gaya cum Chota Nagpur Division Muhammadan), Shivama Prasad Sinha (Elected by the Bihar Legislative Assembly), Khan Bahadur Nawab Sayid Shah Wajid Husain (Elected by the Bihar Legislative Assembly), Naresch Mohan Thakur (Bhagalpur cum Purnea General), Bishwanath Prasad Narayan Singh (Saran cum Champaran General), Sayid Mobarak Ali (Tirhut Division Muhammadan), Mrs Malcolm Sinha (Nominated), Maheshwar Prasad Narayan Singh (Muzaffarpur General), Rai Bahadur Shyamnandan Sahay (Elected by the Bihar Legislative Assembly), Rai Sahib Lalini Kumar Sen (Ranchi and Palamu cum Singhbhum General), Ramjivan Umait Singka (Monghyr cum Santal Parganas General), Raja Bahadur Harihar Prasad Narayan Singh (Gaya General), Khan Bahadur Sayid Muhammad Ismail (Patna cum Shahabad Muhammadan), Jamnulur Rahman Bhagalpur Division Muhammadan), Alan Campbell Combe (Bihar European), Ganga Nand Singh (Darbhanga General)

The Bombay Province.

Consequent on the separation of Sind from the Bombay Province as from April 1, 1936, Bombay has suffered a diminution territorially and otherwise. The following details relate to Bombay minus Sind:

The Bombay Province now stretches along the west coast of India, from Gujerat in the North to Kanara in the South. It has an area of 77,221 square miles and a population of 18,192,475. Geographically included in the Province but under the Government of India is the first class Indian State of Baroda, with an area of 8,164 square miles and a population of 2,443,007. There are no States in political relations with the Government of Bombay, as they are all now under the Government of India.

The Province embraces a wide diversity of soil, climate and people. In the Province there are the rich plains of Gujerat, watered by the Nerbudda and the Tapti, whose fertility is so marked that it has long been known as the Garden of India. South of Bombay City the Province is divided into two sections by the Western Ghats, a range of hills running parallel to the coast. Above Ghats are the Deccan Districts, south of these come the Karnatic districts. On the sea side of the Ghats is the Konkan, a rice-growing tract, intercepted by creeks which make communication difficult.

The People

The population varies as markedly as soil and climate. Gujerat has remained true to Hinduism although long under the dominion of powerful Mahomedan kings. Here there is an amplitude of caste divisions, and the people, who although softened by prosperity, are amongst the keenest trading races in the world. The Deccan peasant has been seasoned by adversity; the saying goes that the Deccan expects a famine one year in every three, and gets it; the population is much more homogeneous than in Gujerat, and thirty per cent. are Mahrattas. The Karnatic is the land of the Lingayets, a Hindu reforming sect of the twelfth century, and in the Konkan there is a large proportion of Christians. Three main languages are spoken, Gujarati, Marathi and Kannada with Urdu a rough *lingua franca* where English has not penetrated. The main castes and tribes number five hundred.

Industries.

The principal industry is agriculture, which supports sixty-four per cent. of the population. In Gujerat the soils are of two classes, the black cotton soil, which yields the famous Broach cottons, the finest in India, and alluvial, which under careful cultivation in Ahmedabad and Kaira makes splendid garden land. The dominant soil characteristic of the Deccan is black soil, which produces cotton, wheat, gram and millet, and in certain tracts rich crops of sugarcane. The Konkan is a rice land, grown under the abundant rains of the submontane

regions, and in the south the Dharwar cotton vies with Broach as the best in India. There are no great perennial rivers suitable for irrigation, and the harvest is largely dependent upon the seasonal rainfall; supplemented by well irrigation. A chain of irrigation works, consisting of canals fed from great reservoirs in the region of unfailing rainfall in the Ghats, is gradually being completed, and this will ultimately make the Deccan immune to serious drought. More than any other part of India the Province has been scourged by famine and plague. The evils have not been unmixed, for tribulation has made the people more self-reliant, and the rise in the values of all produce, synchronising with a certain development of industry, has induced a considerable rise in the standard of living. The land is held on what is known as the ryotwari tenure, that is to say, each cultivator holds his land direct from Government under a moderate assessment, and as long as he pays this assessment he cannot be dispossessed.

Manufactures.

Whilst agriculture is the principal industry, others have no inconsiderable place. The mineral wealth of the Province is small and is confined to building stone, salt extracted from the sea, and a little manganese. But the handicrafts are widely distributed. The handloom weavers produce bright-coloured saris, and to a diminishing extent the exquisite kincobs of Ahmedabad and Surat. Bombay silverware has a place of its own, as well as the brass work of Poona and Nasik. But the tendency is to submerge the indigenous handicrafts beneath industry organised on modern lines. Bombay is the great centre in India of the textile trade. This is chiefly found in the headquarter city, Bombay, and in Ahmedabad.

Number of Looms in Bombay Island. 65,292

Number of Spindles in Bombay Island. 27,89,080

Number of hands employed in the
Textile Industry in Bombay Island
(daily average) 1,15,903

Consumption of Cotton by the Mills in
Bombay Island (in candles of
784 lbs) - 5,73,984
Number of Spindles in Ahmedabad. 17,82,963

Number of Looms in Ahmedabad .. 43,513

Number of Spindles in Sholapore Dist. 3,13,084

Number of Looms in Sholapore Dist. 7,023

Number of Spindles in the Bombay
Province (excluding Bombay
Island and Ahmedabad) 12,48,888

Number of Looms in the Bombay
Province (excluding Bombay
Island and Ahmedabad) 26,094

Administration.

With the introduction of Provincial Autonomy on April 1, 1937, the administration of the province has been largely altered at the top. Excepting unusual circumstances, there is now a Governor and a Council of seven Ministers to aid and advise him in all matters except in so far as he is required by the Government of India Act, to exercise his function in his discretion. The executive power of the province extends to all matters in which it may legislate. The Ministers are appointed and dismissed by the Governor in his discretion, he fixes their salaries until determined by the legislature. The Governor, as in other Provinces, has certain special responsibilities and these extend to (a) the prevention of menace to the peace or tranquillity of his province or any part thereof, (b) the safeguarding of the legitimate interests of minorities; (c) the safeguarding of the rights of civil servants past and present and their dependants; (d) the securing in the executive sphere of protection against discrimination, (e) the securing of the peace and good government of areas declared to be partially excluded areas, (f) the safeguarding of the rights of states and the rights and dignity of any ruler, and (g) the securing of the execution of orders given to him under Part VI of the Act (dealing with administrative relations) by the Governor-General in his discretion.

The Governor is assisted by a special secretariat staff presided over by a Secretary whose emoluments are fixed in his discretion.

In the legislative sphere the Governor is assisted with two chambers, known as the Bombay Legislative Assembly and the Bombay Legislative Council. The Council is a permanent body. One-third of the members retire each three years and the Assembly, unless sooner dissolved, lasts for five years. The strength of the Assembly is 175 members of whom 30 are Muslims, 3 Indian Christians, 2 Anglo-Indians, 3 Europeans, 2 landholders, 7 Commerce and Industry, 7 Labour, 1 University and the remaining 120 are Hindus including 15 Scheduled castes and 7 Marathas. There are also six women.

The Legislative Council will contain not less than 29 and not more than 30 members of whom not less than three and not more than four shall be nominated by the Governor. Twenty will be elected by the General Constituencies, 6 by Muslims and 1 by Europeans. The senior of the Civilian Secretaries is entitled the Chief Secretary. The Government is in Bombay from November to the end of May; and in Poona from June to November, but the Secretariat is always in Bombay. Under the Local Government the Province is administered by three Commissioners, namely, the Commissioner for the Northern Division, with headquarters at Ahmedabad, the Central Division at Poona, and the Southern Division at Belgaum. Each district is under a Collector, usually a Covenanted Civilian, who has under him one or more Civilians as Assistant Collectors, and one or more Deputy Collectors. A collectorate contains on an average from eight to ten talukas, each consisting of from one to two hundred villages

whose whole revenues belong to the State. The village officers are the patel, who is the head of the village both for revenue and police purpose; the talati or kulkarni, clerk and accountant; the messenger and the watchman. Over each taluka or group of villages is the mamlatdar, who is also a subordinate magistrate. The charge of the Assistant or Deputy Collector contains three or four talukas. The Collector and Magistrate is over the whole District. The Commissioners exercise general control over the Districts in their Divisions.

Justice.

The administration of justice is entrusted to the High Court sitting in Bombay, and comprising a Chief Justice, who is a barrister, and nine puisne judges, either Civilian, Barristers, or Indian lawyers. Of the lower civil courts, the court of the first instance is that of the Subordinate Judge recruited from the ranks of the local lawyers. The Court of first appeal is that of the District or Assistant Judge, or of a first class subordinate judge with special powers. District and Assistant Judges are Indian Civilian, or members of the Provincial Service or the Bar. In cases exceeding Rs. 5,000 in value an appeal from the decision of the Subordinate or Assistant Judge and from the decision of the District Judge in all original suits lies to the High Court. District and Assistant Judges exercise criminal jurisdiction throughout the Province but original criminal work is chiefly disposed of by the Executive District Officers and Resident and City Magistrates. Capital sentences are subject to confirmation by the High Court. In some of the principal cities Special Magistrates exercise summary jurisdiction (Bombay has six Presidency Magistrates, as well as Honorary Magistrates exercising the functions of English Justices of the Peace) and a Court of Small Causes, corresponding to the English County Courts.

Local Government.

Local control over certain branches of the administration is secured by the constitution of local boards and municipalities, the former exercising authority over a District or a Taluka, and the latter over a city or town. These bodies are composed of members either nominated by Government or elected by the people, who are empowered to expend the funds at their disposal on education, sanitation, the construction of roads and tanks, and general improvements. Their funds are derived from cesses on the land revenue, the toll, ferry funds and local taxes. The tendency of recent years has been to increase the elective and reduce the nominated element, to allow these bodies to elect their own chairmen, whilst larger grants have been made from the general revenues for water supply and drainage.

The Bombay Municipal Boroughs Act of 1925 works further advance in the matter of local Self-Government in the Province. The Act provides more adequate basis for Municipal Administration in the larger cities of the Bombay Province. The larger municipalities are now styled as Municipal Boroughs which are now 27 in number. The executives of these Borough

Municipalities are invested with larger powers than hitherto exercised. Another important change introduced by the Act was the extension of municipal franchise to occupiers of dwellings or buildings with annual rental values of Rs. 12 or with capital value of not less than Rs. 200.

Public Works.

The Public Works Department is under the control of a Chief Engineer who acts as Secretary to the Government. Under him are Superintending Engineers in charge of Circles and Executive Engineers in charge of divisions, and the Electrical Engineer.

There is a chain of protective irrigation works, originating in reservoirs in the Ghat regions. The principal works are the Nira Canals fed by Lake Whiting impounded by the Lloyd Dam at Bhatgar, the Pravara Canals fed by Lake Arthur Hill, impounded by Wilson Dam at Bhandardara, the Mutha Canals fed by Lake Tife at Khadakvasla, the Godavari Canals fed by Lake Beale at Nandur Madhmeshwar and the Gokak Canal. The Mutha Canals and the Gokak Canal were completed in 1896-97, the Nira Left Bank Canal in 1905-06, the Godavari Canals in 1915-16 and the Pravara Canals in 1926-27. The Nira Right Bank Canal which has been under construction since 1912 is practically completed. The Wilson Dam at Bhandardara, the second highest yet constructed by Engineers the world over, was opened by His Excellency the Governor on 10th December 1926. The Lloyd Dam at Bhatgar which is 5,333 feet in length, 190 feet in height and 124 feet in width was opened by H. E. Sir Leslie Wilson on 27th October 1928. It cost Rs. 172 lakhs. It is remarkable as being the largest Dam in volume hitherto constructed and contains 21½ million cubic feet of masonry. The Assuan Dam in Egypt is popularly supposed to be the largest Dam in existence but that contains 19 million cubic feet. It cost also nearly 50 per cent. more than the Lloyd Dam. An idea of the magnitude of the Lloyd Dam can be gathered from the fact that if a wall 6 feet high and 15 inches thick were constructed from the masonry in the Dam it would stretch a distance of 520 miles, say from Bombay to Nagpur. These projects will irrigate certain tracts most liable to famine.

Police.

The Police Force is divided into 3 categories, viz., District Police, Railway Police and the Bombay City Police. The District and Railway Police in the Province proper are for the purpose of control under the Inspector-General of Police who is assisted by three Deputy Inspectors-General, of whom two are in charge of Ranges and the third is in charge of the Criminal Investigation Department and the Finger Print Bureau. The executive management of the Police in each district and on Railways in the Province proper as well as in Sind is vested in a Superintendent of Police under the general direction of the Magistrate of the District concerned except in the case of the Railway Police. For the purposes of effective supervision over the investigation and prevention of crime, some of the larger districts are divided into one or more sub-divisions each under a

Sub-Divisional Officer who is either an Assistant Superintendent of Police, or an Inspector of Police, a Deputy Superintendent of Police. Sub-Inspectors are the officers in charge of Police Stations and are primarily responsible under the law, for the investigation of offences reported at their Police Stations. Officers appointed directly to the posts of Assistant Superintendents of Police, Deputy Superintendents of Police, Inspectors and Sub-Inspectors undergo a course of training at the Central Police Training School at Nasik before being posted to Districts for executive duty. The Bombay City Police is a separate force under the Commissioner of Police who is directly responsible to Government.

Education.

Education is imparted partly through direct Government agency, and partly through the medium of grants-in-aid. Government maintain Arts Colleges at Bombay, Andheri, Ahmedabad and Dharwar; the Grant Medical College, the Poona College of Engineering, the Agriculture College, Veterinary College, School of Art, Law College and a College of Commerce. Most of the secondary schools are in private hands. The primary schools are maintained by Local Authorities, with a grant-in-aid. The Bombay Municipality is responsible for primary education in Bombay City (*q. v.*, Education).

The total number of institutions at the end of the year 1939-40 was 22,322. Of these 21,856 were recognised and 466 unrecognised. Of the recognised 19,857 are for males and 1,999 for females. The recognised institutions consisted of 18 Arts and Science Colleges excluding the University School of Economics and Sociology, 14 Professional Colleges, 790 Secondary Schools, 19,115 Primary Schools and 1,938 Special Schools.

There are 21,068 towns and villages in this Province. Of these, 13,358 possessed schools as compared with 11,862 in 1938-39. The area served by a town or village with school was 5.8 square miles as against 6.5 square miles in 1938-39.

There were 1,782,072 pupils under instruction at the end of the year 1939-40 as compared with 1,556,441 in 1938-39. The number of pupils in recognised institutions was 1,753,701 and in unrecognised institutions was 28,370 as compared with 1,536,763 and 29,678 respectively in 1938-39. The percentage of pupils in recognised institutions to the total population of the Province increased from 8.58 to 9.79. Of the 1,753,701 pupils under instruction in recognised institutions, 1,504,821 were boys and 248,880 were girls.

The total expenditure on Public Instruction increased from Rs. 410 lakhs to Rs. 438 lakhs during 1939-40. Out of this amount 44.9 per cent was met from Provincial Revenues, 16.9 per cent from Local Funds, 27.4 per cent from fees and 11.8 per cent from other sources.

The Educational Department is administered by a Director, with an Inspector in each Division and a Deputy or Assistant Inspector in each district.

Higher education in the Province is controlled by the Bombay University which was established in 1857. The constitution of the University has recently undergone, however, considerable changes in virtue of a new enactment known as the Bombay University Act of 1928. This Act altered the whole constitution of the University so as to make it adequately representative with a view to bringing into closer association with the public the industrial, commercial and civic life of the people of the Province to enable it to provide greater facilities for higher education in all branches of learning including Technology and to undertake on a larger scale than heretofore post-graduate teaching and research, while continuing to exercise due control over the teaching given by colleges affiliated to it from time to time. The new University Department of Chemical Technology was formally inaugurated by His Excellency the Governor of Bombay on 15th November 1933. The authorities of the University, as now constituted, are chiefly the Chancellor, Vice-Chancellor, the Syndicate, the Academic Council and the Senate. The Senate consisting of fellows is the supreme governing body of the University. The number of fellows are 144 of whom 40 are nominated by the Chancellor and 11 are ex-officio. The Academic Council consisting of educational experts deals with all purely academical questions. This body works in collaboration with the Syndicate which is the principal executive of the University.

Medical.

The Medical Department is in the charge of the Surgeon-General who is a member of the I. M. S., and Public Health in that of the Director of Public Health, who is usually a non I.M.S. Officer. Civil Surgeons stationed at each district headquarters are responsible for the medical work of the district: whilst sanitation is entrusted to one of the Assistant Directors of Public Health. Four large hospitals are maintained by the Government in Bombay, and the accommodation in them has been recently increased. The total number of beds available in all the City Hospitals including private Institutions is 7,151 roughly. Well-equipped hospitals exist in all important up-country stations. Over 4,083,918 persons including 145,783 in-patients were treated during the year 1940. The

Province contains 6 Lunatic Asylums and 16 institutions for the treatment of Lepers. Vaccination is carried out by a staff under the direction of the Director of Public Health. Sanitary work has received an immense stimulus from the large grants made by the Government from time to time.

Two important schemes have been recently sanctioned for providing medical relief in rural areas

The first relates to the extension of a former scheme for subsidising medical practitioners in six selected rural centres. Government have now decided to open, in all, 200 centres for medical aid in the Province by giving subsidies to private medical practitioners. The subsidy will be given to Allopathic medical practitioners and to some Ayurvedic and Unani practitioners who may get themselves registered.

Finance.

With the introduction of Provincial Autonomy, the financial arrangements have been revised. There is a clear cut division between the finances of the Federation and those of the Provinces.

The provincial sources of revenue in addition to grants from federal taxation now include taxes raised by the local Government on land, as land revenue; taxes on land and buildings, hearths and windows; taxes on agricultural income and duties in respect of succession to agricultural land, duties of excise on goods manufactured or produced in the province and countervailing duties on goods produced or manufactured elsewhere in India, being alcoholic liquors for human consumption; opium, Indian hemp, and other narcotic drugs and narcotics; non-narcotic drugs; medicinal and toilet preparations, containing alcohol or any of the above substances, other excises being federal; taxes on mineral rights subject to any federal restrictions imposed in respect of mineral development; capitation taxes, taxes on professions, trades, callings, and employments; taxes on animals, boats, the sale of goods, advertisements, on luxuries including entertainments, amusements, betting and gambling; cesses on the entry of goods into a local area; dues on passengers and goods carried on inland waterways; tolls; stamp duties in respect of documents not included in the federal list.

GOVERNORS OF BOMBAY.

Sir Abraham Shipman	1662
Died on the island of Anjediva in Oct. 1664		
Humfrey Cooke	1665
Sir Gervase Lucas	1666
Died, 21st May 1667.		
Captain Henry Garey (Officiating)	1667
Sir George Oxenden	1668
Died in Surat, 14th July 1669.		
Gerald Aungler	1669
Died in Surat, 30th June 1677.		
Thomas Rolt	1677
Sir John Child, Bart.	1681
Bartholomew Harris	1690
Died in Surat, 10th May 1694.		
Daniel Annesley (Officiating)	1694
Sir John Gayer	1694
Sir Nicholas Waite	1704
William Aislabie	1708
Stephen Strutt (Officiating)	1715
Charles Boone	1715
William Phipps	1722
Robert Cowan	1729
Dismissed.		
John Horne	1734
Stephen Law	1739
John Geek (Officiating)	1742
William Wake	1742
Richard Bouchler	1750
Charles Crommelin	1760
Thomas Hodges	1767
Died, 23rd February 1771.		
William Hornby	1771
Rawson Hart Boddam	1784
Rawson Hart Boddam	1785
Andrew Ramsay (Officiating)	1788

Major-General William Medows	1788
Major-General Sir Robert Abercromby,	1790
K.O.B. (a).		
George Dick (Officiating)	1792
John Griffith (Officiating)	1795
Jonathan Duncan	1795
Died, 11th August 1811.		
George Brown (Officiating)	1811
Sir Evan Nepean, Bart.	1812
The Hon. Mountstuart Elphinstone	1819
Major-General Sir John Malcolm, G.O.B.	1827
Lieut.-General Sir Thomas Sidney Beckwith, K.O.B.	1830
Died, 15th January 1831.		
John Romer (Officiating)	1831
The Earl of Clare	1831
Sir Robert Grant, G.O.B.	1835
Died, 9th July 1838.		
James Farish (Officiating)	1838
Sir J. Rivett-Carnac, Bart.	1839
Sir William Hay Macnaghten, Bart. (b)	1841
George William Anderson (Officiating)	1841
Sir George Arthur, Bart, K.O.H.	1842
Lestock Robert Reid (Officiating)	1848
George Russell Clerk	1847
Viscount Falkland	1848
Lord Elphinstone, G.O.H., P.C.	1853
Sir George Russell Clerk, K.O.B. (2nd time)	1860
Sir Henry Bartle-Edward Frere, K.O.B.	1862
The Right Hon. William Robert Seymour Vesey Fitzgerald,	1867
Sir Philip Edmond Wodehouse, K.O.B.	1872
Sir Richard Temple, Bart, K.O.S.I.	1877
Lionel Robert Ashburner, C.S.I. (Acting)	1880
The Right Hon. Sir James Fergusson, Bart, K.O.M.G.	1880
James Braithwaite Relle, C.S.I. (Acting)	1885
Baron Reay	1885
Baron Harris	1890
Herbert Mills Birdwood, C.S.I. (Acting)	1895
Baron Sandhurst	1895
Baron Northcote, O B	1900
Sir James Monteat, K.O.S.I. (Acting)	1903
Baron Lamington, G.O.M.G., G.O.I.E.	1903
J. W. P. Muir-Mackenzie, C.S.I. (Acting)	1907
Sir George Sydenham Clarke, G.O.M.G., G.O.I.E. (c).	1907
Baron Willingdon, G.O.I.E.	1913
Sir George Ambrose Lloyd, G.O.I.E., D.S.O. (d)	1918
Sir Leslie Orme Wilson, P.C., G.O.I.E., C.M.G., D.S.O.	1923
Sir Frederick Hugh Sykes, P.C., G.O.I.E., G.B.E., K.O.B., C.M.G.	1928
SIR ERNEST HOSKIN, K.O.S.I., O.B.E., I.O.S., acted for six months for Sir F. H. Sykes.		
The Rt Hon Michael Herbert Rudcliff Knatchbull, Lord Brabourne, G.O.I.E., M.C. 1933		
Sir Robert Bell, K.O.S.I., C.I.E., I.O.S., acted for four months for Lord Brabourne.		
Sir Lawrence Roger Lumley, G.O.I.E., T.D. 1937.		
Field Marshall Sir John Greer Dill, K.O.B., C.M.G., D.S.O., A.D.-C. (Governor Designate)		
(a) Proceeded to Madras on duty in Aug 1793 and then joined the Council of the Governor-General as Commander-in-Chief in India on the 28th Oct 1793.		
(b) Was appointed Governor of Bombay by the Honourable the Court of Directors on the 4th Aug. 1841, but, before he could take charge of his appointment, he was assassinated in Cabul on the 23rd Dec. 1841.		
(c) Afterwards (by creation) Baron Sydenham.		
(d) Afterwards (by creation) Baron Lloyd.		

BOMBAY LEGISLATIVE ASSEMBLY.

Speaker The Hon Mr Ganesh Vasudeo Mavalankar, B A., LL.B.

Deputy Speaker Narayanrao Gururao Joshi, M L A.

Khan Bahadur Abdul Latif Haji Hajrat Khan (Sholapur District, Muhammadan Rural); Jivappa Subhana Aidale (Sholapur North-East, General Rural); Ali Bahadur Bahadur Khan (Bombay City North and Bombay Suburban District, Muhammadan Urban) Dr Bhimrao Ramji Ambedkar, M A, D Sc, Bar-at-Law (Bombay City Byculla and Parel, General Urban), Dr Kishanji Bhimrao Antrolikar (Sholapur City, General Urban), Dattatray Trimbak Aadhve, B A, LL B (Sholapur South-West, General Rural), Aboobakei Baig Mohamed Husein (Bombay City South, Muhammadan Urban), Khan Sahab Abdulla Haji Isa Bhagat (Panch Mahals Sub-Division, Muhammadan Rural), Mohsin Mohamed A Bhaiji (Kolaba District, Muhammadan Rural); Ramkri-hna Gangaram Bhatankar (Thana South, General Rural), Rajaram Ramji Bhole (Poona West, General Rural), Courtney Parker Bramble (Bombay City cum Bombay Suburban District, European), Bhaskarrao Bhaurao Chakranarayan (Poona cum Ahmednagar, Indian Christian Rural), Dhanaji Nana Chawdhari (East Khandesh East, General Rural), Purnashottam Lalji Chawhan (Surat District, General Rural), Su (Gujaprasad), Chunubhai Madhowlal, Bart (Gujarat Sardars and Inamdar Landholders), Rao Bahadur Ganesh Krishna Chitale, B A, LL B (Ahmednagar South, General Rural), Anant Vinayak Chitre (Ratnagiri North, General Rural), Ismail Ibrahim Chundrigar (Ahmedabad District, Muhammadan Rural), Dr Joseph Altino Collaco, L M & S (Bombay City, Indian Christian Urban), Sir Dhanjishah Bomani Cooper, Kt (Satara North, General Rural), Fred J Currie (Presidency, Anglo-Indian), Fulsinji Bharatsinji Dabhi (Kaira District General Rural), Vishnu Vaman Dandekar (Thana North, General Rural), Sir Ali Mahomed Khan Dehlavi, Kt (Surat and Rander Cities, Muhammadan Urban), Dinkarrao Narbheram Desai (Broach Sub-Division, General Rural), Rao Sahab Gurashiddappa Kadappa Desai (Bijapur North, General Rural), Khandubhai Kasanji Desai (Ahmedabad Textile Unions, Labour), Moraji Ranchhodji Desai (Surat District, General Rural), Randhur Prasannadan Desai (Surat District General Rural), Shankreppagouda Basalingappagouda Desai (Bijapur South, General Rural), Mrs Annapurna Gopri Deshmukh (Bombay City, Gurgaum, Women's General Urban), Indaneppa Dnyanappa Dodmeti (Dharnar North, General Rural), Faiz Mahamadkhan Mahobatkhan B A, Bar at-Law (Kaira District, Muhammadan Rural), Dominic Joseph Ferreira (Thana cum Bombay Suburban District, Indian Christian Rural); Kundanmal Sobhachand Firodea, B A, LL B (Ahmednagar South General Rural) Vinayak Atmaram Gadkari (Poona East, General Rural), Bhaurao Krishnrao Gaikwad (Nasik West, General Rural), Maneklal Maganlal Gandhi (Panch Mahals West, General Rural), Shankar Krishnaji Gavankar (Ratnagiri South, General Rural), Gangadhar Raghoram Ghatge (Ratnagiri North, General Rural), Abdulmajeed Abdulkhadar Ghoewale (Belgaum District, Muhammadan Rural) Di Champaklal Jekisandas Ghia (Surat and Rander Cities, General Urban), M C Ghia (Indian Merchants' Chamber, Commerce and Industry), Dr Manchercha Dhanjishov Gilde M D (Bombay City Byculla and Parel, General Urban), Gulabsing Bhila Gnasev (West Khandesh East, General Rural), Ramchandra Bhagawant Girmo (Ahmednagar North, General Rural), Keshav Govind Gokhale, B A (Belgaum South, General Rural), Mahableshwar Ganpati Bhatta Gopi (Kanara District, General Rural), J B Greaves, CBE (Bombay Chamber of Commerce and Bombay Presidency Trades Association, Commerce and Industry), Bhulchandra Maheshwar Gupte, M A, LL B (Poona City, General Urban), Khan Sahab Abdul Rahim Baboo Hakeem (Nasik District, Muhammadan Rural), Ningappa Fackeeappa Hallikeri (Kanara District, General Rural), Abdul Karim Amnash Hanaji (Dharnar District, Muhammadan Rural), Shaikh Mohamad Hasan, Bar-at-Law (East Khandesh District, Muhammadan Rural), Donald G Hill (Bombay Chamber of Commerce and Bombay Presidency Trades Association, Commerce and Industry), Bhaurao Sakharam Hiray, B A, LL B (Nasik East, General Rural); Alissa Nabisa Ilkal, B A, LL B (Bijapur District, Muhammadan Rural), Daulatrao Gulaji Jadhav, B A (East Khandesh East, General Rural), Tulsidas Subhamao Jadhav (Sholapur North-East, General Rural), Dadasaheb Khaserao Jagtap (Bombay City and Suburban Textile Unions, Labour Trade Union), Parappa Chanbasappa Jakaty (Belgaum South, General Rural), Khaleelulla Abasaheb Janvekar, B A, LL B (Bijapur District, Muhammadan Rural), Shavaksha Holmraji Jhabvala (Railway Unions, Labour); Jinabhai Parvatishankar Joshi (Bombay City Byculla and Parel, General Urban), Naraynrao Gururao Joshi (Belgaum North, General Rural), Vishwanathrao Narayanrao Jog, B A, LL B (Dharnar

North, General Rural) Revappa Somappa Kale (Bijapur North, General Rural); Rão Saheb Annappa Narayan Kalyani (Satara South General Rural), Sir Siddappa Totappa Kambli, Kt, B A, LL B (Dharwar North General Rural), Mrs Vijyagauri Balvantrai Kanuga (Ahmedabad City, Women's General Urban), Shivrām Laxman Karandikar M A, LL B (Ratnagiri North, General Rural); Ramchandra Krishna Karavade (Satara South General Rural), Shripad Shyamaji Kargudri (Dharwar South, General Rural), Appaji Yeshwantrao alias Bapusaheb Kate (Poona East, General Rural), Bhaḡwan Sambhuppa Kathale (Sholapur North-East, General Rural), Khwaja Bashiruddin Khwaja Momuddin Kazi, M A, LL B, Advocate (West Khandesh District Muhammadan Rural) Aziz Gafur Kazi (Ratnagiri District Muhammadan Rural), Kanji Govind Kerson (Thana South General Rural); Sheshgiri Narayanrao Keshwani (Kanara District General Rural), Ramchandra Annaji Khedgikar (Sholapur City Textile Labour Labour Non-Union), Bal Gangadhar Kher, B A, LL B (Bombay City North and Bombay Suburban District General Urban) Bhawanji A Khumji (East India Cotton Association Commerce and Industry), Mahomed Musa Killedar (Bombay City North and Bombay Suburban District), Dattatraya Kashinath Kunte, B A, LL B (Kolaba District General Rural); Bhogilal Dhirajlal Lala (Ahmedabad North General Rural), Lalchand Hirachand (Nasik East, General Rural), Anna Babji Latthe M A, LL B (Belgaum North, General Rural), Maganlal Nagindas (East Khandesh West, General Rural), Ramchandra Narayan Mandlik (Kolaba District, General Rural), Namdeorao Budhajirao Marathe (West Khandesh East General Rural) Nagindas Tribhuvandas Master, B A, LL B (Bombay City Fort Mandri Bhuleshwar and Gurgaum General Urban), The Hon Mr. Ganesh Vasudev Maralanker B A, LL B (Ahmedabad City, General Urban), Hariprasad Pitamber Mehta (Ahmedabad North, General Rural), Akhtar Hasan Mirza (Trade Unions of Seamen and Dock-Workers Labour Trade Union), Mohamedally Allabux (Bombay City South, Muhammadan Urban); Morarbhai Kasarni (Surat District General Rural), Jayavant Ghana-shyam More B A, LL B (Sholapur South West General Rural), Wamanrao Sitaram Mukadam (Panchmahals West, General Rural), Denis Wilson Mullock (Bombay Chamber of Commerce and Bombay Presidency Trades Association, Commerce and Industry); Kanaiyalal Maneklal Munshi, B A, LL B Advocate (University), Mrs Lilavati Kanaiyalal Munshi (Bombay City Bhuleshwar, Women's General Urban), Gimmallappa Rachappa Nalwadi (Dharwar North General Rural), Gulzari Lal Nanda (Ahmedabad Textile Unions Labour); K F. The Central Provinces and Berar.

The Central Provinces and Berar compose a great triangle of country midway between Bombay and Bengal. Their area is 131,557 sq. miles, of which 80,637 are British territory proper, 17,808 (*viz.* Berar) held on perpetual lease from H E H. the Nizam and the remainder held by Feudatory Chiefs. The population (1931) is 15,323,058 in C. P. British Districts and Berar. Various parts of the Central Provinces passed under British control at different times in the wars and tumult in the first half of the 19th century and the several parts were amalgamated after the Mutiny, in 1861, into the Chief Commissionership of the Central Provinces. Berar was, in 1853, assigned to the East India Company as part of a financial arrangement with H E H. the Nizam for the maintenance of the Hyderabad Contingent, and was leased in perpetuity to the Central Provinces in 1903, as the result of a fresh agreement with H E H. the Nizam.

The Country.

The Central Provinces may roughly be divided into three tracts of upland, with two intervening ones of plain country. In the north-west, the Vindhyan plateau is broken country, covered with poor and stunted forest. Below its precipitous southern slopes stretches the rich wheat growing country of the Nerbudda valley. Then comes the high Satpura plateau, characterised by forest-covered hills and deep water-cut ravines. Its hills decline into the Nagpur plain, whose broad stretches of "deep" black cotton soil make it one of the most important cotton tracts of India and the wealthiest part of the O P. proper. The Eastern half of the plain lies in the valley of the Wainganga and is mainly a rice growing country. Its numerous irrigation tanks have given it the name of the "lake country" of Nagpur. Farther east is the far-reaching rice country of Chhattisgarh, in the Mahanadi basin. The south-east of the O P. is again mountainous, containing 24,000 square miles of forest and precipitous ravines, and mostly inhabited by jungle tribes. The States of Bastar and Kankar lie in this region. Berar lies to the south-west of the O P. and its chief characteristic is its rich black cotton-soil plains.

The People.

The population of the province is a comparatively new community. Before the advent of the Aryans, the whole of it was peopled by Gonds and other primitive tribes and these aboriginal inhabitants fared better from the Aryans than their like in most parts of India because of the rugged nature of their home. But successive waves of immigration flowed into the province from all sides. The early inhabitants were driven into the inaccessible forests and hills, where they form nearly a quarter of the whole population of the Central Provinces being found in large numbers in all parts of the province, particularly in the south-east. The main divisions of the newcomers are indicated by the language divisions of the province. Hindi brought in by the Hindustani-speaking peoples of the North, prevails in the North and East, Marathi in Berar and the West and centre of the Central Provinces. Hindi is spoken by 56 per cent of the population and is the *lingua franca*, Marathi by 31 per cent, and Gondi

7 per cent. The effects of invasion are curiously illustrated in Berar, where numbers of Moslems have Hindu names, being descendants of former Hindu officials who on the Mahomedan invasion adopted Islam rather than lose their positions. The last census shows that a gradual Brahmanising of the aboriginal tribes is going on. The tribes are not regarded as impure by the Hindus and the process of absorption is more or less civilising.

Industries.

When Sir Richard Temple became first Chief Commissioner of the O. P., the province was land locked. The only road was that leading in from Jubbulpore to Nagpur. The British administration has made roads in all directions, the two trunk railways between Bombay and Calcutta run across the province and in the last few years a great impetus has been given to the construction of subsidiary lines. These developments have caused a steady growth of trade and have aroused vigorous progress in every department of life. The prime industry is, of course, agriculture, which is assisted by one of the most admirable agricultural departments in India and is now receiving additional strength by a phenomenal growth of the co-operative credit movement. The land tenure is chiefly on the *malguzari*, or landlord system, ranging with numerous variations, from the great Feudatory chiefships, which are on this basis, to holdings of small dimensions. A system of land legislation has gradually been built up to protect the individual cultivator. Berar is settled on the Bombay *raiyatwari* system, 16,099 square miles of the O. P. is Government Reserved forest; in Berar the forest area is about 8,341 square miles, the total forest area being one-fifth of the whole Province. The rugged nature of the greater part of the country makes forest conservation difficult and costly. Excluding forest and waste 67 per cent of the total land is occupied for cultivation; for the two most advanced districts in the Central Provinces, the proportion averages 81 per cent, while the average figure for the Berar Districts is 72 per cent. The cultivated area has extended almost continuously except for the temporary checks caused by bad seasons. Rice is the most extensive single crop of the Central Provinces, covering nearly 82 per cent of the cropped area. Wheat comes next with over 16 per cent, then pulses and other cereals used for food and oil-seeds with nearly 47 per cent, and cotton nearly 5 per cent. In Berar cotton and jute each occupies 41 and 34 per cent, respectively. And then pulses and other cereals and oil seeds of the cropped area. In agriculture more than half the working population is female.

Commerce and Manufactures.

Industrial life is only in its earliest development except in one or two centres, where the introduction of modern enterprise along the railway routes has laid the foundations for great future developments of the natural wealth of the province. Nagpur is the chief centre of a busy cotton spinning and weaving industry. The Empress Mills, managed by Messrs Tata Sons Ltd, were opened there in 1877 and the

general prosperity of the cotton trade has led to the addition of many mills here and in other parts of the province. The total amount of Indian yarn exported from the Province during the years 1937-38, 1938-39 and 1939-40 was 239,935, 212,567 and 250,446 maunds, respectively.

The largest numbers engaged in any of the modern industrial concerns are employed in manganese mining which in 1940 employed 29,302 persons and raised 652,755 tons. Then follow coal mining with an output of 1,806,313 tons and 15,518 persons employed the Jabulpore marble quarries and allied works, the limestone quarries and the mines for pottery clay, soapstone, etc.

The total number of factories of all kind legally so described was 1,119 in 1939, the latest period for which returns are available and the number of people employed in them 64,494. The same economic influences which are operative in every progressive country during its transition stage are at work in the C. P. and Berar, gradually sapping the strength of the old village industries, as communications improve, and concentrating industries in the towns. While the village industries are fading away, a large development of trade has taken place. The last pre-war reports showed an increase in volume by one-third in eight years.

Administration.

The administration of the Central Provinces and Berar is conducted by a Governor who is appointed by the Crown. He is assisted by seven Secretaries and six Under-Secretaries. Under the provisions of the Govt of India Act, 1935, the administration is conducted by a Governor with a council of ministers, chosen and summoned by him and sworn as members of the council, but due to the arising of a situation which made it impossible to carry on the Government of the province in accordance with the provisions of the Government of India Act 1935, the normal working of the Constitution has been suspended with effect from the 11th November 1939 by a proclamation under section 93 of the Act and the administration is carried on by the Governor with the help of two advisers.

This Province which has a unicameral Legislature, consists of 112 members distributed as follows:—

Class of constituency or constituencies—			
General Urban ..	10	} No. seats	
General Rural ..	74		84
Muhammadian Urban ..	2		
Muhammadian Rural ..	12		
Women ..	3		
Anglo-Indian ..	1	seat.	
European ..	1	"	
Backward areas & Tribes ..	1	"	
Commerce ..	2	seats.	
Landholders ..	3	"	
Labour ..	2	"	
University ..	1	seat.	

Of the 84 General seats 20 seats are reserved for members of the Scheduled castes.

The C. P. are divided for administrative purposes into three divisions and Berar constitutes a division. Each of these is controlled by a

Commissioner. The divisions are sub-divided into districts, each of which is controlled by a Deputy Commissioner, immediately subordinate to the Commissioner. The principal heads of Provincial departments are the Commissioner of Settlements and Director of Land Records, the Chief Conservator of Forests, the Inspector-General of Civil Hospitals, the Director of Public Health, the Inspector General of Police, the Inspector-General of Prisons, the Director of Public Instruction, the Excise Commissioner and Superintendent of Stamps and Inspector-General of Registration, and Registrar-General of Births, Deaths and Marriages, the Director of Agriculture, the Registrar of Co-operative Societies, the Director of Industries, the Legal Remembrancer, the Director of Veterinary Services and a Chief Engineer, Public Works Department, Buildings and Roads and Irrigation Branches. The Deputy Commissioners of districts are the chief revenue authorities and District Magistrates and they exercise the usual powers and functions of a district officer. The district forests are managed by a forest officer, over whom the Deputy Commissioner has certain powers of supervision, particularly in matters affecting the welfare of the people. Each district has a Civil Surgeon, (except Mandla, Drug and Balaghat where there are Assistant Surgeons) who is generally also Superintendent of the District Jail except at Central Jails at Nagpur and Jabulpore and District Jails at Raipur, Narsinghpur and Akola where there are whole time Superintendents and whose work is also in various respects supervised by the Deputy Commissioner. The Deputy Commissioner is also Marriage Registrar and manages the estates of his district which are under the Court of Wards. In his revenue and criminal work the Deputy Commissioner is assisted by (a) one or more Assistant Commissioners, or members of the Indian Civil Service; (b) one or more Extra Assistant Commissioners, or members of the Provincial Civil Service, including a few Anglo-Indians and (c) by Tahsildars and Naib Tahsildars, or members of the Subordinate service. The district is divided for administrative purposes into tahsils, the average area of which is 1,500 square miles. In each village a lambardar or representative of the proprietary body is executive headman.

Justice.

The High Court of Judicature at Nagpur, which was established in January 1936, is the highest court of appeal in civil cases, and also the highest court of criminal appeal and revision for the Central Provinces and Berar including proceedings against European British subjects and persons jointly charged with European British subjects.

Subordinate to the High Court are the District and Sessions Judges (9 in number) each of whom exercises civil and criminal jurisdiction in a Civil and Sessions district comprising one or more Revenue districts. The civil staff below the District and Sessions Judge consists of Subordinate Judge second class

Local Self-Government.

Municipal administration was first introduced under the Punjab Municipal Act and the Municipality of Nagpur dates from 1864. Several revising Acts extend its scope and the C.P. Municipalities Act passed towards the end of the year 1922 has considerably increased the powers of the Municipal Committees. The C.P. Municipalities Act has also been extended to Berar. Viewed generally, municipal self-government is considered to have taken root successfully. The larger towns have municipalities, there being 82 such bodies in the Province.

Under the Central Provinces Local Self-Government Act passed in 1920 as amended in 1931 there is a local board for each tahsil and a district council for each district excepting Hoshangabad, Chhindwara and Saugor districts each of which has two district councils. The local board consists of elected representatives of circle. The constitution of the district council is a certain proportion of elected representatives of local boards, and of members selected by those representatives. If the members elected on the local board or the district council do not include a Muslim, a Harijan and a woman, the elected members of the local board of the district council as the case may be have to select a Muslim, a Harijan or a woman as may be required to be a member, and if they fail to do so the Provincial Government can appoint a Muslim, a Harijan or a woman as may be required.

The district councils in the Central Provinces have power of taxation within certain limits and local boards derive their funds in allotments from the District Councils. The new Central Provinces Local Self-Government Act has also been applied to Berar. The office Bearers of all the district councils and with few exceptions of local boards also are non-officials.

Rural education, sanitation, medical relief and rural communications are among the primary objects to which these bodies direct their attention, while expenditure on famine relief is also a legitimate charge upon the District Council funds.

The Central Provinces, Village Panchayat Act was passed in the year 1920. So far 1,029 Panchayats have been established. As the result of a recommendation of a Committee appointed in 1925 to look into the question of Panchayats, a Village Panchayat Officer was appointed to guide the developments of the Panchayat system. This post was kept vacant on account of financial stringency for more than two years. It has now been filled in with effect from the 24th May 1933.

Public Works

The Public Works Department, which comprises Buildings and Roads and Irrigation Branches, is under the control of the Chief Engineer. There are two Superintending Engineers who between them supervise the work of both branches. The Province is fairly well served by a network of roads, but in a number of cases they are not fully bridged and are therefore impassable to traffic at times during the rains.

State irrigation was introduced early in the present century mainly as a result of the recommendations of the Irrigation Commission (1901-03). During the last forty one years a sum of Rs 7.25 crores has been expended on the construction of irrigation works, of which the more important are the Wainganga, Tandula-Mahanadi, Kharung and Maniari canals.

Three works, viz., the Mahanadi and Wainganga Canals and the Asola Mendha tank, were sanctioned originally as productive works and the remainder were all sanctioned as unproductive works. The three works sanctioned as productive have all failed to justify their classification in that category and have now been transferred to the unproductive list. The conditions in the province are such that irrigation works cannot be expected to be productive and their construction is justified only on account of their value as a protection against famine. The normal area of annual irrigation is at present about 6,62,000 acres, mainly rice and the income from these works more than covers the expenditure incurred on their maintenance and management.

Police

The police force was constituted on its present basis on the formation of the Province, the whole of which including the Cantonments and the Municipalities, is under one force. The strength is equal to one man per nine square miles of area. The superior officers comprise an Inspector-General, whose jurisdiction extends over Berar, three Deputy Inspectors-General, for assistance in the administrative control and supervision of the Police force, including the Criminal Investigation Department, and the usual cadre of District Superintendents of Police, Assistant and Deputy Superintendents and subordinate officers. On railways special Railway Police are employed under the control of two Superintendents of Railway Police with headquarters at Raipur and Hoshangabad. There is a Police College under the control of a Superintendent of Police at Saugor and Constable's Schools under the control of Deputy Superintendents at Nagpur and Jabulpore. A special Armed Force of 924 men is distributed over the headquarters of eight districts, for use in dealing with armed disturbers of the peace in whatever quarter they may appear. There is a small force of Mounted Police consisting of 1 Head Constable and 7 Constables for the escort of His Excellency the Governor. The Central Provinces has no rural police as the term is understood in other parts of India. The village watchman is the subordinate of the village headman and not a police official and it is considered very desirable to maintain his position in this respect.

Education.

The Education Department of the Central Provinces and Berar is administered by a Director of Public Instruction, assisted by a Deputy Director of Public Instruction, an officer-in-charge of Muslim Education, four Divisional Superintendents of Education, an Assistant Secretary, High School Education Board who also performs the duties of the Secretary, High School Education Board in addition to his own duties, two Inspectresses of Schools assisted by four Assistant Inspectresses

ses, 17 District Inspectors of Schools,—assisted by sixty six Assistant District Inspectors of Schools. The Director of Public Instruction is no longer the Secretary to Government in the Education Department. The Education Department now has an ICS Secretary, like other Departments of Government.

Schools are divided into (a) schools for general education and (b) schools for special education. The latter are schools in which instruction is given in a special branch of technical or professional education. The main division of schools for general education is into Primary and Secondary. In the Primary Schools the teaching is conducted wholly in the recognised Indian languages of the province and these schools are known as Primary Schools. The Secondary Schools are divided into Middle and High Schools. The former may be either Middle Schools in which instruction is given (a) wholly in a recognised Indian language or (b) mainly in a recognised Indian language with the option of English as an additional language, or Indian English Middle Schools in which instruction is given in a recognised Indian language but English is a compulsory subject. In the High School classes instruction is given through the recognised Indian language since 1922 but for the convenience of pupils whose mother tongue is not a recognised Indian language of the locality, a few English medium sections are still maintained. For administrative purposes, schools are further divided according to their management into schools under public management and schools controlled by private bodies. The former consist of (a) schools controlled by Government and (b) schools controlled by Local Bodies or Boards. The latter consist of (a) schools which are aided by grant from Government or from Local Funds and Municipal Funds and (b) unaided schools. All schools under public management, all aided schools and all unaided recognised schools conform in their courses of study to the standards and syllabi prescribed by the Education Department or by the Board of High School Education in Central Provinces and Berar. They are subject to inspection by the Department and to the general rules governing schools of this type. They are "recognised" by the Department and their pupils may appear as candidates for any prescribed public examination for which they are otherwise eligible. Unrecognised schools do not follow the rules of the Department, nor are they subject to inspection by the Department. Their pupils may not appear as candidates at any of the prescribed public examinations without the previous sanction of the Department. Primary Education is under the control of District Councils and Municipal Committees. The Primary Education Act empowers local authorities to introduce compulsion and this is in force in several areas.

Higher Education is under the control of the Nagpur University of which the following are constituent colleges—at Nagpur. Morris College, the College of Science, Hislop College, City College, the Agriculture College, the University College of Law, and the Central College for Women, at Jabulpore. the Robertson College, the Hitkarini City College, the Spence

Training College (for teachers), and the Hitkarini Law College; at Amraoti the King Edward College; at Wardha: Wasudev Arts College; at Akola: the Berar Art College; and at Raipur the Rajkumar College and the Chhattisgarh Arts College. There are also an Engineering School and a Medical School at Nagpur.

Secondary Education is under the control of the Board of High School Education, on which the University is represented. The High School certificates awarded by the Board qualifies for entrance to the University.

Medical.

The Medical and Public Health services of the province are respectively controlled by the Inspector-General of Civil Hospitals and Director of Public Health. The Medical department has made some progress since the year 1911. A striking advance has been made in recent years with urban sanitation, and the opening of a Medical School at Nagpur in 1914 supplied a long felt need. The principal medical institutions are the Mayo Hospital at Nagpur (opened in 1874) with accommodation for 222 in-patients, the Victoria Hospital at Jabulpore (opened in 1886) with accommodation for 174 in-patients; the Daga Memorial (Dufferin) Hospital and the Muir Memorial Hospital at Nagpur and the Lady Elgin Hospital and the Crump Children's Hospital at Jabulpore, these last four being for women and children and can together accommodate 270 in-patients. In addition to these, hospitals for women exist at Ohhindwara, Saugor, Khandwa, Amraoti, Akola, Murtizapur, Shegaon and Khamgaon and at all district headquarters where no separate women's hospitals exist, sections have been opened at the Main Hospitals for the treatment of women by women doctors. The Mayo Hospital at Nagpur, was provincialised in 1923, the Irwin Hospital at Amraoti in 1925, the Victoria Hospital at Jabulpore in 1926 and the Silver Jubilee Hospital at Raipur in 1928. In accordance with recent policy, 158 out of 214 local fund dispensaries have been transferred to the administrative and executive control of local bodies. The Province has one Mental Hospital at Nagpur. Four tuberculosis clinics have been opened at Nagpur, Jabulpore, Raipur and Amraoti during the year 1937 and 40 beds have been reserved at the Pendra Road Sanatorium for the treatment of patients sent by Government. There is a great deal of eye diseases in the province and the problem is receiving special attention. The Central Provinces and Berar Blind Relief Association is doing propaganda work and helping the blind. So far 23 Assistant Medical Officers have been given training in eye work for six months at the Mayo Hospital, Nagpur. These specially trained officers are posted to eye centres in the Province. Anti-rabic treatment is now available at 13 centres in the province, viz., Nagpur, Jabulpore, Raipur, Akola, Wardha, Hoshangabad, Saugor, Chanda, Ohhindwara, Khandwa, Pachmarhi, Yeotmal and Amraoti. Vaccination is compulsory in nearly all municipal towns in the province. The Central Provinces Vaccine Institute at Nagpur was opened in 1913.

Finances.

The budget for the year 1942-43 has been framed on the basis of the existing level of taxation, certain taxation measures due to expire in 1942 being renewed. It has been possible to provide for new expenditure in the budget to the extent of Rs 11 50 lakhs without recourse to new taxation largely on account of the increase in the provincial assignment from income-tax revenue which is estimated at Rs 41 85 lakhs in 1942-43 against Rs 36 95 lakhs in 1941-42. The revenue for 1942-43 is estimated at Rs 5,26 62 lakhs and expenditure against revenue at Rs 5,23 38 lakhs, showing a revenue surplus of Rs 3 24 lakhs. The expenditure includes a sum of Rs 8 lakhs being the excess of net forest revenue over the standard figure which is to be appropriated to the deposit head "Appropriation for reduction or avoidance of debt" by debit to revenue.

The total new expenditure provided in the budget for 1942-43 is Rs 22 20 lakhs of which Rs 10 60 lakhs is only technically new and represents more or less recurring commitments, such as grants to the Dufferin fund hospitals (Rs 58,270), grant to the Indian Red Cross Society (Rs 32,500), grants to co-operative institutes (Rs 29,000), allotment for minor works in the Public Works Department (Rs 2,00,000), grants to district councils in Berar to the extent of one per cent of land revenue collected in Berar (Rs 95,310), and the general purposes of grants to district councils (Rs 5,38,000). The provision for real new expenditure is Rs 11 60 lakhs, the greater portion of which has been allotted to nation building departments, namely Education (Rs 46,600), Medical (Rs 26,039), Public Health (Rs 55,806), Agriculture (Rs 52,559), Veterinary (Rs 11,393) and Cooperation (Rs 99,544). Care has been taken to restore capital to compensate for exploitation in the Forest Department which has contributed abnormal revenue to the province since the outbreak of the war. The more important of the new items of expenditure included in the budget are Rs 90,000 for the construction of quarters for the forest subordinate staff, Rs 13,000 for increase in the ration of oil to the "C" class prisoners in the jails of this province, Rs 2,000 for grant of educational concessions to children of men taking part in the war, Rs 43,910 for improvements to the Mental Hospital, Nagpur, Rs 8,040 for the establishment of pathological laboratories at Raipur and Amraoti, for improvements to buildings for the Victoria Hospital, Jabulpore and to the tuberculosis clinics at Nagpur and Jabulpore, Rs 12,332 for the introduction and demonstration of latest agricultural improve-

ments in aboriginal tracts; Rs 90,000 for grants to meet deficits in the working expenses of certain central banks in pursuance of the scheme of rehabilitation of the co-operative movement; Rs 40,000 for advances in pursuance of the Government's guarantee of interest on conciliated debts of central banks taking advantage of the rehabilitation scheme, Rs 12,560 for the continuance of the scheme for the encouragement of hand spinning and hand weaving in rural areas under the auspices of the All-India Spinners' Association; Rs 1 lakh for the construction of a new road from the provincial share of the Road Fund as an alternative means of removing timber and other forest produce required for military purposes from the area served by the Raipur Forest Tramway which has been closed; Rs 31,084 for expenditure in connection with the Bombay scheme of publicity through 60 mm projectors; Rs 3,000 for grant to the Society for the elimination of beggary and a lump sum of Rs 4 lakhs to meet expenditure on Civil Defence.

The liabilities of the province on the 1st April 1942 which are estimated at Rs 6,79 47 lakhs, comprise the outstandings on account of the two C P. and Berar 3 per cent Loans 1949 and 1952, Rs 1,23 20 lakhs, consolidated debt due to the Central Government Rs 3,17 39 lakhs, unfunded debt (mainly deposits of State Provident Funds) Rs 1,75 60 lakhs, and deposits of local funds and civil deposits Rs 63 28 lakhs. By the end of the year 1942-43 the outstandings on account of the public loans will be reduced to Rs 1,18 19 lakhs and the debt to the Central Government to Rs 3,14 46 lakhs; while unfunded debt and deposits of local funds including civil deposits will have increased to Rs 1,81 10 lakhs and Rs 65 28 lakhs respectively. The total liabilities on the 31st March 1943 are estimated at Rs 6,79 03 lakhs. As against these liabilities the liquid assets would amount to Rs 2,97 99 lakhs, composed of loans outstanding against local bodies and cultivators Rs 1,12 32 lakhs, advances not bearing interest Rs 7 36 lakhs, investments in the Famine Relief Fund Rs 48 79 lakhs, accumulations in the sinking funds of the two public loans Rs 20 98 lakhs and cash balance Rs 1,08 55 lakhs. It is not proposed to have recourse to any borrowings during the year 1942-43.

The year 1942-43 is expected to commence with an opening balance of Rs 89 03 lakhs. The budget provides for a revenue surplus of Rs 3 24 lakhs while the net result of the capital and debt head transactions is expected to be a surplus of Rs 16 28 lakhs. Thus the year is expected to close with a balance of Rs 1,08 55 lakhs.

FINANCES OF THE CENTRAL PROVINCES.

ESTIMATED REVENUE FOR 1942-43

Principal Heads of Revenue.

	Rs

The Madras Province.

The Madras Presidency occupies the whole southern portion of the Peninsula, and, excluding the Indian States, all of which have now come under the direct control of the Government of India, has an area of 124,363 square miles. It has on the east, on the Bay of Bengal, a coast line of about 1,250 miles; on the South on the Arabian Sea, a coast line of about 450 miles. In all this extent of coast, however, there is not a single natural harbour of any importance; the ports, with the exception of Madras, and perhaps of Cochin and Vizagapatam are merely open roadsteads. A plateau, varying in height above sea-level from about 1,000 to about 3,000 feet and stretching northwards from the Nilgiri Hills, occupies the central area of the Presidency; on either side are the Eastern and the Western Ghats, which meet in the Nilgiris. The height of the western mountain-chain has an important effect on the rainfall. Where the chain is high, the intercepted rain-clouds give a heavy fall, which may amount to 150 inches on the seaward side, but comparatively little rain falls on the landward side of the range. Where the chain is low, rain-clouds are not checked in their westward course. In the central table land on the east coast the rainfall is small and the heat in summer excessive. The rivers, which flow from west to east, in their earlier course drain rather than irrigate the country, but the deltas of the Godavari, Kistna and Cauvery are productive of fair crops even in time of drought and are the only portions of the east coast where agriculture is not dependent on a rainfall rarely exceeding 40 inches and apt to be untimely.

Population.

The population of the Presidency was returned at the census of 1931 as 47,193,602, an increase of 10.4 per cent over the figure of 1921. The increase was not uniform. The districts which had suffered most in 1921 tended to show large increases in 1931—Bellary and Agencies were marked illustrations. As a natural corollary to an increase in population the Presidency density has risen. Hindus account for 88 per cent. of the Madras population, Muhammadans 7 per cent and Christians 3.8 per cent. The actual number in other communities is inconsiderable. The vast majority of the population is of the Dravidian race and the principal Dravidian languages, Tamil and Telugu are spoken by 19 and 18 million persons respectively 40 per cent of the population talk Tamil, 37½ per cent Telugu, 7.9 per cent. Malayalam, Oriya, Kanarese, Hindustani, Tulu follow in that order with percentages above 1.

Government

The executive authority of the Province is exercised on behalf of His Majesty by the Governor. He is aided by four Advisers.

Agriculture and Industries.

The principal occupation of the province is agriculture engaging about 68 per cent of the population. The principal food crops are rice, cholam, ragi and kambu. The industrial crops

are cotton, sugarcane and groundnuts. The agricultural education is rapidly progressing in the Presidency. The activities of the Agricultural Department in matters educational consist in the running of a college at Coimbatore affiliated to the University of Madras, three farm labourers schools and numerous demonstration farms. As it was found that the present course of middle school education does not satisfy the needs of the ryots, the only school maintained by the department at Taliparamba was closed with effect from 1st April 1932. Short practical courses in farm management and allied subjects have been instituted at the Agricultural College. While paddy which is the staple food of the population, occupies the largest cultivable area, cotton and sugarcane are by no means inconsiderable crops of the province and are receiving close attention at the hands of the local agricultural authorities. The area under cotton irrigated and unirrigated was 2,412,857 acres in 1940-41 and, as in the case of paddy, efforts are being made to produce better strains of cotton suited to different localities by means of both selection and hybridization. Side by side with an increase in the area under cotton, from existing good staple areas, improved varieties have been systematically introduced. A special feature of the agricultural activities in the Presidency is the large industry which the planting community have built up, contributing substantially to the economic development of the province. They have organised themselves as an unregistered body under the title of "The United Planters' Association of South India," on which are represented coffee, tea, rubber and a few other minor planting products. The aggregate value of seaborne trade of the Presidency which was Rs. 82.58 crores in 1936-37 and Rs. 88.49 crores in 1937-38, decreased to Rs. 79.04 crores in 1938-39. As in other provinces, the forest resources are exploited by Government. There are close upon 18,495 square miles of reserved forests.

Fifty-six spinning and weaving mills were at work on 31st March 1941, and they employed 68,100 operatives. The number of jute mills at work was four. At the close of the year 1936 the number of the other factories in the Presidency was 1,762. These consisted of oil mills, rope works, tie works, etc. Tanning is one of the principal industries of the Presidency and there is considerable export trade in skins and hides. The manufacturing activities which are under the direction of the Department of Industries are mainly confined to the production of soap and shark liver oil. There are a number of indigenous match factories run on cottage lines. It is slowly becoming recognised that the Madras Presidency is one of the most suitable parts of India for sugarcane cultivation and that the several deep-rooted varieties of cane which have been evolved at Coimbatore and require very little water are especially suited for the conditions which obtain in several areas of the Presidency where they grow better than in the north. The departments of Industries and Agriculture assist the development of the sugar industry by demonstration of the methods of manufacture

of white sugar by centrifugals by getting trained sugar technologists, by the award of scholarships and by investigating schemes for starting sugar factories

Education.

The Presidency's record in the sphere of education has been one of continuous progress. There were at the end of the official year 1940 about 42,300 public institutions, ranging from village primary schools to arts and professional colleges, their total strength being about 3,306,700. Special efforts are being made to provide education for boys belonging to the communities eligible for help by the Labour Dept. The total expenditure of the province on Education is in the neighbourhood of Rs 593 lakhs. The principal educational institutions in the province are the Madras, Andhra and Annamalai Universities, the Presidency College, the Christian College, the Loyola College, the Pachayappa's College, the Law College, and the Queen Mary's College for Women, Madras, the St Joseph's College, Trichinopoly, the American College, Madura; the Government College, Kumbakonam, the Ceded Districts College, Anantapur, the Government College, Rajahmundry, the Agricultural College, Coimbatore; the Veterinary College, Madras, the Madras Medical College; the Stanley Medical College, Rayapuram, (Madras); the Andhra Medical College, Vizagapatam, the Engineering College at Madras (Guindy), the Teachers' College, Saidapet and the Government Training College, Rajahmundry.

Local Administration.

Local bodies in the Madras Presidency are administered under the following Acts:—

The Madras City Municipal Act, 1919, was amended by a comprehensive Amendment Act in 1936 and the main changes effected by the Amending Act which was brought into force on 21st April 1936, were as follows.—

- (1) the redistribution of the existing thirty divisions into forty territorial ones;
- (2) the provision for a Deputy Mayor,
- (3) the provision for aldermen;
- (4) the increase in the maximum strength of the council from 50 to 68 members consisting of 60 elected councillors, five aldermen elected by the council and not more than three special councillors appointed by Government for special subjects;
- (5) the reservation of three special seats for the members of the Scheduled Castes and two for Labour,
- (6) the widening of the franchise,
- (7) the abolition of the system of representation of minority communities by nomination;
- (8) the provision for better control over chetti and hutting grounds;
- (9) the provision for the levy of a tax on advertisements;
- (10) the fixing of the minimum and maximum rates of levy of the property tax at 15½ and 20 per cent respectively of the annual value of buildings and lands, and
- (11) the constitution of a new Taxation Appeals Standing Committee with a Chairman appointed by Government.

Of the two seats reserved for labour, one is to be elected by a non-union labour electorate and the other by union labour electorate.

By an Act of 1939 simultaneous triennial elections to all the forty divisions in the city was introduced.

The Madras District Municipalities Act, 1920, as amended by Madras Act X of 1930; and

The Madras Local Boards Act, 1920, as amended by the Madras Act XI of 1930.

The amending Acts of 1930, which came into force on the 26th August 1930, provide, *inter alia*, for the abolition of the system of nominations to local bodies, for the inclusion of village panchayats within the scope of the Madras Local Boards Act with a view to making the village the unit of local self-government, for direct elections to district boards, for the creation of a municipal and local boards service for the Presidency of Madras, for the removal of the disqualification of women as such in respect of elections to municipal councils and for the cessation of office of the President of a district board or Chairman of a Municipal Council on a motion of non-confidence being passed against him by a prescribed majority. The Acts have undergone subsequent amendments. Taluk Boards have been abolished with effect from the 1st April 1934.

In the interests of administration, commissioners have been appointed to all the Municipalities in the presidency and these have replaced non-official chairmen as executive authorities.

Under an Amending Act of 1934, the taluk boards were abolished with effect from 1st April 1934. This step was undertaken as these bodies became financially embarrassed. Their functions have been entrusted to district boards; with a view to avoid extreme centralisation of administration of district boards, it was decided to bifurcate them. Up to the end of 1935, the number of district boards bifurcated was four. Eight district boards were bifurcated in 1936.

But, it was actually found later on that many of the bifurcated district boards were financially unstable so much so that the Government had to have recourse to a reversal of the policy of bifurcation and to amalgamate all of the bifurcated district boards.

By an Act of 1935, the local boards in the presidency have been divided into three groups for the purpose of elections, so that elections will be held to a third of the local boards every year. The object of this legislation was administrative convenience.

By an Act of 1936 ordinary courts of law have been debarred from issuing injunctions restraining proceedings which are being or about to be taken for the conduct of elections to local bodies and preparation of electoral rolls in connection therewith.

By an Act of 1938 the franchise of the territorial constituencies of the Madras Legislative Assembly were assimilated to that of the local bodies in the Province of Madras, inclusive of the Corporation of Madras with a view to widen the franchise of local bodies and to effect economy in the cost of preparation of the electoral roll of local bodies.

By an Act of 1939 Chairman or Vice-Chairman of Municipal Council and Presidents and Vice-Presidents of local board who have been removed have been made ineligible for election to either of the said offices for a period of six months from the date of removal or until the date on which notice of the next ordinary elections is published

By an Act of 1940 persons who are in arrears of any kind due to any local body inclusive of the corps of Madras are disqualified from standing for election or holding office as a member thereof

The assistant engineers of the District Boards were constituted into a Local Fund Service for the Province known as the Madras Local Fund Assistant Engineers Service. The Municipal Engineers in some of the Municipalities and the Electrical Engineers in some of the Districts and Panchayats have also been constituted into separate services known as the Madras Ward Engineers' Service and the Madras Local Authorities Electrical Engineers Service respectively. These constitute important step in improving the status and conditions of some of the main services of local board employees

Irrigation.

In March 1925, the Secretary of State sanctioned the Cauvery Reservoir Project, the estimated cost of which amounted to about £4½ millions. The project has been framed with two main objects in view. The first is to improve the existing fluctuating water supplies for the Cauvery Delta irrigation of over a million acres, the second is to extend irrigation to a new area of 301,000 acres, which will, it is estimated, add 150,000 tons of rice to the food supply of the country. The scheme which was completed in 1934 provides for a large dam at Metur on the Cauvery to store 93,500 million cubic feet of water and for a canal nearly 88 miles long with a connected distributary system. Owing to the necessity for providing adequate surplus arrangements to dispose of floods similar to the phenomenal floods of 1924 and to other causes the estimate had to be revised and the revised estimate was about £5½ millions. The Project was however completed with a saving of nearly £½ million. Another important project is the Periyar project. Taking its rise in the Western Ghats, the river flows into the Arabian Sea through Travancore State territory. After prolonged negotiations, the Travancore Durbar consented to the water being caught and stored in the Travancore hills for being diverted towards the East. Some three thousand feet above sea-level a concrete and masonry dam has been constructed and nearly 50 feet below the crest-level of the dam a channel through the summit of the range carries the waters into the eastern water-shed where they are led into the river Vaigal. The total quantity of water impounded to crest-level is 15,660 million cubic feet. By this work, a river ordained by Nature to flow into the Arabian Sea has been led across the Peninsula into the Bay of Bengal irrigating on its way well over 100,000 acres of land. The irrigable area commanded by the Periyar system is 143,000 acres, while the supply from the lake was sufficient only for 130,000 acres. To make

up for this deficit, the effective capacity of the lake was increased in 1933 by lowering the water-shed cutting. The area under Government irrigation works in the Madras Presidency during 1939-40 was about 7.5 million acres. Of this over 3 million acres are served by petty irrigation works numbering about 34,000.

Co-operation.

The improvement in the economic condition of the people, reflected in the record of the progress of the co-operative movement during 1937-38 and 1938-39, was maintained during 1939-40. The loan transactions of agricultural societies amounted during the year 1939-40 to Rs 302 61 lakhs as against Rs 307 79 lakhs in 1938-39. There was a reduction in the percentage of overdues in all societies under all heads except under current interest in non-agricultural societies. The policy of rectification and consolidation of existing societies was continued. 932 new societies were registered during the year as against 828 in the previous year, a good number being non-credit societies. The registration of 211 societies was cancelled as compared with 207 in 1938-39. During the year the rectification scheme was pursued by all Central Banks and some of the banks undertook a re-examination of the loans in societies with a view to collecting fresh data. Additional securities were obtained or the amount was collected to the extent of Rs 4 58 lakhs in respect of loans standing on inadequate security. The adequacy of the security for loans aggregating Rs 192 76 lakhs given by 5,871 societies has been examined. The strong reserves built up by Central Banks will enable them without detriment to their financial stability, to write off ultimately some bad and recoverable debts which have been brought to notice. The Madras Co-operative Central Land Mortgage Bank has been building up a sound and steady business and is an acknowledged model for the rest of India. On account of the changes in the money market created by the war, the Bank raised the rate of interest on the debentures from 3 to 3½ per cent. Consequent on this increase, the lending rate to Primary Land Mortgage banks was raised to 5 per cent and that to the ultimate borrower to 6 per cent. The total amount of debentures issued during the year amounted to Rs 39,36,800 as against Rs 39,57,200 in the previous year. Primary Land Mortgage banks which numbered 119, advanced loans to the extent of Rs 42,57 lakhs as against Rs. 61 44 lakhs in the previous year. Land Mortgage banks have upto June 30, 1940, contributed a sum of Rs 279 84 lakhs towards the redemption of agriculturists' debts. There were 149 loan and sale societies and these advanced loans to the extent of Rs 107 30 lakhs as against Rs 95 86 lakhs in the previous year. The Provincial Marketing Society and the Provincial Hand-loom Weavers' Society continued to make steady progress during the year.

Electric Schemes.

The Pykara Hydro-Electric Scheme, which was the first hydro-electric scheme undertaken by the Madras Government commenced operation from April, 1933. It consists in utilising a fall of over 3,000 feet in the Pykara river as it descends the Nilgiris Plateau for the genera-

The image shows a document page, likely a ledger or a form, with a grid-like structure. The page is heavily degraded, showing significant noise, artifacts, and a large, dark, irregular shape on the right side, suggesting a scan of a physical document with a large shadow or damage. The text is mostly illegible due to the high contrast and noise. There are some faint, dark, irregular shapes on the right side of the page, which appear to be shadows or damage to the original document. The overall appearance is that of a low-quality scan of a physical document.

North-West Frontier Province.

The North-West Frontier Province, as its name denotes, is situated on the north-west frontier of the Indian Empire. It is in form an irregular strip of country lying north by east and south by west and may generally be described as the tract of country, north of Baluchistan, lying between the Indus and the Durand boundary line with Afghanistan. To the north it extends to the mountains of the Hindu Kush. From this range a long broken line of mountains runs almost due south, dividing the province from Afghanistan, until the Sulaiman Range eventually closes the south of the Province from Baluchistan. The greatest length of the province is 408 miles, its greatest breadth 279 miles and its total area about 39,276 square miles, a little more than half of Bombay, or more than three-fifths of the size of England without Wales. The territory falls into three main geographical divisions: the Cis-Indus district of Hazara, the narrow strip between the Indus and the Hills, containing the Districts of Peshawar, Mardan, Kohat, Bannu and Dera Ismail Khan, and the rugged mountainous regions on the north and west between those districts and the border line of Afghanistan. Hazara and the five districts in the second division contain 14,290 square miles. The mountain regions, north and west, are occupied by tribes subject only to the political control of H. E. the Governor in his capacity as Agent to the Governor-General. The area of this tract is roughly 24,986 square miles and in it are situated, from north to south, the political agencies severally known as the Malakand, Khyber, Kurram, North Waziristan and South Waziristan Agencies. Each of the Deputy Commissioners of the six administered districts is responsible for the management of political relations with certain tribes or sections of the tribes across the frontier. A few hundred miles of the trans-border territory are internally administered by the Political Agents, but the bulk of the trans-border population is free from any internal interference, so long as offences are not committed and the tribes observe the conditions on which allowances are paid to many of them.

The key to the history of the people of the N.-W. F. P. lies in the recognition of the fact that the valley of Peshawar was always more closely connected politically with Eastern Iran than with India, though in pre-Mahomedan times its population was mainly Indian by race. Early history finds the Iranians dominating the whole Indus valley. Then came the Greek invasion under Alexander the Great, in B.C. 327, then the invasions of the Sakas, and of the White Huns and later the two great waves of Mahomedan invasion. Last came the Sikh invasion beginning in 1818. The Frontier Territory was annexed by the British in 1849 and placed under the control of the Punjab Government. Frequent warfare occurred with the border tribes. The most serious phases of these disturbances were the war provoked by the aggression of Afghanistan in 1919

and the protracted punitive operations against the Waziris and Mahsuds in 1919-1920. These have resulted in the establishment at Razmak, a position dominating the Mahsud Waziri country, of a permanent garrison of 10,000 troops drawn mostly from stations lying in the plains immediately below the hills. A circular road from Bannu, through Razmak to Sararogha, Jandola and back to the Derajat provides communications transport with this force and facilitates its mobility. The effect of this measure has been a marked improvement in the internal peace of the Tribal area.

The separation of the Frontier Province from the Punjab was aimed at achieving the double object of securing closer and more immediate control and supervision of the Frontier by the Supreme Government and of making such alterations in the personnel and duties of frontier officials as would tend to the establishment of improved relations between the local British representatives and the independent tribesmen. The province was eventually removed from the control of the Punjab administration in 1901. To it was added the political charge of Dir, Swat and Chitral, the Political Agent of which had never been subordinate to the Punjab. The new Province was constituted under a Chief Commissioner and Agent to the Governor-General, with headquarters at Peshawar, in direct communication with the Government of India in the Foreign and Political Department. In April 1932 the Province was constituted a Governor's Province. In political questions there is no intermediary between the Governor and the local officer, an arrangement designed to secure both prompt disposal of references and the utilisation of the expert knowledge of frontier conditions for which the head of the administration is selected. The advisability of re-uniting the Province with the Punjab was much discussed in certain Indian political circles and as a result of the views expressed upon the matter in the Legislative Assembly the Government of India in 1922 appointed a Committee of officials and non-officials to investigate it. The Committee, presided over by Mr. D. de S. Bray, M.L.A., Joint Foreign Secretary, toured the Frontier Province and the Punjab and heard numerous witnesses. Its members were Messrs. Raza Ali, M.O.S., T. Rangacharia, Chaudhri Shahabuddin, N. M. Samarth and K. B. Abdur Rahim Khan, members of the Legislative Assembly, H. N. Bolton, I.O.S. (Foreign Dept.) and A. H. Parker, I.O.S. (Punjab) (members). The inquiry developed practically into a contest between Mahomedans and Hindus on communal lines. The Hindus, allied in sympathy with their co-religionists in the Punjab, demanded the reunion of the administered districts of the Province with the Punjab or, if that were not attainable then the placing of the judicial administration of the Province under the Punjab High Court at Lahore. The Mahomedans on the other hand claimed the right of their Province

to a status corresponding with that enjoyed by other Provinces of India and to immediate reforms initiating and providing for progress along that line. The Hindus argued that a separate Pathan Province on the Frontier would cause a dangerous sentimental division from the rest of India, with leanings towards the allied racial elements outside British India. The answer to that was that a contented Pathan Province would be a valuable buttress against hostile feeling across the Border. The Committee's deliberations ended in disagreement, the two Hindu members writing each a separate report favourable to the Hindu viewpoint already explained, and the majority of the Committee, comprised of all its other members, recommending advance on a Provincial basis. Their principal recommendations were for—

Retention of the Settled Districts and Tribal Tracts as a separate unit in charge of a minor administration under the Government of India,

Early creation of a Legislative Council for the Settled District and appointment of Member of Council and Minister,

Appointment of a second Judicial Commissioner which has since been sanctioned and reform of the judicial administration in various directions, including interchange of officers with the Punjab, so that the members of the Service in the smaller Province should have the advantage of experience in the larger one.

"If (concluded the Majority) the Pathan nationality is allowed self-determination and given scope for that self-development within the Indian Empire under the Reforms Scheme after which it is now striving, we are assured that with a contented Frontier population India can face with calm resolution the future that the Frontier has in store for her.

The People.

The total population of the N.W.F.P. (1941) is 5,415,666, made up as follows:—

Hazara	796,230
Trans-Indus Districts	2,241,837
Trans-Border Area	2,377,599

This last figure also include estimated population for these parts of the Agencies and district tribal territory where no census was taken. There are only 632·3 females per 1,000 males in the towns and 887·6 females per 1,000 males in rural areas.

This disproportion of the sexes cannot at present be explained in the N.W.F.P. any more than in other parts of Northern India where it also appears. The discrepancy is greater here than in any other Province of India. There is no ground for believing that the neglect of girls in infancy has any effect in causing the phenomenon. On the other hand, the female population has to face many trials which are unknown to men. The evils of unskilled midwifery and early marriage are among them. Both the birth and death-rates of the Province are abnormally low. The birth-rate in the

administered districts, according to the last available official reports, is 25·6 and the death-rate 21·9.

The dominant language of the Province is Pashtu and the population contains several lingual strata. The most important sections of the population, both numerically and by social position, are the Pathans. They own a very large proportion of the land in the administered districts and are the ruling race of the tribal area to the west. There is a long list of Pathan, Baluch, Rajput and other tribal divisions. Gurkhas have recently settled in the Province. The Mahomedan tribes constitute almost the whole population, Hindus amounting to only 5 per cent of the total and Sikhs to a few thousands. The occupational cleavage of the population confuses ethnical divisions.

(Under the North-West Frontier Province Law and Justice Regulation of 1901), custom governs all questions regarding successions, betrothal, marriage, divorce, the separate property of women, dower, wills, gifts, partitions, family relations such as adoption and guardianship, and religious usages and institutions, provided that the custom be not contrary to justice, equity or good conscience. In these matters the Mahomedan Law where the parties are Mahomedans, and Hindu Law where the parties are Hindus, is applied in so far as that law has not been altered or abolished by any legislative enactment and is not opposed to the provisions of the Regulation and has moreover not been modified by any custom.

The climatic conditions of the N.W.F.P. which is mainly the mountainous region, but includes the Peshawar Valley and the river in tracts of the Indus in Dera Ismail Khan District, are extremely diversified. The latter district is one of the hottest areas of the Indian continent, while on the mountain ranges the weather is temperate in summer and intensely cold in winter. The air is generally dry and hence the annual ranges of temperature are frequently very large. The Province has two wet seasons, one the S.W. Monsoon season, when moisture is brought up from the Arabian Sea and the Bay of Bengal; the other in winter, when storms from Mesopotamia, Persia and the Caspian Districts bring widespread rain and snowfall. Both sources of supply are precarious and not infrequently either the winter or the summer rainfall fails almost entirely.

Trade and Occupations.

The population derives its subsistence almost wholly from agriculture. The Province is practically without manufactures. There is no considerable surplus of commercial products for export. Any commercial importance which the province possesses it owes to the fact that it lies across the great trade route which connect the trans-border tribal territories and the marts of Afghanistan and Central Asia with India, but the influence of railways is diminishing the importance of the trading interests. The new roads in Waziristan

are already largely utilised by the Tribal inhabitants for motor traffic. Prices of agricultural produce have in recent years been high, but the agriculturists, owing to the poor means of communication, have to some extent been deprived of access to Indian markets and have therefore been unable to profit by the rates prevailing. On the other hand, high prices are a hardship to the non-agricultural classes. The effects of recent extensions of irrigation have been important. Land tenures are generally the same in the British administered districts as in the Punjab. The cultivated area of the land amounts to 25 per cent. and uncultivated 75 per cent.

The work of civilisation is now making steady progress, both by the improvement of communications and otherwise. Relations with the tribes have generally improved, trade has advanced, free medical relief has been vastly extended, police administration has been reformed and the desire of people for education has been judiciously and sympathetically fostered, though in this respect there is complaint against the limitations imposed by financial embarrassments. In the British administered districts the total percentage of male scholars to the total male population is 7.36 and that of female scholars to the total female population is 1.8 for the year 1940-41. 25 per cent. males and 7 per cent. females of the total population are returned as literates. The figures for males denote a very narrow diffusion of education even for India. Those for females are not notably low, but they are largely affected by the high literacy amongst Sikh women, of whom 13.3 per cent. are returned as literate. The inauguration of a system of light railways throughout the Province, apart from all considerations of strategy, must materially improve the condition of the people and also by that means strengthen the hold of the administration over them. The great engineering project of the Upper Swat River Canal, which was completed in 1914, and the lesser work of the Paharpur Canal, also completed a few years ago, will bring ease and prosperity to a number of peasant homes.

Administration.

The administration of the North-West Frontier Province is conducted by H. E. the Governor and Agent to the Governor-General. The administration comprises—

- (1) The Hon'ble the Chief Minister
- (2) The Hon'ble Minister for Finance
- (3) The Hon'ble Minister for Education
- (4) The Hon'ble Minister for Industries.

(At the time of compiling these notes no Ministers are in office since the resignation of the Congress Ministry, and the Governor is assisted in the administration by an Adviser.)

- (5) The Hon'ble the Speaker, Legislative Assembly.
- (6) Officers of the Political Department of the Government of India
- (7) Members of the Provincial Executive and Judicial Service.

- (8) Members of the Subordinate Civil Service
- (9) Superintendents and Assistant Superintendents of Police.
- (10) Officers recruited for the service of departments requiring special knowledge—Militia, Engineering, Education, Medicine and Forestry.

The cadre posts reserved for officers coming under the sixth head above are.—

	Chief Secretary, Revenue and Divl. Commr.	
	Secretary, Development Departments.	4
Administration	Home Secretary.	
	Dy Commissioners	6
	Political Agents	5
	Senior Sub-Judge	1
	Asst Commissioners and Asst. Political Agents.	14
Hon'ble the Judicial Commissioners' Court & District Judges.	The Hon'ble Judicial Commissioner	
	The Hon'ble Addl. Judicial Commissioner.	
	Three District and Sessions Judges.	7
	Two Additional District and Sessions Judges	

The districts under the Deputy Commissioners are divided into from two to three sub-collectorates in charge of tahsildars, who are invested with criminal and civil and revenue powers, and are assisted by naib-tahsildars, who exercise only criminal and revenue powers. Some sub-divisions are in charge of Assistant or Extra Assistant Commissioners. The village community characteristic of some parts of India is not indigenous among the Pathans. Its place as a social unit is to some extent taken by the tribe, which is held together by the ties of kinship and ancient ancestry, real or imaginary. Modern municipal local government has been introduced in the towns. There are also district boards. The district is the uniform police, medical and educational administration and the ordinary staff includes a District Superintendent of Police, a Civil Surgeon, the Superintendent of Jail and a District Inspector of Schools. The Province forms a single educational circle and only possesses one forest division, that of Hazara. The P. W. D. of the Province carries out duties connected with both Irrigation and Buildings & Roads. It is organised in two circles (in all seven Divisions) under a Chief Engineer, P.W.D. who is also *ex-officio* Secretary to H. E. the Governor. The administration of the civil police force of the districts is vested in an Inspector-General. There is a special force of Frontier Constabulary. Of the Agencies only Kurram and Tochi Valley pay land revenue to the British Government. The revenue administration of all six administered districts is controlled by the Revenue and Divisional Commissioner. For the administra-

tion of civil and criminal justice there are three Civil and Sessions districts each presided over by a District and Sessions Judge. The two Judicial Commissioners are the controlling authority in the Judicial branch of the administration, and their Courts are the highest criminal and appellate tribunals in this Province.

FINANCES.

In order to meet the excess in expenditure over the income of the Provinces a subvention of Rs. one crore per annum is given by the Government of India out of Central Revenues.

Budget.

A small surplus of Rs 68,000 is anticipated in the budget estimates of the Province for 1942-43. The total revenue for 1942-43 is expected to yield Rs 1,96,54,000 and expenditure is estimated at Rs 1,95,86,000.

The estimates for expenditure include capital expenditure totalling Rs 3,68,000 on account of irrigation works (Rs 28,000) commutation of pensions (1,36,000) and the Malakand Hydro-Electric scheme (Rs. 2,04,000) which is being met from revenue. If this is excluded, the total revenue surplus would amount to Rs. 4,36,000.

The total provincial balance at the end of 1942-43 is estimated at Rs 45,22,000. It is, therefore, unlikely that the province will have to borrow money for ways and means purposes during the year.

The Administration.

The principal officers in the present Administration are.—

H. E. the Governor and Agent to the Governor-General.—H. E. Sir George Cunningham, K.C.S.I., K.C.I.E., O.B.E. (Assumed charge 2nd March 1937).

Secretary to Governor—G. H. Emerson, I.C.S.

Aide-de-Camp—A. A. Mackintosh, I.P.

Adviser to H. E. the Governor—Lt.-Col. W. F. Campbell, C.I.E.

Judicial Commissioner—Hon'ble Sir James Almond, Bar-at-Law, I.C.S.

Additional Judicial Commissioner—The Hon'ble Khan Bahadur Kazi Mir Ahmad Khan, B.A., LL.B.

Revenue and Divisional Commissioner—L. W. Jardine, C.I.E., I.C.S.

Chief Secretary—Lt.-Col. G. L. Mallam, Bar-at-Law.

Secretary to Government, Development Departments.—Major W. C. Leeper.

Home Secretary—Major E. H. Cobb, O.B.E.

Financial Secretary—E. E. C. Price.

Advocate-General and Secretary to Government, Legislative Department—S. B. Sardar Raja Singh, M.A., LL.B.

Secretary, Information Department—Major Abdul Rahim Khan.

Secretary, Civil Defence—Major M. D. A. Baig, M.B.E.

Assistant Secretary General to Government—K. B. Ibrahim Khalil Khan, B.A., P.C.S.

Asst. Financial Secretary—M. A. Muzaffar, M.A.

Indian Personal Assistant to H. E. the Governor—K. B. Haji Gulam Nagshand Khan, M.B.E.

Secretary, Public Works Department—G. A. M. Brown, O.B.E.

Inspector-General of Civil, Hospitals and Prisons.—Col. J. P. Huban, O.B.E., I.M.S.

Inspector-General of Police—A. F. Perrott.

Commandant, Frontier Constabulary—O. G. Grace, O.B.E., I.P.

Director of Public Instruction—Khan Sahib Shah Alam Khan, M.A., LL.B., P.E.S.

Superintendent, Archaeological Survey, Frontier Circle—Dr. Muhi Nazim, Ph.D. (Cantab.)

District and Sessions Judge—N. Mir Saeed Alam Khan, Bar-at-Law.

Additional District and Sessions Judges, Peshawar & Kohat—K. Mohd Ibrahim Khan, B.A., LL.B.; K. B. Mohd Nasir Khan.

Dist. & Sessions Judge, Derajat—M. R. Kayani, I.C.S.

Dist. & Sessions Judge, Hazara—Mr. P. R. B. May, I.C.S.

Political Agents.

Major K. C. Packman, Dir, Swat and Chitral.

Capt J. O. S. Donald, Khyber.

C. B. Duke, I.C.S., North Waziristan.

Major F. E. Loughton, Kurram.

Major A. J. Dring, South Waziristan.

Deputy Commissioners

Major Ishandar Mirza, O.B.E., Peshawar.

Major B. D. S. Bedi, Hazara.

Khan Bahadur Sheikh Mahbub Ali Khan, O.B.E., Kohat.

A. P. Low, I.C.S., Bannu.

Major G. A. Cole, Dera Ismail Khan.

Lt.-Col. J. R. L. Bradshaw, Mardan.

Former Chief Commissioners.

The Hon'ble Lieutenant-Colonel Sir Harold Deane, K.C.S.I., from 9th November 1901 to 3rd June 1908. Died 7th July 1908.

The Hon. Lieutenant-Colonel Sir George Roos-Keppel, C.I.E., K.C.S.I., from 4th June 1908 to 9th September 1919.

The Hon'ble Sir Alfred Hamilton Grant, K.C.S.I., C.I.E., from 10th September 1919 to 7th March 1921.

The Hon'ble Sir John Loader Maffey, K.C.V.O., C.S.I., C.I.E., I.C.S., from 8th March 1921 to 6th July 1923.

The Hon'ble Sir Horatio Norman Bolton, K.C.I.E., C.S.I., I.C.S., from 7th July 1923 to 30th April 1930.

The Hon'ble Sir Stuart Pears, K.C.I.E., C.S.I., I.C.S., from 10th May 1930 to 9th September 1931.

The Hon'ble Lieut.-Col. R. E. H. Griffith, C.I.E., from 10-9-30 to 17-4-32.

Former Governor.

H. E. Sir Ralph Griffith, K.C.S.I., C.I.E., from 18th April 1932 to 1st March 1937.

NORTH-WEST FRONTIER PROVINCE LEGISLATIVE ASSEMBLY.

SPEAKER

The Hon. Malik Khuda Bakhsh Khan, B A , LL B

DEPUTY SPEAKER.

Nawabzada Allah Nawaz Khan, Bar-at-Law.

Elected Members

Rai Bahadur Mehr Chand Khanna, B A (*Peshawar Cantonment, General Urban*), Rai Bahadur Lala Chiman Lal, B A , LL B (*Bannu Town, General Urban*), Lala Bhanju Ram (*Dera Ismail Khan Town, General Rural*), Dr Charuchandar Ghosh (*Peshawar West, General Rural*), Lala Jamna Das (*Peshawar East, General Rural*), Rai Bahadur Lala Ishar Dass Sawhney, M A , LL B (*Hazara, General Rural*), Lala Hukam Chand (*Kohat General Rural*), Lala Tek Chand Dhingra (*Dera Ismail Khan, General Rural*), Abdur Rab Khan Nishtar, B A , LL B (*Peshawar City, Muhammadan Urban*), M Pir Baksh Khan, M A , LL B (*Peshawar City, Muhammadan Urban*), The Hon'ble Malik Khuda Bakhsh Khan, B A , LL B (*North-West Frontier Province Towns, Muhammadan Urban*), Lieut M Muhammad Zaman Khan (*Tanawal, Muhammadan Rural*), Pir Muhammad Kamran (*Abbottabad West, Muhammadan Rural*), Khan Sahib Raja Abdur Rahman Khan (*Abbottabad East, Muhammadan Rural*), Sardar Bahadur Khan (*Haripur Central, Muhammadan Rural*), Raja Manuchohr Khan (*Haripur South, Muhammadan Rural*), Abdur Rashid Khan (*Haripur North, Muhammadan Rural*), Khan Muhammad Abbas Khan (*Manshera-North, Muhammadan Rural*), Khan Sahib Muhammad Attai Khan (*Upper Pakhli, Muhammadan Rural*), M Faqira Khan (*Lower Pakhli, Muhammadan Rural*), Qazi Attaullah Khan (*Bara Mohmands, Muhammadan Rural*), Qazi Attaullah Khan (*Bura Mohmands, Muhammadan Rural*), Arab Abdul Ghafoor Khan (*Khahls, Muhammadan Rural*), Khan Abdul Ghafoor Khan, Bar-at-law (*Hashtnagar North, Muhammadan Rural*), Dr Khan Sahib (*Hashtnagar South, Muhammadan Rural*), Arbab Abdur Rahman Khan (*Doaba Daudzai, Muhammadan Rural*), Mian Jaffar Shah (*Nowshera South, Muhammadan Rural*), Khan Muhammad Samin Jan, B A , LL B (*Nowshera North, Muhammadan Rural*), Khan Zarin Khan (*Barzai, Muhammadan Rural*), Khan Amir Muhammad Khan (*Kamalzai, Muhammadan Rural*), Khan Abdul Aziz Khan (*Utamannama, Muhammadan Rural*), Khan Kamdar Khan (*Ruzzar, Muhammadan Rural*), Khan Allahdad Khan (*Amazai, Muhammadan Rural*), Khan Sahib Malik-ur-Rahman Khan, M A (*Hangu, Muhammadan Rural*), Pir Sayed Jalal Shah (*Kohat, Muhammadan Rural*), Khan Muhammad Afzal Khan (*Teri South, Muhammadan Rural*), Khan Nasrullah Khan, B A , LL B (*Bannu East, Muhammadan Rural*), Khan Akbar Ali Khan (*Bannu West, Muhammadan Rural*), Khan Faizullah Khan, Ghazni Khel (*Lakki East, Muhammadan Rural*), Nawab Muhammad Zaffar Khan, Waliwal (*Lakki West, Muhammadan Rural*), Nawabzada Muhammad Said Khan Tank, (*Muhammadan Rural*), Khan Sahib Asadullah Khan (*Kulachi, Muhammadan Rural*), Nawabzada Allah Nawaz Khan, Bar-at-Law (*Dera Ismail Khan South, Muhammadan Rural*), Khan Abdullah Khan (*Dera Ismail Khan North, Muhammadan Rural*), Sardar Ajit Singh (*Southern Districts, Sikh Rural*) Sardar Jagat Singh Narag (*Peshawar, Sikh Rural*), Ishar Singh, Bar-at-Law (*Hazara Mardan, Sikh Rural*), Khan Bahadur Saadullah Khan (*Peshawar Landholders*), Sardar Muhammad Muhammad Aurangzeb Khan, B A , LL B (*North-West Frontier Province Landholders*)

Orissā.

Like Sind, Orissa was constituted a separate province on April 1, 1936. If Sind was a separate geographical, ethnological and linguistic unit inside the administrative boundary of Bombay Presidency, the new province of Orissa is the result of the amalgamation of various Oriya-speaking peoples who had till then belonged to three separate provinces, viz., Bihar and Orissa, Madras and the Central Provinces.

The Oriyas are an intensely patriotic people who bear great love for their culture and language. They have always opposed any move to dismember the Oriya-speaking tracts for political or administrative considerations. The Oriyas trace their traditions far back to the days of Mahabharata, when there was the ancient kingdom of Utkal embracing a wide territory now known as Orissa. Through successive conquests and annexations in known history, the Oriyas passed through varying fortunes, until at the time of the Moghul conquest the Orissa country was broken up, and the people gradually lost race consciousness although common language and literature continued to act as a link.

Race consciousness was revived with the spirit of education under the British regime and after the great famine of 1866, Sir Stafford Northcote suggested the separation of Orissa from Bengal. The proposal was turned down, but the patriotic fervour underlying the new move persisted and gave rise to a series of demands.

History of Separation.

The agitation for the unification of Oriya tracts first obtained official recognition in 1903 when the Government of India accepted the principle of bringing in the scattered sections of the Oriya-speaking population under a single administration. About the same time, there was brought into existence the Utkal Union Conference, which carried on a sustained agitation to unify the Oriyas.

The first stage of success was achieved in 1912 when the area of modern Orissa was separated from Bengal and amalgamated with Bihar to form what came to be known as the province of Bihar and Orissa. Although the status of Orissa in the province of Bihar and Orissa was much better than before, the advocates of Oriya unity continued to press their claim for the formation of Orissa into a distinct administrative unit. The late Mr. Montague and Lord Chelmsford saw the justice of the Oriyas' claim and generally favoured the redistribution of provinces on a linguistic basis for the success of responsible government. They left it, however, to the provincial governments concerned to formulate opinions and make concrete proposals after the advent of the Montford constitution in 1920.

The Bihar and Orissa Legislative Council endorsed the idea of amalgamation, but the Madras Council held an inconclusive debate. The Madras Government was against the surrender of any of its territory, while the C. P. Government had an open mind.

The Government of India then appointed what is called the Philip-Duff Committee to make local inquiries with a view to ascertaining the attitude of Oriya-speaking people in the north of Madras Presidency on the question of their union with Orissa. Messrs. C. L. Philip and A. C. Duff reported that there was "a genuine, long standing and deep seated desire on the part of the educated Oriya classes of the Oriya-speaking tracts for amalgamation of these tracts with Orissa under one administration".

The next stage came with the appointment of the Simon Commission in 1927. A sub-committee of the commission presided over by Major Attkin recommended the creation of a separate administrative unit for Orissa, agreeing with the Oriyas' contention that, under the autonomous conditions proposed by the Commission, the Oriyas would be an ineffective minority in Madras, Bengal, Bihar and Orissa and the C. P.

Round Table Conference.

When the idea of a federation of autonomous units dawned at the first Round Table Conference, the Oriyas' demand was presented in a crystallised form by the Maharaja (then Raja) of Paralakhemundi, who asked for a separate province for Orissa. "We want a province of our own," he said, "on the basis of language and race so that we can be a homogeneous unit with feelings of contentment and peace, to realise, and be benefitted by, the projected reforms and look forward to the day when the United States of India will consist of small federated States based on common language and race."

The Oriyas' demand derived adventitious support from the strength of the Muslim claim for the constitution of Sind as a separate province. Those who backed up the case of Sind could not oppose Oriyas' claim, which, therefore, came to be recognised at the Round Table Conference.

In September 1931, the Government of India appointed the O'Donnell Committee to examine and report on the financial and other consequences of setting up a separate administration for Orissa and to make recommendations regarding the boundaries in the event of separation. The Committee recommended the creation of a new province including the Orissa division, Angul, the Khariar Zamindari of the Raipur district and the greater part of the Ganjam district and the Vizagapatnam agency tract. According to the Committee, the new Orissa province was to have an area of 32,681 square miles and a population of about 8,174,000 persons. On the question of financial and other consequences of separation, the Committee made recommendations generally on the lines of the Sind Committee.

In January 1936, an Order-in-Council was issued by His Majesty's Government constituting Orissa as a separate province to be brought into line with other provincial units on the inauguration of Provincial Autonomy on April 1, 1937.

Extent of Province.

The following are the areas comprised in the new province of Orissa —

1. That portion of the Province of Bihar and Orissa which was known as the Orissa Division thereof.

2 Areas transferred from the Presidency of Madras —

(i) The Ganjam Agency Tracts,

(ii) The following areas in the non-Agency portion of the Ganjam district, viz, the taluks of Ghumsur, Aska, Surada, Kodala and Chattrapur, so much of the taluks of Ichapur and Berhampur as lies to the north and west of the boundary line,

(iii) So much of the Parlakmedī Estate as lies to the north and east of the said line, and

(iv) The following areas in the Vizagapatam district, that is to say, the Jeypore (Impartible) Estate and so much of the Pottangi taluk as is not included in that estate

3 Areas transferred from the Central Provinces :—

(i) The Kharlar Zamindari in the Raipur district, and

(ii) The Padampur Tract in the Bilaspur district, that is to say, the detached portion of that district consisting of 54 villages of Chandrapur-Padampur estate and also of the following 7 villages, viz, Kuhakunda, Badimal, Panchpudgia (Soda), Barhampura (Malguzari), Panchpuragia (Palsada), Jogni and Thakurpal, (Jogni)

Agriculture.

Agriculturally and industrially, Orissa is a backward region. It has suffered as the result of being tacked to one or the other of many provinces for administrative purposes. This explains why there are no big factories in Orissa, although there are a large number of indigenous cottage industries bespeaking the people's artisanship. Among the cottage industries may be mentioned handloom industries, brass, bell metal, silver filigree, cutlery, wood and paper pulp and horn articles. Sugarcane and jute are two important commercial crops in Orissa, and areas under both these are already increasing. The Orissa forests can supply a large quantity of valuable timber and fuel. Fisheries too are an important industry of Orissa. The two valuable sources of supply are the extensive Chilka lake and Puri where on an average 9,000 maunds of cured fish and 50,000 maunds of uncured fish respectively are exported to Calcutta every year.

The chief mineral resources of Orissa are iron, coal, limestone, manganese and mica. Iron-ore is mostly found in Mayurbhanj, Keonjhar, and Bonai, all States. The deposits in this area are remarkable for the enormous quantity of extremely rich ore they contain. More than 60 per cent of the ore extracted in India comes from these areas of Orissa for which there is a ready demand from the Tata Iron and Steel Works in Jamshedpur and Messrs. Bird

& Co. of Calcutta. Orissa cannot boast of such extensive coal mines as those of Bengal and Bihar, but coal has been found in Angula, Sambalpur and in the States of Gangpura, Talcher and Athmallik. Talcher has the largest coalfields and they are being progressively exploited. The Agricultural and the Industries Departments which remained under the control of the Revenue Commissioner till November 1936 was taken over by the Director of Development. A Deputy Director of Agriculture was appointed for Orissa. By the amalgamation of the ex-Madras and ex-Central Provinces areas 15 additional factories were added to those already in Orissa Division and four fish curing yards with their staff were transferred from the Madras Presidency.

Administration.

Sir John Austin Hubback, KCSI, was appointed to be the first Governor of the infant province of Orissa.

Under paragraph 19 of the Order in Council, the Patna High Court is the High Court for the Province. To enable the High Court to hear on Circuit, cases of the Ex-Madras and ex-Central Provinces areas, Clause 35 of the Letters Patent was amended by Regulation XII of 1936. A new Court of an Agency Sub-Judge at Jeypur, a Munsif's Court at Nawapara and three additional Criminal Courts, consisting of a District Magistrate's Court and two sub-divisional Magistrate's Courts, were established in 1936.

The Cadre of the Indian Civil Service was provisionally fixed at 17 including 13 superior posts and 4 inferior posts. As it was considered undesirable to form a separate Cadre for such a small number the Cadre is joint with Bihar.

Provincial Autonomy—The first general elections under the constitution which established Orissa as a separate province resulted in a clear majority for the Congress Party. Out of 56 elective seats in the Assembly (four are nominated, making a total of 60) the Congress counted 36 as its adherents. The Governor thereupon summoned the leader of the Congress Party to form a Ministry, but the latter, in obedience to the directions of the party headquarters, declined unless he were given certain assurances by the Governor (See chapter on Indian National Congress). After a prolonged controversy this point was amicably settled, and the Congress Party leader formed a Cabinet. Late in 1937, the legislature decided that Cuttack should be the capital of the province.

The working of self-government in the infant province was threatened with interruption twice in 1938—once early in the year and later in the summer. The former did not relate directly to Orissa, but the latter did. In this chapter we are concerned only with the latter. Sir John Hubback wished, for reasons of health, to go home on leave. In his place the Revenue Commissioner, the seniormost civilian in the province, was appointed to act for a period of four months. The Premier opposed this appointment on the ground that it is bad in principle and derogatory to the prestige

of the Ministry to ask it to work under a Governor who till the other day took his orders from the Ministry and will continue to do so on his reversion to his substantive post. The Orissa Premier's complaint was taken up by the Congress and Mr. Gandhi. An all-India crisis was threatened on this issue, but it was averted through the goodness and self-sacrifice of Sir John Hubback who postponed his leave.

Thus assured of a period of peaceful progress, the province continued to be administered by the Congress Ministry for a number of months till the autumn of 1939 when its fortunes were blighted by the political crisis which overtook all the Congress-governed provinces. The Orissa Ministry resigned along with other Congress Cabinets and, there being no prospect of the formation of an alternative Government with any reasonable chance of stability, the Governor, as in other similar provinces, assumed charge of the entire province under Section 93 of the Government of India Act. By a resolution of Parliament in April 1940, this act of emergency was approved and the period of its operation extended by a year. In the absence of a Ministry the Governor administered the province with the aid of an Adviser.

New Ministry.

The people of Orissa in general and some of the Congress Party members in particular took little time to realise that the official policy of the Congress towards the war was wrong. Both in the interests of provincial self-government and in the wider interests of the country, they wished to replace the gubernatorial rule by a popular administration which would actively undertake the task of marshalling the resources and man-power of the province for an all-out effort against the Axis powers.

With this object in view all right-thinking people in the province began to work for a popular front. At first their efforts were not taken seriously because there seemed little prospect of forming anything like a stable Ministry in face of the solid block of the Congress Party in the Assembly. Moreover, the first flush of jail-going enthusiasm generated by the civil disobedience movement did not reveal the fissures which later showed themselves in the ranks of Congressmen in Orissa.

As days rolled by, signs of disapproval of the official Congress policy became evident. The Congress Party in the province was never a united house. Even in the days before the war when the Congress Ministry was in office there were members who were straining at the leash, if they did not openly revolt it was because of the rigours of party discipline. This state of affairs underwent a change under the stress of war conditions. When the novelty of the civil disobedience movement wore off, the dissenting elements set about to work.

As far back as September 1941 eight members of the Orissa Congress Assembly Party formed themselves into a new group under the leadership of Pandit Godavaris Misra. It was interpreted at the time as the first step in an effort to form a Ministry in co-operation with the members of the Opposition. In a manifesto this group declared, "We have come to the conclusion that the present stalemate in the country should be ended. We have ventured to think differ-

ently from the present official Congress policy. We think that our duty to the country should be placed higher than our discipline to a party which has become practically defunct".

At least one of these dissentients made bold to resign from the Congress Party. She was called upon to resign her seat, seek re-election and appeal to the electorate with the new policy. This she refused to do. The attitude of the Congress headquarters only served to stiffen the backs of the dissidents. Soon it was revealed that the new group included some prominent members of the Congress Assembly Party. Mr. Gandhi's reaction was "We shall be stronger for the weak ones falling away".

Thus the move begun in the summer of 1941 took shape in the autumn when it was revealed that with the addition of the seceders from the Congress Party the Opposition could count 33 among its supporters in a house of 60. By now the waverers had made up their minds. Notwithstanding the disciplinary action taken by the Congress executive against some of the prominent seceders, the new group remained firm. Late in October the Maharaja of Parlakimedi called a meeting of his supporters both from the Opposition and from the group of Congress dissentients when he was elected leader of the newly formed United Nationalist Party.

With this proved strength the leaders of the new party got in touch with the Governor and requested him to terminate the operation of section 93 of the Government of India Act and restore democracy. The authorities responded and on November 23, 1941, a new Ministry was formed with the Maharaja of Parlakimedi as Chief Minister and Pandit Godavaris Misra and Moulvi Abdus Sobhan Khan as the other two Ministers. With the concurrence of the Governor-General, the Governor revoked his earlier proclamation under section 93.

It was announced that the Maharaja of Parlakimedi would hold the portfolios of Home Affairs (excluding publicity), Local Self-Government and the Public Works Department, Pandit Misra would be in charge of Finance, Publicity, Development and Education; and Moulvi Abdus Sobhan Khan would be responsible for Law, Commerce, Revenue and Health.

"Our first and foremost task will be to give a stimulus to the war effort", said the Maharaja of Parlakimedi on assumption of office. Pandit Misra said "I believe that in the present situation, when the whole world is steeped in hostilities and when the little privilege which India has won from the British is being threatened, it is not in the country's interests to keep aloof from war preparations. It is for this that I thought that a Ministry under the present circumstances would be useful".

Meanwhile the official Congress continued to hope that it would be able to throw out the Ministry on a motion of no-confidence. Indeed notice was given of one such motion, but it was withdrawn for tactical reasons of voting. Before the Assembly was convened for the budget session in the first half of February 1942, some of the members of the official Congress Party were arrested and sentenced under the Defence of India rules. This, coupled with the restric-

tions placed on party political activities in connection with a by-election (which eventually turned in favour of the official Congress Party), gave rise to criticism of the Ministry's *bona fides*, and it was contended that the new Ministry was adopting subterfuges to defeat possible motions of no-confidence and to retain office at any cost

Commenting on the arrests of Congressmen on the eve of the budget session, Maulana Abul Kalam Azad, the Congress President said "Although these arrests have ostensibly been made under the provisions of the Defence of India Act, the alleged offences appear to arise out of the speeches made against the new Ministry. The occasion on which these arrests are being made leads one to infer that the free expression of public opinion is highly distasteful to the men newly placed in authority. By silencing those who are voicing the sentiments and feelings of a majority of the electorate, they hope to secure themselves against a vote of censure in the legislature. The Defence of India Act is being pressed into service to stifle public opinion and to reduce the number of inconvenient legislators by resorting to these methods."

During the budget session, there were several close votings, on more than one cut motion the Government had a bare majority of one. Speaking on one of these motions, Mr Biswanath Das, who was Premier in the Congress Government before the war, affirmed that his party commanded the support of thirty members in a house of 60 (one seat still remains vacant at the time of writing). Although the new Ministry is still functioning, its majority is precarious, and it is difficult to say what the future has in store for the province.

As these lines are being written, news comes of the death of one member whose vote saved the Ministry from defeat in the budget session. The latest position of the parties in the legislature is Congress 29, Ministrialist 28, speaker 1, Vacant 2, totalling 60.

When the budget session opened on February 12, 1942, the Hon Pandit Godavaris Misra, Finance Minister, presented the revised budget estimates for the province for the year 1941-42.

He explained that the budget for the whole year had been prepared and sanctioned by the Governor, in exercise of his powers assumed under the proclamation issued under Section 93 of the Government of India Act. With the revocation of the proclamation, the budget sanctioned by the Governor had ceased to have force, and the balance of grants which remained unspent on the date of revocation (November 23, 1941), could not be available for further expenditure. Thus the statutory position made it incumbent on the Ministry to compile a revised budget to obtain supply of funds from the legislature for the unexpired portion of the financial year. The revised budget showed an expenditure debitable to revenue of Rs 1,96,86,000, as against Rs 1,90,59,000 originally estimated. The revised estimate of revenue was Rs 2,05,61,000. The year opened with a free balance of Rs 6,49,000. It is expected, therefore that the year will close with a free balance of Rs 15,24,000.

BUDGET FOR 1942-43

In the first week of March the budget estimates for the year 1942-43 were presented. The Finance Minister revealed a revenue surplus of Rs 12,000, adding that the total revenue for the year was estimated at Rs 1,97,07,000 and the total expenditure on revenue account Rs 1,96,95,000.

Outside the Revenue account, the budget anticipated a receipt of Rs 4,29 00 lakhs and expenditure of Rs 3,91 81 lakhs, leaving a surplus of Rs 37 19 lakhs. The combined effect of the revenue surplus of Rs 12,000 and the surplus of Rs 37 19 lakhs in the capital—debt—deposit section was that the opening balance of Rs 12 28 lakhs at the beginning of the year would be raised to Rs 49 50 lakhs at the end of the year, which would be the closing balance of the year's budget.

On the revenue side a drop of about Rs 4 87 lakhs was expected under 'land', mainly on account of arrear payment to Local Bodies in South Orissa for land and other cesses, collected on their behalf, amounting to about Rs 4 lakhs. Forest revenue was also likely to fall by Rs 0 91 lakhs, the primary reason being that extra sales of timber for supply to the War Board may not be on such a large scale as in the current year.

On the expenditure side, one of the noticeable features was the provision of Rs 3 36 lakhs for civil defence. Provisions under "Education," "Agriculture," "Industries" and "Medical" have been increased by Rs 0 49 lakhs, Rs 0 58 lakhs, Rs 0 54 lakhs, and Rs 0 55 lakhs respectively. Expenditure under "police" was expected to be Rs 0 58 lakhs more than in the current year.

After explaining the budgetary position of the province, the Hon Minister referred to the various schemes, which the Government proposed to give effect to for the improvement of education to the province. The schemes included opening of a premedical course of study, in Biology at the Ravenshaw College. Introduction of vocational and industrial education in the Middle English and Middle Schools managed by Local Bodies and conversion of the Board of Higher Elementary Schools at Koraput into a Middle English School. Pandit Misra said that the expenditure under 'Education' had increased, but the problem still lay where it had laid when the province was created six years ago. "Little in the field of education can be done without solving the most important question of inaugurating a university of our own. There is a widespread feeling that a University should be started immediately. I am trying to expedite preliminaries and to come before the House within a few months' time with a University Bill drafted on the lines suggested in the report of the University Committee and also with a Supplementary Demand for the necessary money."

Referring to "Public Health" Pandit Misra informed the house that a provision had been made in the budget for the appointment of a Committee for establishing a link between the Public Health department and the public. Pandit Misra also referred to the various schemes.

proposed to be undertaken by the Government during the ensuing year for the improvement of agriculture and industries in the province.

Explaining the reason for the increase in the expenditure under "Police", the Finance Minister pointed out that the events in the Far East had unsettled normal conditions and had made it desirable to post additional guards at several places in the province.

Dealing with the Civil Defence measures Pandit Misra said that theirs was now a full-

fledged province which must be able to carry on its civil Defence as worthily as possible. So far as military defence was concerned necessary preparations were being made. "The Government are conscious of their responsibility at the present crisis. Therefore, necessary funds are being provided even at the sacrifice of nation-building developments; because nation saving is more important than nation building. I assure the Hon Members that everything possible within our means will be done to ward off danger."

ADMINISTRATION

GOVERNOR.

His Excellency Sir William Hawthorne Lewis, K.C.S.I. K.C.I.E., I.C.S.

MINISTERS.

Prime Minister, Home, L.S.G. and P.W.D.—Hon. Capt. Maharaja Sri Sri Sri K. C. G. Narayan Deo of Parlakimedi.

Minister, Finance, Publicity Development and Education—Hon. Pandit Godavaris Misra

Minister, Law and Commerce, Revenue and Health—Hon. Maulavi Abdus Sobhan Khan.

PARLIAMENTARY SECRETARY.

Parliamentary Secretary—Peari Sankar Roy M.L.A.

SECRETARIES.

Secretary to His Excellency the Governor—V. E. Davies I.C.S.

Revenue Commissioner—E. B. Wood, M.C., C.I.E., I.C.S.

Chief Secretary—P. T. Mansfield C.I.E., I.C.S.

Secretary Education, Health and Local Self Government Departments—Rai Bahadur Samuel Das, M.A.

Secretary, P.W.D. and Chief Engineer—S. K. Roy I.S.E., C.E.

Secretary, Law, Commerce and Labour Department & Legal Remembrancer—W. W. Dalziel, I.C.S.

Secretary, Revenue and Development Department—F. E. A. Taylor, I.C.S.

Secretary, Legislative Assembly—Dewan Bahadur C. Govindan Nair, C.I.E., Bar-at-law.

Additional Secretary and Director of Civil Defence—J. Bowstead, C.I.E., M.C., I.C.S.

ORISSA LEGISLATIVE ASSEMBLY.

SPEAKER:—The Hon. Sri Mukunda Prasad Das

DEPUTY SPEAKER —Sri Nanda Kishore Das

Elected Members.

The Punjab.

The Punjab or land of the five rivers, is so called from the five rivers by which it is enclosed, namely, the Jhelum, Chenab, Ravi, Beas and Sutlej. Together with the North-West Frontier Province and the Indian State of Jammu and Kashmir which lie to the north, the Punjab occupies the extreme north-western corner of the Indian Empire, and with the exception of the above-mentioned province comprises all of British India north of Sind and Rajputana and west of the river Jumna. Previous to October 1912, the Punjab with its feudatories embraced an area of 136,330 square miles and a population at the Census of 1911 of 24,187,750 (inclusive of 28,587 trans-frontier Baluchis), that is to say, about one-thirteenth of the area and population of the Indian Empire. But the formation of a separate province of Delhi reduced the area and population of the Punjab by about 450 square miles and 380,000 souls, respectively. The total population of the Province in 1931, including the Baluch tribes on the border of the Dehra Ghazi Khan District, was 28,490,857 of whom 4,910,005 were in the Indian States.

Physical Features.

The greater part of the Punjab consists of one vast alluvial plain, stretching from the Jumna in the east to the Suleman Range in the west. The north-east is occupied by a section of the Himalayas and the Salt Range forms its north-western angle. A few small spurs of the Aravalli mountain system traverse the extreme south-east and terminate in the Ridge at Delhi. The Punjab may be divided into five natural divisions. The Himalayan tract includes an area of 22,000 square miles with a scanty population living scattered in mountain hamlets. The Salt Range tract includes the districts of Attock, Rawalpindi and Jhelum and part of Shahpur district. Its physical configuration is broken and confused and the mountainous tracts of Murree and Kahuta approximate closely in characteristics to the Himalayan tract. Except in the hills, the rainfall leaves little margin for protection against distress in unfavourable seasons and irrigation is almost unknown. Skirting the base of the hills and including the low range of the Siwaliks, runs the narrow sub-montane tract. This tract, secure in an ample rainfall, and traversed by streams from the hills, comprises some of the most fertile and thickly populated portions of the province. Its population of over four millions is almost agricultural and pastoral but it includes one large town in Sialkot. Of the plains of Punjab, the eastern portion covers an area of some 36,000 square miles with a population of 10½ millions. East of Lahore, the rainfall is everywhere so far sufficient that cultivation is possible without irrigation in fairly favourable seasons, but over the greater part of the area the margin is so slight that, except where irrigation is employed, any material reduction in the rainfall involves distress, if not actual famine. Within the eastern plains lie the large cities of Lahore and Amritsar, and the popula-

tion in comparison with the western Punjab is largely urban. The western plains cover an area of 59,000 square miles, with a population of a little over six millions. The rainfall in this area, heaviest in the north and east and decreasing towards the west and south is everywhere so scanty that cultivation is only possible with the aid of artificial irrigation or upon the low-lying river-banks left moist by the retreating floods. In this very circumstance, these tracts find their security against famine, for there cultivation is almost independent of rain, a failure of which means nothing worse than a scarcity of grass. So little rain is sufficient, and absolute drought occurs so seldom that the crops may be said never to fail from this cause. The western plains embrace the great colony areas on the Chenab and Jhelum Canals which now challenge the title of the eastern plains as the most fertile, wealthy and populous portions of the province. Multan and Lyallpur are the largest towns in the western area. Owing to its geographical position, its scanty rainfall and cloudless skies, and perhaps to its wide expanse of untilled plains, the climate of the Punjab presents greater extremes of both heat and cold than any other portion of India. The summer, from April to September, is scorchingly hot, and in the winter, sharp frosts are common. But the bright sun and invigorating air make the climate of the Punjab in the cold weather almost ideal.

States.

The Indian States of the Punjab were formerly in the political charge of the Punjab Government. In 1921, however, the thirteen most important States, including Patiala, Bahawalpur, Jind and Nabha, were formed into a separate "Punjab States Agency" under the control of the Agent to the Governor-General, Punjab. The only States remaining in the charge of the Punjab Government were the Simla Hill States, for which the Deputy Commissioner of Simla was Political Officer, and three small States in the Ambala Division, Kalsia, Pataud and Dujana, which were supervised by the Commissioner of Ambala. From 1st October 1936 with the formation of a new Political Agency at Simla all these States have been transferred to the Punjab States Agency.

The People.

Of the population roughly one-half is Mahomedan, three-eighths Hindu and one-eighth Sikh. Socially the landed classes stand high, and of these the Jats, numbering nearly five millions, are the most important. Roughly speaking, one-half the Jats are Mahomedan, one-third Sikh and one-sixth Hindu. In distribution they are ubiquitous and are equally divided between the five divisions of the province. Next in importance come the Rajputs, who number over a million and a half. The majority of them are Mahomedans by religion about a fourth are Hindus and a very few Sikhs. They are widely distributed over the province. Both Jats and Rajputs of the Punjab provide many of the best recruits for the

Indian Army. In fact all the agricultural classes of the Punjab, except in the south-western districts, made a magnificent response to the appeal for recruits in the great war and the province's contribution of upwards of 400,000 men to the man power of the Empire speaks for itself. The Gujars are an important agricultural and pastoral tribe, chiefly found in the eastern half of the province and in the extreme north-west. In organisation they closely resemble the Jats and are often absorbed into that tribe. There are many minor agricultural tribes, priestly and religious castes (Brahmans, Sayads and Kureshis), most of whom are landholders, the trading castes of the Hindus (Khatris, Aroras and Banias), the trading castes of the Mahomedans (Khojas, Parachas and Khakhas), and the numerous artisan and menial castes. There are also vagrant and criminal tribes, and foreign elements in the population are represented by the Baluchis of Dera Ghazi Khan and neighbouring districts in the west, who number about half a million and maintain their tribal system, and the Pathans of the Attock and Mianwali districts. Pathans are also found scattered all over the province engaged in horse-dealing, labour and trade. A small Tibetan element is found in the Himalayan districts.

Languages.

The main language of the province is Punjabi, which is spoken by more than half the population. Western Punjabi may be classed as a separate language, sometimes called Lahndi, and is spoken in the north and west. The next most important languages are Western Hindi, which includes Hindustani and Urdu (the polished language of the towns), Western Pahari, which is spoken in the hill tracts, and Rajasthani, the language of Rajputana. Baluchi, Pushto, Sindhi and Tibeto-Burman languages are used by small sections of the population.

Agriculture.

Agriculture is the staple industry of the province affording the main means of subsistence to 65·5 per cent. of the population. It is essentially a country of peasant proprietors. About one-sixth of the total area in British districts is Government property, the remaining five-sixths belonging to private owners, and a large part of the whole area is so situated that it cannot be brought under cultivation without extensive irrigation. Since 1900, several big irrigation projects have been put into execution and irrigation facilities provided to large tracts of barren land, as a result of which many colonies have sprung up. The Lower Chenab Canal has brought under plough about 2·9 million acres most of which was formerly waste land. Similarly the Lower Jhelum and Lower Bari Doab Canals are responsible for 1·2 and 1·4 million acres respectively. The Sutlej Valley Canals and Haveli Canals command 3·3 and 1·3 million acres respectively. Large areas in the hills and elsewhere which are unsuited to cultivation are preserved as forest lands, the total extent of which is about 6,000 square miles. Of the crops grown, wheat is the most important and the development of irrigation has led to a great

expansion of the wheat area. Next in importance to wheat is gram. Other important staples are barley, rice, millets, maize, oilseeds (rape, toria and sesamum), cotton and sugarcane. In the canal colonies large areas of American cotton are grown but in the other cotton-growing districts the short staple indigenous varieties are predominant. The country being preponderantly agricultural, a considerable proportion of the wealth of the people lies in live-stock. Large profits are derived from the cattle and dairy trades and wool is a staple product in Kulu and Kangra and throughout the plains generally. The production of hides and skins is also an important industry.

Industries.

Although the Punjab does not yet rank with the industrially advanced provinces of India, steady progress has been maintained in the establishment of new factories during the last decade. The number of registered factories alone has increased from 602 in 1928 to 927 in 1940. There are a large number of cotton ginning and pressing factories located all over the province and there are several modern cotton spinning and weaving mills at Amritsar, Lahore, Lyallpur, Okara and Montgomery. In raw wool pressing and baling, the Punjab occupies an important position, and besides being a large scale exporter of raw wool, it has large scale wool spinning and weaving mills at Amritsar and one at Dhariwal. Other industrial concerns of note are a ribbons and trimming mill, an absorbent cotton and antiseptic dressings factory, several carpet factories and silk weaving factories at Amritsar, a paper products factory, stationery and drawing materials factories, a dry ice plant and metal foundries at Lahore, a turpentine and rosin factory at Jallo, a pulp and paper mill, a starch factory and a sugar mill at Abdullapur, a plywood factory at Shahdara, a factory for the hydrogenation of vegetable oils at Lyallpur, several sports gear making and rubber factories at Sialkot, cement tile factories and steel rolling mills at Lahore and Amritsar, a cement factory at Wah, tanneries at Wazirabad and Sialkot and hosiery factories at Ludhiana and Lahore. The Attock Oil Company is engaged in extracting and refining mineral oil in Attock and Rawalpindi Districts.

Handloom weaving is one of the most important industries both as regards the number of workers engaged and the value of products. Blankets and woollen rugs are produced in considerable quantities. Much hosiery work is done on cottage lines. Other cottage industries of commercial importance are iron safes at Gujranwala, veterinary and surgical instruments and hospital furniture at Sialkot, Lahore and Multan, glue industry at Rewari, ivory carving at Amritsar and Leliah, copper and brass utensils at Jagadhri, Gujranwala and Rewari. Workers in gold and silver are fairly numerous. The sericulture industry is expanding gradually and a large number of agriculturists in submontane tracts are taking an increasing interest in silk worm rearing and reeling operations. There is a Punjab Arts and Crafts Depot at Lahore which provides a market for artistic wares of craftsmen and helps to secure improvement in design and workmanship.

Administration.

Prior to the amendment of the Government of India Act in 1919 the head of the administration was a Lieutenant-Governor, drawn from the ranks of the Indian Civil Service. Under the Act of 1919 the province was raised to the status of a Governorship, with an Executive Council and Ministers, the Governor-in-Council being in charge of the Reserved Subjects and the Governor with his Ministers of the Transferred Subjects. With the introduction of part III of the Government of India Act, 1935, this Executive Council has been substituted by a Council of Ministers and the Legislative Council by an enlarged Legislative Assembly with wide powers of legislation and control. The business of Government is carried on through the usual Secretariat which consists of five Secretaries, designated (1) Chief, (2) Home, (3) Finance, and (4) Medical and Local Government Departments, (5) Electricity and Industries Depts., three Deputy Secretaries, one Under Secretary, and two Assistant Secretaries. In the Public Works Department, there are five Chief Engineers (Secretaries except in the case of Electricity Branch) one in the Buildings and Roads Branch; one in the Electricity Branch while and three in the Irrigation Branch while the Legal Remembrancer is also the Secretary to Government in the Legislative Department. The head of the Police Department is Joint Secretary and of the Education Department an Under Secretary to Government. The Government winter in Lahore and summer (from the middle of May to the middle of October) in Simla. Under the Governor, the province is administered by five Commissioners (for Ambala, Jullundur, Lahore, Rawalpindi and Multan) who exercise general control over the Deputy Commissioners—29 in number—each of whom is in charge of a district.

The principal heads of Department in the province are the two highest Court of Commissioners (who are the heads of the Revenue jurisdiction, and heads of the departments of Land and Separate Revenue, and of Agriculture and the Court of Wards), the five Chief Engineers, the Inspector-General of Police, the Director of Public Instruction, the Inspector-General of Prisons, the Inspector-General of Civil Hospitals, the Director of Public Health, the Chief Conservator of Forests, the Directors of Agriculture and Industries, the Inspector-General of Registration, the Registrar of Co-operative Credit Societies and Joint Stock Companies and the Legal Remembrancer.

Justice.

The administration of justice is entrusted to a High Court, which is the final appellate authority in civil and criminal cases, and has powers of original criminal jurisdiction in cases where European British subjects are charged with serious offences and original civil jurisdiction in special cases. The Court sits at Lahore and is composed of a Chief Justice and ten Puisne Judges (either civilians or barristers). Subordinate to the High Court are the District and Sessions Judges (22 in number) each of whom exercises civil and criminal jurisdiction in a civil and session division comprising one or more

districts. In districts in which the Frontier Crimes Regulation is in force the Deputy Commissioner on the finding of a Council of Elders (Jirga) may pass sentence up to seven years' imprisonment.

Local Self-Government.

Local Self-Government is secured in certain branches of the administration by the constitution of District Boards, each exercising authority over a district; of Municipal, Town, and Notified Area Committees each exercising authority over an urban area, and of Panchayats, each exercising authority over a revenue estate or a compact group of revenue estates. The funds of District Boards are derived from a cess on the land revenue of the district supplemented by Government grants, profession and other taxes and miscellaneous fees, and those of Municipal, Town, and Notified Area Committees from octroi or terminal tax and other forms of taxation from Government grants and from rents and miscellaneous fees. The Panchayat system is an attempt to revive the traditional village community organisation, the elected committee or Panchayat possessing certain powers in respect of taxation, local option, civil and criminal justice, the abatement of nuisances and other matters. Exclusive jurisdiction (within certain limits) now vests in the Panchayats. Most of the members of practically all local bodies are now elected and elections are as a rule keenly contested. In the case of Notified Area Committees, however, all Members are appointed.

Police.

The Police force is divided into District Police, Railway Police and Criminal Investigation Department. The combined force is under the control of the Inspector-General, who is a member of the gazetted force and has under him five Deputy Inspectors-General in charge of ranges comprising several districts and a sixth Deputy Inspector-General in charge of the Criminal Investigation Department and of the Finger Print Bureau at Phillaur. There is a Police Training School at Phillaur controlled by a Principal of the rank of Superintendent of Police. The Railway Police are under an Assistant Inspector-General. The District Police are controlled by Superintendents, each of whom is in charge of a district and has under him one or more Assistant Superintendents or Deputy Superintendents.

Education.

Rapid strides have been made in education in the Punjab during the last two decades. The advance has not been confined to any one form of education but is spread over all grades and varieties. In addition to institutions maintained in all parts of the province by private enterprise, Government itself maintains fifteen arts colleges (including one for European and three for women), four normal schools for males, twenty-nine training classes, and combined institutions for females, one hundred and fifty-three secondary schools for boys and girls and sixty-two centres for vocational training. The department maintains five Vernacular training classes for wives of teachers. Apart from these institutions for general education, Government maintains eight higher grade professional

institutions, viz, the King Edward Medical College, de Montmorency College of Dentistry and Veterinary College at Lahore, the Agricultural College at Lyallpur, the College of Engineering and Technology at Moghalpura, the Central Training College, Lahore, the Lady MacLagan Training College for Women, Lahore, and the Chelmsford Training College at Ghoragali, and two schools, viz, the Medical School at Amritsar and the Engineering School at Rasul. In addition there are thirty-six technical and industrial schools (twenty-eight for males and eight for females) scattered over the province.

The Department of Education is in the charge of the Minister for Education, who is assisted in the work of administration by the Director of Public Instruction.

Medical

The Medical Department is controlled by the Inspector-General of Civil Hospitals, who is an officer of the Indian Medical Service holding the rank of Colonel. He is assisted by an officer designated the Assistant Inspector-General of Civil Hospitals, who is at present an officer of the Provincial Civil Medical Service of the rank of a Civil Surgeon. He also has a Lady Assistant who is a senior Member of the Women's Medical Service (Indian).

The post of Personal Assistant of gazetted rank has also been recently sanctioned to assist Inspector General in non-technical work.

Public Health.

The Department of Public Health is controlled by the Director of Public Health who has, working under him, four Assistant Directors of Public Health, 35 District Medical Officers of Health, and 28 District Sanitary Inspectors. In addition there is a permanent reserve staff of 11 Sub-Assistant Health Officers and 15 Sanitary Inspectors for work in combating epidemic disease.

Medical inspection of Factories is under a specially trained officer, and experts have been appointed to deal with Nutrition and Leprosy work.

An expert in sanitary engineering who has the status of a Superintending Engineer acts as technical adviser to the Public Health Department in sanitary engineering matters.

The Sanitary Board, Punjab, is a standing body which examines drainage, water-supply, and other public health engineering schemes, and advises Government regarding grants of money for meeting the cost of such schemes in whole or in part.

The Public Health Department controls—

(1) The Punjab Vaccine Institute. Vaccine lymph is prepared at this institution. The requirements, not only for the Punjab, but for the Army in Northern India and several Provinces and Indian States, are met.

(2) An Epidemiological Bureau. This establishment is primarily a bacteriological laboratory, in which examinations of waters, foods, morbid material from cases of infectious disease, etc., are carried out. Anti-malaria work is controlled from the Bureau which also serves as a health propaganda centre.

(3) A Chemical Laboratory. In this institution chemical analyses of specimens of food and water sent from all over the Province are carried out.

Both in the Chemical Laboratory and in the Epidemiological Bureau, research work is undertaken.

(4) A Public Health School, which exists for the purpose of training Health Visitors who take charge of Maternity and Child Welfare Centres throughout the Province.

The Public Health Department now controls 162 Rural Dispensaries, the medical officers in charge of which are under the control of the Director of Public Health.

Sind is one of the two provinces created in 1936, the other being Orissa. Unlike the latter, which has been carved out on a linguistic basis from three older provinces, Sind was a compact unit and was considered a province within a province even before its separation. From the point of view of geography, ethnology and language, Sind has greater affinity to Punjab than to Bombay. Nevertheless it has been attached to the Bombay Presidency administratively ever since its conquest by Sir Charles Napier in 1843.

The demand for its separation into a distinct political entity is of comparatively recent origin. It was only about a dozen years ago that Muslim leaders started the demand that Sind, where the Muslims are in an overwhelming majority, should have separate administrative machinery under the next reformed constitution, so that it might be a counterblast to provinces where the Hindus are in a majority. What was started as a bargaining point in inter-communal negotiations has now become an accomplished fact.

The Muslim delegation at the first Round Table Conference put forward the demand in London in the winter of 1930. The question was referred to a committee which accepted the principle of separation, suggested an expert inquiry to ascertain the financial aspect of the separation, and threw the burden of proving the feasibility of separation on those who asked for it. An expert inquiry was held and it drew a gloomy picture of the financial future of Sind. Its findings can best be summarised by its remark, "There is thus obviously no question of Sind standing surety for the Barrage—the problem is whether the Barrage can stand surety for Sind."

Demand for Separation.

A conference of representatives of the people of Sind met in 1932 to devise measures to meet the financial objections to the separation. Wide divergence of opinion prevailed at this conference, whose chairman eventually submitted a report according to which the annual deficit of the new province for the first six years of its life would be Rs 80 lakhs, the revenue from the Barrage being eaten up by interest charges. Roughly from 1945 onwards, there would be a surplus from the Barrage to help the province. Based on this assumption the authorities set about perfecting the administrative machinery in preparation for the inauguration of the new regime.

With the state set for the advent of the new province, an Order-in-Council was issued in January, 1936, announcing that the new province would start on its career on April 1, 1936, and creating transitional machinery for the conduct of Government till provincial autonomy is inaugurated in accordance with the provisions of the Government of India Act, 1935.

Of a permanent character are those provisions of the Order-in-Council which sever Sind from Bombay and settle the liabilities of the parent

and the infant in respect of development loans incurred during the joint family period. Lands, forests, buildings, property, etc., will pass to the province where they are situated. Arrears of taxes will belong to the province where the taxed property is situated or the taxed transactions took place. Of the outstanding Bombay Irrigation Debt incurred before April 1, 1921, Rs 2,74,96,384, including Rs. 73,687 of the debt on account of the Lloyd Barrage and Canals system, will be borne by Sind, and the rest by Bombay. Of the debt incurred on account of the Lloyd Barrage and Canals system, all except the portion relating to the Nasirabad section (which is chargeable neither to Bombay nor to Sind) will be borne by Sind. The outstanding Bombay debt on account of the Bombay Development Scheme will be the debt of Bombay alone. Other loan works will be chargeable to the province where the works are located.

It is also understood that the Central Government will have to come to the rescue of Sind by providing the funds to meet the deficit in the first few years. In order to make arrangements for such a subvention to Sind and Orissa and for other weak provinces and generally to adjust the financial relations between the Central and the provinces under the provincial autonomy scheme, Sir Otto Niemeyer, a financial expert, was asked to conduct an inquiry. He completed his investigations and submitted his report, according to which Sind gets a cash subvention of Rs 105 lakhs for a period of ten years, after which the aid will be progressively decreased. While on the subject of help from the centre, it may be mentioned that, according to the Niemeyer recommendations, Sind will get after the first five years of provincial autonomy 2 per cent of the distributable portion of the income-tax revenue.

Population.

Sind has an area of 48,136 sq. miles and a population of 4,535,008. Of this the Hindus (including Scheduled castes) number 1,229,926 and the Muslims 3,205,325. The rest of the population is made up of 20,209 Christians, 31,011 Sikhs, 3,687 Jains, 3,838 Parsis, 1,082 Jews and 36,930 others. According to the census of 1941 389,333 males and 90,020 females in the Province of Sind are literate, representing 15.6% and 4.4% of the total male and female population respectively. 138,249 Muslim males and 16,416 Muslim females are literate. The language of the Province Sindhi, though it bears many marks of Arabic and Persian influence and is written in Perso-Arabic script, is never the original Sanskrit than any other Indian language. The Hindus are far more advanced than the Muslims and enjoy a virtual monopoly of the trade of the province. As against 263 Hindu literate males per 1,000, only 44 Muslims per 1,000 are literate; 51 per 1,000 literate Hindu females compare against five literate Muslim females. The number of those literate in English are 119 per 10,000—186 per 10,000 males and 34 per 10,000 females.

Out of every 100 workers in Sind 59 are engaged in agriculture and animal husbandry. Ten per cent are engaged in manufacturing industries, most of which are, however, of the cottage type, there being very few factories in Sind.

The cultivable area of the province is mostly commanded by the recently constructed Sukkur Barrage and Sind canals, which, with other canals and the Indus river itself, supply water to 7,500,000 acres. The Barrage works have cost nearly 24 crores of rupees. The Sindhi agriculturist is gradually becoming alive to the perennial regulated supply of irrigation and his outlook is becoming brighter. The rapidity with which lands supplied by the Barrage system are being taken up augurs well for the success of the scheme and the prosperity of the province as a whole. Already there has been a growth in the production of long staple cotton, all of which is easily absorbed by Indian textile mills.

Lloyd Barrage.

The Barrage owes its existence largely to the zeal of the late Lord Lloyd the then Governor of Bombay, whose name it bears. Started in July 1923, it was completed in January 1932. It was the completion of the dream of many an engineer and an almost incredible boon to the cultivator, who formerly carried on his agricultural operations in a haphazard manner being unable to depend on the proverbial vagaries of the Indus. What it means to the Sindhi, the Sindhi alone knows, for the Barrage has converted—or hopes to convert—a waterless desert into a smiling garden flowing with milk and honey.

The magnificence of the achievement that is the Lloyd Barrage can be imagined when it is realised that it is a huge water regulator consisting of 66 spans, each sixty feet wide, the openings being regulated by steel gates, each weighing fifty tons. The Barrage is about a mile long, about five times the length of London Bridge. Thousands of miles of new channels were excavated varying in width from 346 feet in the case of main canals to only two or three feet in the case of water courses. The total length of Government channels which were excavated was over 8,000 miles, and that of water courses over 30,000 miles. The total lengths is thus some 36,000 miles, which means about $1\frac{1}{2}$ times the circumference of the earth.

The total quantity of earthwork involved, excluding that for the watercourses was 628 crores cubic feet of earthwork which means a solid column measuring 100 feet by 100 feet extending to a height of over 115 miles.

The function of the Barrage is to head up the river at Sukkur and from that to distribute it all the year round according to requirements of cultivators. The distribution is made through seven great canals, regulated through regulators on both banks of the river—four on the left bank, three on the right. Those on the left bank are Rohri, the Eastern Nara, the Khairpur Feeder East and the Khairpur Feeder West. Those on the right bank are the North Western Canal, the Rice Canal and the Dadu Canal.

The total number of openings in all the canal Head Regulators is 55, each being of 25 feet span and each opening being equipped with three

electrically operated gates. The total discharge of water into all the canals is approximately 45,763 cusecs or 457,630 gallons per second. The total length of all irrigation channels including old and new watercourses is 54,300 miles. To accomplish this staggering feat, excavation of earthwork to the extent of 7,500,000,000 cubic feet was involved, as much as would fill a drain 14 feet wide and four feet deep, dug round the equator. It was estimated that the ultimate area of annual cultivation on the scheme would be over 5,000,000 acres and this would be under various crops approximately as follows:

Wheat 2,440,000 acres, cotton 850,000 acres, rice 625,000 acres; *jawar*, *bajri*, etc, 635,000 acres, and oilseeds 410,000 acres.

This denoted in produce would mean the following approximate quantities:

Wheat 1,133,000 tons, cotton 549,000 bales, rice 447,000 tons, *jawar*, *bajri*, etc, 271,000 tons, and oilseeds 117,000 tons.

Inter-communal Co-operation.

Politically, the province is backward. Only the Hindu minority is politically minded, the Muslims owning allegiance to personalities rather than to principles. The Hindus are openly afraid of Muslim dominance and of being ousted from public life. On the other hand, there is growing evidence of a desire on the part of the Muslim community to reassure the minority in regard to the continued enjoyment of its rights. Leaders of both communities are working for the creation of an understanding between the two which will bring about an area of inter-communal co-operation and goodwill so necessary for the successful working of the reformed constitution under unfavourable financial conditions.

Karachi.

No account of Sind will be complete without a reference to its capital, Karachi. It is a comparatively new town, for according to known facts it was as recently as 1729 that a few traders of the neighbouring State of Kalat migrated to the "Kalachi" the land of the sand-dunes. It was several years later that its potentialities as a harbour were realised by the British—Sir Charles Napier, the Conqueror of Sind, is said to have forecast that Karachi would some day become the "Glory of the East." Recent developments in Karachi hold out fresh hopes of this prediction being fulfilled, for with the growth of aviation, Karachi, which is on the main line of imperial aerial communication between London and Australia right across India, is bound to become a vital airport, if it is not already one. In addition to being the capital of Sind, Karachi is the outlet for the products of the Punjab. If the Barrage becomes all that is expected of it, Karachi may have to handle in 1960 a very large portion of the produce mentioned above of the Barrage produce as also the produce from 429,800 acres of Dubari cropped land. That this is not altogether Utopian is evident from the fact that within seven years of the commencement of Barrage operations, that is, by the end of 1939 the following acres were under cultivation in the Barrage Zone 1,014,104 acres under wheat, 822,191 acres under cotton and 580,631 acres under rice.

The United Provinces.

The United Provinces lies in practically the centre of Upper India. It is bounded on the north by Tibet, on the north-east by Nepal, on the east and south-east by Bihar, on the south by two of the Chota-Nagpur States of the Central India Agency and the Saugor district of the Central Provinces, and on the west by the States of Gwalior, Dholpur, Bharatpur, Sirmoor, and Jubbil, and by the provinces of Delhi and the Punjab. Its total area amounts to 106,247 square miles, to which may be added the area of the three Indian States of Rampur, Tehri-Garhwal and Benares with an area of 6,276 square miles, giving a total of 112,523 square miles. The total population is 49,614,833.

The Province, originally termed the North-Western Provinces and so amalgamated in 1877, was named the United Provinces of Agra and Oudh in 1902 and received its present designation on April 1, 1937. It includes four distinct tracts of country portions of the Himalayas, including the Kumaon division which consists of three hill districts, two of which are entirely in the hills and one is half in the submontane belt, the sub-Himalayan tract; the great Gangetic plain, and portions of the hill systems of Central India including Bundelkhand. The Gangetic plain protected by an extensive canal system, rich though somewhat liable to run short of water in extremely dry years, is of great benefit in all ordinary years and years of limited drought. The first two of these tracts are infertile and support a very sparse population and the Central Indian plateau is almost equally infertile, though better populated. The soil of the Gangetic plain, however, possesses an extreme fertility and here the density of population varies from 542 persons per square mile in the west to 555 in the centre and 758 in the east, which gives the Province as a whole a greater population pressure on the soil than any other Province in India save Delhi and Bengal. In the south there are low rocky hills, broken spurs of the Vindhya mountains, covered with stunted trees and jungle, and in the north the lower slopes of the Himalayas, clothed with dense forest, affording excellent big and small game shooting, and rising beyond in a tangled mass of ridges, ever higher and higher, until it reaches the line of the eternal snows, but the greater part of the province consists of level plain, teeming with highly-cultivated fields and watered by three rivers—the Ganges, Jumna and Gogra.

Manufactures.

The province is not rich in minerals. Iron and copper are found in the Himalayan districts, there were mines of importance there formerly, but owing to high cost of production and inaccessibility, most of them have been closed. Gold is found in minute quantities by washing the sands in some of the rivers in the hills. Limestone is found in the Himalayas and in the Etawah district, and stone is largely quarried in the Mirzapur district. Cottage and artistic industries, however, abound in U.P. Cotton is ginned and spun throughout the

Western districts of the province as a home industry; and weaving by means of handlooms is carried on in most districts. Cawnpore is the chief centre for cotton spinning and weaving mills. According to the latest figures available, 5,150 persons are employed in cotton ginning, cleaning and pressing factories and 50,740 in spinning and weaving mills. The number of actual hand-loom weavers including helpers is 679,075. Silk weaving used to be confined to Benares (where the famous 'Kimkhab' brocade is made) but considerable work is now done at Etawah, Sandils and Mau. Embroidery work is done at Lucknow, where the noted 'Chikan' work of cotton on muslins is produced, and in Benares, where gold and silver work on silk, velvet, crepe and sarsenet obtains. Benares uses local gold thread for embroidery work and 'Kimkhab' weaving. The glass industry is important at Firozabad, Bahjoi, Balawali, Sasni, Hathras, Harangau, Shikohabad, Makhampur and Naini (Allahabad). Moradabad is noted for its lacquered brass-work, Benares for brassware-engraving and repousse, Farrukhabad and Pilkhawa (in Meerut district) for their calico prints and Agra for its durries and marble and alabaster articles; glazed pottery is made at Chunar and Khurja, clay figures of men and fruits at Lucknow, carpets at Mirzapur and leather goods in Cawnpore, Agra and Lucknow.

The making of brass utensils at Mirzapur, Farrukhabad and Oel (District Kheri); the carving and inlay work of Nagina and Saharanpur, the art silk industry of Tanda, Bilari (Moradabad) and Mau, the lock and brass fittings industry of Aligarh, the copper utensil industry of Almora, the durries of Khairabad (Sitapur), Cawnpore and Bareilly, the pottery of Nizamabad (District Azamgarh) and the Ivory work of Lucknow also deserve mention.

Cawnpore is the chief industrial centre. It has tanneries, soap factories, oil mills, cotton woollen and other mills. The woollen mill is the largest in India. Lucknow possesses an important paper-mill and also a cotton mill. There are cotton ginning and pressing factories at Aligarh, Meerut, Saharanpur and Bareilly and cotton mills at Agra, Hathras, Benares and Moradabad. There are now 74 Sugar Factories in the province worked by the vacuum pan process; they are situated mainly in the Gorakpur, Rohilkhand and Meerut divisions. A certain amount of Sugar is also made by the open pan process and a large quantity of gur is made in the villages. Excellent furniture is made at Bareilly mostly on cottage lines.

There is a card board manufacturing factory and a cigarette factory at Saharanpur. There is a cigarette factory at Allahabad also. Itrs and perfumes are made at Lucknow, Kanauj and Jaunpur. Dayalbagh (Agra) has a tannery, a dairy and a factory for making door bolts, lanterns, electrical goods, fountain pens, chemical balances, etc. Fountain pens are made in Cawnpore, Lucknow and Benares. Shoe laces, elastic, and electric fans are made in Cawnpore.

The largest trade centres are Cawnpore, Allahabad, Mirzapur, Benares, Lucknow, Meerut, Aligarh, Hathras, Muttra, Agra, Farrukhabad, Moradabad, Chandausi, Bareilly, Saharanpur, Muzaffarnagar, Ghaziabad, Khurja, Gorakhpur, Ghazipur, Pilibhit and Shahjahanpur.

Agriculture.

The chief industry is agriculture, which is the principal source of livelihood of a little over 70 per cent of the population and a subsidiary source of income to a further 8 per cent. The soils of the Province fall into three groups, the valley soils of the Himalayas, the main alluvium and the Central Indian alluvium, the chief characteristic soil or the Central Indian alluvium is the black soil, with a lighter variant, though here also there are light loams and gravel. The Himalayan soils are of local origin and vary with the nature of the rock from which they have been formed, whilst the main alluvium soils are sand, clay and loam, the loam being naturally the most productive. The soil generally yields excellent crops of rice, millet, maize, linseed, mustard, cotton, wheat, barley, sugarcane, pulses and potatoes, rice being grown mostly in low-lying, heavy clays and potatoes on the higher valleys. The greater part of the Province is highly cultivated, the rainfall varies from 50 to 60 inches in the Hills to 40 inches in the Benares and Gorakhpur Divisions, whilst the Agra Division receives only about 25 to 30 inches annually. Drought seriously affected Bundelkhand and the Agra Divisions, in the past; improved drainage and irrigation facilities have effected considerable improvements. In the latter area, however, shortage of water in the canals and the general lowering of the water table still continue to react against full agricultural returns. Steps are being taken to increase the amount of water passing down the canals. Prices of chief food grains remained more or less stationary in the first five months of 1941. From June onwards till the end of the year, they rose steadily due to the unfavourable monsoon and the effect of the War.

The area under wheat, and cotton decreased to some extent but the average outturn increased appreciably. Both the area and the average outturn of rice, however, declined considerably in comparison to those in 1940. The area under sugarcane increased in comparison to that in 1939-40 and the outturn also increased by 1 per cent. Land is held on *zamindari* tenure in Agra and *talugdari* tenure in Oudh. The principal land owners in Oudh are the *Talugdars*, some of whom own very large estates. The area held in *talugdari* tenure amounts to 54 per cent of the total area in Oudh.

The People.

The population is mainly Hindu. The 1941 census has disclosed slight variations in the communal percentages. The Hindus were 83.27 per cent as against 84.4% in 1931, the Muslims numbering 15.28% as against 15% at the previous census. The total of all other communities was 1.44% comprising of Indian Christians, Anglo-Indians, other Christians, Sikhs, Jains, Parses, Buddhists, Jews, Tribes other than scheduled castes and of persons

who declared themselves as belonging to no caste or religion. Among the Hindus are included scheduled caste Hindus and Arya Samajists.

The three main physical types are Dravidian, Aryan and Mongoloid, the latter being confined to the Himalayan and sub-Himalayan districts and the former to South Mirzapur and Bundelkhand, whilst the high caste Aryans frequent the western district of the Province. Most of the people, however, show a mixed Arya-Dravidian origin.

The ordinary spoken language of the Province is Hindustani, written in Nagri and Persian Characters. There are distinct literatures in Hindi and Urdu language respectively and a certain proportion of residents in urban areas, irrespective of their religion, speak and write in Urdu which has a close relationship with Persian and Arabic.

Administration.

The Province was until the close of 1920 administered by a Lieutenant-Governor, chosen from the ranks of the Indian Civil Service. Under the Reform scheme the Province was raised to the status of a Governor-in-Council, the Governor being assisted by two members of the Executive Council in charge of the Reserved Subjects and two Ministers in charge of the Transferred Subjects. With effect from April 1, 1937, provincial autonomy was inaugurated in this Province and a Cabinet of 6 Ministers to assist the Governor was formed, under the G. I Act of 1935. The Cabinet consisted of 6 Ministers. This Ministry remained in office from July 17, 1937 to November 3, 1939. But after the outbreak of the European War resigned and the powers of administration were assumed by the Governor under section 93 of the G. I Act of 1935. He appointed 3 advisors from November 4, 1939, to assist him in the administration of the Province. The medium for the transaction of public business is the Secretariat, the staff of which consists of 12 Secretaries (including Chief Secretary), and 13 Deputy Secretaries including one additional deputy Secretary in each of the Finance and Judicial Departments and the Deputy Legal Remembrancer who is *ex-Office* Deputy Secretary in the Judicial Department. There are also four Under-Secretaries and 4 Assistant Secretaries. The Chief Secretary is in charge of Appointment, General Administration, Secretariat Establishment and Accounts, Political and Ecclesiastical Departments, the Finance Secretary deals mainly with the Finance Department, the Revenue Secretary is in charge of the Revenue, and Scarcity Departments, the Education Secretary is in charge of the Education Department, the L. S. & G. Secretary is in charge of the Local Self-Government, Municipal, Medical and Public Health Departments, the Judicial Secretary is in charge of the Judicial and Legislative Departments, the Public Works Secretary is in charge of the Buildings and Roads and Irrigation and Forest Departments. The War Production Commissioner, W. P., is also *ex-Office* Secretary to Government in the Industries and Excise Departments. The Information Secretary is in charge of the Information, Agriculture and Rural Develop-

ment Departments The Secretary, Home Department is in charge of the Home Department (Criminal) Home Department (Police) There is one Home Department (Police) There is one Director, Civil Defence U P. The Secretary, Secretary to Government U P. The Provincial Price Control Department is also Controller of wheat, and Chief Controller of Prices, U P There is a Petrol Rationing Authority-Controller of wheat, and Secretary to deal with the Air Raid Precaution Government spends the cold weather, October to April, in Lucknow and Allahabad, mostly in Lucknow, though the Secretariat remains through-out the year at Lucknow. The Governor and some of the Secretaries spend the hot weather in Naini Tal, but during the monsoon the Governor tours the plains, as he does also in the cold weather. The Board of Revenue is the highest court of appeal in revenue and rent cases lying within its jurisdiction, being the chief revenue authority in the province. There are forty-eight British districts, thirty-six in Agra and twelve in Oudh, average area 2,200 square miles and average population a million. Each district is in charge of a District Officer, termed a Magistrate and Collector in Agra and a Deputy Commissioner in Oudh and Kumaon. The districts are grouped together in divisions. Each division is under a Commissioner, except the Jhansi and Kumaon divisions the charge of which is held by the Collector of Jhansi and that of Kumaon by the Deputy Commissioner, Naini Tal, in addition to their duties. There are ten divisions having an average area of nearly 10,600 square miles, and an average population of nearly 5 millions. The districts are sub-divided into *tahsils*, with an average area of 500 square miles and an average population of 236,000. Each *Tahsil* is in charge of a *Tahsildar*, who is responsible for the collection of revenue, and also exercises judicial powers. *Tahsils* are divided into *parganas* which are units of importance in the settlement of land revenue. Sub-ordinate to the *Tahsildars* are *naiib tahsildars* and *Kanungos* supervise the work of the *pauwars*, or village accountants as may be entrusted to them by superior Officers. For judicial purposes (revenue and criminal) the District Officer assigns a sub-division consisting of one or more *tahsils*, as the case may be, each of his subordinates who may be (civil or criminal) Joint and Assistant Magistrates and Collectors or members of the Provincial Service (Deputy Collectors and Magistrates).

Local Self-Government

The main units of local self-government are the district and municipal boards, which have non-official Chairman. Most of the municipal boards having an annual income of Rs 50,000 or over have executive powers reserved to them. Certain administrative functions of the municipal boards are performed by the Chairman and Executive Officer or the Secretary, but the boards themselves are directly responsible for most of the administration. The district board obtain 41.91 per cent of their income

from Government grants. The other chief sources of income are the local rate levied from the land owners and the tax on circumstances and property imposed by some of the boards. The United Provinces Motor Vehicles Taxation Act came into force with effect from January 1st, 1936. The tax realised under this act is also utilized in the payment of grants to local authorities for purposes of expenditure on the construction, maintenance and improvement of roads. The chief source of municipal income is the octroi or terminal tax and toll which is an octroi in modified form. Local opinion is strongly in favour of indirect as opposed to direct taxation for municipal purposes.

Justice

Justice is administered by the High Court of Judicature at Allahabad in the portion of the province known as Agra and by the Chief Court sitting at Lucknow in the portion of the province known as Oudh. They are the final appellate authorities in both criminal and civil cases. The former consists of a Chief Justice and ten permanent and one Additional Judges six of whom are Indians and the latter consists of a Chief Judge and three permanent and one Additional Judges two of whom are Indians. There are 30 posts (21 in Agra, eight in Aboynance, Legal Remembrancer, which is held in abeyance, and its duties are performed by the Judicial Secretary to Government) of district and sessions judges of which nine are held by Indians not belonging to the Indian Civil Service and the have been listed to the provincial service and the bar. Usually they exercise appellate jurisdiction in civil and criminal cases and in certain conditions in rent cases. The High Court has extra-ordinary original jurisdiction. The Chief Court's original jurisdiction was established in 1939 by an Act of the Provincial Legislature. District Officers and their assistants, including *tahsildars*, preside in criminal courts as magistrates and as collectors and assistant collectors, in rent and revenue courts and dispose of a good deal of the work. Honorary magistrates and honorary assistant collectors who function in all the districts also deal with criminal, revenue and rent cases. Kumaon has been brought under the Civil jurisdiction of the High Court from 1st April 1926. The deputy and assistant commissioners exercise inferior civil powers in this division which has no separate civil courts. In the rest of the province there are civil judges, judges of small cause courts and munsifs who dispose of a large number of civil suits. The jurisdiction of a civil judge extends to all original suits without pecuniary limit and a munsif can hear cases ordinarily of a value not exceeding Rs. 2,000 and if specially empowered up to Rs 5,000. Appeals from munsif always lie to the district judge while those from the civil judges go to the High Court or the Chief Court, except in cases of a value of Rs 5,000 or less which are heard by the district judge. Small cause courts, ordinarily try suits to the value of Rs 500 but the Senior Judges of Small Causes are empowered to try suits of a civil nature of which the value does not exceed Rs 1,000. There are also honorary munsifs limited to Rs. 200 suits, and village munsifs whose jurisdiction is fixed at Rs. 20.

Public Works Department.

The Public Works Department (Buildings and Roads and Irrigation Branches) is in the portfolio of the Adviser to the Governor, Revenue, and the post of Secretary to Government in this department is held by a member of the Indian Civil Service.

The Buildings and Roads branch is administered by a Chief Engineer. The Province is divided into circles and divisions. Each circle is in charge of a Superintending Engineer and each division is in charge of an Executive Engineer. All metalled roads maintained from Provincial funds and construction of all other department buildings except those of the Irrigation Branch costing more than Rs 5,000 are in charge of the Buildings and Roads branch.

The Irrigation branch is administered by two Chief Engineers. The province is divided into circles and divisions.

The Irrigation Branch administers the various Irrigation works in the province as well as the Ganges Canal Hydro-electric Grid, the Tube-Well irrigation scheme, and the Fyzabad Electricity and Gogra Pumping Schemes. The Ganges, the Eastern Jumna and the Agra Canals, the Hydro-electric works and the Tube-Well are administered by the Chief Engineer (West) while the Sarda Canal, the Gogra pumping scheme and the Bundelkhand Canals are administered by the Chief Engineer (East).

The Canals and Tube-Well administered by the Irrigation Branch in the United Provinces irrigate over 50 lakhs acres annually.

The Sarda Canal a work of the first magnitude, was opened in 1928 for introducing irrigation into Oudh. In November 1941 an extension, which includes 350 miles of new irrigating channels, was formally opened, making the total length of the main canal and branches, including distributaries, drainage cuts and escapes on the system 6,400 miles. The area irrigated is over 10 lakhs of acres annually including over 2½ lakhs acres of sugarcane.

The Ganges Canal—Upper and Lower. The headworks of the former are situated at Hardwar in the Saharanpur district and of the latter at Narora in the Bulandshahr district. The Upper Ganges Canal came into operation in the year 1855-56, and its total mileage of channels is 5,926 miles. The area irrigated annually is over 14 lakhs of acres. The lower Ganges canal was opened in 1879-80 and the total mileage of its channels is 4,994 miles. This system irrigates nearly 10 lakhs of acres.

The Ganges Canal Hydro-electric Grid supplies power at attractive rates for domestic, industrial and agricultural purposes to 14 districts in the west of province, and to Shahdara in Delhi province. Seven of the ten falls available for electrification have been developed and a stand-by steam power station at Chandausi of 9,000 kilowatts has been constructed. No less than 27,900 kilowatts in all is available. A further steam station at Moradnagar with an initial capacity of 6,000 K W is under construction. Besides supplying some 93 towns with cheap current for light and fans and minor industries,

the grid provides energy for irrigation pumping from rivers and open and tube wells. The Ganges Valley State Well scheme comprises about 1,650 Tube Wells, covering the districts of Moradabad, Bijnor, Budaun, Muzaffarnagar, Saharanpur, Meerut, Bulandshahr and Aligarh, introducing irrigation on the volumetric system over approximately one million acres hitherto without any source of irrigation. This supply of cheap power from some 2,000 substations is already having an important bearing on the economic disposal of crops and the development of minor industries in the urban centres.

The steam power station at Sohwal has a capacity of 2,500 kilowatts. It supplies energy to the towns of Fyzabad and Ajudhia and for pumping 180 cusecs of water from the Gogra at Raunahi into a canal system 120 miles long, designed to irrigate 43,000 acres.

Police.

The Police Force is administered by an Inspector-General, with four Deputy Inspectors-General including one temporary officer, and one Deputy Inspector-General now known as D I G. Headquarters and Railways; and two Assistants, 48 Superintendents, 43 Assistant Superintendents and 71 Deputy Superintendents. There is a Police Training College at Moradabad under a Superintendent of Police as Principal. There is a C I D forming a separate department with an Assistant Inspector-General in charge and three Superintendents of Police. A Military Police section under the command of a Superintendent of Police assisted by one Adjutant and four Military Police Staff Officers has been added to the provincial police force. The administration of the Jail Department is in charge of an Inspector-General of Prisons, who is a member of the Indian Medical Service.

Education.

Education is maintained in part by the State and partly by means of grants-in-aid. There are five universities, the four residential universities of Allahabad, Lucknow, Aligarh (Muslim) and Benares (Hindu) and the affiliating University of Agra. The last named was established in 1927 and consists, besides nine affiliated colleges situated outside the United Provinces, of the ten colleges, some of which were formerly associated with Allahabad University on its external side, viz., the Agra and St John's College at Agra, the Christ Church, D A V and Sanatan Dharam College at Cawnpore, the Meerut College, Meerut, the Bareilly College Bareilly, St Andrew's College, Gorakhpur, Balwant Rajput College, Agra and Agricultural College, Cawnpore. There are Intermediate Colleges and anglo-vernacular high and middle schools which prepare boys for the high school and intermediate examinations conducted by the Board of High School and Intermediate Education, which prescribes courses for high school and intermediate education.

There are 48 Government High Schools for boys and 9 for girls and 8 Government Intermediate Colleges for boys, the remainder are under private management and are aided by Government.

The Isabella Thoburn College at Lucknow and the Mahula Vidyalaya College. Lucknow impart university education to Indian girls and the Vasant College for Woman at Benares, the Muslim Girls' Intermediate College at Aligarh, Gokul Das Hindu Girls' Intermediate College, Moradabad, Balika Vidyalaya Intermediate College, Cawnpore, Crothwaite Girls Inter College, Allahabad, Raghunath Girls Inter College, Meerut, Prem Vidyalaya Girls Inter College, Dayalbagh, Agra, Karamat Hussain Kanya Pathchala, Dehra Dun, teach up to the intermediate stage. In addition to these there are A. V. High Schools, English Middle and Vernacular Lower Middle schools and primary schools throughout the province for the education of Indian girls, they are controlled by a Chief Inspector of Girls' Schools under the Director of Public Instruction. The St. George's Intermediate College, Mussoorie, the St. Joseph's College, Naini Tal, Sherwood Intermediate College, Naini Tal, and La Martin-iere College, Lucknow, are the well-known institutions for European and Anglo-Indian children in the province which teach up to the intermediate stage. Besides these, there are many excellent educational institutions for European boys and girls both in the hills and plains which are attended by students from all over India. Government maintain Training Colleges for teachers in Lucknow, Allahabad and Agra, and a training department is attached to the Lucknow Christian College. There are training departments attached to the Aligarh Muslim University and the Benares Hindu University. There is a College of Mining and Metallurgy in the Benares Hindu University where four-year courses of training are provided, leading to degrees in the two subjects. This is the only University in India where training in these two industrial subjects is available. There is a Government Engineering College at Roorkee (Thomason College), a School of Arts and Crafts in Lucknow and an Agricultural College, and a Technological Institute known as the Harcourt Butler Technological Institute at Cawnpore, three Government Technical Institutes at Lucknow, Gorakhpur and Jhansi respectively, five Carpentry Schools. One known as Central Wood Working Institute at Bareilly, Allahabad, Fyzabad, Naini Tal and Dehra Dun, one Textile Institute at Cawnpore, seven Weaving Schools at Benares, Aligarh, Allahabad, Sitapur, Najibabad, Almorah, Muzaffarnagar, Almora and Bulandshahr, one Metal working school at Aligarh, and two Leather working schools at Fatehpur, and Meerut, one Tanning School at Benares known as one Brassware School at Bulandshahr and one Batuk Prasad Khatun Industrial Institute, another at Gorakhpur, there is also a non-Government Agricultural Institute at Allahabad, and there are two Civil Engineering Schools at Lucknow. At the Benares Hindu University there is a five years' course in Electrical and Mechanical Engineering. There is also a technical College at Dayalbagh (Agra). Education in law is given at four residential universities and at the Agra and Meerut Colleges, and at the Dayanand Anglo-Vedic and Sanatan Dharma Colleges at Cawnpore

and at the Bareilly College. Instruction in commerce for the B.Com. degree of the Agra University is given in the Sanatan Dharma and the D. A. V. Colleges at Cawnpore and in the St John's College at Agra; a commerce department for B.Com. degree is also attached to Allahabad and Lucknow Universities. The King George's Medical College Lucknow, which is managed by the Lucknow University, prepares candidates for the M.B.B.S. degree of the Lucknow University. Besides this, there is also a Medical College at Agra which has been recently affiliated to the Agra University. There is also a College of Ayurveda and another of Tib is attached to the Benares Hindu and the Aligarh Muslim Universities respectively. The Board of Indian Medicine, U.P., established by Government in 1926 prescribes courses for Ayurvedic and Unani Schools and Colleges. The Takmil-ut-tib College and the State-aided Unani Medical School at Lucknow, the Unani Medical School, Allahabad, the Rashikul Ayurvedic College, Hardwar, the Bundelkhand Ayurvedic College, Jhansi and the Lalit Hari Ayurvedic College, Pilibhit, are affiliated to it. Public schools for secondary and primary vernacular education are almost entirely maintained or aided by district and municipal boards and vernacular education is administered through them and the expenditure of grants for vernacular education is in their hands. Government maintains eight Normal Schools and seven Central Training Schools for the training of vernacular teachers. There are also five normal schools for training of women vernacular teachers, and an E.I.C. Class attached to the Government Girls' High School, Bareilly. Each district has a deputy inspector of schools who is the Secretary of the Education Committee of the district board assisted by several deputy inspectors. There are seven inspectors who supervise both anglo-vernacular and vernacular education in their circles.

Medical.

The Medical Department is in charge of an Inspector-General of Civil Hospitals, who is assisted by a lady Superintendent for Medical aid to women in the administration of the Dufferin fund affairs. A post of Personal Assistant to the I. G. Civil Hospitals has also been created from December 8, 1934, to relieve the I. G. of the routine duties in connection with the control of his office. A Civil Surgeon is in charge and is responsible for the medical work of each district and in a few of the larger stations he has an assistant. The Civil Surgeon of Lucknow has been recently appointed as Deputy Inspector-General of Civil Hospitals in addition to his own duties to cope with the heavy increase in work resulting from the war situation. In two stations (Ranikhet and Roorkee) Medical Officers in military employ hold collateral civil charge. There are about 100 Provincial Medical service officers in charge of important dispensaries and on the reserve list and a large number of Provincial subordinate medical service officers. Lady doctors and women sub-assistant surgeons visit *pardanashin* women in their own homes and much good work is done in this manner.

The best equipped hospitals for Indian patients are the Thomason Hospital at Agra, King George's Hospital and the Balrampur Hospital at Lucknow, the Prince of Wales and the Ursula Horsman Memorial Hospital, Cawnpore, King Edward VII Hospital, Benares, and the Civil Hospital at Allahabad (for Europeans, Anglo-Indians and Indians living in European style). The Ramsay Hospital for Europeans at Naini Tal is a first-class institution and there are also the Lady Dufferin Hospitals at various places for rendering medical aid to women. The King George's Medical College, Lucknow, is one of the best equipped colleges in the country, with a staff of highly efficient professors, and the hospital attached to it is the first in the Province. The Queen Mary's Hospital for women and children, completed in 1932, is also attached to the King George's Medical College and provides clinical material for the instruction of students in midwifery and gynaecology. The X-Ray Institute at Dehra Dun has been closed. There are sanatoria for British soldiers in the hills. The King Edward VII Sanatorium at Bhowali in the district of Naini Tal is an up-to-date and well-equipped institution for the treatment of European and Indian consumptives. There is also a Government T. B. clinic at Allahabad.

Arrangements have been made for 146 Ayurvedic and 50 Unani dispensaries to work in villages, under the charge of qualified Vaidas and Hakims under the Rural Development programme. A compounder has been engaged to assist. Forty-eight Fixed and sixteen Travelling allopathic dispensaries were sanctioned under the scheme. Steps have been taken to establish these dispensaries in rural areas. The duty of the medical officer appointed to the Rural Development Dispensaries is not only to provide medical aid in villages but also to inculcate habits of cleanliness and carry on propaganda to ensure personal hygiene and health. The travelling Rural Development Dispensaries in sixteen districts have to visit villages in rotation and to serve large groups of population than a fixed branch of dispensaries.

The aim which has been kept in view in opening rural indigenous and allopathic dis-

pensaries is to make available medical aid in villages situated in the interior of the districts.

Government have sanctioned a grant for the treatment of eye diseases at certain centres opened during the current financial year as an experimental measure. A good number of patients suffering from cataract and other diseases have received treatment under the scheme.

There were eighty-two subsidized dispensaries and thirty-nine subsidized medical practitioners working at the end of December 1941.

With a view to provide facilities for the training of Indian girls as nurses and midwives a training school has been opened at Agra.

The Medical School at Agra has been raised to the status of a degree College and has been affiliated to the Agra University. The Women's Medical School has been abolished.

The Government have established a Hospitals Fund to improve Medical facilities all over the province. A sum of Rs. 20 lacs has so far been allotted to this fund. Applications for grant out of this fund are considered by a committee consisting of Secretary to Government, U. P., Medical Dept., I. G. C. H., U. P. and member of the Board of Revenue.

A systematic campaign has been undertaken and large funds allotted to bring the hospitals at District Headquarters and the Dufferin Hospitals to a direct level.

Adequate steps have been taken to ensure that the hospitals and dispensaries in the U. P. do not run short of medicines, drugs and equipment during the war period. A sum of Rs. 4½ lakhs has been allotted to provide a reserve stock of medical stores. Arrangements have also been made with the Director General, Indian Medical Service, to obtain supplies of medical stores from the Medical Stores Department. A Scheme is being sanctioned to train 90 Compounders every year for hospitals and dispensaries in the Province.

THE FINANCES OF THE UNITED PROVINCES.

Statement of the Revenue and Expenditure of the Government of the United Provinces.

Chief Commissioner's Provinces.

AJMER-MERWARA.

Ajmer-Merwara is an isolated British Province in Rajputana. The Hon'ble the Resident for Rajputana administers it as Chief Commissioner. The Province is divided into the Sub-divisions of Ajmer and Kekri and Beawar with a total area of 2,400 square miles and a population of 5,83,693. At the close of the Pindari war Daulat Rao Scindia, by a treaty, dated June 25, 1818, ceded the district to the British. Sixty-two per cent of the population are supported by agriculture, the industrial population being principally employed in the cotton and other industries. The principal crops are maize, millet, barley, cotton, oil-seeds and wheat.

Chief Commissioner, The Hon. Sir Arthur Lothian, K.C.I.E., C.S.I., I.C.S.

ANDAMAN AND NICOBAR ISLANDS.

This is a group of islands lying in the Bay of Bengal. Port Blair, the chief town is 780 miles from Calcutta, 740 miles from Madras and 360 miles from Rangoon.

The Islands were administered by a Chief Commissioner until March 1942, when they were occupied by the Japanese.

COORG.

Coorg is a small petty Province in Southern India, west of the State of Mysore. Its area is 1,593 square miles and its population (168,726 according to the census of 1941) Coorg came under the direct protection of the British Government during the war with Sultan Tippu of Seringapatam. In May 1834, owing to misgovernment, it was annexed. The Province is directly under the Government of India and administered by the Chief Commissioner of Coorg whose headquarters is at Mercara. A Legislative Council consisting of 15 elected members and five nominated members was created in 1924. The chief wealth of the country is agriculture and especially the growth of coffee. Although owing to over-production and insect pests coffee no longer commands the profits it once enjoyed, the Indian

output still holds its own against the severe competition of Brazil. The bulk of the output is exported to Europe.

Chief Commissioner, Coorg, J. W. Pritchard, I.C.S.

BALUCHISTAN.

Baluchistan is an oblong stretch of country occupying the extreme western corner of the Indian Empire. It is divided into three main divisions: (1) British Baluchistan with an area of 9,476 square miles consisting of tracts assigned to the British Government by treaty in 1879; (2) Baluchistan Leased and Tribal areas with an area of 44,345 square miles composed of tracts which have, from time to time, been acquired by lease or otherwise brought under control and placed directly under British officers; and (3) the Indian States of Kalat and Las Bela with an area of 80,410 square miles. The Province embraces an area of 134,838 square miles and according to the census of 1931 it contains 868,617 inhabitants.

The country, which is almost wholly mountainous, lies on a great belt of ranges connecting the Saffed Koh with the hill system of Southern Iran. It thus forms a watershed the drainage of which enters the Indus on the east and the Arabian Sea on the south while on the north and west it makes its way to the inland lakes which form so large a feature of Central Asia. Rugged, barren, sun-burnt mountains, rent by high chasms and gorges, alternate with arid deserts and stony plains, the prevailing colour of which is a monotonous sight. But this is redeemed in places by level valleys of considerable size in which irrigation enables much cultivation to be carried on and rich crops of all kinds to be raised.

The political connection of the British Government with Baluchistan commenced from the outbreak of the First Afghan War in 1839; it was traversed by the Army of the Indus and was afterwards occupied until 1842 to protect the British lines of communication. The districts of Kachhi, Quetta and Mastung were handed over to the Amir of Afghanistan and Political Officers were appointed to administer the country. At the close of the First

Afghan War, the British withdrew and these districts were assigned to the Khan of Kalat. The founder of the Baluchistan Province as it now exists was Sir Robert Sandeman who broke down the close border system and welded the Baluch and Brahui Chiefs into a close confederacy. In the Afghan War of 1879 Pishin, Shorard, Sibi, Zawara Valley and Thal-Chotiali were handed over by Yakub Khan to the British Government and retained at Sir Robert Sandeman's strenuous insistence.

Industries.

Baluchistan lies outside the monsoon area and its rainfall is exceedingly irregular and scanty. Shahrig, which has the heaviest rainfall, records no more than 14·72 inches in a year. In the highlands few places receive more than 10 inches and in the plains the average rainfall is about 5 inches, decreasing in some cases to 3. The majority of the indigenous population are dependent for their livelihood on agriculture, care of animals and provision of transport. The majority of the Afghan and the Baluch, as a rule, cultivate their own lands. The Brahuists dislike agriculture and prefer a pastoral life. Previous to the advent of the British, life and property were so insecure that the cultivator was fortunate if he reaped his harvest. The establishment of peace and security has been accompanied by a marked extension of agriculture which accounts for the increase in the numbers of the purely cultivating classes. The Mekran Coast is famous for the quantity and quality of its fish and the industry is constantly developing. Fruit is extensively grown in the highlands and the export is increasing.

Education is imparted in public schools of all kinds. There is a distinct desire for education amongst the more enlightened headmen round about Quetta and other centres; but on the whole education or the desire of it has made little or no advance in the outlying districts. Coal is mined at Sharigh and Harnai on the Sind-Pishin Railway and in the Bolan Pass. Chromite is extracted in the Zhob District near Hindubagh. Limestone is quarried in small quantities.

Administration.

The head of the local administration is the officer styled Agent to the Governor-General, Resident and Chief Commissioner. Next, in rank comes the Revenue Commissioner who controls the revenue administration and exercises the functions of a High Court as Judicial Commissioner of the Province. The keynote of administration in Baluchistan is self-government by the tribesmen, as far as may be, by means of their Jirgas or Councils of Elders along the ancient customary lines of tribal law, the essence of which is the satisfaction of the aggrieved and the settlement of the feud, not retaliation on the aggressor or the vindictive punishment of a crime. The district levies play an unobtrusive but invaluable part in the work of the Civil administration not only in watch and ward and the investigation of crime, but also in the carrying of the mails, the serving of processes and other miscellaneous work. In addition to these district levies there are ordinarily three Irregular Corps in the Province; the Zhob

Militia, the Mekran Levy Corps and the Chagal Levy Corps. Fundamentally the Province is not self-supporting, the deficit being met from Imperial Funds.

Baluchistan Agency.

Agent to the Governor-General, Resident and Chief Commissioner in Baluchistan, The Hon'ble Sir Aubrey Metcalfe, K O I E, O S I, M V O

Revenue and Judicial Commissioner, J G Acheson, O I E, I O S

Secretary to the Agent to the Governor-General, Resident and Chief Commissioner, H J Todd

Under-Secretary and Personal Assistant to the Agent to the Governor-General, Resident and Chief Commissioner, Major J E Ladieth, I S O, M B E

Secretary to the Agent to the Governor-General in the Public Works Department, Col F E Orange-Bromehead, O B E

Political Agent and Deputy Commissioner in Quetta-Pishin, Major B Woods Ballard, M B E

Assistant Political Agent and Assistant Commissioner in Quetta-Pishin, Capt R K M. Battye

Political Agent in Kalat and Political Agent in charge of the Bolan Pass, A J Hopkinson, O I E, I O S

Political Agent in Chagai, Major S. M. Khurshid, I A

Assistant for Mekran to the Political Agent in Kalat, Capt W G Raw

Second Assistant Political Agent, Mekran, Capt. M D Gardiner

Political Agent and Deputy Commissioner, Sibi, Lt Col D R Smith, I A

Assistant Political Agent and Assistant Commissioner Sibi, Major H D Rushton

Assistant Political Agent and Colonization Officer, Nasirabad, Capt I S Chopra

Political Agent in Loralai, Major D G H de la Faigne

Political Agent in Zhob, Lt-Col C S Scoble, M O

Assistant Political Agent and Assistant Commissioner in Zhob, Captain A. L A Diedge

Chief Medical Officer and Inspector General of Prisons in Baluchistan, Major E A O'Connor, I M S

DELHI

The Capital of India.

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India were located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential. Its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change.

Various places had been discussed as possible Capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour, and, as Lord Crewe said in his despatch on the subject, "to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country."

The foundation stone of the new capital was laid by the King-Emperor on December 15, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi, on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood, has a natural drainage, and is not manworn. It is not cumbered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surgeon-General Sir C. P. Lukis, Mr. H. T. Keeling, C.S.I., A.M.I.C.E., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative healthiness of the site and of an alternative one to the North of the existing city. Their report, dated 4th March, 1913, stated that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

The Town Plan and Architecture.—A Town Planning Committee, appointed to advise Government, submitted its report in March, 1913, with a plan of the lay-out and worst was begun in accordance with that Report. The central point of interest in the lay-out, which gives the motif of the whole, is Government House and two large blocks of Secretariats. This Government centre has been given a position at Raisina hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Sir Edward Baker for the Secretariats. The former building is estimated to cost approximately Rs 140 lakhs and the latter groups were originally estimated to some Rs 124 lakhs. The provision made in the design of the Secretariats for extensions in case if used has already partly been utilised. The Secretariat personnel has largely increased in the past few years and numerous additional rooms had to be provided to make room for Army Headquarters, which moved into the new capital at the end of the Simla season, 1929. To the east of the forum, and below it, is a spacious forecourt defined by an ornamental wall and linked on to the great main avenue or parkway which leads to Indrapat. Across this main axis runs an avenue to the shopping centre. Other roads run in different directions from the entrance to the forum. The axis running north-east towards the Juma Masjid forms the principal approach to the new Legislative Chambers. They are officially described as the Council House and the road is named Parila-

ment-street. The railway station for the new city finds its place about half way between the old and new cities off the road through Paharganj, which lies to the west of Old Delhi in the direction of The Ridge. The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

In October, 1912, by proclamation, there was constituted an administrative enclave of Delhi under a Chief Commissioner. This enclave was entirely taken from the Delhi district of the Punjab and its total area is 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province was 398,269 and of the new area 14,552, or a total of 412,821. The population of the Municipal town of Delhi was 2,29,144. The plans of the New Capital allow for a population within it of 70,000. Sites have been allotted for forty Ruling Princes and Chiefs to build houses for their own occupation during their visits to the Capital and several of these habitations have been erected.

There was, as regards architecture, a prolonged "battle of the styles" over Delhi. Finally, to use the language of the architect, it has been the aim "to express within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument." The inspiration of the designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian features without abandoning the architect's aim to avoid doing violence to the principles of structural fitness and artistic unity.

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors afterwards increased the amount, the chief of these being the immense rise in prices after the war, and the Legislative Assembly were informed by Government on 23rd March 1921, that the revised estimates then amounted to 1,307 lakhs of rupees. This amount included allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee, in its report published in January, 1923, estimated the total expenditure at Rs. 1,292 lakhs including Rs. 42 lakhs for loss by Exchange. Actual expenditure upto approximately the end of 1929 was Rs 14 crores. This may be taken as the figure for the completion of the main project.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital

outlay, whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts is secured. The project, after being completed and closed, was re-opened in 1933-34. This became necessary owing to the need to increase residential accommodation for officers and staff and was facilitated by a period of cheap money. Government utilised the occasion for extending the residential accommodation for visiting member of the Indian Legislature. The population of the new City is about 80,000 according to the 1931 Census. Practically all the building sites within it (except in a small area where shortcomings in drainage are a handicap) are taken up and the time for extending the layout has almost arrived.

Progress of the Work.—The construction of New Delhi was made at satisfactory speed, having regard to the curtailment of the Budget allotment in consequence of the Great War and the absence of officers and other establishments at the war. The Secretariats were so far advanced that there were transferred to them from Calcutta in October, 1924, the offices of the Accountant-General, Central Revenues and the headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The original programme of residential buildings for Government officers and staff of various grades were then nearly completed. The whole of the civil side of Government moved from Old Delhi into their quarters in the new Secretariats on coming down from Simla in November, 1926. All Government Departments, including the Army Departments and Army Headquarters and R A F Headquarters, have their offices in the new Secretariats, of which the builders have already had to carry out the first section of the extension provided for in the architects' plans. H E the Viceroy took up his residence in the new Government House on December 23, 1929. His Excellency until then had resided during the Delhi season at Viceregal Lodge in Old Delhi. The Government of India in 1927 devoted special consideration to the question whether their ordinary annual 5 months residence in Delhi should be extended each year to 7 months and early in 1928 decided in consultation with the India Office to endeavour to stay in Delhi for half of each year, the new order being introduced for trial in 1928 by keeping the Secretariat in New Delhi till mid-April and bringing it down Simla from again in mid-October. The experiment was not very successful and was not repeated till 1932-33, when Retrenchment Committees had strongly recommended a longer stay in Delhi in order to extract rent for a longer period from the seasonal official occupants of its residential buildings, the rents in Delhi being higher than those for residences in Simla. An early descent from Simla was postponed in the autumn of 1934 on account of a report by the Public Health Commissioner on the general unhealthiness of the Winter Capital in October. But various factors, including especially the increase in personnel in the Secretariat and consequential congestion of office and residential accommodation in Simla, are making the extension of the Delhi season unavoidable. The provision of considerable further housing accommodation both for offices and residential has become

imperative. The only question is whether this should be undertaken both in Delhi and in Simla or in Delhi only. Pressed by sharp financial stringency, arising partly out of the emergency created by the institution of the Constitutional Reforms, the Government of India appear decisively moving in the direction of making Delhi an all-the-year-round Capital. Certain Departments are already now kept in Delhi throughout the year. The office personnel of others are kept in Delhi throughout the year.

There was in recent years an increase in malaria bearing mosquitoes and consequential fever in New Delhi. This led to a special inquiry in 1936. The inquiry showed that both Old and New Delhi were ringed about with prolific mosquito breeding places, one of the worst being the area utilized for sewage outfall. The water borne sewage of both Old and New cities is dealt with in a farm which, when the new city was built, was placed immediately outside its southern boundary. The Government of India after the 1926 inquiry were forced to adopt a new scheme for the removal of the farm to a more distant site and chose one some four miles further away from the city. Anti-malaria operations on a large scale, scientifically directed, were simultaneously undertaken, the estimate of their cost being Rs 14 lakhs. Improvements in the water supply of the new Capital with a view to a larger population being retained in it during the summer has also been effected.

When the residential buildings in New Delhi were, in the course of the original construction of the new city, about to be designed, the Government of India issued orders that they were to be "for cold weather occupation only." This rule was followed. The general principle embodied in the design of the houses was that of planning them to capture as much warmth from the sun as possible. Secretariat, residential bungalows and staff quarters are largely inappropriate for hot weather occupation.

Art Decorations.—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and ceilings in the New Secretariat Buildings at Delhi suitable for decoration were selected. The various schools of art in India, as well as individual artists, were invited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures were to be drawn out and painted to full size on canvas, and, if finally approved by the Committee, fixed according to the marouflage process *in situ*. Other techniques, such as fresco or tempera, were optional. Artists or schools of art, who sent in small scale drawings, had to bear the initial expense of preparing them. When these were approved by the Committee, the out-of-pocket expenses paid in addition to a suitable honorarium Government undertook to pay for the finished pictures done from approved sketches but give no guarantee that the finished paintings will permanently be preserved. Government intimated that historical or allegorical sub-

jects would be given preference over religious ones and English artists living in India were barred from competition, the work being strictly reserved to Indian artists. Numerous artists submitted designs, especially those of Western India, and with such satisfactory results that the specially appointed Expert Committee approved of nearly all. A great deal of painting has now been completed and the work was continually progressing until the world-wide depression in recent years dried up funds.

All-India War Memorial.—H. R. H. the Duke of Connaught on 10th February, 1921, laid the foundation stone of an All-India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park and the construction of the building was for economy's sake proceeded with slowly. The memorial was formally inaugurated by Lord Irwin in February, 1931, in the presence of representatives of every unit of the army in India, of the Royal Air Force and of a large concourse of official and other spectators.

George V Memorial.—It was decided in 1936 to erect a memorial statue to His Late Majesty, King-Emperor George V, in Princes' place, the large park-like area lying between the All-India War Memorial and the Purana Qila. The origin of this proposal was a movement started among the Ruling Princes, sometime previously, to erect a white memorial statue to His Majesty in the new city and this scheme had made considerable progress when His Majesty died. The matter was then considered in a broader light and in consultation between Their Highnesses and His Excellency the Earl of Willingdon. The Princes agreed to merge their scheme in a larger one for an All-India memorial to His Late Majesty. H. E. the Viceroy issued an appeal for subscriptions to the major scheme and he and Her Excellency the Countess of Willingdon opened the general subscription list with a donation of Rs 5,000. Sir Edwin Lutyens was invited to submit a design for a memorial and the Statue was eventually unveiled by His Excellency the Viceroy, Lord Linlithgow, on November 14, 1939.

Public Institutions.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. The proposal is still "under consideration." To implement it would require an estimated capital outlay of Rs 12½ lakhs.

The Government of India further in the Spring session of their Legislature in 1922 introduced and carried a Bill for the establishment of a unitary, teaching and residential University of Delhi, the buildings for which would be erected in the new capital. The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university being a matter of time it was decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of

organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that H. E. the Viceroy would be able to lay the foundation stone of the university buildings in November, 1922, but this proved impracticable. The general question of the finances of the University was in 1927 the subject of inquiry by a special Committee appointed by Government. For the time being the University was housed in the temporary buildings in old Delhi occupied by the Civil Secretariat until 1929 and in 1931 the old Viceregal Lodge was allocated to it for its future home. The Government of India have also allotted free land to various colleges in Old Delhi.

H. H. the Maharaja of Bhavnagar having offered Rs 5,00,000 for the provision of some amenity in the new city, the Government of India decided to utilize the sum for the provision of a Stadium. The ground which they took for this was a large area lying immediately below the western walls of the Purana Qila, i.e., between them and Princes' place. This area was originally marked by Sir Edward Lutyens, in his plan, to be an ornamental lake. Practical consideration led to its abandonment for that purpose and the area was laid out as a park. A large proportion of the Maharaja's Rs 5,00,000 was utilized for the provision of a huge brick grandstand overlooking the central portion of the park taken for the Stadium.

Inaugural Ceremony.—The New City was the scene of notable and elaborate inauguration ceremonies in February, 1931. The first of these was the unveiling of four "Dominion Columns" suitably placed about the great place between the two Secretariat blocks. The columns are of red stone, surmounted each by a gilded merchantman of the old style in full sail. The columns are designed to resemble the historic ones erected in various parts of the land by Asoka and were presented by Canada, Australia, New Zealand and South Africa. The first two and fourth of these Dominions sent their own representatives to perform the ceremony of unveiling. New Zealand nominated a Member of the Government of India to act in her behalf for the same purpose.

City Extension.—The main direction for the future extension of the new city is southward where for some three miles beyond the limits of present development, Government have land in their possession and have placed it at the disposal of the City administration. The New Delhi Civil Aerodrome lies immediately southward of the existing new City boundary on the southern side and H. E. the Earl of Willingdon in February 1936, opened alongside the high road there a fine new Willingdon Air Station, which is furnished with the most modern equipment for day and night flying. Building has already taken place in the same neighbourhood.

A New Delhi Municipal Committee with its own permanent official Chairman and Secretariat was established in 1932.

The Improvement Trust was instituted in 1937, its duties being to provide for the expansion of the new capital, including

both old and new cities and urgently to deal with the insanitary overcrowding of the old city, a problem arising from the rapid increase of population there since Delhii again became capital of India

Aden.

Aden was the first new territory added to the Empire after the accession of Queen Victoria. Its acquisition was the outcome of an outrage committed by local Arabs upon the passengers and crew of a British Indian bungalow wrecked in the neighbourhood. Negotiations having failed to secure satisfactory reparation, the Government of Bombay despatched a force under Major Baillie which captured Aden on January 19th, 1839.

Aden is an extinct volcano, five miles long and three broad, jutting out to sea much as Gibraltar does, having a circumference of about 15 miles and connected with the mainland by a narrow isthmus of flat ground. The highest peak on the wall of precipitous hills that surrounds the old Crater which constitutes Aden is 1,725 feet above sea level. Rugged spurs, with valleys between, radiate from the centre to the circumference of the crater. The peninsula of Little Aden, adjacent to Aden proper, was obtained by purchase in 1868 and the adjoining tract of Shaikh Othman, 39 square miles in extent, was subsequently purchased when, in 1882, it was found necessary to make provision for an overflowing population. Attached to Aden is the Island of Perim, 5 square miles in extent, in the Straits of Babel-Mandeb at the entrance to the Red Sea. The Kuria Muria Islands, which were acquired from the Sultan of Muscat in 1854, are included in the Aden Colony, but for administrative purposes were transferred to the control of the British Resident in the Persian Gulf in 1931.

The whole extent of the Aden Colony, including Aden, Little Aden, Shaikh Othman and Perim, is approximately 80 square miles. The 1931 census showed Aden, with Little

Aden, Shaikh Othman, and Perim to have a population of 48,338.

The language of the Settlement is Arabic, but several other Asiatic tongues are spoken. The population is chiefly Arab. The chief industries are salt and cigarette manufacture and dhow building. The crops of the tribal low country adjoining are jowar, sesamum, a little cotton, madder, a bastard saffron and a little indigo. In the hills, wheat, madder, fruit, coffee and a considerable quantity of wax and honey are obtained. The difficult problem of water supply has been solved. It is now obtained from bore wells situated near the village of Sheikh Othman, and it is sufficient to meet the requirements of the civil population and shipping. Bore water has practically replaced condensed water.

Some 2,000 houses have been connected to the main water, and fire hydrants have been sited at intervals throughout the system. There are filling stations for camel carts at Crater, Tawahi and Sheikh Othman, and by this means water is distributed to houses which have so far not been connected to the main supply. The water is of exceptional bacteriological purity, although rather hard.

Drainage systems at Tawahi and Crater are now in operation.

Climate—The average temperature of the station is 87 degrees in the shade, the mean range being from 75 in January to 93 in June, with variations up to 102. The lulls between the monsoons in May and September are very oppressive. But Aden is usually free from infectious diseases and epidemics, and the absence of vegetation, the dryness of the

soil and the purity of the drinking water constitute efficient safeguards against many maladies common to tropical countries. The annual rainfall varies from $\frac{1}{2}$ inch to $8\frac{1}{2}$ inches, with an irregular average of 3 inches.

Administration.—Aden was transferred from the administrative control of the Government of India to that of the Colonial Office with effect from 1st April, 1937, from which date it assumed the status of a Crown Colony.

The Administration is vested in His Excellency the Governor and Commander-in-Chief who is assisted by an Executive Council.

In spite of the transfer in control it is intended that there should be as great a degree of continuity as possible in the machinery and methods of Government. This involves the retention of the spirit and in most cases of the letter of existing laws and regulations, the preservation in judicial cases of the right of appeal to the High Court of Bombay, the continued use of Indian postage rates and currency and the maintenance of the port as a free port.

The management of the port is under the control of the Board of Trustees formed in 1888. The principal business of the Port Trust in recent years has been the deepening of the harbour so as to allow vessels of large size to enter and leave at all states of the tide.

The Police Force consists of land, harbour and armed Police.

The Executive Committee of the Aden Settlement performs all municipal functions in Aden.

Aden Protectorate.—The Aden Protectorate, which has an area of approximately 112,000 square miles, is bounded on the East by Dhufar, which is part of the dominions of the Sultan of Muscat and Oman, and on the North and West by the Great Desert and the Kingdom of Yemen, whose southern boundary was temporarily fixed by Article III of the Treaty of San'a (February, 1934) by which His Majesty's Government and the Yemen Government agreed to maintain the *status quo* frontier as it was on the date of the signature of the treaty. The coastline of the Aden Protectorate, which is about 750 miles long, starts in the West from Husn Murad, opposite the Island of Perim, and it runs eastwards to Ras Dharbat 'Ali where it meets the Sultanate of Muscat and Oman.

History.—Up to the 18th century, the Aden Protectorate used to be in the hands of the Imam of San'a (capital of the Yemen of to-day) and several of the rulers of the tribal districts such as the Abdali, Haushabi, Amiri, Yafa'i and 'Aulagi, were the Imam's "wakils" or Governors until his power declined and they declared their independence. This occurred in 1728 in the case of the Abdali and 1758 in the case of the Yafa'i.

After the capture of Aden by the British in 1839, most of the neighbouring Chiefs entered into Treaty relations with His Majesty's Government. Others followed suit as time went on, the last to do so being the Audhali Sultan in 1914. The treaties are Treaties of Protection.

In 1904, an Anglo-Turkish Commission delineated the frontiers between the Protectorate and Turkish Yemen.

In July, 1915, during the Great War, the Turks occupied the Abdali, Haushabi and Amiri districts until the Armistice.

Subsequent to the end of Turkish rule in Arabia after the Armistice, the Imam of the Yemen advanced into the Protectorate and between 1919 and 1925 occupied the Amiri district, including the Radhfan tribes, and portions of Haushabi, Subeihl and Upper Yafa' territory. He also occupied the district of the Beidha Sultan who was not in Treaty relations with His Majesty's Government, and the Audhali plateau.

In 1928 he was forced by air and ground action to evacuate the Amiri district with the exception of a small portion in the North, and also the district of Shaib. On the conclusion of the Treaty of San'a in 1934 he evacuated the remaining portion of the Amiri district and the Audhali plateau.

Division of Aden Protectorate.—The Aden Protectorate can be more conveniently described by dividing it into two areas, the Western and the Eastern. The former consists of the following Tribal districts, the Chiefs of which are all in protective treaty relations with His Majesty's Government.

'Abdali.—His Highness Sultan Sir Abdul Karim Fadhl, K.O.M.G., K.O.I.E., Sultan of Lahej, who is the premier Chief of the Aden Protectorate.

Fadhli.—Sultan Salih bin 'Abdullah, Capital Shugra.

Amiri.—Amir Nasr bin Shaif Self, O.M.G., Capital Dhala'.

Lower Yafa'i.—Sultan 'Aidrus bin Muhsin, Capital Al Qara'.

Haushabi.—Sultan Sarur bin Muhammad, Capital Museimir.

Upper Yafa'i Confederation.—Sultan Muhammad bin Salih Husam Saleh Muhsin, Capital Mahjaba. Askar 2nd, Naqibs of the Mausatta Tribe, Capital Al Qudma Sheikh Salim Salih, of the Dhubi Tribe, Capital Dhi Sura Sheikh Qasim 'Adburrahman, of the Mafahi Tribe, Capital Al Jurba Sheikh Muhammad Muhsin Ghaleb, of the Hadhrami Tribe, Capital Ash Shibr.

Shaib.—Sheikh Muhammad Muqbil As Saqladi, Capital Bakhal.

Quteibi.—Sheikh Hasan 'Ali, Capital Ath Thumeir.

'Alawi.—Shaikh Saleh Ba Sayal, Capital Al Kasha'.

'Aqrabi.—Sheikh Muhammad Fadhl Ba 'Abdullah, Capital Bir Ahmed.

'Audhali.—Sultan Salih bin Hussein, Capital Zara.

Upper 'Aulagi.—Sultan 'Awadh bin Salih bin Abdullah, Capital Nisab Sheikh Muhsin bin Farid, Capital Yeshbum.

Lower 'Aulagi.—Sultan 'Aidrus bin Ali, Capital Ahwar.

Belthan.—Sharif Salih bin Hussein, Capital An Nuqub.

Regent.—Sharif Hussein Bin Ahmed Am Mohsin.

Subeiri—Sheikh Muhammad bin 'Ali, the Barhimi Sheikh, Sheikh Muhammad 'Ali Ba Salih and Hawwash bin Sa'id, the Atifi Sheikhs.

The Eastern area comprises Hadhramaut (consisting of the Quaiti State of Shihr and Mukalla and the Kathiri State of Selyun), the Mahri Sultanate of Qishn and Socotra, and the Wehidi Sultanates of Bir* 'Ali and Baliha all of which have been for many years in protective treaty relations with His Majesty's Government. His Highness Sultan Sir Salih bin Ghalib al Qu'alti, K O M G., Sultan of Shihr and Mukalla is the premier Chief in the Eastern Aden Protectorate, and Hadhramaut is the most important and best organised of these areas. It is bounded on the west by the Wahidi Sultanates and on the east by the Mahri Sultanate.

The Mahri Sultanate of Qishn and Socotra is the most easterly area in the Aden Protectorate, being bounded on the east by the Sultanate of Muscat and Oman. The Sultan of Qishn and Socotra resides on the island of Socotra (area 1,400 square miles) which lies 150 miles from Cape Guardafui. The island was occupied by the East India Company in 1834 and it came under British protection in 1886 when the treaty with the Mahri Sultan was concluded.

Population—The population of the whole Protectorate is roughly estimated to be about 600,000. They are chiefly Muslims, nearly all being of the Shaf'i persuasion, but there are also a few Jews. The Western Aden Protectorate is divided into tribal confederations and Sultanates, and the inhabitants are for the most part settled or agricultural, though a few are nomadic. The indigenous type of Arab is chiefly confined to the littoral and to the maritime ranges. Further North and East of the Protectorate chiefly in Yafa'i and 'Aulaqi territory, one gets a taller and more semitic type who came originally from the Yemen, especially from Jauf.

Physical character—The Western Protectorate is divided into—

- 1 The littoral belt, which varies between 4—40 miles in width
- 2 The maritime ranges.
- 3 The intramontaine plains, about 3,000 feet above sea level.
- 4 The highland plateau ranging from 5,000 to 8,000 feet,
- 5 The Great Desert with a mean altitude of 2,500 feet

The country between the littoral and the plateau is a tangle of mountainous valleys. Some of the valleys are very fertile. The plateau itself is broken up by numerous hills and it is intersected with several deep valleys. The plateau of the Upper Yafa' and 'Audhall districts are particularly fertile.

Climate—The climate is not unhealthy, and the nights are usually cool. The cultivated oases and river beds such as the Lahej delta, Abyan, and the Tiban and Bana valleys are malarious.

In the maritime hills and intramontaine plains the heat is fierce, but dry, by day. On the highland plateau it never gets unbearably hot even in the day time and in the summer, whilst the nights are always cool. In the winter, one often seeks the sun for choice, while, at night, the cold is severe, though frost is rare. The air in the highlands is invigorating and the climate delightful.

There is little rainfall in the littoral and maritime hills and intramontaine plains, and cultivation is chiefly dependent on irrigation from the water courses.

On the highland plateau water is obtained near the surface and irrigation is chiefly from wells which are numerous. There is more rainfall, while, in the summer, thunderstorms are frequent towards the evening and hail occasionally falls. The region is also liable to dense white mists which provide considerable moisture and are beneficial to agriculture.

On the southern fringes of the Great Desert rainfall is scarce, and the heat very fierce, contrasting with cool, and in the winter, cold nights.

The prevailing diseases are malaria, internal disorders, bilharzia and rheumatism. Consumptive cases are above the normal. Ophthalmia and cataract are fairly common, and the diseases of the eye are particularly common in the Northern and coastal 'Aulaqi districts, perhaps on account of the frequent sand storms blowing there. Perhaps the most common complaint is the "Yemen" ulcer. This ulcer is not harmful if treated in its early stage, but, if neglected, as is so often the case in the interior where few opportunities for cure exist, it develops into a septic, spreading sore, often resulting in the loss of a leg. In some of the bigger towns where sanitation does not exist and flies abound, dysentery is common.

Communications—There are no railways or metalled roads in the Western Aden Protectorate. A single-line metre-gauge railway was constructed in 1916 for war purposes and upto the Armistice the railhead was four miles of north Sheikh Othman. Immediately after the Armistice, the railway was extended to a point seven miles beyond Lahej. It was pulled up at the end of 1929, as the expense to His Majesty's Government in maintaining it was only justified as long as there was any risk of the Imam of the Yemen extending his encroachment towards Lahej. This risk ceased with the expulsion of the Imam's forces from the Amiri and Haushabi districts.

There are several natural roads which have been improved to take motor traffic. The chief of these are—

1. Sheikh Othman to Lahej
2. Lahej to Muselmir
3. Lahej to the Yemen frontier towards Ta'iz
4. Lahej to the Yemen frontier towards Mafalis
5. Lahej to Dhala' and Yemen Frontier town of Oataba
6. Khor Malsar to Abyan, Shuqra and Lodar
7. Sheikh Othman to Ywal Baha and the Yunim Frontier town of Mafalis

* 1. Sultan Naser bin Talib of Bir 'Ali 2. Sultan Ali bin Muhsin of Baliha now made and represented by his brother Abdulla bin Muhsin

Recently, successful attempts have been made to take passengers by motor traffic to the 'Aulagi district as far as the foot of the main 'Aulagi range of mountains, the route being via Ahwar on the coast. Passengers have also been taken by taxi to the port of 'Irqa. In the absence of roads suitable for motor traffic, communication is chiefly by camel, though in the mountainous districts of Upper Yafa', mules or donkeys are more suitable.

The Royal Air Force maintain a number of landing grounds in the Protectorate

Products, Industries and Trade—Agriculture is the chief occupation of the majority of the inhabitants of the Western Aden Protectorates. Viewed from the barren surroundings of Aden it is difficult to realise the surprising fertility of the mountain valleys and slopes, and of the highland plateau in the Protectorate. Every possible use is made of irrigation and water rights are a frequent cause of tribal feuds.

The staple crops are "Dhura" and "Dukhn", a millet, of which there are various varieties. Indian corn is also grown. Wheat and barley are found at the higher elevations especially in Yafa', the 'Audhali plateau and the Yeshbum valley. Wheat and barley also grown all along the Northern Aden Port Frontier. Other crops are jujul (sesamum) and lucerne. Dates are grown in the Subeih country. Coffee is grown in Yafa'.

Of fruits, grapes, peaches and pomegranates are found in the Dhala' district and 'Audhali plateau. Bananas and papayas are grown in the Lahej oasis and in some other parts.

Cotton and indigo ("hawir") is grown in Beihan and the 'Aulagi districts.

Honey is largely exported from Yeshbum, and to a less extent, from the 'Audhali, Yafa' and 'Aulagi Dhala' districts.

Trade in the Western Aden Protectorate is chiefly transit trade from the Yemen, from which coffee, skins and "qat" are exported, the latter being a plant cultivated in the Yemen, the leaves of which are chewed. Most of the coffee, however, is exported by sea. In return, kerosene oil, piece goods and foodstuffs are imported. All the main trade routes from the Yemen pass through Lahej, a town 15 miles north of Sheikh Othman, and the Sultan of Lahej's chief source of revenue is derived from transit dues, which make him the richest, and consequently the most important Chief in the Western Aden Protectorate.

The only industries are weaving, dyeing and charcoal burning, though such Jews as there are make silver work. Potash is manufactured in the 'Abdali and Fadhi districts. Sheep and goats are imported from Somaliland, while oxen, fodder, vegetables and fuel come in by caravan from the neighbouring districts.

Government—His Majesty's Government does not at present attempt to administer the Aden Protectorate, but the Eastern Aden Protectorate has a European adviser, with his staff, who is resident at Mukalla. The interests of the Western Aden Protectorate are looked after by a small staff of Political Officers under

a Political officer in charge, who, together with the Resident adviser at Mukalla, work under the Chief Secretary to the Government. The Governor and C. in C. of the Colony is also Governor of the Protectorate.

The tribes nominate their own Chiefs who have subsequently to be recognised by the Aden Government. The majority of the Chiefs have little control over their subjects, an outstanding exception being the Sultan of Lahej (or 'Abdali Sultan) whose wealth and trained military forces assist him. The foundation of tribal administration is the Sharia law of the Qur'an, which is entrusted to the Qadhis. The tribal Chief adjudicates in serious cases and assists the Qadhi in the execution of his decisions.

Each large tribe is divided into sub-tribes under an 'Aqil or Sheikh. These sub-tribes are further sub-divided into clans, and each clan into families or "beits."

There are no Government regular troops in the Aden Protectorate. In the Western Aden Protectorate, the only Chiefs with trained troops to whom the designation "regular" might apply are the Sultan of Lahej and, in a minor degree, the Amir of Dhala'.

A force named 'Government Guards' was raised in 1938 for Police and general duties in the Protectorate and numbers at present 300 all ranks.

These with the Tribal Guards are jointly known as the 'Protectorate Guards.'

The Government Guards are under the Command of a Political Officer and are paid and controlled entirely by His Majesty's Government.

At present the Tribal Guards are under the direct control of the Tribal Chief concerned who contributes to their upkeep, but with the view to improving these Forces, it is proposed to re-organise them.

They will then be paid and clothed entirely from Governments Funds and the Commandant, Government Guards, will be responsible for their training.

Their control will remain in the hands of the Chief concerned working in close co-operation with the Political Officer of the area.

Towns, Ports and Water Courses.—The chief towns in the Western Aden Protectorate are Lahej, Dhala', Shuqra, Loda, Ahwar, Yeshbum, Nisab and Beihan al Qasab. Upper Yafa' has several large settlements, the largest being Beni Bak.

The chief ports are Shuqra, Masani' (Ahwar) 'Irqa and Haura.

The chief water courses are the Tiban, Har-daba-Suheib, Bana, Sulub-Yaramis and Dheiga-Ahwar. The first two and the last come down in flood a few times each year.

The Hadhramaut States—The Qu'atli Rulers of Shihir and Mukalla entered into a treaty with His Majesty's Government in 1882 in which they bound themselves not to cede any parts of their territories to any person or power other than the British Government without the consent of the British Government. In

addition, the Qu'aitis bound themselves to abide by the advice and conform to the wishes of the British Government in all matters relating to their dealings with neighbouring chiefs and foreign powers. Prior to this treaty the Qu'aiti Jemadar of Shihr and the Kasabi Nakib of Mukalla had entered into agreements for the abolition of the slave trade in 1873 and an even earlier agreement (1863) had been made with the latter on the same subject. The treaty of 1882 was strengthened in 1888 by a Protectorate Treaty in the common form of the treaties with the Protectorate Chiefs.

In August, 1937, the Qu'aiti Sultan entered into a Treaty with the British Government by which His Majesty's Government agreed to appoint a Resident Adviser to the Sultan whose advice the Sultan agreed to accept in all matters except those concerning Mahomedan religion and custom. The Treaty provided also for the recognition by His Majesty's Government of the right of the Sultan to nominate his own successor subject to the approval of His Majesty's Government.

In February, 1939, the Kathiri Sultan of Seiyun entered into a similar treaty and the same month Anglo-Qu'aiti-Kathiri Agreement was concluded reconstituting the Qu'aiti-Kathiri Agreement of 1918 with certain modifications, principally in favour of the Kathiri, and by this Agreement the Kathiri Sultan became a direct Treaty Chief.

The Qu'aiti State of Shihr and Mukalla on the Gulf of Aden is bounded on the West by the Wahidi and 'Aulaqi Sultanates and the Kingdom of Yemen, on the North by the Great Desert and on the East by the Mahri Sultanate. The Kathiri State forms an enclave on the North.

The country is large in extent but the greater part of its surface consists of barren mountains intersected by Wadis some of which are fertile and cultivated. Of these the most important are the Wadis Meifa, Hajr, Du'an, Leisar, and part of the Wadi Hadhramaut. The principal crops are millet, sesame, beans and wheat. These are all consumed locally but Hammumi tobacco is exported and so is Du'an honey. The other exports are principally fish products.

The Capital and the Residence of the Sultan is Mukalla (population about 16,000). Shihr is also an important port and both are visited by ocean-going ships. The country is divided into five provinces. There are several hundred miles of

motorable tracks, including the Al Kaf Road, which is under separate administration and links Tarim with Shihr, and the Du'an road which links Mukalla with Wadi Du'an. Other tracks are under construction.

The population is estimated at about 202,000 and the revenue and expenditure are about 7 and 6 lakhs of rupees respectively.

Sultan—His Highness Sultan Sir Salih bin Ghalib al Qu'aiti, K O M G

Her Apparent—Sultan 'Awadh bin Salih al Qu'aiti

The Kathiri State is bounded on the North by the Great Desert and on all other sides by the Qu'aiti State.

The Kathiri country was formerly of great extent. It still includes the most fertile portion of the Wadi Hadhramaut and its tributary wadis such as Wadis Adim and Bin 'Ali. Its crops are mainly grain and dates which are all consumed locally, but cotton grows well and this may develop into an export.

The capital and residence of the Sultan is Seiyun (population about 18,000) but Tarim is also a large and important city which is joined with the port of Shihr by the Al Kaf Road, constructed by the Al Kaf Seyids who spend large sums on the advancement of the country. Kathiri towns and villages are mostly accessible by motor.

The population is estimated at about 58,000 and contains a large number of extremely well-to-do people, who live mostly on remittances from the East Indies.

Sultan—Sultan Ja'fer bin Mansur al Kathiri
Resident Adviser—G A Joy

Financial Assistant—R H Strachan

Kamaran—The Island of Kamaran in the Red Sea about 200 miles north of Perim was taken by the British from the Turks in 1915, and is administered by the Government of India through a Civil Administrator under the control of the Government of the Colony of Aden. It has an area of 22 square miles and a population of about 3,000. A quarantine station for pilgrims travelling to Mecca from the East is maintained on the Island under the joint control of the Government of India and the Government of the Netherlands Indies.

The Home Government.

The Home Government of India represented for sixty years the gradual evolution of the governing board of the old East India Company. The affairs of the company were originally managed by the Court of Directors and the General Court of Proprietors. In 1784 Parliament established a Board of Control, with full power and authority to control and direct all operations and concerns relating to the civil and military government, and revenues of India. By degrees the number of the Board was reduced and its powers were exercised by the President, the lineal precursor of the Secretary of State for India. With modifications this system lasted until 1858, when the Mutiny, followed by the assumption of the Government of India by the Crown, demanded a complete change. Under the Act of 1858 (merged in the consolidating measure passed in 1915) the Secretary of State is the constitutional adviser of the Crown on all matters relating to India. He inherited generally all the powers and duties which were formerly vested either in the Board of Control, or in the Company, the Directors and the Secret Committee in respect of the government and revenues of India.

The Secretary of State.

Until the Act of 1919 came into force, the Secretary of State and the Secretary of State in Council had, and exercised, the fullest powers of superintendence, direction and control over the government and revenues of India, subject, of course, to a large measure of delegation. The Secretary of State was the statutory heir of the East India Company and the Board of Control, and it was as such that the generality of his powers were exercised.

The Act of 1919 transferred a substantial share of power and responsibility in relation to the Government of the Provinces to the Provincial Legislatures and Ministers, while it greatly increased the elected element in, and the influence of, the Central Legislature at Delhi. In the sphere so affected the power and responsibilities of Parliament and its representative, the Secretary of State, were correspondingly curtailed, but outside the field of administration so transferred the responsibility of Parliament for the good government of India remained unimpaired. No statutory change in the relations between the Secretary of State and the Central Government was made, but there was a very marked alteration in the balance of authority corresponding with the enhanced status and influence of the Indian Legislature. The Report of the Joint Select Committee on the Bill of 1919 recommended that a convention should be allowed to grow up that only in exceptional circumstances should the Secretary of State be called upon to intervene in matters of purely Indian interest where the Government and the Legislature of India are in agreement.

The Council of India.

The Act of 1858 established besides the Secretary of State the body known as the Council of India, which was associated with the

Secretary of State in the exercise of many of his powers and, in particular, held control of the revenues of India and was charged with the conduct of the business transacted in the United Kingdom in relation to the Government of India and the correspondence with India. The Act of 1919 established the number of members at a minimum of 8 and a maximum of 12, one half of whom were required to have served or resided in India for at least ten years. Lord Morley opened the door of the Council to Indians, and from 1917 the usual number of Indian Members was three.

The India Office.

The Secretary of State, like other Ministers of His Majesty's Government in the United Kingdom, is served by a body of officers and servants known in this case as the India Office. Its staff are recruited through the same source and serve on the same conditions as Civil Servants in corresponding positions in the other Government Offices in London. Until 1919, the whole cost was borne by Indian revenues, except that the Home Government made certain grants and remissions, in lieu of a direct contribution, amounting to £50,000 a year. The Act of 1919 transferred the salary of the Secretary of State to the Treasury, and, in accordance with its provisions, an arrangement was devised whereby a contribution from the Treasury of about £115,000 was made to the total cost. The basis of the contribution was that Home estimates should bear the outlay needed for the controlling and political functions of the India Office; Agency functions being still an Indian charge.

The Government of India Act, 1935.

Substantial changes in the machinery described above have resulted from the Government of India Act of 1935. The Secretary of State is no longer the final authority upon whose superintendence, direction and control depend the Acts of the Government of India and all grants, payments and charges arising out of the revenues of India. The powers of the Executive in India now run in the name of the Governor-General and the Governor, to whom they flow direct from the Crown, and there is no delegation of powers through the Secretary of State. In so far as the Executive Governments in India function on the advice of the Ministers responsible to the new Legislatures, the responsibility of the Secretary of State to Parliament, and consequently his control, is at an end. Where, however, the Governor-General or the Governors are empowered to act in their discretion or on their individual judgment, they are subject to direction by the Secretary of State who remains, in these matters, the channel of their responsibility to Parliament. During the interim period between the 1st April, 1937 (the date on which Provincial Autonomy came into operation) and the establishment of the Federation, the Secretary of State has power to issue directions to the Governor-General in Council, and such directions, if they are with respect to the revenues of the Governor-General in Council, require the concurrence of his Advisers. The Council of India ceased to exist from the

1st April, 1937. Some of its functions, particularly in relation to Service matters, have passed, however, to a body of Advisers with the same numerical limits during the interim period, reduced after Federation to a minimum of 3 and a maximum of 6. The position of the India Office as the Department serving the Secretary of State remains, but the change brought about by the Act involves the transfer of the whole cost to a Parliamentary vote with a contribution from Indian revenues based on the cost of Agency functions still performed by the Secretary of State for the Government of India.

To some extent the working of the Home Government is affected by the separation of Burma, involving as it does the separate exercise in respect of Burma of the functions of the Secretary of State. The Government of Burma Act provides also for the appointment of not more than 3 Advisers to the Secretary of State in relation to Burma, whose status and functions are analogous to those of the Advisers established by the Government of India Act. Provision has also been made for the payment from the revenues of Burma in respect of the expenses attributable to the performance, on behalf of the Government of Burma, of such functions as the Secretary of State agrees that his Department should perform.

The Indian States.

The area enclosed within the boundaries of India is 1,808,679 square miles, with a population of 352,837,778 of people—nearly one-fifth of the human race. But of this total a very large part is not under British Administration. The area covered in the Indian States is 712,508 square miles with a population of 81,310,845. The Indian States embrace the widest variety of country and jurisdiction. They vary in size from petty states like Lawa, in Rajputana, with an area of 19 square miles, and the Simla Hill States, which are little more than small holdings, to States like Hyderabad, as large as Italy, with a population of over fourteen millions. They include the inhospitable regions of Western Rajputana, Baroda, part of the Garden of India, Mysore, rich in agricultural wealth, and Kashmir, one of the most favoured spots on the face of the globe.

Relations with the Paramount Power.

So diverse are the conditions under which the Indian States were established and came into political relation with the Government of India, that it is impossible even to summarise them. But broadly it may be said that as the British boundaries expanded, the states came under the influence of the Government and the rulers were confirmed in their possessions. To this general policy however there was, for a brief period, an important departure. During the regime of Lord Dalhousie the Government introduced what was called annexation through lapse. That is to say, when there was no direct heir, the Government considered whether public interests would be secured by granting the right of adoption. Through the application of this policy, the states of Satara and of Nagpur fell in to the East India Company, and the kingdom of Oudh was annexed because of the gross misgovernment of its rulers. Then came the Mutiny. It was followed by the transference of the dominions of the East India Company to the Crown, and an irrevocable declaration of policy toward the Indian States. In the historic Proclamation of Queen Victoria it was set out that "We desire no extension of our present territorial possessions; and while we will permit no aggression on our dominions or our rights to be attempted with impunity, we shall allow no encroachments on those of others. We shall respect the rights, dignity and honour of the Native Princes as our own; and we desire that they, as well as our own subjects, should enjoy that prosperity and that social advancement which can only be secured by internal peace and good government." Since the issue of that proclamation there has been no encroachment on the area under Indian rule by the Government of India. On the contrary, the movement has been in the opposite direction. In 1881 the State of Mysore, which had been so long under British administration that the traditions of Native rule were almost forgotten, was restored to the old Hindu ruling house. In 1911 the Maharajah of Benares, the great taluqdar of Oudh, was granted ruling powers over his extensive possessions. On many occasions the Govern-

ment of India has had to intervene, to prevent gross misgovernment, or to carry on the administration during a long minority, but always with the undeviating intention of restoring the territories as soon as the necessity for intervention passed. Almost all states possess the right of adoption in default of heirs.

Rights of Indian States.

The rights and obligations of the Indian States are thus described by the Imperial Gazetteer. The Chiefs have, without exception, gained protection against dangers from without and a guarantee that the protector will respect their rights as rulers. The Paramount Power acts for them in relation to foreign Powers and other Indian States. The inhabitants of the Indian States are the subjects of their rulers, and except in case of personal jurisdiction over British subjects, these rulers and their subjects are free from the control of the laws of British India. Criminals escaping to an Indian State must be handed over to it by its authorities; they cannot be arrested by the police of British India without the permission of the ruler of the State. The Indian Princes have therefore a sovereign power which acts for them in all external affairs, and at the same time scrupulously respects their internal authority. The suzerain also intervenes when the internal peace of their territories is seriously threatened. Finally they participate in all the benefits which the protecting power obtains by its diplomatic action, or by its administration of its own dominions, and thus secure a share in the commerce, the railways, the ports, and the markets of British India. Except in rare cases, applied to maritime states, they have freedom of trade with British India although they levy their own customs, and their subjects are admitted to most of the public offices of the British Government.

Obligations of Indian States.

On the other hand, the Indian States are under an obligation not to enter into relations with foreign nations or other states, the authority of their rulers has no existence outside their territories. Their subjects outside their dominions become for all intents and purposes British subjects. Where foreign interests are concerned, the Paramount Power must act so that no just cause of offence is given by its subordinate allies. All Indian States alike are under an obligation to refer to the British every question of dispute with other states. The Indian States maintain a fixed proportion of Indian States Forces units for co-operation with the Imperial Government in the event of emergencies, and for internal security purposes. These units are, generally speaking, organised and armed on the lines of regular Indian Army units. In addition, many states keep up irregular forces, maintained almost on a feudal basis. These forces do not possess modern arms and equipment. Although old and unaltered treaties declare that the British Government will have no manner of concern with any of a Maharajah's

dependants or servants, with respect to whom the Maharajah is absolute, logic and public opinion have endorsed the principle which Lord Canning set forth in his minute of 1860, that the "Government of India is not precluded from stepping in to set right such serious abuses in a Native Government as may threaten any part of the country with anarchy or disturbed area, nor from assuming temporary charge of a Native State when there shall be sufficient reason to do so." Of this necessity the Crown Representative is the sole judge subject to the control of Parliament. Where the law of British India confers jurisdiction over British subjects or other specified persons in foreign territory, that power is exercised by the British courts which possess it. The subjects of European Powers and the United States are on the same footing. Where can-

tonments exist in an Indian State, jurisdiction both over the cantonment and the civil station is exercised by the suzerain power.

Political Officers.

The powers of the British Government are exercised through Political Officers who, as a rule, reside in the states themselves. In the larger states the Crown Representative is represented by a Resident and in groups of states by a Resident, assisted by local Political Agents. These Officers form the sole channel of communication between the Indian States and the Crown Representative with the officials of British India and with other Indian States. They are expected to advise and assist the Ruling Princes and Chiefs in any administrative or other matters on which they may be consulted.

AIDES-DE-CAMP TO HIS MAJESTY.

His Majesty the King has approved the appointment of the following Indian Princes as Hon. Aides-de-Camp to the King:—

Hon. Major-Gen. the Maharaja of Batlam.

Hon. Col. the Maharaja of Jodhpur.

Hon. Lt.-Col. the Nawab of Palanpur.

Hon. Lt.-Col. the Maharaja Jam Sahab of Swanagar.

The following have been appointed Hon. Aides-de-Camp to the King (extra):—

Hon. Gen. the Maharaja of Bikaner.

Hon. Major-Gen. Nawab Malik Sir Umar Hayat Khan.

Hon. Lt.-Gen. the Maharaja of Jammu and Kashmir.

These were all A.D.C.s to King Edward VIII and have been reappointed collectively.

HYDERABAD AND BERAR.

His Exalted Highness the Nizam exercises full sovereignty in all internal affairs. He grants titles and is the fountain head of all powers retained by him or delegated to individuals or institutions. Before 1919, the Government consisted of a Prime Minister responsible to the Nizam, with Assistant Ministers, but an Executive Council was established in that year which now consists of seven members. A Legislative Council consisting of 20 members, of whom 12 are official, six non-official, and 2 extraordinary, assists in considering bills and recommending them for sanction by the Ruler. The administration is carried on by a regular system of Departments on lines similar to those followed in British India. By the 1936 Berar Agreement, the sovereignty of the Nizam over Berar was re-affirmed, the Berar rent was to continue as before, to be paid by the British Government to the Nizam, but the administration of Berar was to continue as before as part of the Province of the Central Provinces. The State (apart from Berar) is divided into two divisions, Telangana and Mahratwara, seventeen districts and 153 taluqas. Local boards are constituted in each district and taluqa. The State maintains its own currency which consists of gold and silver coins and a large note issue. The rupee, known as the Osmania Sica, exchanges with the British Indian rupee at an average ratio of 116/10/8 to 100. There is a State postal service and stamps for internal purposes.

Finance.—Hyderabad State is by far the wealthiest of the Indian States, having a revenue in its own currency of about 9½ crores, which

is approximately double that of the Central Provinces and Berar, and more than double that of any other of the larger States. After many vicissitudes, its finances are at present in a prosperous condition and it enjoys an annual surplus of revenue from which a total reserve of 12½ crores, apart from the paper currency reserve of 18 crores, has been built up. This consists of separate Reserve Funds for debt redemption, famine relief, industrial development, O S Currency stabilisation and deposits. The budget estimates for the present year 1351 F. (6th October, 1941 to 5th October, 1942) show a revenue of 915 73 lakhs and an expenditure of 913 77 lakhs, inclusive of large sums set aside for famine insurance and debt redemption. The capital expenditure programme provides for an expenditure of 110 36 lakhs, which includes 5 12 lakhs for completion of large irrigation projects and 5-67 lakhs for construction of railway, 17 50 lakhs for Osmania University buildings, 15 lakhs for Military Buildings, 10 lakhs for Secretariat Buildings, 5 lakhs for Medical Buildings, 23 94 lakhs for gold prospecting and 5-30 lakhs for District Electricity Buildings. The year opened with a cash balance of 300-89 lakhs which is expected to be 101-75 lakhs by the end of the year. The 5½ per cent Government loan 1352-62 F, is quoted at 100-14-0 and the 3½ per cent loan 1355-65 F, at 100-6-0.

In addition to the munificent gifts of His Exalted Highness the Nizam and the contributions of the public, the State is subscribing at the rate of 21 lakhs annually in its own currency to the Empire's War effort,

Production and Industry—The principal industry of the State is agriculture, which maintains 57 per cent of the population. The common system of land tenure is *ryotwari*. About 58 per cent. of the total area is directly administered by the State. The rest consists of private estates of His Exalted Highness the Nizam and the estates of the Jagirdars and Paigah nobles. The total land revenue is over 3 crores. The principal food crops are millet and rice, the staple money-crops are cotton, which is grown extensively on the black cotton soils, and oil seeds. Hyderabad is well-known for its Gaorani cotton which is the finest indigenous cotton in India. The total area under cotton cultivation exceeds 3½ million acres (1949-50 Fasil-Forecast). Hyderabad possesses the most southerly of the Indian coal mines and the whole of Southern India is dependent on it for such coal as is transported by rail. The chief mines are situated at Singareni, which is not far from Bezwada junction on the Calcutta-Madras line and Bellampalli on Balharshah line. The chief manufacturing industry is based on the cotton produced in the State. There are 6 large cotton mills in existence and others are likely to be established, while about nearly one-half of the cloth worn in the Dominions is produced on local hand-looms. There are about 369 ginning, pressing and decorticating factories in the cotton tracts and also a number of tanneries, rice, flour and oil mills, the total number of factories subject to the Hyderabad Factories Act of all kinds in the State being 629. The Shahabad Cement Co., which has been established at Shahabad on the Great Indian Peninsula Railway not far from Wadi, now associated with the Associated Cement Company, Ltd., has at present an annual output of 150,498 tons. A sugar factory of a Crushing capacity of about 1,500 tons has been established at Bodhan. A Distillery to manufacture 6 lakhs gallons of alcohol 99.8 B out of Molasses adjoining the Sugar Factory at Bodhan is also in operation and a Paper Factory to manufacture paper from bamboo has been erected at Kothapetta, and has commenced manufacture of paper recently.

Taxation—Apart from the land revenue which, as stated above, brings in about 3 crores, the main sources of taxation are excise and customs. The receipts from each are estimated for the present year, at 171 lakhs and 1 crore 20 lakhs respectively. After these come interest on investments, 35.77 lakhs, railways 135 lakhs, and Berar rent 20.17 lakhs. The customs revenue is derived from an *ad valorem* duty of not more than 5 per cent on all imports and exports.

Communications—132 miles of broad-gauge line from Bombay to Madras traverse the State; also 30 miles of metre-gauge in the Masulipatam to Marmagao line. At Wadi, on the Bombay-Madras line, the broad-gauge system of the Nizam's State Railway takes off and running east through Hyderabad City and Warangal, reaches the Calcutta-Madras line at Bezwada, a total length of 353 miles. From Kazipet, near Warangal on this line, a new link to Bellarshah strikes north providing the shortest route between Madras and Delhi. From Secunderabad the metre-gauge Godavari Valley Railway runs north-west for 386 miles to Manmad on the main line of the Great Indian Peninsula Railway to

Calcutta. A metre-gauge line also runs south from Secunderabad through Mahbubnagar to the border and is now linked up with Dronachallam on the Madras and Southern Mahratta Railway. Branch lines exist from Purna to Hingoli, Parbhani to Purl-Vajinath, Karpalli to Kothagudium and Vikarabad to Bidar, which last was extended to Purl-Vajinath. A branch line of 12 miles from Jankampet to Bodhan was opened for traffic on 1st November 1938. A branch line of 101 miles from Mudkhed to Adilabad is under construction. Thus with branch lines there are now 790 miles of broad-gauge and 638 of the metre-gauge in the State. The Barsi Light Railway owns a short extension of 36 miles from Kurduwadi on the Bombay-Madras line to Latur in Osmanabad District. The Nizam's Guaranteed State Railway was worked by a company until April, 1930, when it was purchased by the Nizam's Government.

The road system is being rapidly extended in accordance with a well considered programme. From June, 1932 the Railway is running motor bus service in the city and suburbs of Hyderabad and on some district roads. At first the fleet consisted of 27 passenger vehicles operating a route mileage of 284. New services have been opened from time to time and the present motor mileage operated is 4,057 miles with 276 passenger vehicles and 51 goods lorries with three trailers. There are now a few important roads in the State not operated by the Railway Bus Services and in due course these are likely to be operated by these services.

Co-ordination of road rail services has been achieved by the opening of many out-agencies in the districts for through booking of goods and by arranging for the collection and delivery of goods at economic rates from merchants' godowns to railway stations, and by connecting up bus service with the railway at various places for passenger traffic also.

The Railway Department is also in charge of Aviation. At present the activities are confined to the running of an Aero Club, training local men in flying, constructing aerodromes at various places in the State and undertaking charter flights. An Elementary Flying Training School has been started to train Pilots for the Royal Indian Air Force. A trial service between Hyderabad-Bangalore-Madras route was worked during the summer of 1940 and on account of the above training Scheme it is not possible to continue the Service at present.

After the purchase of the Railway in 1930, Government set up a Board consisting of five members to administer the Railway with its ancillary Services, subject to the control of H.E.H. the Nizam's Executive Council. This was previously functioning in London. With effect from 1st November '41 this has been transferred to Hyderabad and a London agent represents the Railway's interests there. The General Manager assisted by heads of the various departments under him is responsible for the actual working and the day to day activities of the Railway.

Education—In 1940-41 the total number of educational institutions was 5,504 (excluding Collegiate Education), the number of primary schools in particular having been largely increased.

The Osmania University which was established at Hyderabad by a Charter in 1918, marks a new departure in Indian education as it imparts instruction in the faculties of Arts, Science, Law, Muslim Theology, Medicine, Engineering and Education through the medium of Urdu, English being a compulsory language in the B A and B Sc examinations and examinations leading up to that stage. In addition to the University College comprising the faculties of Arts Science Muslim Theology and Law, it has a Medical College, and Engineering College, a Training College for teachers and a Women's College teaching up to M A and M Sc and Dip-in-Ed standards. The total number of students in the Colleges of the University is 2,536. The annual expenditure is about Rs 21 lakhs. The Nizam College at Hyderabad (First Grade) is, however, affiliated to the Madras University and uses English as the medium of instruction.

Executive Council.—His Excellency Colonel Sir Mohammed Ahmad Said Khan Nawab of Bahadur K C I E K C S I M B E L L D, President (with Political, Constitutional Affairs, Defence, and Mines Legislative, Defence, Judicial Committee, Toshak-khana Information, Publicity and Reforms Departments Portfolios),

Nawab Sir Aqel Jung Bahadur, Commerce and Industries and Wireless Member, Nawab Mahdi Yar Jung Bahadur, M A (Oxon), Finance, Education (Academic and Vocational), University, Accounts and Treasuries, Mint and Currency, City Electricity Stationery Depot, Daftar-i-Dewani, Asafia Library and Nizama Observatory Member, Sir Theodore J Tasker, C I E, O B E, I C S, Revenue, Atiyat, Revenue Survey and Settlement, Statistics, Excise, Customs, Jails, Agriculture, Forests, Veterinary, Dist Water Works, Famine Department, Rural Co-operative, Development Fund Departments Reconstruction and Local Fund Departments Member, Major-General Nawab Khusrung Bahadur, Military, Irregular Forces, Medical (Allopathy, Unani, Ayurvedic), Archaeological, Registration and Stamps, Post and Printing Departments Member, Syed Abdul Azz, Bar-at-law, Judicial and Religious Affairs Member, Raja Dharam Karan Bahadur H C S, Public Works, Buildings and Communications, Irrigation City Water Works City Municipal Survey, Drainage, Telephone, District Electricity, City Corporation, City Improvement Boards and Public Gardens Member

British Resident—Hon'ble Mr C H. Gidney, K C I E, C S I, I C S.

MYSCORE.

The State of Mysore is surrounded on all sides by the Madras Presidency except on the north and the north-west where it is bounded by the districts of Dharwar and North Canara respectively and towards the south-west by Coorg. It has two natural divisions each with a distinct character of its own—the hill country (or mainad) on the west and the wide spreading valleys and plains (the maidan) on the east. The State has an area of 29,483 square miles, including the Civil and Military Station of Bangalore, and a population of 7,328,896 (1941 census), of whom 6,612,225 are Hindus. Kannada is the language of the State.

History.—The ancient history of the country is varied and interesting. Tradition connects the tableland of Mysore with many a legend enshrined in the great Indian epics, the Ramayana and the Mahabharata. The north-eastern portion of the country formed part of Asoka's Empire in the third century B C. Mysore then came under the rule of the Andhra dynasty. From about the third to the eleventh century A D Mysore was ruled by three dynasties, the north-western portion by the Pallavas and the central and the southern portions by the Gangas. In the eleventh century, Mysore formed part of Chola dominion, but the Cholas were driven out early in the twelfth century by its capital at Halebidu. The Hoysala power came to an end in the early part of the fourteenth century. Mysore was next connected with the Vijayanagar Empire. At the end of the fourteenth century Mysore became associated with the dominant empire of Vijayanagar, the dynasty attaining its independence after the downfall of Vijayanagar in 1565. In the latter part of the eighteenth century, the real sovereignty passed into the hands of Hyder Ali and then his son, Tippu Sultan. In 1799, on the fall of Seringa-

patam, the British Government restored the State comprised within its present limits, to the ancient dynasty in the person of Maharaja Sri Krishnaraja Wadiyar Bahadur III. Owing to the insurrections that broke out in some parts of the country, the management was assumed by the British Government in 1831. In 1881, the State was restored to the dynasty in the person of Sri Chamarajendra Wadiyar Bahadur under conditions and stipulations laid down in an Instrument of Transfer. That ruler with the assistance of Mr. (afterwards Sir) K. Seshadri Iyer, K C S I., as Dewan, brought Mysore to a state of great prosperity. He died in 1894, at the early age of 31, and was succeeded by His Highness the late Sri Krishnarajendra Wadiyar Bahadur, G O S I., G B E, who was installed in 1902. In November 1913, the Instrument of Transfer was replaced by a Treaty which indicates more appropriately the relation subsisting between the British Government and the State of Mysore. In 1927, the Government of India remitted in perpetuity Rs. 10½ lakhs of the annual subsidy which till then had stood at Rs 35 lakhs. A further provisional remission of Rs 5 39 lakhs in the subsidy has been allowed from 1937-38, in accordance with the recommendation of the Indian States Enquiry Committee (Financial), 1932. He died in August 1940 at the age of 57 and was succeeded by H H Sri Jaya Chamarajendra Wadiyar Bahadur who was installed on September 8, 1940.

Administration.—Constitutional reforms of a far-reaching character were announced in a Proclamation of His Highness the Maharaja on November 6, 1939. These provide for the grant of enlarged powers and privileges for the Representative Assembly and Legislative Council, the widening of the electorate and the appointment of the elected representatives of the people to His Highness's Executive Council.

The Representative Assembly and the Legislative Council which have been hitherto functioning under separate Acts now function under a consolidated law. The term of both the Houses has been increased from three to four years. The strength of the Representative Assembly is 310. The Assembly is being invariably consulted in regard to any legislative measure before it is introduced in the Legislative Council. The Assembly has the right of considering the general principles underlying any Bill or any of its provisions and of proposing amendments thereto. The powers of the Assembly in respect of the budget have been enlarged by conferring on it the right of passing resolutions on any of the major heads on the budget, provided that such resolutions do not have reference to particular grants of appropriations. Certain heads of expenditure hitherto excluded from discussion continue to be so excluded except in the case of "the Military Forces of His Highness the Maharaja" where discussion is permitted.

The strength of the Legislative Council has been raised from fifty to sixty-eight, forty-four places being filled by election. The Council will have a non-official President who will be elected by the House after its first term, the Deputy President being elected from the commencement.

Certain provisions calculated to widen the electorate for the Assembly and the Legislative Council have also been made.

An important reform designed to enable the Legislature more largely to influence the nature of the advice and assistance which the Executive Council tenders to His Highness, has been the selection of two non-officials, from among the elected representatives, in His Highness's Executive Council. Such Ministers are eligible to hold any portfolio of the Administration.

The Mysore Army.—The total strength of the Mysore Army was 2,346, consisting of 1,883 Combatants and 463 non-Combatants, at the end of June 1941. The Combatant strength of the Mysore Lancers was 485, and that of the Mysore Horse was 114. The strength of the Mysore Infantry was 1,064. The expenditure under "army" amounted to nearly 18½ lakhs of rupees.

The cost of the Police administration was Rs 22,10,000.

Agriculture—Nearly three-fourths of the population are employed in agriculture, and the general system of land tenure is *ryotwari*. The principal food crops are ragi, rice, jola, millets, gram and sugarcane, and the chief fibres are cotton and sun-hemp. The Sericultural industry is the most important subsidiary industry practised by the agriculturists. The prospects of the silk industry has been bright in view of the international situation and the limited imports of foreign silk. The area under mulberry during the year ended June 1941 was 38,430 acres. The Department of Agriculture is popularising agriculture on scientific lines by means of demonstrations, investigations and experiment. There are 7 Government Agricultural Farms at Hebhal, Babbur, Marthur,

Nagenahally, Hunsur, Mandya and the coffee experimental station at Balehonnur. A live-stock section has been organised which have been taking necessary steps for the improvement of live-stock. A cattle breeding station has been established at Parvatharay-anakere, near Ajjampur in the Kadur District, with a sub-station at Basur. A Serum Institute has been opened at Bangalore for the manufacture of serum and virus for inoculation against rinderpest and other contagious diseases. There are 81 Veterinary Institutions in the State under the control of the Civil Veterinary Department.

Medical Relief—The improvement of medical relief and sanitation in urban and rural areas has also received special attention. The headquarters of every one of the taluks in the State is provided with a hospital and there are 349 dispensaries and medical institutions. A scheme of subsidising rural practitioners has been in practice and is working successfully.

Water Works and Electricity.—Water-works have been established at great cost in Mysore and Bangalore. Both these cities (and 210 towns and villages) are lit by electricity, and much has been done in the way of clearing out congested areas, providing them with "lungs," opening out extensions, and inducing the people to build houses of an improved type.

Industries and Commerce—A Department of Industries and Commerce was organised in 1913 with a view to the development of industries and commerce in the State. Its main functions are stimulating private enterprise by the offer of technical advice and other assistance for starting new industries, undertaking experimental work for pioneering industries, developing existing industries and serving as a general bureau of information in industrial and commercial matters. The department has under its control the following demonstration factories—The Government Soap Factory, Government Porcelain Factory, Government Silk Weaving Factory, Government Electric Factory and the Central Industrial Workshop. The Department has a well-equipped Government Industrial and Testing Laboratory, with a section devoted to the manufacture of pharmaceutical drugs and preparations. The Well-Boring Section which is engaged in the drilling of boreholes for meeting the requirements of drinking water in the rural areas is now under the control of the Bureau of Sanitary Engineering Department of Public Health. Mysore is the largest producer of silk in India, and the care and development of this industry is entrusted to a Department of Sericulture in charge of a Superintendent subject to the general control of the Director of Industries and Commerce. Arrangements have been made for the supply of disease-free seed and a central and five taluk popular schools have been doing good work.

With a view to demonstrate and impart instruction in the utilisation of the high grade silk produced in the State, Government have established a Silk Weaving Factory and Dyeing and Finishing Works at Mysore.

The Sandalwood Oil Factory started on an experimental basis is now working on a commercial scale. A factory is working at Mysore.

At Bhadravati are located the Mysore Iron and Steel Works, owned and run by the Government. The works are the second largest of their kind in the British Empire and contain the only charcoal blast furnace and wood distillation plant in the East. A plant for manufacturing steel and steel products has been added since April 1936. The slag produced by the blast furnace is now being utilised by the newly erected cement plant attached to the works. Nearby is also situated the Mysore Paper Mills started as a joint-stock company, which produce many varieties of paper. Bhadravati bids fair to become one of the most important industrial centres in India. Among other industries may be mentioned a sandal oil distillery, a silk filature, a soap factory, a weaving factory, technical art and industrial workshops, porcelain factory, industrial and testing laboratory, lac factory, and a factory for the manufacture of electrical goods.

A notable feature during the past few years has been the coming into being of several state-aided joint-stock companies for the manufacture of sugar, paper, chemicals and fertilisers, spun tobacco and coffee curing, electrical batteries, glass-making and vegetable oils. There are now 513 large scale industrial establishments in the State giving employment to about 73,921 persons.

A Trade Commissioner in London has been appointed to look after the interest of the trade and industry of the State.

Hydro-Electric and Irrigation Works.—The river Canvery in its course through the State, possesses a natural fall of about 380 feet near the island of Sivasamudram, and this fall was harnessed in the year 1902 for the development of electric power, to the extent of about 12,000 H.P. for supplying power mainly to the Kolar Gold Mining Companies and incidentally for lighting the cities of Mysore and Bangalore. In course of time, the demand for power increased and with a view to protecting the existing supply and augmenting the generation of additional power to meet the growing demands, the "Krishnaraja-sagara Reservoir", called after the name of the late Maharaja, was constructed. The storage from the reservoir, besides enabling the generation of electric power up to 46,000 H.P., will also bring under irrigation about 120,000 acres of land situated in an area subject to more or less continuous drought. The new Canal Works were started in 1927, and the main canal is named the "Irwin Canal" after Lord Irwin, the then Viceroy. An area of about 18 thousand acres under this Canal has been brought under sugarcane cultivation and a Sugar Factory with a crushing capacity of about 2,000 tons of cane per day has been established nearby at Mandya. An up-to-date Distillery has been erected as an adjunct to the Sugar Factory. Full advantage is being taken of the available electric power for small industries and the electrification of towns and lift irrigation.

The construction of a reservoir across the river Kumadvathi near Anjanapur, Shikaripur Taluk, was completed at a cost of Rs. 18 lakhs and the reservoir was opened for irrigation. The area expected to be irrigated is about 10,000 acres. In addition to large new irrigation works in progress, the work of constructing a Reservoir across the river Shimsha at Marconahalli, Kunigal Taluk, which is estimated to cost Rs 22 lakhs to irrigate an extent of about 10,000 acres, is nearing completion.

To provide for the ever-widening demand for power for industrial, domestic and town lighting purposes, the Shimsha and Jog hydro-electric schemes are being pushed through at an aggregate cost of over two crores of rupees.

There are 5,721 power installations and 44,001 lighting installations. The total number of towns and villages electrified at the end of June 1941 was 215.

Finance.—The actual revenue receipts and disbursements charged to revenue for 1940-41 were Rs 4,75,18,000 and Rs. 4,72,87,000 respectively.

Education.—A separate University for Mysore was established on 1st July, 1916. It is of the teaching and residential type composed of the Central, Engineering and Maharani's Colleges at Bangalore, and the Medical and Maharaja's College at Mysore, and three Intermediate Colleges with headquarters at Mysore. The colleges are efficiently equipped and organised and there is a training college for men located at Mysore. The Maharani's College at Bangalore is a College for Women.

There are 37 High Schools for boys and 12 High Schools for Girls, 325 Middle Schools for boys and 47 for Girls. Provision has been made for teaching several vocational subjects in general school with a view to creating an interest in the vocations and in order to enable the pupils to take to such vocations after their High School life. There are 9 Training Institutions for training teachers in Middle and Primary Schools: 4 of them are for women. The control over Primary Education was taken over by Government from the local bodies from the 1st July 1941 under The Elementary Education Act, 1941. There are also schools for imparting instruction in Agricultural, Commercial, Engineering and other Technical subjects. There were altogether 7,097 schools at the end of June 1940 with a strength of 353,746 pupils. This gives one school to every 3.59 square miles of the area, and to every 787 persons of the population. The total expenditure of Education was Rs 74,38,315, yielding an average of Rs. 1-2-6 per head of population.

Dewan—Rajamantrapravina N Madhava Rau, B A, B L

Ministers—Rajamantrapravina K V Anantaraman; Rajasevaprakashta A V. Ramanathan; H B Gundappa Gowda; J Mohamed Imam

Resident in Mysore.—The Hon. Lt.-Col. D. de M. S. Fraser, C.I.E.

BARODA.

The State of Baroda is situated partly in Gujarat and partly in Kathiawar. It is divided into four district blocks (1) the southern district of Navsari near the mouth of the Tapti river, and mostly surrounded by British territory; (2) central district north of the Narbada, in which lies Baroda, the capital city, (3) to the north of Ahmedabad, the district of Mehsana; and (4) to the west, in the peninsula of Kathiawar the district of Amreli, formed of scattered tracts of land. The area of the State is 8,176 square miles; population 2,855,010, of whom over four-fifths are Hindus.

History—The history of Baroda State as such dates from the break-up of the Mughal Empire. The first Maratha invasion of Gujarat took place in 1705. In later expeditions Pilaji Gaekwar, who may be considered as the founder of the ruling family, greatly distinguished himself. Songhad was the headquarters till 1766. After 1723 Pilaji regularly levied tribute in Gujarat. His son Damaji finally captured Baroda in 1784, since when it has always been in the hands of the Gaekwars, but Mughal authority in Gujarat did not end until the fall of Ahmedabad in 1758, after which the country was divided between the Gaekwar and the Peshwa. In spite of the fact that Damaji was one of the Maratha chiefs defeated at Panipat by Ahmed Shah, he continued to add to his territory. He died in 1768, leaving the succession in dispute between two rival sons. He was succeeded in turn by his sons Sayaji Rao I, Fattesing Rao, Mannaji Rao and Govind Rao. The last died in 1800 and was succeeded by Anand Rao. A period of political instability ensued which was ended in 1802 by the help of the Bombay Government, who established the authority of Anand Rao at Baroda. By a treaty of 1805 between the British Government and Baroda, it was arranged *inter alia* that the foreign policy of the State should be conducted by the British, and that all differences with the Peshwa should be similarly arranged. Baroda was a staunch ally of the British during the wars with Bajji Rao Peshwa, the Pindari hordes and Holkar. But from 1820 to 1841, when Sayaji Rao II was Gaekwar, differences arose between the two Governments which were settled by Sir James Carnac, Governor of Bombay, in 1841. Ganpat Rao succeeded Sayaji Rao II in 1847. During his rule the political supervision of Baroda was transferred to the Supreme Government. His successor, Khande Rao, who ascended the gadi in 1856, introduced many reforms. He stood by the British in the Mutiny. He was succeeded by his brother Malhar Rao in 1870. Malhar Rao was deposed in 1875 for "notorious misconduct" and "gross misgovernment," but the suggestion that he had instigated the attempt to poison Col. Phayre, the Resident, was not proved. Sayaji Rao III, a boy of 13 years of age, and a descendant of a distant branch of the family, was adopted as heir of Khande Rao in 1875 and invested with full powers in 1881. Sayaji Rao III, after a glorious reign of 58 years, died in February 1939 and was succeeded by Yuvraj Pratap Singh, who is the present Ruler.

Administration—An executive council consisting of the Dewan and three Ministers carries on the administration, subject to the control of the Maharaja. One of the Ministers is appointed from among the non-official members of the Legislative Council. A number of departments have been formed, which are presided over by officials corresponding to those in British India. The State is divided into five *Prants* each of which is sub-divided into *Mahals* and *Peta Mahals*, of which there are in all 42. Attempts have for some years been made to restore village autonomy, and village panchayats have been formed which form part of a scheme for local self-government. There is a Legislative Department, under a Legal Remembrancer, which is responsible for making laws. There is also a Legislative Council, consisting of nominated and elected members. A High Court at Baroda possesses jurisdiction over the whole of the State and hears all final appeals. From the decisions of the High Court appeals lie in certain cases to the Maharaja who decides them on the advice of the Huzur Nyaya Sabha. The State Army consists of 5,086 Regular forces and 3,856 Irregular forces.

Finance—In 1940-41, the total receipts of the State were Rs 252 45 lakhs and the disbursements Rs 240 33 lakhs. The principal revenue heads were Land revenue Rs 95 07 lakhs, Abkari Rs 27 85 lakhs, Opium Rs 2 49 lakhs, Railways Rs 20 91 lakhs, Interest Rs 17 61 lakhs, Tribute from other States Rs 6 06 lakhs. British currency was introduced in 1901.

Production and Industry—Agriculture and pasture support 63 per cent of the people. The principal crops are rice, wheat, gram, castor-oil, rapeseed, poppy, cotton, sun-hemp, tobacco, sugarcane, maize and garden crops. The greater part of the State is held on *ryotwari* tenure. The State contains few minerals, except sandstone, which is quarried at Songir, and a variety of other stones which are little worked. There are 150 industrial or commercial concerns in the State registered under the State Companies' Act. There are four Agricultural Banks and 1,303 Co-operative Societies in the State.

Communications—The B. B. & C. I. Railway crosses part of the Navsari and Baroda *prants* and the Rajputana-Malwa Railway passes through the Mehsana *prant*. A system of branch lines has been built by the Baroda State in all the four *prants* in addition to which the Tapti Valley Railway and the Baroda-Godhra Chord line (B. B. & C. I.) pass through the State. The Railways owned by the State are about 723 miles in length. The total mileage of metalled and fair weather roads in the State is 458 and 582 respectively.

Education—The Education Department controls 2,513 institutions of different kinds, in 139 of which English is taught. The Baroda College and the B. T. College are affiliated to the Bombay University. There are a number of high schools, technical schools, and schools for special classes, such as the jungle tribes and unclean castes. The State is "in a way pledged

to the policy of free and compulsory primary education." It maintains a system of rural and travelling libraries. Eighteen per cent of the population is returned in the census as literate. Total expense on Education is Rs 38 82 lakhs.

Capital City—Baroda City with the cantonment has a population of 153,301. It contains a public park, a number of fine public buildings, palaces and offices, and it is crowded with

Hindu temples. The Cantonment is to the north-west of the city and is garrisoned by an infantry battalion of the Indian Army.

Ruler.—His Highness Farzand-i-Khas-i-Dowlat-i-Englishtia, Maharaja Sir Pratap Singh Gaekwar, Sena Khas Khel, Samsher Bahadur, G O I E, LL D, Maharaja of Baroda.

Resident.—Lieut.-Col. C. K. Daly, G.O.I.E.

Dewan.—Sir V. T. Krishnamachari, K.O.I.E.

GWALIOR.

The House of Scindia traces its descent to a family of which one branch held hereditary post of patel in a village near Satara. The head of the family received a patent of rank from Aurangzeb. The founder of the Gwalior House was Ranoji Scindia who held a military rank of Chatrapati Shahu Maharaj. In 1726 Chatrapati Shahu granted deeds to Puar, Holkar and Scindia, empowering them to levy "Chauth" and "Sardesmukhi" and retain half the payment to their troops. In 1736 Ranoji Scindia accompanied Baji Rao to Delhi where he and Malhar Rao Holkar distinguished themselves in military exploits. Ranoji fixed his headquarters at the ancient city of Ujjain, which for the first time became the capital of the Scindia dominions.

During the time of Mahadji Scindia and Daulat Scindia, Gwalior played an important part shaping the history of India. Despite partial reverses which Mahadji Scindia's troops suffered at the hands of the British in 1780, reverses which led to the treaty of Salbai (1782), Scindia's power remained unbroken. For the first time he was then recognised by the British as an independent sovereign.

In 1790 his power was firmly established in Delhi. While he was indulging in ambitious hopes he fell a prey to fever which ended his remarkable career on 12th February 1791. Himself a military genius, Mahadji Scindia's armies reached the zenith of their glory under the disciplined training of the celebrated French adventurer De Bologne. Mahadji was succeeded by his grand nephew Daulat Rao in whose service Perron, a military commander of great renown played a leading part. The strength of Scindia's army was, however, considerably weakened by the reverses sustained at Ahmednagar, Assaye, Asigarh and Laswari. Daulat Rao Scindia died in 1827. Till his death he remained in undisputed possession of almost all the territory which belonged to him in 1805.

Daulat Rao was succeeded by Jankoji Rao who passed away in the prime of life. On his demise in 1843 intrigues and party spirit were rampant and the army was in a state of mutiny, with the result that it came into collision with the British forces at Maharajpur and Pannihar.

Jankoji Rao was succeeded by Jayaji Rao Scindia whose adherence to the British cause during the dark days of the Mutiny, when his own troops deserted him, was unshakable. In 1861 he was created a Knight Grand Commander of the Most Exalted Order of the Star of India and in 1877 was made a Councillor of the Empress.

Subsequently he received other titles. He entered into treaties of mutual exchange of territories with the British Government. On his death on June 20, 1886, he was succeeded by his son Lieutenant-General H. H. Maharaja Sir Madhav Rao Scindia, Alijah Bahadur, G O V O, G O S I, G B E, A D O to the King who assumed powers in 1894. In 1901 he went to China during the war. He died in June 1925 and was succeeded by his son His Highness Maharaja Sir Jivaji Rao Scindia, Alijah Bahadur, G O I E. During His Highness's minority the administration of the State had been conducted by a Council of Regency. His Highness assumed full ruling powers on November 2, 1936.

Gwalior has an area of 20,307 sq. miles and the population is 4,000,150. Its average rainfall varies from 25 to 36 inches. The estimated gross revenue for 1941-42 is Rs. 257.71 lakhs.

The Ruler enjoys a salute of 21 guns and the State is in direct relations with the Government.

In matters of administration His Highness is assisted by a Council of Ministers under his direct control. The State Army consisting of Cavalry, Infantry and Artillery units is well organized and is considered to be the best among Indian State Forces. The State maintains its own Postal system and a light Railway. Educationally the State is much advanced.

There are two degree Colleges at Gwalior, the Capital, including one for women, one Intermediate College at Ujjain, and High Schools in practically all the districts. There are a few technical schools imparting education in arts and crafts and there is a Public School on the Gwalior Fort which is run on the English Public School lines.

The political reforms announced in June 1939 have been further supplemented by His Highness' Proclamation of Sept., 1941. The strength of the Praja Sabha which was formerly 86 has been raised to 90, and of this number 55 instead of 50 will be elected representatives, thus providing for still great non-official element. Lower House. The Praja Sabha and Raj Sabha (Upper House) will have identical powers and the range of their functions will be co-extensive. The communities and interests to which special protection has been afforded are the Muslim Community, the Bhils, the Backward classes and women. To each of these a minimum

number of seats have been guaranteed in the Praja Sabha. To Muslims and women seats have been guaranteed in the Raj Sabha also.

Another special feature of the recent reforms is that the legislature will have the power of discussing the constitution as well.

Gwalior is one of the few advanced States which have taken practical steps in associating the public voice with the administration of the State by actually appointing a non-official, as Ministers for Rural Welfare and Local Self-Government.

The Executive Council thus includes a popular Minister selected from among the public.

Since the assumption of Ruling powers by the present Maharaja, commendable activity has been witnessed in all branches of administration. The construction of Harsi Reservoir costing about Rs 1½ crores, the grant of one crore of rupees for rural reconstruction and the establishment of a Degree College for women as also the scheme for construction an up-to-date Female Hospital are some of the important beneficent measures undertaken during the period. The network of roads has been utilized by motor bus services run by the Gwalior and Northern India Transport Company, and those places which were unconnected are now being joined with important highways. His Highness also constructed at Madhav Nagar a seaplane base which serves as a halting station for the boats flying on the Imperial Air Line.

Gwalior maintains an Aerodrome also.

Thus year, famine conditions having been experienced in some parts of the State, on account of shortage of rainfall, His Highness has generously sanctioned about 15 lacs of rupees for relief measures. Rupees two lacs were also sanctioned by His Highness for organising locust control.

On the declaration of the War His Highness was one of the first rulers in India to place the Army and the resources of his State at the disposal of His Majesty the King-Emperor.

Immediately after the outbreak of present war Gwalior took steps to sponsor effective measures such as were taken in British India, by promulgating rules for the safety of the public, registration of European subjects, restriction of the movements of foreigners and control of the Press and price control in order to prevent profiteering. The pick of his splendid army was offered by His Highness to the British Government. The Mountain Battery, the 4th Gwalior Infantry, the "B" Battery, the Gwalior Transport, the Second and Third Infantry have left the State and are already serving with the British Indian troops. Thousands of recruits have been enlisted to provide reinforcements and bring units up to depot strength. Besides the contributions in men and material, His Highness has also made handsome contributions and investments with a view to successful prosecution of the war. The contribution alone reached a total figure of rupees 42 lacs towards the close of 1941.

BALUCHISTAN AGENCY.

In this Agency lies the State of Kalat with its feudatory State of Las Bela.

Kalat is bounded on the North by the Chagai district, on the East by Sindh and the Marri-Bugti tribal territories, on the South by the Arabian Sea and on the West by Persia.

The Kalat State, unlike the other Indian States, is a confederacy of partially independent chiefs, whose head is the Khan of Kalat. The divisions of the State are Sarawan or the Highlands, Jhalawan or the Lowlands, Kachhi and Mekran. The inhabitants are, for the most part, Mahomedans of the Sunni sect. The area is 73,278 square miles and population 342,101 (1931).

The relations of Kalat with the British Government are governed by the treaties of 1854 and 1876, by the latter of which the independence of Kalat was recognised, while the Khan agreed to act in subordinate co-operation with the British Government. There are also agreements with Kalat in connection with the construction of the Indo-European telegraph line, the cession of jurisdiction on the railways and in the Bolan Pass, and the permanent leases of Quetta, Nushki and Nasirabad.

The Khan is assisted in the administration of the State by a Wazir-i-Azam, at present

an officer of the Indian Political Service. The Resident and Agent to the Governor-General in Baluchistan conducts the relations between the Government of India and the Khan, and exercises general political supervision over the State through the Political Agent in Kalat. The revenue of the State is about Rs 15.7 lakhs, out of which the Khan retains a civil list of Rs 3,00,000 per annum. The present Khan is Captain His Highness Beglar Begi Sir Mir Ahmad Yar Khan, C O I E, born in 1904.

Las Bela is a small State under the suzerainty of Kalat. The Hab river for the Southern part of its course forms the Eastern boundary with Sind, and the greater part of the State consists of the valley and the delta of the Purali river. Area 7,132 square miles; population 63,008 (1931), chiefly Sunni Mahomedans. The estimated average revenue is about Rs 3.6 lakhs. The ruling chief of Las Bela, known as the Jam, is Mir Ghulam Qadir Khan, born in 1920. The young Jam has studied at the Alitchison College, Lahore. The administrative control of the State is exercised by the Hon'ble the Agent to the Governor-General, Resident and Chief Commissioner in Baluchistan, through the Political Agent, Kalat. The Jam also employs a Wazir to assist him in the administration of the State.

RAJPUTANA AGENCY.

Rajputana is the name of a great territorial circle with a total area of about 135,091 square miles, which includes 21 Indian States, one Chiefship, one estate, and the small British district of Ajmer-Merwara. It is bounded on the west by Sind, on the north-west by the Punjab, State of Bahawalpur, on the north and north-east by the Punjab, on the east by the United Provinces and Gwalior, while the southern boundary runs across the central region of India in an irregular zigzag line. Of the Indian States, Chiefship and estate 19 are Rajput, 2 (Bharatpur and Dholpur) are Jat, and two (Palanpur and Tonk) are Mahomedan. The chief administrative control of the British district is vested *ex-officio* in the political officer, who holds the post of Resident for Rajputana for the supervision of the relations between these several Indian States of Rajputana and the Political Department, and has his headquarters at Abu. For administrative purposes they are divided into the following groups:—Bikaner in direct relations with the Resident for Rajputana. Eastern Rajputana States Agency 6 States (Bharatpur, Bundi, Dholpur, Jhalawar, Karauli and Kotah); Jaipur Agency 5 States and one estate (Alwar, Jaipur, Kishangarh, Tonk, Shahpura and Lawa Estate); Mewar and Southern Rajputana States Agency 4 States and one Chiefship (Mewar, Dungarpur, Banswara and Partabgarh and the Kushalgarh Chiefship); Western Rajputana States Agency States (Jodhpur, Jaisalmer, Palanpur, Sirohi and Danta).

The Aravalli Hills intersect the country almost from end to end. The tract to the north-west of the hills is, as a whole, sandy, ill-watered and unproductive, but improves gradually from being a mere desert in the far west to comparatively fertile lands to the north-east. To the south-east on the Aravalli Hills lie higher and more fertile regions which contain extensive hill ranges and which are traversed by considerable rivers.

Communications.—The total length of railways in Rajputana is 3,259 miles, of which about 1,000 are the property of the British Government. The B. B. & C. I. (Metre-gauge) (Government) runs from Ahmedabad to Bandikui and from there branches to Agra and Delhi. Of the Indian State railways the most important are the Jodhpur and Bikaner lines from Marwar Junction to Hyderabad (Sind) and to Bikaner.

Inhabitants.—Over 50 per cent. of the population are engaged in some form of agriculture; about 20 per cent. of the total population are maintained by the preparation and supply of material substances; personal and domestic service provides employment for about 5 per cent and commerce for 2½ per cent. of the population. The principal language is Rajasthani. Among castes and tribes, the most numerous are the Brahmans, Jats, Mahajans, Chamars, Rajputs, Minas, Gujars, Bhils, Malis and Balais. The Rajputs are, of course, the aristocracy of the country, and as such hold the land to a very large extent, either as receivers of rent or as cultivators. By reason of their position as integral families of pure descent,

as a landed nobility, and as the kinsmen of ruling chiefs, they are also the aristocracy of India; and their social prestige may be measured by observing that there is hardly a tribe or clan (as distinguished from a caste) in India which does not claim descent from, or irregular connection with, one of these Rajput stocks.

The population and area of the States and the British District of Ajmer-Merwara are as follows:—

Name.	Area in square miles.	Population in 1911.
<i>In direct political relations with the Resident for Rajputana.</i>

Udaipur State (also called Mewar) was founded in about 646 A.D. The capital city is Udaipur, which is beautifully situated on the slope of a low ridge, the summit of which is crowned by His Highness the Maharana's palaces, and to the north and west, houses extend to the banks of a beautiful piece of water known as the Pichola Lake, in the middle of which stand two island palaces. It is situated near the terminus of the Udaipur-Chittorgarh Railway, 697 miles north of Bombay. His Highness Maharajah Sir Bhupal Singhji Bahadur, G. O. S. I., K. C. I. E., who succeeded his father the late

Maharana His Highness Maharajadhiraj Maharana Sir Fateh Singhji Bahadur, K.C.I.E., G.O.V.O., in 1930, is the Premier Ruling Prince of Rajputana. The revenue and expenditure of the State are about 806 lakhs. Its archaeological remains are numerous, and stone inscriptions dating from the third century have been found.

Banswara State is the southernmost State of Rajputana within the Political Agency of the Southern Rajputana States. Area 1,946 square miles, population 299,913. It is thus in regard to size eleventh among the States of Rajputana. Banswara with Dungarpur originally formed a country known as Bagar, which was, from the beginning of the thirteenth century, until about the year 1529, held by certain Rajput Rulers of the Ghelot or Sishodiya clan, who claimed descent from an elder branch of the family now ruling in Udaipur. After the death of Maha-Rawal Udal Singhji, the Ruler of Bagar, about 1529, his territory was divided between his two sons, Jagmal Singhji and Prithvi Rajji, and the descendants of the two families are now the Rulers of Banswara and Dungarpur respectively. Where the town of Banswara now stands, there was a large Bhilpal or colony under a powerful Bhil Chieftain, named Wasna, who was defeated and slain by Maharawal Jagmal Singhji about 1530. The name of Banswara is by tradition said to be a corruption of Wasnawara or the country of Wasna. Others assert that the word means the country (wara) of bamboos (bans). Nearly three centuries after its foundation by Maharawal Jagmal Singhji, Maharawal Bijai Singhji anxious to get rid of the supremacy of the Mahrattas offered to become a tributary to the British Government. In 1818, a definite treaty was made with his successor, Maharawal Umed Singhji. Banswara has been described as the most beautiful portion of Rajputana, it looks its best just after the rains. The principal rivers are the Mahi, the Anas, the Eran, the Chap and the Haran.

The present Ruler, His Highness Rayan Rai Maharajadhiraj Maharawalji Sahib Shree Sir Pirthi Singhji Bahadur, K.C.I.E., was born on July 15, 1888. He is the 21st in descent from Maharawal Jagmal Singhji and enjoys a Salute of 15 guns. His Highness was educated at the Mayo College and conducts the administration of the State with the assistance of a Diwan. Here is a Legislative Council (with a non-official Majority) of which the Diwan is the President. A High Court has also been established.

On the outbreak of the present war, His Highness the Maharawal Sahib Bahadur placed the entire resources of the State at the disposal of His Majesty the King Emperor. A message of appreciation for the offer by His Majesty was conveyed through His Excellency the Viceroy. Substantial amounts have also been contributed by the State and His Highness towards the War Funds and War Loans. A local War Committee consisting of officers, jagirdars and leading citizens of the State has been established and efforts are being made to collect substantial amounts.

Diwan and President, Legislative Assembly—
Maharaj Lal Singh

Dungarpur State, with Banswara, formerly comprised the country called the Bagar. It was invaded by the Mahrattas in 1818. As in other States inhabited by hill tribes, it became necessary at an early period of British supremacy to employ a military force to coerce the Bhils. The State represents the *Gadi* of the eldest branch of the Sisodias and dates its separate existence from about the close of the 12th Century. Samant Singh, King of Chitor, when driven away by Kirtipal of Jalor, fled to Bagar and killed Chowrasimal, Chief of Baroda, and founded the State of Dungarpur. The present Chief is His Highness Rai-i-Rayan Mahimahendra Maharajadhiraj Maharawal Shri Sir Lakshman Singhji Bahadur, K.C.S.I., born on 7th March 1908, succeeded on 15th November 1918 and assumed charge of the administration on the 16th February 1928. No railway line crosses the territory, the nearest railway station, Udaipur, being 65 miles distant and Talod on Ahmedabad side, being about 70 miles distant. Area 1,400 sq miles. Population: 2,74,000. Revenue Rs 10 lakhs.

Partabgarh State, also called the "Kanthal" was founded in the sixteenth century by a descendant of Rana Mokul of Mewar. The town of Partabgarh was founded in 1698 A.D. by Maharawat Patabsingh. In the time of Maharawat Sawant Singh (1775-1844), "Kanthal" was invaded by the Marathas, but the Maharawat arranged to buy off the Holkar by agreeing to pay Rs 72,700 *Salam Shahi*, which were being coined in Partabgarh and accepted as good and legal tender throughout the surrounding territories. The first connection of the State with the British Government began as early as 1804. Holkar, by the Treaty of Mandsore, ceded all his rights of collecting tributes, etc., from the States of Rajputana to the East India Company, as a result of which Partabgarh continued to pay the former cash payment of Rs 72,700 *Salam Shahi* (subsequently converted to Rs 36,350 British) to the British Government. As it has, however, been considered to be excessive, it has been reduced to Rs 27,500 from the year 1937-38. The present Ruler is His Highness Maharawat Sir Ram Singhji Bahadur, K.C.S.I., who was born in 1908 and succeeded to the *gadi* in 1929. The Ruler enjoys a dynastic salute of 15 Guns and Partabgarh is one of the Treaty States enjoying plenary jurisdiction. The highest administrative and executive office is termed "Mahakma Khas" where sit His Highness and the Dewan. There is a graded judiciary under a separate High Court Judge, who is unconnected with the Executive. Annual average revenue Rs 5,82,000.

Jodhpur State is the largest in Rajputana with an area of 36,071 square miles and a population of 2.5 millions, of which 80% are Hindus, 8.6% Muslims and the rest Jains and Animists. The greater part of the country is an arid region. It improves gradually from a mere desert to comparatively fertile land as it proceeds from the west to the east. The rainfall is scanty and capricious. There are no perennial rivers and the supply of sub-soil water is very limited. The only important river is the Luni.

Sirohi State is much broken up by hills. c' the main feature is Mount Abu, 5,650 feet. Rana Rajputs, a branch

Sirohi State is much broken up by hills, of which the main feature is Mount Abu, 5,650 feet. The Chiefs of Sirohi are Deora Rajputs, a branch of the famous Chauhān clan which furnished the last Hindu kings of Delhi. The present capital of Sirohi was built in 1425. The city suffered in the eighteenth century from the wars with Jodhpur and the depredations of wild Mra tribes. Jodhpur claimed suzerainty over Sirohi but this was disallowed and British protection was granted in 1823. The present ruler is His Highness Maharajadhiraj Maharao Shri Sa Sarup Ram Singh Bahadur, G.C.I.E., K.C.S.I. The State is ruled by the Maharao with the assistance of a Council consisting of Chief Minister Rao Bahadur Ichhshanker K. Pandya, B.A., LL.B., and two other members. Revenue on about Rs 10½ lakhs

Jaipur is the fourth largest State in Rajputana. It consists for the most part of level and open country. It was known to the ancients as Matsya Desh, and was the kingdom of the King Virata mentioned in the Mahabharata, in whose court the five Pandava brothers during their last period of exile resided. Bairat in the Jaipur State has been identified.

The Maharaja of Jaipur is the head of the Kuchava clan of Rajputs, which claims descent from Kush, son of Rama, King of Ayodhya, the famous hero of the famous epic poem, the Ramayana. This dynasty in Eastern Rajputana dates as far back as ninth century A.D. Dulna Rai, one of its most early rulers, made Amber the capital of the State in 1037 A.D. About the end of 12th century one of the rulers, Pajun at the head of the army of Prithvi Raj, Emperor of Delhi, defeated Shahabuddin Ghori in the Khyber Pass and pursued him as far as Ghazni. Prithvi Raj had given his sister in marriage to him.

The late ruler Major His Highness
S. Ramnagar-Rajahm Hindustan Raj Rajendra
Sinh Maharajah Sir Sawal Min Singh
Bahadur G.C.I.E. was born on 21st August
1911. He was adopted by His late Highness
on 24th March 1921. He is a scion of the
Rajawat House of Isarda, and ascended the
throne on the 7th September 1922, and was
married to the sister of the present Maharaja
of Jodhpur on the 30th January 1924, from
whom he has a daughter and a son and
their (6) 2nd October 1931). His second
marriage with the daughter of his late
Highness Maharaja Sir Sumar Singh Bahadur
of Jodhpur was celebrated on the 24th April 1932
from whom he has two sons: the first born in
England on the 5th May 1933 and the second
born on the 10th December 1935. Thirdly he
married the younger sister of His Highness
Maharaja Narayan Bhup Bahadur Maha-
raj of Cochin Bharu on 9th May 1940.

The revenue of the State during the year 1940-41 was Rs. 2,07,971 and expenditure Rs. 1,49,817-3. The Jodhpur Railway, extending from Hyderabad to Kuchaman Road, with its branches on all sides in the territories of the State, is the principal railway while the B. B. & C. I. Railway runs across a portion of the south-eastern border. The famous marble quarries of Vakrana as well as the Salt Lake at Sambhar are situated in Jodhpur territory.

Jaisalmer State is one of the largest States in Rajasthan and covers an area of 16,000 square miles. The Rulers of Jaisalmer belong to the Jaden clan and are the direct descendants of Sri Krishna. Jaisalmer City was founded in 1156, and the State entered into an alliance of perpetual friendship with the British Government in 1818. In 1844 after the British conquest of Sind the forts of Shahgarh, Garsia and Ghotara marriage of Sir Samundar Singh and Princess Hichness Maharrja was celebrated on the 24th April 1933. Sir Samundar Singh of Jodhpur was celebrated on the 24th April 1933 from whom he has two sons: the first born in England on the 5th May, 1933 and the second born on the 10th December, 1935. Thirdly he married the younger sister of His Highness Fariddudin Naryan Rana Bahadur Maharaja of Cooch Behar on 9th May 1940.

His Highness the Maharaja Sahib Bahadur was invested with full powers on 14th March, 1931. His Highness was appointed Honorary Lieutenant in the Indian Army on the 25th April, 1931, and was promoted to the rank of Honorary Captain on the 1st January, 1934. In 1933, His Highness took his Polo Team to England, where it achieved exceptional success, setting up a record by winning all open tournaments. His Highness again visited England in 1935, sailing from Bombay on the 9th May and returning to Jaipur on the 6th September. While in England His Highness was invested by His Majesty the King Emperor with the Insignia of **GOIE**, which distinction was conferred on him on the 3rd June, 1935. His Highness again visited England in May, 1936, returning to Jaipur in August of the same year. In December, 1936, His Highness met with an accident while playing Polo and had to proceed to Vienna (Austria) in January, 1937, for expert Medical advice. After undergoing a course of medical treatment for about eight weeks, he returned to his capital in March, 1937. His Highness left Jaipur on the 19th April, 1937, to attend the Coronation of His Majesty the King Emperor in London and returned to Jaipur on the 26th September, 1937. His Highness paid another visit to England in 1938 flying from Jodhpur on the 8th May and returning to Jaipur on the 17th July. A Chief Court of Judicature was established in 1921. The army consists of Cavalry, Infantry, Transport and Artillery. The normal revenue is about one crore and thirty five lakhs *tharshahi* equals Rs 1,43,43,000 *Kaldar* (British Government).

The population of the State is 3,040,876. In area it is 16,682 square miles.

Kishangarh State is in the centre of Rajputana and consists practically of two narrow strips of land separated from each other, with an area of 858 square miles (population 1,04,155), the northern mostly sandy, the southern generally flat and fertile. The Ruling Princes of Kishangarh belong to the Rathor clan of Rajputs and are descended from Maharaja Kishan Singh (second son of Maharaja Udai Singh of Jodhpur) who founded the town of Kishangarh in 1611. The present ruler is His Highness Umdae Rajhai Baland Makan Maharajadhiraj Maharaja Summar Singh Bahadur. He was born on the 27th January, 1920, and is being educated at the Mayo College, Ajmer. On the demise of His late Highness on the 3rd February 1939, he succeeded to the *gadi* on the 24th April, 1939. Revenue about Rs 75 lakhs and expenditure Rs 65 lakhs.

Lawa in Rajputana is a separate chieftship under the protection of the British Government and independent of any Native States. It formerly belonged to Jaipur and then became part of the State of Tonk. In 1867, the Nawab of Tonk murdered the Thakur's uncle and his followers, and Lawa was then raised to its present position. The Thakurs of Lawa belonged to the Naruka sect of the Kachwaha Rajputs. The present Thakur, Bansperdeep Singh, was born on September 24, 1923, and succeeded to the chieftship on 31st December 1929.

Bundi State is a mountainous territory in the south-east of Rajputana. The Ruler of Bundi is the head of the Hara sect of the great clan of Chauhan Rajputs and the country occupied by this sect has for the last five or six centuries been known as Haraoti. The State was founded in the early part of the thirteenth century and constant feuds with Mewar and Malwa followed. It threw in its lot with the Mahomedan emperors in the sixteenth century. In later times it was constantly ravaged by the Mahrattas and Pindaries and came under British protection in 1818. The present ruler of the State is His Highness Hadendra Shiromani Deo Sar Buland Rai Maharajadhiraj Maharao Raja Sir Ishwari Singhji Saheb Bahadur, **G O I E**. He was born on 8th March, 1893, and succeeded to the *Gadi* on 8th August, 1927. His Highness is entitled to a salute of 17 guns. His apparent Maharaj Kumar Shri Bahadur Singhji Grandson Bhanwar Shri Ranjit Singhji Bahadur. Revenue about Rs 16 lakhs *Kaldar*.

Tonk State—Partly in Rajputana and partly in Central India, consists of six Parganas separated from one another. The ruling family belongs to the Salarzal clan of the Bunerwal Afghan tribe. The founder of the State was Nawab Muhammad Amir Khan Bahadur General of Holkar's Army from 1798-1806. Holkar bestowed grants of land on him in Rajputana and Central India and the land so granted to him was consolidated into the present State. The present Ruler of the State is His Highness Said-ud-Daula, Wazir-ul-Mulk Nawab Hafiz Sir Muhammad Saadat Ali Khan Bahadur Saulati-Jang, **G O I E**, who ascended the Masnad in 1930. The administration is conducted by His Highness the Nawab in consultation with a Council of four members, viz., (1) D E Augiar, **G I E**, J P, Vice-President, State Council and Finance Member; (2) Khan Bahadur Sz. Mohammad Abdul Tawwab Khan, Home Member; (3) Razada Naraindas, B A, LL B, Judicial Member; (4) Syed Nasiruddin Hayder, Revenue Member.

Revenue .. Rs. 21,76,283 Expenditure Rs 21,03,884

Secretary Council—Maqul Ahmed, B.A.

Private Secretary to H. H.—R. S. Babu Chandmall, B A

Durbar Secretary to H. H.—Khan Sahib Mirza Hamid Ali Khan.

Shahpura State—The ruling family belongs to the Secsodia clan of Rajputs. The State came into existence about 1629 when the Parganah of Phulla was granted by the Mughal Emperor Shah-Jehan to Maharaj Surjan Singh, son of Maharaj Surajmal, the second son of Maharana Amar Singh of Udaipur.

The present Ruler is Rajadhiraj Shri Umald Singhji Bahadur. The State enjoys a permanent salute of 9 guns and full internal Powers.

Bharatpur State—Consists largely of an immense alluvial plain, almost 2,000 sq miles in size watered by the Banganga and other monsoon rivers.

The rulers of Bharatpur are Jats, of the Sinsinwar clan, who trace their ancestry to the eleventh century. The family derives its name from its old village Sinsini. Bharatpur was the first State in Rajputana that made alliance with the British Government in 1803. It helped Lord Lake with 5,000 horses in his conquest of Agra and the battle of Laswari in which the Maratha power was entirely broken, and received 5 districts as reward for the service. In 1804, however, Bharatpur sided with Jaswant Rao Holkar against the British Government which resulted in a war. Peace was re-established in 1805 under a treaty of alliance and it continues in force. The *Gadi*, being usurped by Darjan Sal in 1825, the British Government took up the cause of the rightful heir Maharaja Balwant Singh Sahib. Bharatpur was besieged by Lord Combermere, and as the faithful subjects of the State also made common cause with the British Army, the usurper was quickly disposed of, and Maharaja Balwant Singh, the rightful heir, came into his own. Bharatpur also rendered valuable service to the British Government during the Mutiny. During the Great War the Bharatpur Durbar gave valuable help to the Imperial Government. The Bharatpur Imperial Service Infantry served in East Africa and the Mule Transport Corps served in all theatres of war except Africa.

The present ruler is His Highness Maharaja Shri Brijendra Sawai Shri Brijendra Singh Bahadur Bahadur Jung, who was born on 1st December, 1918 and succeeded his father in 1929. His Highness was invested with ruling powers on 22nd October, 1939. He married the youngest sister of H. H. the Maharaja of Mysore on 18th June, 1941. He is giving valuable help to the British Government in the present war. The total collections towards the War Fund and War Loan upto the end of October, 1941 amounted to Rs 1,11,200 and Rs 3,25,000 respectively, besides a monthly contribution of Rs 1,000 being made by the Durbar. About 700 recruits have so far been enlisted. A Rifle Company of 136 together with 121 personnel of the M. T. Section has been despatched to British India and the Durbar have also sanctioned several concessions for encouraging people to join war appointments.

Population of the State	5,75,625
Salute	.. 19 guns
Average Revenue	.. 32,20,000

Dholpur State.—The family of the ruling Chiefs of Dholpur belongs to the Bamrolia Jats, the adopted home of one of their ancestors. The family took the name of Bamrolia about the year 1367. They next migrated to Gwalior, where they took the part of the Rajputs in their struggles against the Emperor's Officers. Eventually the Bamrolia Jats settled near Gohad and in 1505 Surjan Deo assumed the title of Rana of Gohad. After the overthrow of the Mahrattas at Panipat, Rana Bhim Singh in 1761 possessed himself of the fortress of Gwalior but lost it six years later. In order to bar the encroachments of the Mahrattas, a treaty was made with the Rana in 1779 by the British Government under Warren Hastings, and the joint forces of the contracting parties re-took Gwalior.

In the treaty of the 13th October, 1781 between the British Government and Scindia, it was stipulated that so long as the Maharaj Rana observes his treaty with the English, Scindia should not interfere with his territories. The possession of Gohad however led to disputes between the British and Scindia, and in 1805 the Governor-General transferred Gwalior and Gohad to Scindia, and that of Dholpur, Bari, Baseri, Sepau and Rajakhera to Maharaj Rana Kirat Singh. Maharaj Rana Kirat Singh died in 1836 and was succeeded by his son Maharaj Rana Bhagwant Singh on whose death in 1870 his grandson, the late Chief Maharaj Rana Nehal Singh, succeeded to the *Gadi*. Lt-Col. His Highness Rais-ud-Daula Sipahdar-ul-Mulk Saramad Rajhai Hind Maharajadhiraj Sri Sawai Maharaj Rana Sir Udal Bhan Singh Lokindra Bahadur Diler Jang Jai Deo, G.O.I.E., K.O.S.I., K.O.V.O., the present ruler, is the second son of Maharaj Rana Nehal Singh and was born on the 12th February, 1893. On the death of his brother Maharaj Rana Ram Singh, His Highness succeeded to the *gadi* on March 1911.

Karauli State.—A State in Rajputana under the political control of the Resident for Rajputana, lying between 26° and 27° north latitude and 76° 30' and 77° 30' east longitude. Area, 1,242 square miles. The river Chambal forms the south-eastern boundary of the State, dividing it from Gwalior Scindia's Territory, on the west and south-west it is bounded by Jaipur; on the north by Bharat-pore and on the north-east by Dholpur. The state pays no tribute either to the British Government or to any other Indian State. Languages spoken Hindi and Urdu.

Ruler.—His Highness Maharajadhiraj Maharaja Sir Bhom Pal, Deo Bahadur, Yadukul Chandra Bhal, K.O.S.I. Heir-apparent—Maharaj Kumar Ganesh Pal Dewan—Pandit Iswar Narani Kitchlu, B.A., LL.B.

Kotah State belongs to the Hara Section of the clan of Chauhan Rajputs. The early history of their house is, up to the 17th century, identical with that of the Bundi family, of which they are an offshoot. Its existence as a separate State dates from 1625. The present Ruler is H. H. Maharao Bhim Singhji Sahib Bahadur who was born in 1900 and succeeded to the *gadi* in December, 1940. The Administration is conducted by His Highness with the assistance of a State Council of three ministers, viz Dewan Bahadur Sir Harilal Gosalia, Kt., M.A., LL.B., Vice President and Prime Minister, Raj Chandra Sen Ji of Kunadi, General Minister, Rao Sahib N. V. Joshi, Revenue Minister.

The total area of the State is 5,684 square miles and its average annual income amounts to about Rs 53 lakhs. The population of the State according to the census of 1941 is 777,303.

Jhalawar State consists of two separate tracts in the south-east of Rajputana with an area of 813 square miles, yielding a revenue of about Rs. 8 lakhs. The ruling family belongs to the Jhala clan of Rajputs. The present Ruler, Lieut. His Highness Maharaj Rana Sir Bardneja Singhji, K.O.S.I., succeeded to the *Gadi*.

on 13th April, 1929 He was born in 1900 and educated at the Mayo College, Ajmer, and Oxford University The heir-apparent Yuvraj Harishchandra, was born in England on 27th September, 1921

Dewan—Rai Bahadur Sahasdevaker Bhaya Shadlaji, B A, LL B

Bikaner State in point of area (23,317 sq miles), is the sixth largest of all the Indian States and the second largest in Rajputana The population of the State is 12,92,938 of whom 77 per cent are Hindus, 14 per cent Mahomedans, 6 per cent Sikhs and 3 per cent Jains The capital city of Bikaner, with its population (including the suburbs) of 1,27,226 is the third city in Rajputana

The northern portion of the State consists of level loam land, whilst the remainder is for the most part sandy and undulating The average annual rainfall is about 12 inches The water level over most of the State is from 150 feet to 300 feet deep

The Reigning Family of Bikaner belongs to the Rathore clan of Rajputs The State was founded in 1465 A D by Rao Bikaji, the eldest son of Rao Jodhaji, Ruler of Marwar (Jodhour), and after him both the Capital and the State are named Rajah Rai Singhji the 6th Ruler and the first to receive the title of Rajah, was "one of Akbar's most distinguished Generals", and it was during his reign that the present Fort of Bikaner was built in 1593 The title of Maharajah was conferred on Rajah Anup Singhji by the Mughal Emperor Aurangzeb in 1687 in recognition of his distinguished services in the capture of Golconda The conspicuous services of Maharajah Sardar Singhji, who in the Indian Mutiny of 1857 personally led his troops to co-operate with the British forces in the field on the outbreak of the Mutiny, were acknowledged by the Government of India by the transfer of the Sub-Tehsil of Tibi, consisting of 41 villages from the adjoining Sirsa Tehsil in the Punjab to the Bikaner State

The present Ruler, General His Highness Maharajadhiraj Raj Rajeshwar Narendra Shiromani Maharajah Sri Ganga Singhji Bahadur, G.C.S.I., G.O.I.E., G.O.V.O., G.B.F., K.O.B., A.D.C., LL.D., is the 21st of a long line of distinguished rulers renowned for their bravery and statesmanship He was born on the 13th October 1880, and assumed full ruling powers in December 1898. He was awarded the first class Kaisar-i-Hind Medal for the active part he took in affording relief during the famine of 1899-1900, and soon after he went on active service to China in connection with the China War of 1900-1901 in command of his famous Ganga Risala and was mentioned in despatches and received the China Medal and K.O.I.E

The State Forces consist of the Army Headquarters with a strength of 7, Camel Corps, known as 'Ganga Risala,' with a sanctioned strength of 563 including the Band, an Infantry Battalion known as Sadul Light Infantry 773 strong a Regiment of Cavalry known as Dungri Lancers 342 strong including His Highness' Body Guard a Battery of Artillery

(4 guns 3 7" Howe) 245 strong, and two sections of Motor Machine Guns 100 strong The total strength of the Bikaner Army including the Camel Battery armed with Muzzle Loading Guns and the units raised during the war, viz 2nd Infantry Battalion, 3rd Infantry Battalion, Training Battalion and Artillery Training Centre, is 3,773

At outbreak of the Great War in 1914, His Highness immediately placed the services of himself and his State forces and all the resources of the State at the disposal of His Imperial Majesty the King-Emperor. The Ganga Risala reinforced by the Infantry Regiment which became incorporated in the Camel Corps in the field, rendered very valuable services in Egypt and Palestine. An extra force was also raised for internal security. His Highness personally went on active service in August 1914 and enjoys the honour of having fought both in France and Egypt, and thus has the distinction of having fought for the British Crown on three Continents, viz., Asia, Europe and Africa. He was mentioned in despatches both in Egypt and France. His Highness also played a very conspicuous political part during the last War when he went twice to Europe as the Representative of the Princes of India, once in 1917 to attend the meetings of the Imperial War Cabinet and Conference, and again in 1918-19 to attend the Peace Conference where he was one of the signatories to the Treaty of Versailles His Highness led the Indian Delegation to the 11th Assembly of the League of Nations at Geneva and represented the Indian States at the Imperial Conference in 1930. His Highness played a conspicuous part in the Indian Round Table Conference and the Federal Structure Sub-Committee both in 1930 & 1931 and attended the Silver Jubilee of the Reign of His Majesty King George V and the Coronation of His Majesty King George VI in 1935 & 1937 respectively.

At the commencement of the present War also His Highness placed the personal services of his own and those of the Heir-Apparent, as well as the entire resources of the State, at the disposal of the British Government His Highness, accompanied by Yuvraj Kumar Sri Karni Singhji Bahadur, proceeded on active service to the Middle East Front in November 1941 The Ganga Risala, the famous Bikaner Camel Corps, with 45 per cent over its original establishment, the Sadul Light Infantry (Mechanised) which was reorganised from 3 companies basis to 4 companies and the Bijay Battery have proceeded outside the State and are serving with His Majesty's Forces Due to the war the military expenditure of the State has risen from Rs 8½ lakhs to 24 lakhs, showing an increase of 182 per cent over and above peace time expenditure

His Highness enjoys a salute of 19 guns (personal) whilst the permanent local salute of the State is also 19 His Highness has had the honour of being elected the first Chancellor of the Chamber of Princes on its Inauguration in February 1921, an office which he filled most creditably for 5 years till 1926 He was Hon General Secretary to the Princes' Conferences held in Delhi from 1916 to 1920

Her Highness Maharani Sri Bhatiani received the Imperial Order of the Crown of India on New Year's Day, 1935.

His Highness is assisted in the administration by a Prime Minister and an Executive Council. The post of Prime Minister is held by Colonel Maharaj Sri Mandhata Singh Bahadur, CSI.

A Legislative Assembly was inaugurated in 1913, and has a non-official majority, it meets twice a year.

The revenues of the State according to budget estimates for 1941-42 are ordinary Rs 1,58,11,000, capital and extraordinary Rs 20,56,000—total Rs 1,78,67,000.

The State owns a large Railway system, the total mileage being 883.05. The last portion of the Sadulpur-Rewari Chord Lane—87.20 miles—was opened on the 1st March 1941. This extension forms an important connection towards Delhi. Another project under contemplation is that from Sri Kolayat to Sindri Jaisalmer, an approximate distance of 300 miles.

Till 1927 there was practically no irrigation in the State, the crops depending only on the scanty rainfall; but the construction and opening in 1927 of the Gang Canal, taken out from the Sutlej River, has helped to protect about 6,20,000 acres of land in the northern part of the State against famine from which it has suffered in the past. 3,44,460 bighas of the Canal land have already been sold and further sale is going on. Even larger expectations are held out of the Bhakra Dam Project from which it is hoped that the remaining level lands in the north of the State will be irrigated.

A coal mine is worked at Palana, 14 miles south the Capital.

Alwar State—The State was founded in 1775 by Maharao Raja Pratap Singh of Macheri, with Alwar as its capital, and until the beginning of the nineteenth century maintained somewhat loose political relations with the Moghal Court at Delhi. With the final decline of the Moghals, relations were opened with the East India Company resulting in the State's first and most important Treaty with the British "Government" of Offensive and Defensive Alliance in 1803. Thereafter various other Treaties, Agreements and Engagements have been entered into with the British Government and several Sanads have been granted to the State. (See Aitchinson's Treaties).

The seventh and present Ruler, His Highness Shri Sewai Maharaj Tej Singh Dev, succeeded to the *gadi* from Thana on the 22nd July 1937.

The State has on several occasions placed its forces at the disposal of the British Government. In August 1900 a detachment of infantry, 700 strong, was despatched for service in China. On the outbreak of the Great War in 1914, the Alwar Imperial Service Infantry and one Squadron of the Alwar Lancers proceeded on active service. When hostilities with Afghanistan broke out in May 1919, the Alwar State Forces proceeded to the North-West Frontier. During the present emergency, the State has again placed its resources at the disposal of His Majesty's Government and has supplied a full Infantry Battalion, the Alwar Jey Paltan for service outside the State.

Palanpur.—Palanpur is a first class State with an area of 1,774.64 square miles and a population of 3,15,855. The net revenue of the State calculated on the average of the last five years is about Rs 11,65,000.

Lieut.-Colonel His Highness Zubd-tul-Mulk Dewan Mahakhan Nawab Shri Taley Muhomed Khan Bahadur, G.C.I.E., K.C.V.O., A.D.C., Nawab Saheb of Palanpur, rules the State. The Ruling Family is of Afghan origin, belonging to the Lohani Stock, and had established their principality in Rajputana in the 14th century. The connection with the British may be said to have definitely begun from 1817 A.D., when Dewan Fateh Khan II entered into relations with the East India Company. A considerable trade in cloth, wheat, ghee, wool, hides, castor and rapeseeds, sugar and rice is carried on in the State. The capital city of Palanpur is situated on the B.B. & C.I. Railway and is the junction station of the Palanpur State Railway. Palanpur is a very old settlement of which mention was made in the 8th century.

CENTRAL INDIA AGENCY.

Central India Agency is the name given to the country occupied by the Indian States grouped together under the supervision of the Political Officer who is designated the Resident for Central India, with headquarters at Indore. As constituted in 1921—that is, after the separation of the Gwalior Residency—it is an irregularly formed tract lying in two sections, the Eastern comprising Bundelkhand Agency between 22°-38' and 26°-19' North and 73°-10' and 83°-0' East and

the Western consisting of the Bhopal and Malwa Agencies between 21°-22' and 24°-47' North and 74°-0' and 78°-50' East. The British districts of Jhansi and Saugor and the Gwalior State divide the Agency into two sections. The total area covered is 51,651.11 square miles and the population (1931) 6,635,737. The great majority of the people are Hindus. There are 28 Salute States of which the following 10 have direct treaty engagements with the British Government—Indore, Bhopal,

Rewa, Orchha, Datia, Dhar, Dewas Senior Branch, Dewas Junior Branch, Samthar and Jaora. All of these are Hindu except Bhopal, Jaora and Baoni which are Mahomedan. Besides these there are 61 Minor States and Guaranteed Estates. Excluding the Indore and Rewa States and the Hrapur and Lalgarh the States and Estates are divided into the following groups for administrative purposes — Bhopal Agency, 12 States and Estates (principal States Bhopal, Dewas Senior Branch, Dewas Junior Branch), Bundelkhand Agency, 33 States and Estates (principal States Orchha and Datia), Malwa Agency, 40 States and Estates (principal States Dhar, Jaora and Ratlam). The Agency may roughly be divided into two natural divisions, Central India West comprising the former plateau division with such hilly land as lies on this side and Central India East, comprising the former low-lying area and the Eastern hilly tracts. The hilly tracts lie along the ranges of the Vindhya and Satpura. They consist of forest areas and agriculture is little practised there, the inhabitants being mostly members of the wild tribes. The territories of the different States are much intermingled and their political relations with the Government of India and each other are very varied.

The following is the size, population and revenue of the ten treaty States mentioned above.—

Name.	Area in square miles	Population	Revenue
			Lakhs Rs
Indore	9,902	15,08,820	126
Bhopal	6,924	7,81,660	80
Rewa	13,000	18,20,306	51 80
Orchha	2,080	3,62,554	18 82
Datia	912	1,74,072	13½
Dhar	1,800	2,53,258	17½
Dewas, Senior Branch	440	89,479	6½
Dewas, Junior Branch	419	83,464	6½
Samthar	178	38,279	3½
Jaora	602	1,16,738	12½

Indore—The founder of the House of the Holkar of Indore was Malhar Rao Holkar, born in 1693. His soldierly qualities brought him to the front under the Peshwa, who took him into his service and employed him for his conquests. When the Maratha power was weakened at the battle of Panipat in 1761, Malhar Rao had acquired territories stretching from the Deccan to the Ganges as a reward for his career as a Military Commander. He was succeeded by his grandson. On his death without issue his mother Maharani Devi Ahilya Bai became the Ruler and her administration is still looked upon with admiration and reverence as that of a model ruler. She was succeeded by Maharaja Tukoji I who had been associated with her to carry on the Military administration and had in the course of it distinguished himself in various battles. He was succeeded by Maharaja Kashirao, and the latter by Maharaja Yeshwant

Rao, his step-brother, a person of remarkable daring strategy as exhibited in a number of engagements in which he had taken part. The brilliant success he obtained at the battle of Poona against the combined armies of the Peshwa and the Scindia made him a dictator of Poona for some time and he declared in consequence the independence of Holkar State. During 1804-5 he had a protracted war with the British, ending in a Treaty which recognised the independence of Holkar State with its territories. Yeshwant Rao died in 1811, when he was succeeded by his minor son Maharaja Malhar Rao II. During the Regency which followed, the power of the State was weakened by various causes, the most important of which was the refractory conduct of the Military Commanders. On the outbreak of the war between the English and the Peshwa in 1817, some of these Commanders, with a part of the army, rebelled against the authority of the State and were disposed to befriend the Peshwa, while the regent mother and her Ministers were for friendship with the British. There was a battle between the British Army and this refractory portion of the Holkar Army which culminated in the latter's defeat. A treaty of peace and amity was signed in 1818. The internal sovereignty remained unaffected. The Treaty still regulates the relation between the Crown and the Maharaja Holkar.

Malhar Rao died a premature death in 1833. Then followed the administration of Hari Rao and his son. In 1844, H. H. Maharaja Tukoji Rao II ascended the Throne, but as he was a minor, the administration was carried on by a Regency under Sir Robert Hamilton, the Resident, as its Adviser. The prosperity of the State revived a great deal during this administration and the progress was maintained after the Maharaja assumed powers in 1852. It was interrupted by the outbreak of the Mutiny in 1857 in British India. This wave of disaffection did not leave some of the State troops untouched. The Maharaja with his adherents and the remaining troops remained, however, staunch to the British and gave every possible assistance to the British authorities at Indore, Mhow and other places which was recognised by the British Government. The Maharaja died in 1886 after having effected various reforms in the administration and raised the position of the State to a high degree of prosperity and honour. He was succeeded by H. H. Maharaja Shivaji Rao who reigned for 16 years and will be specially remembered for his beneficent measures in matters of education, sanitation, medical relief and abolition of transit duties. H. H. Maharaja Tukoji Rao III succeeded in 1903 while yet a minor. The Regency Administration was continued till 1911 and it effected a number of reforms in all the branches of administration. The policy of the Regency was maintained by the Maharaja. With his assumption of powers the State advanced in education, including female education, commerce and industrial developments, municipal franchise and other representative institutions. This prosperity was specially reflected in the Indore City, the population of which rose by 40 per cent.

During the war of 1914 the State placed all its resources at the disposal of the British Government. Its troops took part in the various

theatres of war and the contribution of the State towards the war and charitable funds in money was 41 lakhs and its subscriptions to the War Loans amounted to Rs. 82 lakhs, while the contribution from the people of Indore amounted to over one crore. This assistance received the recognition of the British Government.

His Highness Maharaja Tukoji Rao III abdicated in favour of his son. The present Ruler, His Highness Maharajadhiraj Raj Rajeshwar Sawai Shree Yeshwant Rao Holkar Bahadur, G.C.I.E., was born on 6th September 1908. He received his education in England during 1920-23 and again at Christ Church College, Oxford, from 1926 till his return in 1929. He married a daughter of the Junior Chief of Kagal (Kolhapur) in February, 1924, and the Princess Usha Devi was born in 1933. Her Highness Maharani Sanyogita Bai died in July 1937. His Highness's educational career at Oxford in England having come to an end, he returned to India arriving at Indore on the 12th November 1929, and after receiving administrative training, assumed full ruling powers on 9th May 1930. In September 1938 His Highness married Miss Marguerite Lawler.

The administration of the State is carried on by the Ruler assisted by the State Cabinet. The Prime Minister is the President of the Cabinet and the Chief Executive Authority. Wazir-ud-Dowlah Rai Bahadur Colonel Dinanath, G.C.I.E., is the Prime Minister.

The area of the State is 9,934 square miles and the revenue is Rs. 1,21,94,900. According to the Census of 1941 the population of the State is 1,513,966 showing an increase of 14.25 per cent over the Census figures of 1931.

There are three first grade Colleges in the City, two are maintained by the State, one teaching upto M.A. and LL.B. and the other a Teachers' Training College. The College prepares teachers for the C.T. Examination of the Ajmer Board of Education by whom it is recognised. Steps are being taken to get it affiliated to the Agra University in B.T. Degree. The third is maintained by the Canadian Mission and teaches upto M.A. in Philosophy. The State has 10 High Schools, one Sanskrit and 750 Middle and Primary educational and 81 Medical Institutions. School education is free for boys upto Primary standard and for girls throughout. Of the 10 High Schools 2 for girls and 5 for boys are maintained by the State and 3 by private enterprise. In addition to these 750 institutions, one School of Art, another for classical Music and 3 Vernacular Teachers Training Institutions—2 for male and one for lady teachers—are run at Government expense. Out of 750 Middle and Primary institutions 447 are Government, 70 recognised and aided 232 private unrecognised and unaided institutions. Two schools are also run on Montessori lines. 20 new Primary Schools are opened every year with a view to provide adequate facilities for free Primary Education for the masses. The reorganised Primary School curriculum has worked for more than one year and has succeeded considerably in giving vocational bias to education. Moral teaching forms a part of the subject. It aims chiefly at habit formation. After careful survey of

the State territory in the programme of expansion of education for masses in the State, compulsory education has been introduced in the Nimawar District to provide, for which, 55 additional schools have been opened under the scheme. The scheme provides for full sledge Upper Primary education. Provision has also been made for supply of free reading and writing material to the children of Agriculturists. Funds have been sanctioned for school buildings. The scheme has so far borne very encouraging results. The State Government have sanctioned Schemes for running a Nursery School in the State and giving Mid-day Tiffin to school children in High and Middle Schools in the City. Active measures have been taken to check wastage in schools, specially at the primary stage. An Institute of Plant Industry for the improvement of cotton is located at Indore. The State has also 9 spinning and weaving mills.

The strength of the State Army is 3 Battalions of Infantry with a Training Company (the strength of about 600) recently raised for the 1st Battalion, Maharaja Holkar's Infantry, one Squadron of Cavalry, 2 Troops of Mule Transport, plus Training Centre lately organised. One M.T. Section, a Central Military Hospital and a Maternity Home and Family Welfare Centre. A reserve of Officers has been created recently. The Holkar's Transport has a magnificent record of service in the Great War of 1914-18 in Gallipoli, France, and Flanders, Egypt, Mesopotamia and the North-West Frontier and is at present on service. Ex-state. The 1st Battalion is on service overseas. The State has already given a section of M.T. Company which forms part of the Central India General Purposes Transport Company.

The State is traversed by the Holkar State Railway, the principal station of which is Indore, the B. B. & C. I. Railway and the U. B. Section of the G. I. P. Railway.

Besides the trunk roads, there are 601 miles of roads constructed and maintained by the State. The reforms introduced recently are the establishment of State Savings Banks, amelioration of Harijans, a scheme of Life Insurance for State officials, introduction of a scheme of compulsory primary education in the City of Indore, measures for the expansion of education in the mofussil, a scheme for the formation of the Holkar State Executive Service, a scheme of water supply and main drainages in Indore City, raising of the marriageable age of boys and girls to 18 years and 14 years respectively, and the passing of the Indore Nukta Act and the Marriage Expenses Controlling Act for controlling expenditure on funeral ceremonies and marriages. Special attention is being concentrated on the Rural Uplift work for which a comprehensive scheme provides for an eightfold plan of welfare activities. Rural Uplift Centres have, for the present, been established in the Nemawar District and it is proposed to extend the sphere of activities by establishing similar centres in other Districts and gradually increasing their number. His Highness has sanctioned a contribution of Rs. 1,00,000 every year from his Privy Purse for Rural Uplift work, and a further gift of Rs. 1,00,000 annually, also from his Privy Purse for construction of houses for the poor workers.

Recently His Highness the Maharaja has sanctioned Constitutional Reforms based on the recommendations of the Constitutional Reforms Committee appointed last year. According to the new reforms Indore will have a Legislative Council of 50 members consisting of 34 elected and 16 nominated members. The Council, with an elected Deputy President is invested with the rights of interpellation, it may introduce legislation and also discuss important subjects like the State annual budget. Special provision is also made for the representation of Harijans and Labour.

During the year 1940-41 the annual import trade was worth about Rs 2,55,28,208 and export trade worth about Rs 1,28,30,275. The chief imports were cloth, machinery, sugar, salt, spices, rice, coal and kerosene oil and the chief exports were cotton, cloth, tobacco and cereals. Indore occupies a notable position among textile centres in India and the total production of the industry during the year 1940-41 was worth nearly 3 crores. It is besides a very important distributing and buying centre for cloth and grains trade in which is very substantial. The State derived an income from Excise on Indian made spirits, hempdrugs, Indian made foreign spirits, tobacco, matches, spirituous preparations of Rs 13,92,270-12-0 during the year 1940-41. The policy in respect of consumption of country spirits and hempdrugs continues to be one of progressive discouragement.

The City has a well equipped Power house and an aerodrome.

His Highness has contributed a sum of two lakhs of rupees in response to Her Excellency Lady Linlithgow's appeal for Anti-Tuberculosis Fund and about half a lakh of Rupees was collected from the State subjects for the same Fund.

On the out-break of the present War, His Highness placed the entire resources of the State and its Army at the disposal of His Majesty the King-Emperor. His Highness also gave a lead by placing a sum of Rs 5,00,000 at the disposal of His Excellency the Viceroy for such War purposes as His Excellency may deem proper, and donated £1,000 to the British Red Cross Fund. The Holkar Transport has already left for training prior to being sent on active service. Large collections were made throughout the State, by organising public meetings, etc in aid of the Indian Red Cross Fund, British Red Cross Fund and the St Dunstan's Fund for the blind. Ladies Knitting Societies were formed for making articles to be used by Indian soldiers on active service abroad. In many other ways full and active support is being given by the State for the successful prosecution of the War. Liberal contributions have been made by His Highness towards the War Relief Fund and the Defence Savings Bonds, etc. His Highness the Maharaja has sanctioned the purchase of Interest Free Defence Bonds of Rs 3,00,000 and 3 per cent Government of India Bonds of Rs 1,00,000 and all Government servants of the State getting not less than Rs 50 per month have offered to pay a day's salary every month towards the purchase of Defence Bonds and Savings Certificates.

His Highness the Maharaja gave two donations of Rs 10,000 each from his Privy Purse for the Holkar State Red Cross Society and the Holkar State War Relief Fund and also contributed a sum of Rs 5,000 to the War Fund to be ear-marked for the use of the families of Indian Soldiers serving overseas. As a monumental contribution from the people of the City of Indore, £5,000 were contributed towards the cost of a Single Fighter to be named the "City of Indore" ear-marked for the defence of India. His Highness has also sanctioned a donation of £3,000 towards the Lord Mayor's Air Distress Fund. His Highness also contributed a sum of Rs 50,000 to the Russian Red Cross and a sum of Rs 50,000 to His Excellency the Viceroy's War Purposes Fund to be ear-marked for the Chinese Red Cross Fund. His Highness the Maharaja has contributed a sum of Rs 1,00,000 to His Excellency the Viceroy's War Purposes Fund to be ear-marked for the defence of India. A sum of Rs 25,000 was presented by His Highness the Maharaja to Madame Chiang Kai-Shek for the Chinese Funds during her visit to India and a further remittance of Rs 7,000 on account of the collections made on the China's Day in the State was made.

Bhopal.—This principal Mahomedan State in Central India ranks next in importance to Hyderabad among the Mahomedan States of India. The ruling family was founded by Sardar Dost Mohammad Khan, Diler-Jung, a Tirah Afghan, who, after having served with distinction in the army of the Emperor Aurangzeb, obtained the pargana of Berasia in 1709. With the disintegration of the Moghal Empire, Bhopal became an independent State. In the early part of the 19th Century the Nawab successfully withstood the inroads of Scindia and Bhonsla, and by the agreement of 1817 Bhopal undertook to assist the British with a contingent force and to co-operate against the Pindari bands. In 1818 a permanent treaty succeeded the agreement of 1817.

The present Ruler of the State, His Highness Sikander Saulat Nawab Itikharul-Mulk, Mohammad Hamidullah Khan Bahadur, GCSI, GCIE, OVO, BA, succeeded his mother, Her late Highness Nawab Sultan Jahan Begam, on her abdication in May 1926. He had previously actively participated in the administration of the State for nearly ten years as Chief Secretary and afterwards as Member for Finance and Law and Justice.

His Highness is assisted in the work of administration by an Executive Council.

The work of legislation with the right of discussing the Budget, moving resolutions and interpellations rests with a representative Legislative Council inaugurated in 1927. The *rayatwari* system in which the cultivator holds his land direct from Government has lately been introduced. The State forests are extensive and valuable, and the arable area which comprises more than two-thirds of the total area consists mostly of good soil, producing cotton, wheat, and other cereals, sugar-cane and tobacco. The State contains many remains of great archaeological interest including the famous Sanchi Topes, which date from the

The Indian States—Central India.

2nd Century B. C. and which were restored under the direction of Sir John Marshall. Sanchi Station on the G. I. P. main line to Delhi adjoins the Topes.

Among other troops, the State maintains one full strength Infantry Battalion. The Capital, Bhopal City, beautifully situated on the northern bank of an extensive lake, lies on the main broad-gauge line between Bombay and Delhi and is the junction for the Bhopal-Ujjain Section of the Great Indian Peninsula Railway.

The main industries are represented by the Bhopal Textile Mills, the Narbada Refrigerated Products Co., the Hamidia Match Factory, the Sugar Factory of Sehore, the Bhopal Straw-board Products and the Central India Chemicals Ltd.

Rewa—The largest State in Central India Agency, area 13,000 sq miles, population, 1,820,306 (1941). The Rulers are Baghel Rajputs descended from the famous Solanki clan which ruled over Gujrat from the 10th to 13th Century. During the Mutiny the Durbar rendered meritorious services to the Crown for which various *parganas*, which had been seized by the Marathas were restored to the Maharaja.

Dhar—This State, in the Malwa Political Agency in Central India, takes its name from the old city of Dhar, long famous as the capital of the Parmar Rajputs, who ruled over Malwa from the 9th to the 13th century and from whom the present Rulers of Dhar Puar Marathas claim descent. In the middle of the 18th century the Ruler of Dhar, Anand Rao, was one of the leading chiefs of Central India, sharing with the Holkar and Scindia the rule of Malwa. The State came into treaty relations with the British Government by virtue of the treaty of 1819. The present ruler, Lieutenant His Highness the Maharaja Anand Rao Puar Sahib Bahadur, was invested with full ruling powers on March 16, 1940.

There are 13 Fendatories and 9 Bhumias of whom 13 hold a guarantee from the British Government. The population of the State according to the latest census figure is 253,258 and the average Income and Expenditure are about 19 and 18 lakhs respectively.

The Administration of the State is now carried on by His Highness the Maharaja Sahib Bahadur assisted by a Council consisting of the Dewan M. K. Kher, B.Sc., LL.B., who is also the Vice-President and with two other members (Pandit Raghubir Sahai, Revenue Member and Rai Bahadur B. S. Pharakshanewale, B.A., LL.B.).

WAR CONTRIBUTIONS—When the present war broke out the Durbar offered to the British Government all the resources of the State and His Highness volunteered his personal services. Since then the State has contributed Rs 1,15,000 towards war purposes, of which His Highness contributed from his privy purse Rs 60,000 for the purchase of a Light Tank complete with arms, and Rs 5,000 towards the Lord Mayor's Air Raid Victims' Relief Fund.

Defence Bonds of the face value of Rs 68,000 along with the Interest-free Bonds of the value of Rs 25,000 have been purchased by the Darbar and liberal donations from the Officials and

public amounting to Rs 15,000 have been contributed to the War Fund, Red Cross and other Funds.

From the State Army one Demonstration Platoon has been furnished and one section of mechanised transport unit has been promised. Six Signallers and two tailors have also been sent for the Army. Four Doctors have volunteered and their services have been accepted.

The famous and ancient hill fort of Mandla the capital of several ancient and medieval Kingdoms, with its beautiful mausoleums, tombs, palaces, high hills and deep dales, is situated in the State at a distance of 24 miles from the city of Dhar.

Jaora State—This State is the only Treaty State in the Malwa Political Agency. Area, about 602 square miles, population about 116,733. Jaora is the headquarters town. The Chiefs of Jaora claim descent from Abdul Majid Khan an Afghan of the Tajik Khel from Swat. The first Nawab was Abdul Ghafoor Khan, who came in possession of the State about the year 1808. The present Chief is Lieutenant-Colonel His Highness Fakhrud-Daulah Nawab Sir Mohammad Iftikhar Ali Khan Sahib Bahadur, Saulat-e-Jang, G.B.E., K.O.L.E., who was born in 1883. His Highness is an Honorary Lieutenant-Colonel in the Indian Army.

His Highness is assisted by a Council in the administration of the State as under:—

President—His Highness the Nawab—Ruler
Vice-President and Chief Minister—Khw Bahadur Syed Bunyad Hussain, B.A. (Agriculture) (Retired Collector, Punjab), (Political, Finance and Police)

Members—Major Farrukh Syar Nawabzada Mohammad Mumtaz Ali Khan Sahib (Army), Mohammad Mohammad Khan, M.A., LL.B. (Law and Justice), Sahibzada Mir Ghulam Zinnul Abedin Sahib (Education and P. W. D.), Moulvi Mohammad Rafiqullah Khan (Revenue), Moulvi Amar Nath Katju, B.Sc., LL.B.

A High Court with a Chief Justice and a Judge has also been established.

The soil of the State is among the richest in Malwa, being mainly of the best black variety bearing excellent crops of wheat, cotton and poppy. The average revenue is Rs. 15 lakhs.

Ratlam—Is the premier Rajput State in the Malwa Agency. It covers an area of 871 square miles, including the Jagir of Khera in the Kushalgarh Chiefship, which pays an annual tribute to the Ratlam Darbar. The State was founded by Raja Uday Singh of Jodhpur, in 1652. The Ruler of Ratlam is the recognised head of the Rajputs of Malwa, and important caste questions are referred to him for decision. The State enjoys full and final civil and criminal powers. The present Ruler of Ratlam is Major General His Highness Maharaja Sir Sajjan Singh, G.C.I.E., K.C.S.I., K.C.V.O., A.D.C. to His Majesty the King-Emperor. He was born in 1880, educated at the Daly College, Indore, received his military training in the Imperial Cadet Corps

and invested with full powers in 1898. His Highness served in the war in France and Egypt from 1915 to 1918, was mentioned in despatches and received the Croix d'Officiers de Legion d'Honneur. Attended London Coronation in May 1937 as His Majesty's A-D-O. Salute: 13 guns, local 15 guns.

Heir-Apparent—Maharaj Kumar Lokendra Singh, born 9th November, 1927.

Dewan—Rai Bahadur Chumman Lal, Ex-Additional Commissioner, U P.

Datin State.—The rulers of this State, in the Bundelkhand Agency, are Bundela Rajputs of the Orchha House. The territory was granted by the chief of Orchha to his son Bhagwan Rao in 1626, this was extended by conquest and by grants from the Delhi emperors. The present Ruler Lieut.-Colonel His Highness Maharaja Lokendra Sir Govind Singh Ju Deo Bahadur, G O I E. (1932), K O S I (1918) who was born in 1886, and succeeded in 1907, married 1902, enjoys a salute of 15 guns. He placed all his resources and his personal services at the disposal of the Imperial Government during the Great War and established a War Hospital at Datla. He is a progressive Ruler and has created a Legislative Council and introduced many useful and important reforms in his State. He is a Vice-President of the St John Ambulance Association and a patron of the Red Cross Society. His Highness offered to the Imperial City of Delhi the life size marble statue of Lord Reading, a former Viceroy. He has built a hospital in the city named after Mrs Heale and a girls' school named after Lady Willingdon. His Highness is a famous big game shot and has bagged more than 212 tigers.

Orchha State.—The Rulers of this State are Bundela Rajputs claiming to be the descendants of the Gaharwars of Benares. It was founded as an independent State in 1048 A.D. It is the premier Treaty State of Bundelkhand—the other Bundela Princes being the scions of Orchha House. It entered into relations with the British by the Treaty made in 1812 A.D. His Highness Maharaja Sir Pratap Singh, G O S I., G O I E., died in March 1930 and has been succeeded by his grandson His Highness Saramad-i-Rajahai, Bundelkhand Shri Sawai Mahendra Maharaja Sir Virsingh Dev Bahadur, K O S I., the present Ruler. The ruler of the State has the hereditary titles of His Highness Saramad-i-Rajahai, Bundelkhand Maharaja Mahendra Sawai Bahadur and enjoys a permanent salute of 15 guns. The State has a population of 363,405 and an area of 2,080 square miles. The capital is Tikamgarh 36 miles from Lalitpur station on the G I P Ry. Orchha, the old capital, has fallen into decay but is a place of interest on account of its magnificent buildings which were erected by Maharaja Bir Singh Dev I, the most famous ruler of the State (1605-1627). The present ruler has introduced many reforms in the state and has brought the administration to an up-to-date standard.

His Highness is assisted in the work of administration by a cabinet consisting of the following —

President—His Highness, *Vice-President*—Rao Raja Rai Bahadur Dr Shyam Behari Misra, M A, D Litt (Chief Adviser), *Members*—Lieut Col Sajjan Singh (Chief Minister), Major Chandra Sen (Finance Minister), Major M N Zutshi, B A (Home Minister), R S Shukla, M A, LL B (Political & Judicial Minister)

SIKKIM.

Sikkim is bounded on the north and north-east by Tibet, on the south-east by Bhutan, on the south by the British district of Darjeeling and on the west by Nepal. The population consists of Bhutias, Lepchas, and Nepalese. It forms the direct route to the Chumbi Valley in Tibet. The main axis of the Himalayas, which runs east and west, forms the boundary between Sikkim and Tibet. The Singalila and Chola ranges, which run southwards from the main chain, separate Sikkim from Nepal on the west, and from Tibet and Bhutan on the east. On the Singalila range rise the great snow peaks of Kinchinjunga (28,146 feet), one of the highest mountains in the world. The Chola range which is much loftier than that of Singalila, leaves the main chain at the Dongkya La.

Tradition says that the ancestors of the Rajas of Sikkim originally came from eastern Tibet. The State was twice invaded by the Gurkhas at the end of the eighteenth century. On the outbreak of the Nepal War in 1814, the British formed an alliance with the Raja of Sikkim and at the close of the war the Raja was rewarded by a considerable cession of territory. In 1835 the Raja granted the site of Darjeeling to the British and receives Rs 12,000 annually in lieu of it.

The State was previously under the Government of Bengal, but was brought under the direct supervision of the Government of India in 1906. It is thinly populated, the area being 2,818 square miles, and population 109,651, chiefly Buddhists and Hindus. The most important crops are maize and rice. There are several trade routes through Sikkim from Darjeeling District into Tibet. In the convention of 1890 provision was made for the opening of a trade mart but the results were disappointing, and the failure of the Tibetans to fulfil their obligations resulted in 1904 in the despatch of a mission to Lhasa, where a new convention was signed. Trade with British India has increased in recent years, and is now between 40 and 50 lakhs yearly. A number of good roads have been constructed in recent years. The present ruler, His Highness Maharajah Sir Tashi Namgyal, K O S I (1939), K O I E (1923), was born in 1893 and succeeded in 1914. His Highness was invested with full ruling powers on the 5th April 1918. The average revenue is Rs. 5,20,422.

Political Officer in Sikkim:—Sir Basil John Gould, Kt., C.M.G., O.I.E.

BHUTAN.

Bhutan extends for a distance of approximately 190 miles east and west along the southern slopes of the central axis of the Himalayas, adjacent to the northern border of Eastern Bengal and Assam. Its area is 18,000 square miles and its population, consisting of Buddhists and Hindus, has been estimated at 300,000. The country formerly belonged to a tribe called Tek-pa, but was wrested from them by some Tibetan soldiers about the middle of the seventeenth century. British relations with Bhutan commenced in 1772 when the Bhotias invaded the principality of Cooch Behar and British aid was invoked by that State. After a number of raids by the Bhutanese into Assam, an envoy (the Hon. A. Eden) was sent to Bhutan, who was grossly insulted and compelled to sign a treaty surrendering the Duars to Bhutan. On his return the treaty was disallowed by the treaty of 1865, by which the State's relations with the Government of India were satisfactorily regulated. The State formerly received an allowance of half a lakh a year from the British Government in consideration of the cession in 1865 of some areas on the southern borders. This allowance was doubled by a new treaty concluded in January 1910, by which the Bhutanese Government bound itself to be guided by the advice of the British Government in regard

to its external relations, while the British Government undertook to exercise no interference in the internal administration of Bhutan. On the occasion of the Tibet Mission of 1904, the Bhotias gave strong proof of their friendly attitude. Not only did they consent to the survey of a road through their country to Ohumbi, but their ruler, the Tongsa Penlop, accompanied the British troops to Lhasa, and assisted in the negotiations with the Tibetan authorities. For these services he was made a K.C.I.E., and he has since entertained the British Agent hospitably at his capital. The ruler is now known as H.H. the Maharaja of Bhutan, Sir Ugyen Wangchuk, K.C.S.I., K.C.I.E. At the head of the Bhutan Government, there are nominally two supreme authorities; the Dharma Raja, known as Shapting Benipochu, the spiritual head; and the Deb or Depa Raja, the temporal ruler. The Dharma Raja is regarded as a very high incarnation of Buddha, far higher than the ordinary incarnations in Tibet, of which there are several hundreds. On the death of a Dharma Raja a year or two is allowed to elapse, and his reincarnation then takes place, always in the Choje, or royal family of Bhutan. Cultivation is backward and the chief crop is maize. The military force consists of local levies under the control of the different chiefs. They are of no military value.

NORTH-WEST FRONTIER STATES.

The Indian States of the North-West Frontier Provinces are Amb, Phulra, Dir, Swat and Chitral. The area of the latter three is 3,000, 4,000 and 4,000 square miles and population 119,477, 446,014 and 107,900 respectively.

Amb State—Area 225 square miles, including trans-border territory, population 47,916.

Ruler, Nawab Mohammad Farid Khan, Headquarters, Shergarh (Summer) and Darband (Winter).

Amb State comprises the following territories—
1 The trans-Indus territory, which lies for a few miles on the right bank of the Indus River, opposite the extreme north-west corner of the Badhnak tract in the Haripur Tehsil of the Hazara District, and comprises a few villages only, of which Amb is the chief.
2 The major portion of the tract known as Feudal Tanawal, which lies on the left bank of Indus, and occupies the centre of the western half of the Hazara District.

The State of Phulra comprises the minor portion of Feudal Tanawal. It consists of 98 small villages with a population of 8,757 and is situated in Feudal Tanawal. The name of the Khan is K S Abdul Latif Khan.

Officer in charge of political relations with Amb and Phulra States—G. C S Curtis, I O S.

Chitral—Runs from Lowara top to the south of the Hindu-Kush range in the north, and has an area of about 4,000 square miles. The ruling dynasty has maintained itself for more than three hundred years, during the greater part of which the State has constantly been at war with its neighbours. It was visited in 1885 by the Lockhart Mission, and in 1889, on the establish-

ment of a political agency in Gilgit, the ruler of Chitral received an annual subsidy from the British Government. That subsidy was increased two years later on condition that the ruler, Amen-ul-Mulk, accepted the advice of the British Government in all matters connected with foreign policy and frontier defence. His sudden death in 1892 was followed by a dispute as to the succession. The eldest son Nizam-ul-Mulk was recognised by Government, but he was murdered in 1895. A war was declared by Umra Khan of Jandul and Dir against the infidels and the Agent at Gilgit, who had been sent to Chitral to report on the situation, was besieged with his escort and a force had to be despatched (April 1, 1895) to their relief.

The valleys of which the State consists are extremely fertile and continuously cultivated. The internal administration of the country is conducted by His Highness Major Sir Mohd Nasir-ul-Mulk, K O I M, the Mehtar of Chitral and the foreign policy is regulated by the Political Agent at Malakand. The ruler proceeded on pilgrimage to Mecca in February 1939.

Dir—The territories of this State, about 3,000 square miles in area, include the country drained by the Panykora and its affluents down to the junction of the former river with the Bajaur Rud. The Nawab of Dir is the overlord of the country, exacting allegiance from the petty chiefs of the clans. Dir is mainly held by Yusufzal Pathans, the old non-Pathan inhabitants being now confined to the upper portion of the Panykora Valley known as the Dir Kohistan. A motor road has been constructed to Dir from Malakand. A private telephone line has been erected from Chakdarra to Dir, and a Petrol Pump was installed at Timul Garah in 1939.

Swat.—The Ruler is a descendant of the famous Akhund Sahib of Swat. He consolidated his rule in Swat from 1917 to 1922, and was recognized by the Government of India as Wali of Swat in 1926. The area of the State is 4,000 square miles. The Headquarters of the State is at Saidu Sharif about 38 miles from Malakand and connected with Malakand by motor road.

The Wali has since annexed to his territory the areas of Ranohya, Bankad, Tjial, Duber, Patan, Kandia, and Seo in the Indus Kohistan. He has built forts in these areas and has connected them by telephone.

There is High School at Saidu.
Political Agent for Dir, Swat and Chitral—Major G. L. Mallam, Bar-at-Law.

STATES IN THE MADRAS PRESIDENCY.

The Madras Presidency includes 5 Indian States covering an area of 10,644 square miles. Of these, the States of Travancore and Cochin represent ancient Hindu dynasties. Pudukottai is the inheritance from a chieftain called the Tondiman, Banganappalle and Sandur, two petty States, of which the first is ruled by a Nawab, lie in the centre of two British districts, and are in the political charge of the Resident in Mysore.

Name.	Area sq. miles	Population.	Estimated Gross Revenue in lakhs of rupees
Travancore ..	7,625	6,070,018	280 73
Cochin .	1,480	1,422,875	112 60
Pudukottai .	1,179	438,348	22 25

Travancore.—This State, which has an area of 7,661 75 square miles and a population of 6,070,018 with a revenue of Rs 280 73 lakhs, occupies the south-west portion of the Indian Peninsula, forming an irregular triangle with Cape Comorin as its apex. The early history of Travancore is in great part traditional, but there is little doubt that His Highness the Maharaja is the representative of the Chera dynasty, one of the three great Hindu dynasties which exercised sovereignty at one time, in Southern India. The petty chiefs, who had subsequently set themselves up as independent rulers within the State, were all subdued, and the whole country, included within its boundaries, was consolidated and brought under one rule, by Maharaja Marthanda Varma (1729-58). The English first settled at Anjengo, a few miles to the north of Trivandrum, and built a factory there in 1684. In the wars in which the East India Company were engaged in Madras and Tinnevely, in the middle of the 18th century, the Travancore State gave assistance to the British authorities. Travancore was reckoned as one of the staunchest allies of the British Power and was accordingly included in the Treaty made in 1784 between the East India Company and the Sultan of Mysore. The present relations of Travancore with the British Government are governed by the treaties of 1795 and 1805. Under the Treaty of 1795 an arrangement was entered into on a reciprocal basis for the protection of Travancore from foreign aggression. The Treaty of 1805 is one of "perpetual friendship and alliance" and the obligations of Travancore for purpose of defence were later commuted into an annual contribution of nearly eight lakhs of rupees payable by the State to the British Government.

H. H. the Maharaja (b. 7th November 1912) ascended the musnud on the 1st September 1924. During his minority, the State was ruled by Her Highness Maharani Setu Lakshmi Bai, C.I., aunt of the Maharaja, as Regent on his behalf. His Highness was invested with ruling powers on the 6th November 1931. A Legislative Council was established as early as 1888. The Legislature was last re-constituted in 1932, when a bicameral body was instituted. The two Chambers, viz., the Sri Mulam Assembly and the Sri Chitra State Council have a predominant elected non-official majority. Both Chambers possess the right to vote on the annual Budget, to move resolutions and ask questions. Both Chambers have also the right to initiate legislation. The elections to the Assembly are based on a wide franchise. Differences of opinion between the two Chambers are to be settled by a Joint Committee consisting of an equal number of members selected by each Chamber. Women are placed on a footing of complete equality with men in the matter both of franchise and membership in the Legislature.

In the more important towns and villages there are Municipal bodies and Village Panchayats and Unions with a predominant non-official majority functioning in the field of Local and Self-Government. The State has joined the Indian State Forces Scheme. H. H. The Maharaja is the Colonel-in-Chief of the Travancore State Forces. The State is in the forefront in the matter of education. According to the census of 1941, the percentage of literates aged 5 years and above is 67.9 and 42.1 for males and females respectively. The principal food-grain grown is rice, but the main source of agricultural wealth is the coconut. Other crops are pepper, arecanut, jack-fruit, sugar-cane and tapioca. Rubber and tea are among other important products. Cotton weaving and the making of matting from the coir are among the chief industries.

In November 1930 His Highness the Maharaja issued the historic Temple Entry Proclamation which has been hailed all over the world as a great piece of social and religious reform. By another Proclamation in November 1937 a University designed, in addition to ordinary studies, specially to promote technological studies and research has been established.

His Highness is keenly interested in the development of industries in the State and the inauguration of the Pallivasal Hydro-electric Scheme which makes available cheap power to every village in the State marks an epoch in the industrialisation of the country. The Rubber Factory and the Toy Factory at Trivandrum, the Ceramic Factory at Kundara, the Sri Chitra Mill at Alwaye, the Travancore Sugars and Chemicals Ltd. comprising a Sugar Factory at Thuckalay, a Distillery at Nagercoil

and a Factory for the manufacture of pharmaceutical products at Trivandrum are among the foremost industrial concerns established under Government auspices with a view to the more profitable utilisation of indigenous resources and the better employment of indigenous talent. Besides, an Aluminium Smelting Factory at Alwaye and a Plywood Factory at Punalur have been initiated. Facilities for long-term loans to agriculturists and small industrialists are extended by the Credit Bank established by Government. The nationalisation of the motor transport system of the State has ensured an efficient, safe and cheap transport with considerable advantage to trade and commerce. His Highness evinces great interest in matters connected with art and culture and has established at Trivandrum two Art Galleries known as the Chithralayam and the Renga Vilasom Art Gallery.

The Andhra and Benares Universities have conferred Honorary degrees on His Highness and His mother Her Highness Maharani Setu Parvathi Bai.

The State is well provided with roads and with a natural system of backwaters, besides canals and rivers navigable for country crafts. A concrete road 51 miles long connecting the capital with Cape Comorin has been recently completed. A line of railway about one hundred miles in length cuts across the State from east to west and then runs along the coast to the Capital. The Capital is Trivandrum. There exists a weekly air mail service between Bombay and Trivandrum, and Trivandrum and Trichinopoly which is on the Madras-Colombo Air Mail route.

War Efforts.—On the declaration of War in September 1939 His Highness the Maharaja placed the entire resources of the State at the disposal of His Majesty the King Emperor. He has presented a trawler and mine-sweeper, "H M S Travancore" at a cost of Rs 6½ lakhs to the Royal Indian Navy and two fighter planes at a cost of Rs 1½ lakhs to the Royal Air Force. He has besides contributed a sum of Rs 7 lakhs to the Viceroy's War Purposes Fund. His Highness has also sent the first and second infantry units of the State Forces for active service. Generous and voluntary contributions have also been made by officials and non-officials alike to the War Purposes Fund. Large quantities of coconut shell charcoal specially required for war purposes as also salubrious etc (tent components made of cor) required by the Military have been supplied from the State. Very large orders for the supply of ceramic goods, rubber goods, etc, are being executed.

Deewan—Sachivottama Sir C. P. Ramaswami Aiyar, K C S I, K C I E, LL D.

Cochin.—This State on the south-west coast of India is bounded by the Malabar District of the Madras Presidency and the State of Travancore. Very little is known of its early history. According to tradition, the Rajas of Cochin hold the territory in right of descent from Cheraman Perumal, who governed the whole country of Kerala, including Travancore and Malabar, as Viceroy of the Chola Kings about the beginning of the ninth century, and afterwards estab-

lished himself as an independent Ruler. In 1502, the Portuguese were allowed to settle in what is now British Cochin and in the following year they built a fort and established commercial relations with the State. In the earlier wars with the Zamorin of Calicut, they assisted the Rajas of Cochin. The influence of the Portuguese on the west coast began to decline about the latter part of the seventeenth century, and in 1663 they were ousted from the town of Cochin by the Dutch with whom the Raja entered into friendly relations. About a century later, in 1759, when the Dutch power began to decline, the Raja was attacked by the Zamorin of Calicut, who was expelled with the assistance of the Raja of Travancore. In 1776, the State was conquered by Hyder Ali, to whom it remained tributary and subordinate, and subsequently to his son, Tippu Sultan. A treaty was concluded in 1791 between the Raja and the East India Company, by which His Highness agreed to become tributary to the British Government for his territories which were then in the possession of Tippu and to pay a subsidy.

On the demise of His Highness Shri Sri Rama Varma, G O I E, LL D, His Highness Sri Kerala Varma succeeded to the *gadi* and was duly installed as Maharaja on May 28, 1941. The State is governed by His Highness the Maharaja, and the executive authority is exercised by His Highness through the Diwan, in relation to "reserved subjects" and through the Minister appointed under the Government Cochin Act, in relation to "transferred subjects". The forests of Cochin form one of its most valuable assets. They abound in teak, ebony, blackwood, and other valuable trees. Rice is the chief cultivation. Cocoanuts are largely raised in the sandy tracts and their products form the chief exports of the State. Communications by road and backwaters are good, and the State owns a line of railway from Shoranore to Finkulam, the capital of the State, and a Forest Steam Tramway used in developing the forests. The State supports a force of 34 officers and 370 men.

Resident for Madras States.—Lt-Col G P Murphy.

Pudukkottai.—(Area 1170 square Miles, Population 4,38,346). This State is bounded on the north and west by Trichinopoly, on the south by Ramnad and on the east by Tanjore. There are evidences of pre-historic settlements all over the State and some villages are mentioned in Tamil works of the early centuries of the Christian era. In early times, a part of the State belonged to the Chola Kings and the southern part to the Pandya Kings of Madurai. A large part of the State was under Pallava rule from the 7th Century A D until the establishment by Vijayalaya, in the 9th Century, of the Second Chola Empire. When the Chola power declined, the country was ruled for some time by the Hoysalas and, later, was added to the second Pandyan Empire. In the 14th Century, it was included in the Vijayanagar Empire and from the 16th Century formed part of the Nayak Kingdom of Madurai. The State is rich in inscriptions, temples and art treasures belonging to all the dynasties. Towards the

close of the 17th Century, the Tondiman chief of Ambukol, now a village in the State, whose ancestors had migrated from Tirupati, got possession of modern Pudukkottai town and carved out the present State. The State expanded to its present limits in the 18th Century. Relations with the English began during the Carnatic Wars. During the siege of Trichinopoly by the French in 1752, the Tondiman of the time did good service to the Company's cause by sending them provisions, although his own country was, on at least one occasion, ravaged as a consequence of his fidelity to the English. In 1756, he sent some of his troops to assist Muhammad Yusuf, the Company's sepoy—commandant, in settling the Madura and Tinnevely countries. Subsequently, he was of much service in the wars with Hyder Ali and Tipu Sultan. His services were rewarded by a grant of territory subject to the conditions that the district should not be alienated (1806). Apart from that, there is no treaty or arrangement with the Raja. His Highness Sri Brihadamba Das Raja Rajagopala Tondiman Bahadur, the present ruler is a minor. He was installed as Raja on 19th November, 1928. The administration of the State is carried on by an Administrator. The various departments are constituted on the British India model. The main occupation of the people is agriculture, the principal food crops are ragi and rice, and pulses are largely grown. The forests which cover about 1/7th of the State contain only small timber. The State is well provided with roads. The main line of the South Indian Railway from Madras to Danushkodi, which forms the shortest route to Ceylon passes through the State. Pudukkottai is the only municipal Town.

Resident for the Madras States—Lt-Col G P. Murphy.

Banganapalle.—This State, area 275 square miles, is in two detached portions which in the 18th century passed from Hyderabad to Mysore and back again to Hyderabad. The control over it was ceded to the Madras Government by the Nizam in 1800. The present Ruler is Nawab Mir Fazle-e-Ali-Khan Bahadur, who enjoys a salute of 9 guns and is a member of the Chamber of Princes in his own right. The Nawab pays no tribute to the Crown and maintains no military force. The chief food-grain is cholam. The revenue of the State is nearly 34 lakhs. The State has been transferred from the political charge of the Resident for the Madras States to that of the Hon'ble the Resident in Mysore on 1st January 1939.

Resident—The Hon'ble Lieut-Colonel D de M S Fraser, C I R.

Dewan—Rao Bahadur M S Mandanna.

Sandur—Sandur is the only Mahratta State in South India and is in political relations with the Government of India through the Resident in Mysore. The State was conquered early in the eighteenth century by Siddoji Rao, ancestor of the present Ruler from a poligar of the Bedar tribe. During the time of his son and successor, Morar Rao, the State reached the zenith of its territorial expansion. In the Carnatic and Mysore wars Morar Rao was the staunchest ally of the British.

The State came into political relations with the British in 1818. In 1876 the proper style of address of the Ruler was acknowledged by the Government of India. This is one of the 146 important States which received Canning's Sanad of Adoption in 1862. The Ruler also has vested interests in Gajendragad a jaghir in Bombay Presidency, held on his behalf by certain junior members of his family. The State pays no tribute to the Crown. The Ruler is the fountain-head of all authority—judicial, legislative and executive—and exercises powers of life and death. He has established an independent Chief Court presided over by the senior-most member of the Madras judicial service, whose services have been lent to the State under a special arrangement with the Madras Government. There is a State Council to initiate all legislative measures and an Executive Council in charge of the administration. The Ruler has revived the ancient institution of the Darbar to function as an active participant in the governance of the State.

Sandur State holds extensive and excellent deposits of very important economic minerals, especially manganese and iron. Dr N Jayaraman, D Sc, of the Indian Institute of Science, Bangalore, is of the opinion that the manganese ore in the State, especially in certain localities is very rich in manganese and contains a high percentage of pyrolusite. Anu Ghosh of Bengal is of the opinion that "area for area Sandur deposits probably contain the largest manganese reserves so far found." Sandur manganese was formerly exported largely to Continental markets, mainly to Belgo-Luxemburg consumers, to the United Kingdom and Japan and commanded first grade unit prices from Continental buyers. It has been found to be very useful in the manufacture of ferro-manganese. Dr Krishnaswamy of the Indian Institute of Science, Bangalore, is of opinion that Sandur kaolin "is of exceptionally good quality and appears to be suitable for application in the paper industry or for high quality porcelain and refractory manufacture."

The State has also extensive deposits of red and yellow oxide of iron which have been found to be very useful in the manufacture of paints by leading firms in Bombay and Calcutta, who import this commodity in large quantities. The gold quartz found in the area in the vicinity of Taranagari contains indications of promising reefs at very moderate depths. Enormous quantities of high grade jasper, most useful for the manufacture of mosaic tiles, is found in Sandur hills. Dr V S Dubey of the Benares Hindu University, who visited the State recently, reported very favourably on all these deposits. Sandur forests abound in sandalwood which is as rich in oil content as that of Mysore.

The present Ruler is Raja Shrimant Yeshwant Rao Hindurao Ghorpade Mamlatadar Senapathi.

President of the Executive Council—Shrimant Sardar B Y Raju Ghorpade.

Resident—The Hon'ble Lieut-Col D de M S Fraser, C I R.

STATES OF WESTERN INDIA.

Western India States Agency.—Kathiawar in which the majority of the States in this Agency are situated is the peninsula lying immediately to the north of Gujerat in the Bombay Presidency. Its extreme length is about 220 miles and its greatest breadth about 165 miles, while the total area is about 23,445 sq. miles. It is for the most part flat except for the Gir forest, where there exist the only lions still surviving in India.

The political organisation of the Agency is unusual in that besides the normal system of Salute States in political relations with the Resident and non-salute States in political relations with the Political Agents of the subordinate agencies, there are administered areas, which include the Civil Stations of Rajkot, Wadhwan and Sadra, and groups of innumerable petty estates, known as "Thanas". The latter are under the direct supervision of the Political Agents. These "Thanas" were originally offshoots of larger States, but owing to the system of successive holders dividing their heritage amongst all their heirs, a custom prevalent amongst the Kathis, who give their name to the province, they have become so sub-divided as to render impractical the normal administration and the exercise of any jurisdictional powers by each individual holder. The Agency has, therefore, assumed their powers and carries out the administration on their behalf.

The history of the British connection with Kathiawar commences with Colonel Walker's settlement of 1807. In 1863 the States were divided into seven classes and although these have since been abolished, the jurisdictions fixed in that year still remain graded.

Formerly the Political Administration of the Western India States was the responsibility of the Government of Bombay. The transfer of States to direct political relations with the Government of India, a change which was advocated in the Montagu-Chelmsford Report on Constitutional Reforms, was not carried out until 1924. The first stage in the process was the creation of a new Agency in direct relation with the Government of India, known as the Western India States Agency. This Agency comprised the whole of the area containing the old Kathiawar, Cutch and Palanpur Agencies.

The other States in the Bombay Presidency, which for the time being remained in political relations with the Government of Bombay, were transferred to the control of the Government of India with effect from the 1st April 1933. This transfer necessitated the regrouping, not only of the remaining Bombay States, but also of some of the States of the Western India States Agency. The States of Danta and Palanpur were included in the Rajputana Agency; the former having been part of the old Mahi Kantha Agency and the latter part of the Western India States Agency. The States and estates of the Mahi Kantha and Banas Kantha Agencies were united in the present Sabar Kantha Agency, the third subordinate Agency of the Western India States Agency.

The headquarters of the Western India States Agency are situated at Rajkot, which has been the seat of the Representative of the Government for over 100 years, in the Rajkot Civil Station

which was first leased from the Rajkot State in 1863. The personnel of the Headquarters is as follows:—

Resident for the States of Western India: The Hon'ble Sir Edmund Gibson, K C I L, I C S

Judicial Commissioner in the States of Western India: R. W. H. Davies, I C S.

Secretary to the Hon'ble the Resident: Major V M H Cox

The Salute States in this Agency are 17 in number, namely:—

1 Cutch State, 2. Idar State, 3 Junagadh State, 4 Nawanagar State, 5 Bhavnagar State, 6 Porbander State, 7 Dhrangadhra State, 8. Radhanpur State, 9 Morvi State, 10 Gondal State, 11 Jafraabad (Janjira State), 12. Wankaner State, 13 Palitana State, 14. Dhrol State, 15. Limbdi State, 16 Rajkot State, and 17. Wadhwan State

The subordinate agencies are three in number, viz. Western Kathiawar Agency, Eastern Kathiawar Agency and Sabar Kantha Agency.

Western Kathiawar Agency.—The Western Kathiawar Agency, with Headquarters at Rajkot Civil Station, was constituted by the amalgamation in 1923 of two (Sorath and Halar) out of the four Prants or Districts into which the province of Kathiawar was formerly divided. The combined district which was at first named "The Western Kathiawar States" was given its present designation in 1927.

The Agency contains 47 non-salute jurisdictional States and Talukas and five Thana circles. Jurisdictional States in direct political relations with the Political Agent include:—

Jasdan, Manavadar, Thana-Devil, Vadia, Virpur, Maha, Kotda-Sangani, Jetpur, Bilkha and Kharasra.

Political Agent: Major M. C. Sinclair, O B E

Eastern Kathiawar Agency.—The Eastern Kathiawar Agency, with Headquarters at Wadhwan Civil Station, was constituted in 1923 by combining the two Prants of Jhalawad and Gohelwad. The combined District was first styled "The Eastern Kathiawar States" and was given its present designation in 1927. The administration and constitution are similar to those prevailing in the Western Kathiawar Agency.

The Agency contains 15 non-salute jurisdictional States and Talukas and 7 Thana Circles.

The following are the principal jurisdictional States in direct political relations with the Political Agent, Eastern Kathiawar Agency:—

Lakhtar, Sayla, Chuda, Vala, Lathi, Mulli, Bajana, Patdi and Vanod

Political Agent: Lt.-Colonel G. B. Williams, M C

Sabar Kantha Agency.—The Sabar Kantha Agency, with Headquarters at Sadra Civil Station, was constituted by the amalgamation of the Mahi Kantha and Banas Kantha Agencies. Previous to 1933 the administration of these two agencies was on the usual lines with a Political Agent in charge of each, while after that date the organisation was assimilated to that of the other two agencies.

The Agency contains 44 jurisdictional non-salute States and eight Thana Circles.

Among Chiefs in direct relations with the Political Agent, the States of Malpur, Mansa and Mohanpur in the Sadra Division and those of Tharad and Wao in the Banas Division are prominent

Political Agent A N Mitchell, I.C.S.

Bhavnagar.—This State lies at the head and west side of the Gulf of Cambay. The Gohel Rajputs, to which tribe the Ruler of Bhavnagar belongs, are said to have settled in the country about the year 1260, under Sejakji from whose three sons—Ranoji, Sarangji and Shahji—are descended respectively the rulers of Bhavnagar, Lathi and Palitana. An intimate connection was formed between the Bombay Government and Bhavnagar in the eighteenth century when the ruler of that State took pains to destroy the pirates who infested the neighbouring seas. The State was split up when Gujarat and Kathiawar were divided between the Peshwa and the Gaekwar, but the various claims over Bhavnagar were consolidated in the hands of the British Government in 1807. The State pays an annual tribute of Rs 1,28,060 to the British Government, Rs 3,581-8-0 as Peshkashi to Baroda and Rs 22,858 as Zoratalbi to Junagadh. Lt His Highness Maharaja Sir Krishna Kumarsinhji succeeded to the *gadi* on the death of his father, Maharaja Sir Bhavsinhji, K.C.S.I., on 17th July 1919 and was invested with full powers on 18th April 1931. The State Council, of which the late Sir Prabhashankar Pattani was President, was abolished in November 1937 and the Dwanate system introduced, with A P Pattani, M.A. (Cantab.), as Dewan, N M Surti, B.A., LL.B., as Naib Dewan, B V Mehta, M.A., LL.B., Advocate (o.s.) as Judicial Assistant and H M Trivedi, B.A., LL.B., as Personal Assistant. A fixed privy purse for His Highness, the separation of Judicial from executive functions and the decentralisation of authority are the noteworthy features of the administration. A Dhara Sabha (Legislative Assembly) consisting of 55 members of which the Dewan is the President was established by His Highness in 1941 and one of its non-official member is appointed to the Executive.

The chief products of the State are grain, cotton, sugar-cane and salt. The chief manufactures are oil, copper and brass vessels and cloth. The Bhavnagar State Railway is 307 miles in length. The capital of the State is the town and port of Bhavnagar, which has a good and safe harbour for shipping and carries on an extensive trade as one of the principal markets and harbours of export for cotton in Kathiawar. Bhavnagar supports 270 State Lancers and 250 State Infantry.

Population (in 1941) was 6,18,129 of whom 91.6 per cent were Hindus (including Jain) and 8 per cent Mohammedans. The average income for the last five years was Rs 75,84,584, exclusive of Railway income and the average expenditure Rs 94,33,052.

Dhrangadhra State is a State of the First Class in Kathiawar with a population of nearly one lakh and an area of 1,167 square miles, exclusive of the Dhrangadhra portion of the Runn of Cutch. The ruler of Dhrangadhra is the head of the Jhala family of Rajputs, originally called the Mahanas. This Rajput clan is of

great antiquity having migrated to Kathiawar from the North, establishing itself first at Patri in the Ahmedabad District, thence moving to Halvad and finally settling in its present seat. Being the guardians of the North-Eastern marches of Kathiawar, they had to suffer repeatedly from the successive inroads of the Mahomedans into that Peninsula, but after suffering the various vicissitudes of war they were confirmed in their possession of Halvad, its surrounding territories and the salt-pans attached thereto, by an Imperial Firman issued by Emperor Aurangzeb. The States of Wankaner, Limbdi, Wadhwan, Chuda, Sayla and Than-Lakhtar are off-shoots from Dhrangadhra in Kathiawar and Jhalawar and other estates like Sadadi, Delwara, Tana, Goginda, Kunadi and Narwar in Rajputana. His Highness Maharana Shri Mayurdhwajsinhji, Maharaja Raj Saheb, is the ruler of the State and the head of all the Jhalas. The administration is conducted under the Maharaja's directions by a Dewan, (now Rao Bahadur Manishanker R Trivedi, B.A., LL.B.). The soil being eminently fit for cotton cultivation, the principal crops are long stapled cotton and cereals of various kinds. Excellent building and ornamental stone is quarried from the hills situated within the State. Wadagara Salt of an excellent quality with Magnesium Chloride and other bye-products of salt are also manufactured in the State Salt Works at Kuda which offer practically inexhaustible supplies for their manufacture. To utilize these valuable resources, the State built a huge factory in Dhrangadhra, known as the Shri Shakti Alkali Works, now converted into a limited company known as the Dhrangadhra Chemical Works, Limited for the manufacture on a large scale of Soda Ash, Caustic Soda and Soda Bicarb as bye-products of salt. There is also another company called Mayurdhwaj Megnesia Works Ltd manufacturing megnesia at Nimahagar. The capital town is Dhrangadhra, a fortified town, 75 miles west of Ahmedabad.

Dhrangadhra State owns the Railway from Wadhwan Junction to Halvad a distance of 40 miles, which is worked by the Morvi Railway. An extension of this line to Mirja is under contemplation. A railway siding has been laid from Dhrangadhra to Kuda—a distance of 11 miles—to facilitate the salt traffic.

Gondal State—The Ruling Prince of Gondal is a Rajput of the Jadeja stock with the title of H. H. Maharaja Thakore Saheb, the present Ruler being H. H. Bhagwat Singhji, C.S.I., G.C.I.R. The early founder of the State, Kumbhoji I, had a modest estate of 20 villages. Kumbhoji II, the most powerful Chief of the House, widened the territories to almost their present limits by conquest, but it was left to the present ruler to develop its resources to the utmost, and in the words of Lord Reay, Governor of Bombay, by its "importance and advanced administration to get it recognised as a First Class State." The State pays a tribute of Rs 1,10,721. The chief products are cotton, groundnuts and grain and the chief manufactures are cotton and woollen fabrics and gold embroidery. Gondal has always been pre-eminent amongst the States of its class for the vigour with which public works have been

prosecuted, and was one of the earliest pioneers of railway enterprise in Kathiawar, having initiated the Dhasa-Dhoraji line. It owns the Dhasa-Jam Jodhpur section called the Gondal Railway with its Kunkavav Bagasra and Kunkavav-Derdi Extensions and manages it along with the Porbandar State Railway and the Jetalsar-Rajkot Railway subsequently built in partnership with other Indian States in Kathiawar. There are no export and import dues, the people being free from taxes and dues. Gondal stands first in Kathiawar in respect of the spread of education, which is free, female education in the State being compulsory. Rs 32.25 lakhs have been spent on irrigation, tanks and canals, water supply and electricity to the towns of Gondal, Dhoraji and Upleta. The capital is Gondal, a fortified town on the line between Rajkot and Jetalsar.

Junagadh State.—A first class State under the Western India States Agency and lies in the South-Western portion of the Kathiawar Peninsula between 24°-44' and 21°-53' North latitude, 70° and 72° East longitude with the Halar division of the province as its northern boundary and Gohilwad Prant to its east. It is bounded on the south and west by the Arabian Sea. The State is divided into 12 Mahals. It has 16 ports, the principal ones being Veraval, Mangrol, and Nawabandar. The chief rivers in the State are the Bhadar, Uben, Ozat, Hiran, Saraswati, Machhundri, Singaoda, Meghal, Vrajni, Raval and Sabli. The principal town of Junagadh, which is one of the most picturesque towns in India, is situated on the slope of the Girnar and the Datar Hills, while in antiquity and historical interest it yields to none. The Upperkote or old citadel contains interesting Buddhist caves and the whole of the ditch and neighbourhood is honeycombed with caves of their remains. There are a number of fine modern buildings in the town. The famous Asoka inscription of the Buddhist time carved out on a big bolster of black granite stone is housed at the foot of the Girnar Hill, which is sacred to the Jains, the Shivaites, the Vaishnavites and other Hindus. To the south-east of the Girnar Hill lies the extensive forest of Gir comprising 494 square miles, 823 acres and 10 gunthas. It supplies timber and other natural products to the residents of the State and the neighbouring districts and is unique as the sole stronghold of the Indian lion. The area of the State is 3,337 square miles and the average revenue amounts to about Rs. 85,00,000. The total population according to the census of 1911 is 6,70,719. Until 1472, when it was conquered by Sultan Mahomed Begra of Ahmedabad, Junagadh was a Rajput State ruled by Chiefs of the Chuda Sama tribe. During the reign of the Emperor Akbar it became a dependency of Delhi under the immediate authority of the Moghal Viceroy of Gujarat. About 1735 when the representative of the Moghals had lost his authority in Gujarat, Sherkan Babi, the ancestor of the present Babi Ruler, expelled the Moghal Governor, and established his own rule. The ruler of Junagadh first entered into engagements with the British Government in 1807. The principal articles of production in the State are cotton, bajri, juwar,

sesamum, wheat, rice, sugar-cane, cereals, grass, timber, stone, castor-seed, fish, country tobacco, groundnuts, cocoanuts, bamboos, etc., while those of manufacture are ghee, molasses, sugar-candy, copper, and brassware, dyed cloth, gold and silver embroidery, pottery hardware, leather, bamboo furniture, etc. The State pays a tribute of Rs 28,394 annually to the Paramount Power and Peshkashi of Rs 37,210 to His Highness the Gaekwar; on the other hand, it receives a tribute styled Zortalbi amounting to Rs 92,421 from not less than 134 States and Talukas and from Baroda State for the Kodinar Mahall a relic of the days of Mahomedan supremacy. The State maintains a force consisting of Lancers and the Mahabat Khanji Infantry, the sanctioned strength of the former being 173 and of the latter 219, inclusive of Bag-pipe Band.

The present Nawab is Captain His Highness Sir Mahabat Khan III, G.C.I.E., K.C.S.I., who is the ninth in succession and seventh in descent from His Highness Bahadurkhanji I, the founder of the Babi-Family of Junagadh in 1735 A.D. His Highness the Nawab Saheb was born on 2nd August 1900 and succeeded to the *gadi* in 1911.

Heir-Apparent—Nawabzada Mahomed Dilawarkhanji, 2nd Shahzada Mahomed Himatkhanji.

President of the Council—H. H. the Nawab Saheb Bahadur.

Vice-President of the Council—Viqarul Omera Ziaul Mulk Sahebzada Sardar Mohamad Khan Saheb Bahadur Diler Jang, B.C.S., (Retired), J.P.

Nawanagar State, on the southern shore of the Gulf of Cutch, has an area of 3,791 square miles. The Maharaja of Nawanagar is a Jadeja Rajput by caste, and belongs to the same family as the Rao of Cutch. The Jadejas originally entered Kathiawar from Cutch, and dispossessed the ancient family of Jethwas then established at Ghumal. The town of Jamnagar was founded in 1540. The present Jam Saheb is Lieut.-Colonel His Highness Maharaja Jam Shri Digvijayasinhi Saheb, G.C.I.E., K.C.S.I., A.D.C., who succeeded in April 1933. The principal products are grain, cotton and oil-seeds shipped from the ports of the State. A small pearl fishery lies off the coast. The State pays a tribute of Rs. 1,20,093 per annum jointly to the British Government, the Gaekwar of Baroda and Zortalbi to the Nawab of Junagadh. The State maintains Modified Headquarters and one squadron of Shri Huzur Body Guard and one full battalion of Shri Shatrushalya Infantry. The capital is Jamnagar, a flourishing town, nearly 4 miles in circuit, situated 5 miles east of Bedi, a modern port affording all facilities. The State owns a Railway which traverses through its entire territory and is part of the Railway system connecting the Peninsula with the mainland. Population 5,04,006. Revenue nearly Rs 98 lakhs.

Dewan.—Khan Bahadur Merwanji Pestonji, B.A., LL.B.

Military Secretary and Home Member—Col R. K. Himmatsinhji.

Personal Assistant—Major Geoffrey Clarke.

Cutch—The State is bounded on the north and north-west by Sind, on the east by the Palanpur Agency, on the south by the Peninsula of Kathiawar and the Gulf of Cutch and the south-west by the Indian Ocean. Its area, exclusive of the great salt marsh called the Rann of Cutch, is 8,249.5 square miles. The capital is Bhuj. From its isolated position, the special characteristic of its people their peculiar dialect, and their strong feeling of personal loyalty to their ruler, the peninsula of Cutch has more of the elements of a distinct nationality than any other of the dependencies of Bombay. The earliest historic notices of the State occur in the Greek writers. Its modern history dates from its conquest by the Sind tribe of Samma Rajputs in the fourteenth century. The section of the Sammas forming the ruling family in Cutch were known as the Jadejas or 'children of Jada'. The British made a treaty with the State in 1815. There is a fair proportion of good arable soil in Cutch, and wheat, barley and cotton are cultivated. Both iron and coal are found but are not worked. Cutch is noted for its beautiful embroidery and silverwork and its manufactures of silk and cotton are of some importance. Trade is chiefly carried by sea. The ruling chief is the supreme authority. A few of the Bhayats are invested with jurisdictional powers in varying degrees in their own estates and over their own ryots. A notable fact in connection with the administration of the Cutch State is the number and position of the Bhayat. These are Rajput nobles forming the brotherhood of the Maha Rao. They were granted a share in the territories of the ruling chief as provision for their maintenance and are bound to furnish troops on an emergency.

The present ruler His Highness Maharaja Dhuraj Mirza Maharao Shri Vijaya Rajji Savai Bahadur, succeeded to the *gadi* in 1942 and was invested with full powers. Population 5,00,800. Revenue about Rs 38,00,000. Salute 17 guns.

Porbandar—Porbandar State, on the Western Coast of the province of Kathiawar, comprises an area of 642½ square miles and has a population of 1,46,504 according to the 1931 Census. The capital of the State is Porbandar, a flourishing port having trade connections with Java, Burma, Persian Gulf, Africa and important Continental Ports. The State has its own Railway. The well-known Porbandar stone is quarried into Barda Hills near Adityana and is largely exported to important places in as well as outside India. Porbandar Ghee (butter) is also well-known and is largely exported to Africa. There is a fully equipped laboratory at Porbandar where ghee is graded and given Government AGMARK seals and labels. The Cement Factory of The Associated Cement Cos Ltd was established at Porbandar in 1912. It manufactures Ganpati Brand Portland Cement of the best quality. Among more recent industries may be mentioned the establishment of the Nadir Salt Works, the Maharana Spinning and Weaving Mills, the Natwar Match Works, the Hosier Works, the Vishvakarma Engineering Works doing fine engine turning on precious metals, Paint and Distemper Manufacture, etc. Porbandar is also an Air Port with

commodious Hangar, Rest House etc. There is a State Bank at Porbandar and also a Branch of the Imperial Bank of India. The State maintains a Military Force.

The present Ruler, His Highness Maharaja Rana Sahab Shri Sir Natwarsingji Bahadur, KCSI, was born on the 30th June, 1901 and ascended the *gadi* on the 26th January, 1920.

Radhanpur is a first-class State, with an area of 1,150 square miles, which is held by a branch of the illustrious Babi family, who, since the reign of Humayun, have always been prominent in the annals of Gujarat. The present Ruler is His Highness Nawab Murtazakhanji Jorawarkhanji. The State maintains a Police force of 176. The principal products are cotton, wheat and grain. The capital is Radhanpur town, a considerable trade centre for Northern Gujarat and Cutch. Another town of importance is Sami, which has a cotton press and 5 ginning factories. There are two ginning factories at Munjpur, one at Lolada and one at Sankeshwar which is a great centre of Jain pilgrimage all the year round. Gotarka, Dev, and Trakod Loti are also the principal places of pilgrimage for Mahomedans, Vaishnavas and Brahmans respectively.

There are several ancient monuments in the State, viz., Fatehkote at Radhanpur, Jhalore's Teba at Subapura, Lotesvara Mahadev at Loti, Sankeshvara temple at Sankeshvar, Waghel tank at Waghel, Varanath place at Waghel, Tatleshwar Mahadev at Fatehpur, Rajpur Bhotava, old Masjid at Munjpur, Place of Asan at Gotarka, Mahabali Pir's Dargah at Gotarka and Nilkantha Mahadev at Kuwar.

There is also an Anath Ashram for the poor known as "The Husselnbakhte Sahaba Mohobat Vilas."

His Highness the Nawab Sahab Bahadur has established a Bank named "Vadhlar Bank" to lend money to cultivators and others on easy terms, and thus save them from the clutches of money-lenders.

Idar—Idar is a first-class State in the Western India States Agency with an area of 1,669 square miles and an average gross revenue of about 25 lakhs. The present Ruler of Idar, H. H. Maharaja Shri Himmat Singhji Bahadur, is a Rajput of the Rathod clan. He was born in 1899 A.D. and ascended the *gadi* in 1931 on the demise of His late Highness Maharaja Sir Dowlat Singhji. His Highness accompanied His late Highness Lt.-Col. Sir Dowlat Singhji, to Europe when the latter went to attend the Coronation of His Majesty the King-Emperor in London and acted as Page to His Imperial Majesty at the Coronation Darbar held at Delhi in 1911. The subordinate feudatory Jagirdars are divided into three classes. The Jagirdars belonging to the class of Bhayats are cadets of the Ruling House to whom grants have been made in maintenance or as a Jiwara. Those known as Sardar Pattawats are descendants of the military leaders who accompanied Anand Singhji and Rat Singhji, the founders of the present Marwar dynasty who took possession of the State in the first quarter of the eighteenth century and to whom grants of land were made by Maharaja Shiv Singhji in 1741 A.D. on condition of military service. In the class of

the Bhoomias are included all subordinate Feudatories who were in possession of their Pattas prior to the advent of the present Marwar dynasty. The pattas they hold were acquired by their ancestors by grant from the former Rao Rulers of the State. The Maharaja receives Rs 52,427 annually on account of Khichdi and other Raj Haks from his subordinate Sardars the tributary talukas of the Mahi Kantha Agency and others and pays Rs. 30,340 as Ghasdana to the Gaekwar of Baroda through the British Government. His Highness enjoys a Salute of 15 guns.

Vijaynagar.—The State has an area of 135 square miles with a population of 13,554 and an annual revenue of nearly 1 lakh. The Ruler is a well educated and intellectual Rathod Rajput. Leaving Idar his ancestors established their rule in Polo after having conquered the Padhar Rajputs of that place. The State enjoys full plenary powers and pays no tribute to any authority, but on the contrary receives Chauth. Tika, Hatharna and other Haks from Idar. The present Ruler is His Highness Maharao Shri Hamirsinghji Sahab Bahadur. He was born on 3rd January 1904 and succeeded to the *qadi* in 1916. He enjoys rank above some of the nine gun salute states.

Rajkot.—Centrally situated in the Western India States Agency, Rajkot State has an area of 283 square miles and a population of 1,03,033. Revenue on an average Rs 13,89,863. Undulating country, with a stony soil watered by several streams, of which the *Aji* is perennial. Common kinds of gram, cotton and sugar-cane are the principal agricultural products. The climate is generally healthy though hot in April, May and October.

Rajkot being the headquarters of the Hon'ble the Resident to the Governor-General in the States of Western India, it is politically important and all the States of Kathiawar have each a representative in the Office of the Hon'ble the Resident to the Governor-General.

The present Ruler Thakore Sahab Shri Pradumnasinhji was born on 24th February 1913, ascended the *qadi* on 12th June 1940 and was invested with full powers on 17th August 1940.

BARODA RESIDENCY AND GUJARAT STATES AGENCY.

Consequent upon the establishment of direct relations between the Government of India and the Bombay States since April, 1933, many States and Estates which were previously included in the various Political Agencies of the Bombay Government are now included in a separate Political Agency of the Government of India designated the Baroda and Gujarat States Agency. The charge of this new Agency has been added to the charge of the Resident at Baroda who is now known as the Resident for Baroda and the Gujarat States. The Political Agencies thus amalgamated are the Rewa Kantha Agency, the Kaira Agency, the Surat Agency, the Narsik Agency and the Thana Agency.

The following are the full-powered salute States now in direct political relations with the Government of India through the Resident for Baroda and the Gujarat States—

- (1) Balasinor .. (Old Rewa Kantha Agency)
- (2) Bansda .. (Old Surat Agency)
- (3) Baria .. (Old Rewa Kantha Agency)
- (4) Baroda .. (Old Kaira Agency)
- (5) Cambay .. (Old Rewa Kantha Agency)
- (6) Chhoti Udepur .. (Old Surat Agency)
- (7) Dharampur .. (Old Thana Agency)
- (8) Jawhar .. (Old Rewa Kantha Agency)
- (9) Lunawada .. (Old Rewa Kantha Agency)
- (10) Rajpipla .. (Old Surat Agency)
- (11) Sachin .. (Old Rewa Kantha Agency)
- (12) Sant .. (Old Rewa Kantha Agency)

The Headquarters of the Agency are at Baroda.

Balasinor—This State has an area of 189 square miles, a population of 52,525, and an annual revenue of about Rs 3½ lakhs. The Ruling Prince belongs to the Babi family. The State pays a tribute of Rs. 9,766-9-8 to the British Government and Rs. 3,077-11-1 to the Baroda Government. The name of the present Ruler is Babi Shri Jamiatkhanji Manvar-khanji, Nawab of Balasinor. He was born on the 10th November 1894 and succeeded to the

qadi in 1899. The Ruler of the State received in 1890 a Sanad guaranteeing succession according to Muhammadan Law in the event of failure of direct heirs. The Nawab is a member of the Chamber of Princes and enjoys a dynastic salute of 9 guns.

Bansda—This State has an area of 215 square miles a population of 54,764 and an annual revenue of about Rs 7½ lakhs. The Rulers of Bansda are Chalukya Rajputs of the Lunar Race. The ancient history of the House of Bansda is traceable to the second Chalukya dynasty—Vatapi—direct descendants of Janmejava—grand-on of Arjun. One of His Highness ancestors the illustrious Jaisinh founded and consolidated a vast kingdom in Southern Gujarat of which the present Bansda State is a small part. The present Ruler Maharawalji Shri Sir Indrasinhji Pratapsinhji, K.C.I.E. was born on 16th February 1888 and acceded to the *qadi* on 11th November 1911. The Ruler of the State has received a Sanad guaranteeing succession to an adopted heir in the event of failure of direct heirs. He is a member of the Chamber of Princes in his own right enjoys a dynastic salute of 9 guns and is entitled to be received by H.L. the Viceroy.

Baria—The State has an area of 813 square miles with a population of 1,89,206. The capital Devgad Baria is reached by the Baria State Railway from Piprod Station on the B & C I Railway. The Ruler, Lient Col His Highness Maharawal Shri Sir Ranjitsinhji, K.C.S.I., is the direct descendant of the Great House of Khichi Chowhan Rajputs who ruled over Gujarat for 244 years with their capital at Champaer, bearing the proud title of Parapatis. The State pays no tribute either to the British Government or to any other Indian State. His Highness served in France and Flanders in the Great European War and in the Afghan War, 1919. Enjoys a dynastic salute of 9 guns and a personal salute of eleven guns.

Cambay.—This State has an area of 392 square miles, a population of 96,501 and an annual revenue of, about Rs. 9 lakhs. The founder of the Ruling family was Mirza Jafar Najam-e-sani Mominkhan I, the last but one of the Muhammadan Governors of Gujarat. The present Ruler is His Highness Najam-ud-Daulah Mumtaz-ul-Mulk Mominkhan Bahadur Dilaवरjung Nawab Mirza Hussain Yawar Khan Bahadur. He was born on the 16th May 1911, succeeded to the *gadi* on the 21st January 1915 and was invested with ruling powers on the 13th December 1930. His Highness is a member of the Chamber of Princes and enjoys a dynastic salute of 11 guns.

Chhota Udepur.—This State has an area of 890 square miles, a population of 1,62,145 and an annual revenue of about Rs 13,36,371. The Ruling family belongs to the Khichi Chavan Rajput clan and claims descent from the last Patal Raja of Pawagadh or Champaner, the State being founded shortly after the fall of that fortress in 1484. The present Ruler is His Highness Maharawal Shri Natvarsinhji. He was born on the 10th November, 1906, and succeeded to the *gadi* on the 29th August, 1923, on the death of his father. He is a member of the Chamber of Princes and enjoys a dynastic salute of 9 guns.

Dharampur.—This State has an area of 704 square miles, a population of 1,23,336 and an annual revenue of about Rs 8½ lakhs. The Rulers of Dharampur trace their descent from Ramchandraj of Hindu Mythology. They belong to the Solar Sisodia Rajputs dynasty. The present Raja, His Highness Maharana Shri Vijayadevi Mohandevji, was born on the 3rd December 1884 and succeeded to the *gadi* on the 26th March 1921. His Highness is a member of the Chamber of Princes and enjoys a dynastic salute of 9 guns and a personal salute of 11 guns.

Jawhar.—This State is situated to the North of the Thana District of the Bombay Presidency on a plateau above the Konkan plain. It has an area of 308 square miles, a population of 65,126 and an average annual revenue of about Rs 4 lakhs. The present Ruler, H H Raja Patangshah, alias Yeshwantrao Vikramshah, was invested with full administrative powers on 16th January 1938. He exercises full Civil and Criminal Jurisdiction, and is a Member of the Chamber of Princes in his own right. He enjoys a dynastic salute of 9 guns.

Lunawada.—The State has an area of 388 square miles, a population of 105,320 and an annual revenue of about Rs 5½ lakhs. The Rulers of Lunawada belong to the historic Solanki clan of Rajputs claiming their descent from the famous Sidhraj Jaysinh of Anhilwad (Gujarat). Besides having fine patches of good agricultural land, the State contains a considerable forest area yielding rich timber. The present Ruler, Lieut Maharana Shri Virbhadrasinghji, was invested with full powers on 2nd October 1930. He is a member of the Chamber of Princes and enjoys a dynastic salute of 9 guns.

Rajpipla.—This important State lies to the south of the Narbada. It has an area of 1,517½ square miles, a population of 2,48,068 and an

average annual revenue of about Rs 24½ lakhs. The lands are rich and very fertile and, except for a few forest-clad hills, are suitable and available for cultivation in large quantities in the south-east talukas. The family of the Maharaja of Rajpipla, Major H H Maharana Shri Sir Vijaysinhji, K C S I, is said to derive its origin from a Rajput of the Gohel clan. Cotton is the most important crop in the State. In the hills there are valuable teak forests. The capital is Rajpipla which is connected with Ankleshwar by railway built by the State. His Highness is a member of the Chamber of Princes and enjoys a dynastic salute of 13 guns.

Sachin.—Sachin is the senior of the only two Abyssinian States in India. The ancestors of the Nawab of Sachin were the Rulers of Janjira. The founder of the Ruling House of Sachin was Nawab Sidi Abdul Karim Mohammed Yakut Khan I. In 1784, on the death of his father, Nawab Sidi Abdul Karim Mohammed Yakut Khan became Nawab of Janjira but the Throne was seized by Sidi Janhar in favour of Nawab Sidi Mohammed Nawab Abdul Karim Mohammed Yakut Khan's younger brother. This led to several complications which Nawab Sidi Abdul Karim Mohammed Yakut Khan decided to avoid and made the great sacrifice of leaving Janjira with his younger brother. Nawab Sidi Abdul Karim Mohammed Yakut Khan intended to go to Tippu Sultan and gain his support but as this was considered impolitic the Honourable the East India Company intervened as mediators and through the good offices of Mr Mallet (afterwards Sir Charles) and Nana Farnavis, the Prime Minister of His Highness the Peshwa, a Triple Alliance was signed on the 6th June 1791, by which Nawab Sidi Abdul Karim Mohammed Yakut Khan took the State of Sachin. Nawab Sidi Abdul Karim Mohammed Yakut Khan was granted the hereditary title of Nawab by the Emperor of Delhi, His Imperial Majesty Shah Alum II, and was also granted a "Haft Hazari" and the "Mahu Maratab". The Rulers of Sachin are known as amongst the first powerful Princes in India to have cemented an alliance of perpetual friendship with the British. The present Ruler is His Highness Nawab Sidi Mohammed Halder Mohammed Yakut Khan, who was born on the 11th of September 1909 and succeeded to the Throne on 19th November 1930. His Highness is a member of the Chamber of Princes in his own right and a member of the Princes' Standing Committee.

Sant.—This State has an area of 39½ square miles, a population of 94,257 according to the census of 1941 and an annual revenue of about Rs 4 45,420. The Ruling family belongs to the Mahipat branch of the Puar or Parmar Rajputs. The Rulers used to pay a tribute of 5,384 9 10 to Sindhia. This tribute is now paid by the State to the British Government. The present Ruler Maharana Shri Joravar-sinhji Pratapsinghji was born on 24th March, 1851 and succeeded to the *gadi* in 1896. He is a member of the Chamber of Princes and enjoys a dynastic salute of 9 guns.

His Apparent.—Maharaj Kumar Shri Pravin Singhji.

Acting Dewan.—N J Davecha B A, LL B

Rewa Kantha Agency.—Including the Surgana State and the Dangs

This Agency is a subordinate Political Agency of the Gujarat States Agency. It consists of all the non-salute States and Estates of the Old Rewa Kantha Agency, the State of Surgana, previously in the Nasik Agency, and the petty states known as the Dangs, previously in the Surat Agency.

Rewa Kantha means the district or province situated on the banks of the river Rewa or Narmada or Narbada. This river is held in high veneration among the Hindus, especially in the Bombay Presidency.

All the States in the Province of Rewa Kantha are not on the banks of Narbada, for some of the Northern States, *i.e.*, Kadana and the States in Pandu Mewas are on the banks of the Mahi river. In fact the Rewa Kantha Agency comprises territories watered both by the Rewa and Mahi Rivers.

The population consists of the following main classes: Hindus, Jains, Musalmans, Animistic Bhils, Dhankas, Kohis and Naikdas.

Surgana.—Is situated on the borders of the Nasik District.

The Dangs consist of a tract of country between the Sahyadris and the Surat District which is parcelled out among 14 petty Chiefs. Of these 13 are Bhils and 1 a Kokani.

The headquarters of the Agency, situated at the Baroda Residency in view of the fact that the Secretary to the Resident at Baroda and the Gujarat States is also *ex-officio* Political Agent of this Agency, consist of—

Political Agent—J. S. H. Shattock, MBE, ICS.

Assistant Political Agent for Rewa Kantha Agency.—D Y Fell, ICS.

Deputy Political Agent for Rewa Kantha Agency.—Kumar Shri Mohammed Sadiq, BA, Bar-at-Law.

Assistant to the Political Agent for the Dangs.—H P W Davis, BA, BSc, IFS.

Many of the States and Estates are small and only a few enjoy restricted jurisdictional powers. The four Chiefs of Kadana, Bhaderwa, Surgana and Jambughoda are, however, larger and more important, and are included in the list of electorates to representative members of the Chamber of Princes.

KOLHAPUR AND THE DECCAN STATES AGENCY.

This Residency which was formed in consequence of the transfer of the Bombay States to the direct control of the Government of India includes the following States—

Kolhapur.	Miraj (Senior).
Janjira.	Miraj (Junior).
Savantvadi.	Kurandwad (Senior).
Mudhol.	Kurandwad (Junior).
Sangli.	Ramdurg.
Bhor.	Aundh.
Jamkhandi.	Akalkot.
Phaltan.	Savanur.
Jath.	Wadi Estate.

These States are in political relations with the Government of India through the Resident for Kolhapur and the Deccan States, whose headquarters are at Kolhapur.

Resident for Kolhapur and the Deccan States—Lt.-Col P Gaisford.

Secretary to the Resident for Kolhapur and the Deccan States—Captain J E A Bazalgette.

Assistant Secretary to the Resident for Kolhapur and the Deccan States—S Subraman.

Kolhapur.—Kolhapur is a State with an area of 3,229.5 square miles, population 1,092,046 and a gross annual revenue of Rs 1,27,09,558. On the death of His late Highness Shri Rajaram Chhatrapati Maharajasaheb on the 26th November, 1940, leaving only a daughter, His Highness Shri Pratapsinhrao Bhosle of the Khanwatkar branch of the Bhosle family (the descendants of Sharifu, the uncle of Shivaji the Great) has been recognised as the successor to the Kolhapur *qadi*. His Highness was born on Nov. 24, 1941 and his adoption by Her Highness the Senior Maharani Sahib is expected to take place shortly. Dynastic salute 19 guns. The Ruling House is descended from a younger branch of the Great Shivaji, the founder of the Mahratta Empire. There are nine Feudatory Jaghurs under the

Darbar, of which the most important are the four major Jaghurs of Vishalgad, Bavda, Kagal Senior and Ichalkaranji, the remaining five (*viz.*, Kapshi, Torgal, Kagal Junior, Himmat Bahadur and Sarlashkar Bahadur) are called the minor Jaghurs. Their holders enjoy their estates by virtue of *Thalis* or documents of Investiture which define their powers. Kolhapur entered into Treaty relations of an important political nature with the British Government in 1812, by which, Kolhapur was guaranteed against attacks of foreign powers and its integrity assured. The State pays no tribute and supports a Military Force of 845 men of the Rajaram Rifles and 450 men of the 50 (K) G P Tpl Coy.

Kolhapur State is divided into 7 Talukas and 3 Mahals. Kolhapur City is known on account of its religious sanctity as the "Southern Benares," and is famous for the architectural beauty of its temples. Its hill-forts are also famed in history. It is a great centre of higher education and has flourishing industries. The principal articles of production are rice, jowar, sugar-cane and tobacco, and its principal manufactures are coarse cotton and woollen goods, sugar, oil-seeds, pottery and hardware. The Sahyadri Mountains flank the State on the west and contain some of the finest aluminium bauxite deposits in the world in very large quantities. The Shahu Spinning and Weaving Mills, the Sugar Mills, the Kolhapur Bank with Branches, Cinema Industries, as well as full grade Arts, Law and B T College, testify to the growing importance of modern Kolhapur.

Janjira.—This State is situated to the South of the Kolaba District of the Bombay Presidency. The most noticeable point in its history is the successful resistance that it alone, of all the States of Western India, made against the determined attacks of the Mahrattas. The British, on succeeding the Mahrattas as masters of the Konkan, refrained from interfering in the

administration of the State. The State enjoys plenary civil powers. It also has plenary criminal powers excepting over British subjects. The ports of Janjira proper have the rights of British Indian Customs port. The Chief is a Sunni Mohammedan, with the title of Nawab, and has a *sanad* guaranteeing succession according to Mahomedan law. It pays no tribute. But it receives from the Junagadh State an annual "Khandani" payment on Una Mahal of 360 Mosambigiri Ryals equivalent to Rs 500. The last ruler, H H Nawab Sidi Sir Ahmed Khan, G C I E, died on 2nd May 1922, and was succeeded by his son, His Highness Sidi Muhammad Khan born on the 7th March 1914. His Highness the present Nawab Saheb was invested with ruling powers on the 9th November, 1933. The area of the State is 379 square miles, and the population 117,382. The average revenue is about 11 lakhs including that derived from a small dependency named Jafarabad in the south of Kathiawar under the Western India States Agency. The Capital is Murud on the main land, the name of Janjira being retained by the island fort opposite. His Highness the Nawab Saheb is entitled to a dynastic salute of 11 guns and to a permanent salute of 13 guns within his own territories.

Sawantwadi.—This State has an area of 930 square miles and a population of 2,52,200. The average revenue is Rs. 6,42,504. It lies to the north of the Portuguese territory of Goa, the general aspect of the country being extremely picturesque. Early inscriptions take the history of the State back to the sixth century. The late Ruler, Major His Highness Raja Bahadur Shrimant Khem Sawant *alias* Bapusaheb Bhonsle, K C S I, having expired on the 4th July 1937, His Excellency the Crown Representative recognised his only minor son, His Highness Raja Shivram Sawant Bhonsle, the present Ruler, as his successor and appointed Her Highness Rani Parwatibaisaheb Bhonsle as Regent to conduct the administration of the State during the minority of the present Ruler from 5th October 1937. Rice is the principal crop of the State, and it is rich in valuable teak. The sturdy Marathas of

the State are favourite troops for the Indian Army and supply much of the immigrant labour in the adjacent British districts. The Capital is Sawantwadi, also called Sundar Wadi or simply Wadi. The Raja enjoys a dynastic salute of 9 guns and a permanent local salute of 11 guns.

Mudhol.—The State has an area of 369 square miles, a population of 62,832 and an annual average revenue of about Rs 4,76,884. The present Ruler—Raja Shrimant Bhairav Sinhl Malojirao Ghorpade—is a minor. The administration is carried on by a Council of Regency, with the Ramasaheba as Regent. The minor Raja was born on the 15th October 1929 and succeeded to the *gadi* on the 9th November 1937. The Ruler enjoys a dynastic salute of 9 guns and is entitled to be received by the Viceroy.

Sangli.—The State has an area of 1,136 square miles, a population of 293,498 and an annual revenue of Rs 16,80,244. The founder of the family was Harbhat who rose to distinction during the rule of the Peshwas. The present Ruler Captain (Honorary) His Highness Raja Shrimant Sir Chintamanrao Dhundiraj *alias* Appasaheb Patwardhan, K C I E, was born on the 14th February 1890 and succeeded to the *gadi* in 1903 on the death of his adoptive father Dhundiraj Chintamanrao Patwardhan. He was invested with ruling powers on 2nd June 1910 on attaining his majority. His Highness has been granted the hereditary title of Raja. He enjoys a dynastic salute of 9 guns and a personal salute of 11 guns. His Highness exercises first class jurisdiction.

Bhor.—Kolhapur and Deccan States Agency. The State lies in the Western Ghats in wild, beautiful and mountainous country. It has an area of 910 square miles, a population of 156,074 and an annual revenue of about Rs 8,83,000. The present Ruler is Raja Shrimant Raghunathrao Shankarrao *alias* Babasaheb Pandit Pant Sachiv. The honour of a dynastic salute of 9 guns and the hereditary title of Raja was conferred on him in 1927 and 1936 respectively. The Raja Saheb became a permanent member of the Chamber of Princes in 1910 and has made a K C I E in January 1941.

The following are the particulars of the States grouped in this Residency —

State.	Name of Chief	Area.	Population. (1941 Census.)	Revenue. Rs	Tribute to British Government. Rs
Akalkot ..	Raja Shrimant Vijaysinh Fatesinh Bhonsle, Raja of	498	103,903	6,80,000	14,592

EASTERN STATES AGENCY.

On April 1st, 1933, the Eastern States Agency was created, and an Agent to the Governor-General was appointed at Ranchi. The Agency embraced 26 Orissa States, formerly included in the Province of Bihar and Orissa, and 14 Central Provinces States. Subsequently on December 1st, 1936, the two Bengal States of Cooch Behar and Tripura were transferred to the Agency, and there are now three Political Agencies under the Resident for the Eastern States at Calcutta, viz.

(1) The Orissa States Agency with its headquarters at Sambalpur, has the following States in Political relations with it —

Athgarh, Athmallik, Bamra, Baramba, Baudh, Bonal, Daspalla, Dhenkanal, Gangpur, Hindol, Keonjhar, Khandpara, Kharsawan, Narsinghpur, Nayagarh, Nilgiri, Pal-Lahara, Rairakhol, Ranpur, Seraikela, Sonepur, Talcher and Tigiria.

(2) The Chhattisgarh States Agency with its headquarters at Raipur, has the following States in Political relations with it —

Bestar, Changbhakar, Chhuikhadan, Jashpur, Kalahandi, Kanker, Kayardha, Khairagarh, Korea, Nandgaon, Patna, Raigarh, Sakti, Saranagarh, Surguja and Udaipur.

(3) The Bengal States Agency with its headquarters at Calcutta, has Political control of the following States —

Cooch Behar, Mayurbhanj and Tripura.

Of all these States the Rulers of six enjoy the distinction of salute, viz. Cooch Behar and Tripura of 13 guns, and Mayurbhanj, Patna, Kalahandi and Sonepur of 9 guns.

Cooch Behar.—This State is situated in North Bengal, bounded by the Districts of Jalpaiguri, Goalpara and Rangpur. Area 1,318 square miles, population 639,898, revenue about Rs 38,50,000. The town of Cooch Behar is connected by the Cooch Behar State Railway with the Eastern Bengal Railway system. The present Ruler, His Highness Maharaja Jagaddipendra Narayan Bhup Bahadur, born 15th December 1916, succeeded his father Maharaja Jitendra Narayan on 20th December 1922 and was invested with full ruling powers on 6th April, 1936.

Tripura.—This State lies to the east of the district of Tippera in Bengal and consists largely of hills covered with dense jungle. It has an area of 4,116 square miles and a population of 513,952. Revenue (including Zemindaries), Rs 37,54,613. The present Ruler is Captain His Highness Bishama-Samara-Bijoyee Mahamahodaya Pancha Sriyukta Maharaja Manikya Sir Bir Bikram Kishore Deb Varman Bahadur, K.C.B., who was born on 10th August 1908, and succeeded the late Maharaja Manikya Birendra Kishore Deb Barman Bahadur on 13th August, 1923. Besides being the Ruler of Tripura, the Maharaja holds a large landed property situated in the plains of the districts of Tippera, Noakhali and Sylhet.

Mayurbhanj.—The Ruler is a permanent member of the Chamber of Princes. Archaeological finds that have come to light within the State area, as also outside, go to show that the ancient Bhanja Kingdom covered a considerable part of Orissa. Though the origin of the kingdom is shrouded in hoary antiquity, tradition recorded by Hunter places it more than two thousand years ago. Bhanja Kings ruled over an extensive territory from Khijinga-Kotta, modern Khiching, whose ancient remains bear testimony to their eminence and culture which found expression in diverse forms of art of a very high order notably the Mayurbhanj School discussed by Rene Grousset and other art critics of acknowledged authority. During the Moghul period, Mayurbhanj was recognised by the Emperors as an autonomous principality, and in the days of Marhatta supremacy in Orissa, the Rulers of Mayurbhanj were often at war with the Marhattas who attempted to levy a precarious tribute by force of arms. In 1761, the East India Company took possession of Midnapore and almost immediately afterwards the Ruler of Mayurbhanj opened friendly negotiations with the British authorities. During half a century preceding the British conquest of Orissa, the British authorities maintained their friendship with Mayurbhanj and a treaty was concluded between the East India Company and Mayurbhanj State in 1820.

Keonjhar is an off-shoot of Mayurbhanj, being held by a junior branch of the Ruling family which separated from the parent State.

Kharsawan and Seraikela.—The Rulers of these States belong to the family of the Raja of Porahat whose States were confiscated by the British Government. These States first came under the notice of the British in 1793, when in consequence of disturbances on the frontier of the old Jungle Mahals the Thakur of Kharsawan and the Kunwar of Seraikela were compelled to enter into certain agreements relating to the treatment of fugitive rebels. The Chiefs were bound, when called upon, to render service to the British Government, but not required to pay tribute. The Bengal Nagpur Railway runs through a part of the State.

Patna State.—Patna is a very ancient State and its various architectural ruins bear mute testimony to its ancient grandeur and civilisation. In the hoary past this State was the seat of the well known Koshala Empire which was ruled by the kings of the Ara dynasty. In the times of the Moghul Emperors as well as during the ascendancy of the Marhattas, the State maintained its independence and sovereignty. It was taken under British protection in 1803 and has ever since been extremely loyal to the British Crown. The Maharajas of Patna have all along enjoyed the hereditary title of Maharaja. Its great services in the Great War were acknowledged in high terms by the Government, when it conferred the privilege of a permanent salute of 9 guns on the Maharaja. Patna is one of the premier

States of the Eastern States Agency and has an area of 2,511 sq miles and a population of 682,229 souls according to the Census of 1941. It lies between North Lat 20°9' and 21°4' and East Long 82°41' and 83°40'. It is a very well-governed and progressive State possessing various good educational and industrial institutions dairy and agricultural farms and other nation-building institutions. There are also fully equipped hospitals for both sexes an X-ray and Electro-therapy Institute, a Veterinary Hospital and a Leprosy Hospital.

Ruler.—Maharaja Rajendra Narayan Singh Deo.

Athgarh, Athmalik, Bamra, Baramba, Baudh, Bonsi, Daspalla, Dhenkanal, Gangpur, Hindol, Kalahandi, Keonjhar, Khandpara, Narsinghpur, Nayagarh, Nilgiri, Pal-Lahara, Rairakhol, Ranpur, Sonapur, Talcher, Tigiria.—These States have no connected or authentic history. They were first inhabited by aboriginal races who were divided into innumerable communal or tribal groups each under its own Chief or headman. These carried on incessant warfare with their neighbours. In course of time their hill retreats were penetrated by Aryan adventurers who actually overthrew the tribal Chiefs and established themselves in their place. Tradition relates how these daring interlopers, most of whom were Rajputs from the north, came to Puri on a pilgrimage and remained behind to found kingdoms. The Chiefs of Baudh and Daspalla are said to be descended from the same stock as the Rulers of Mayurbhanj, and a Rajput origin is also claimed by the Rajas of Athmalik, Narsinghpur, Pal-Lahara, Talcher and Tigiria, Nayagarh. It is alleged, was founded by a Rajput from Rewah, and a scion of the same family was the ancestor of the present house of Khandpara. The ruling family of Ranpur is of Khond origin and furnishes the only known instance in which amid many vicissitudes, the supremacy of the original settlers has remained intact. The States acknowledged the suzerainty of the paramount power and were under an implied obligation to render assistance in resisting invaders; but in other respects neither the ancient kings of Orissa nor their successors, the Moghuls and Mahrattas, ever interfered with their internal administration. All the States have annals of the dynasties that have ruled over them; but they are made up for the most part of legend and fiction and long genealogical tables of doubtful accuracy, and contain very few features of general interest. The British conquest of Orissa from the Mahrattas which took place in 1803, was immediately followed by the submission of ten of the tributary States the Chiefs of which were the first to enter into treaty engagements.

Bastar, Chhangbhakar, Chhuikhadan, Jashpur, Kanker, Kawardha, Khairagarh, Korea, Nandgaon, Raigarh, Sakti, Sarangarh, Surguja, Udaipur.—These States are scattered round the Chhattisgarh Division in the Central Provinces to the different districts of which the majority of them were formerly attached.

Bastar.—This State is situated between the Central Provinces, Orissa and the Madras Pres-

idency, and is in the Eastern States Agency. The State is the twelfth largest in the Indian Empire, its area being 13,725 square miles. The late Chief of Bastar whose son is the present Maharaja, was a Rajput lady. She was the last direct descendant on the male line of an ancient family of Lunar Rajputs, which ruled over Warangal until the Mohammadan conquest of the Deccan in the 14th century A.D. when the brother of the late Raja of Warangal fled into Bastar and established a kingdom there. From then till the days of the Mahrattas the State was virtually independent, its inaccessibility securing it from all but occasional raids of Mohammadan freebooters. The Bhonslas of Nagpur imposed a small tribute on Bastar in the 18th century which is now paid to the British Government. Nearly 11,000 square miles are covered by forest, of which about 3,000 square miles are reserved, and the cultivated area is about 886,000 acres. The capital of the State is Jagdalpur (population in 1941 census 11,304) on the Indravati, 184 miles from Raipur in the Central Provinces, and 159 miles from Vizianagram in the Madras Presidency by motorable road. The population of the State numbered 633,888 at the 1941 census and by far the greater number of the inhabitants are aboriginals. Murias, Marias, Parjas and Bhatrias, related to the Gond race. The State is at present under administration by the Government of India owing to the minority of the Maharaja. The principal exports are rice, rape-seed, tona oil, cattle, timber, lac, myrobalam and other forest produce. The principal imports are cloth, yarn, salt, kerosine oil, and domestic hardware. The State income for 1941 was over 13 lakhs.

Surguja.—With an area of 6055 Sq Miles Surguja is the 2nd largest of the States in Chhattisgarh Agency. Its early history is obscure but according to local tradition Maharaja Bishnu Pratap Singh an Arkshel Chandravanshi Rajput of Bhojikutpur, first invaded the tract in the year 194 A.D. and defeating the Dravadian Chief Sammi Singh established his kingdom. In course of time the Rulers of Surguja became the overlords of the present States of Udaipur, Jashpur, Korea and Ching Bhikhar. Thereafter they maintained their independent position till 1758 when a Mahratta army in its progress to the Ganges overran the State and compelled the then Chief to acknowledge himself as a tributary of the Berar Government. This suzerainty of the Mahrattas over Surguja was, however, of a nominal nature. In the year 1818 when the Mahratta power was broken it was announced that the State had been ceded along with its dependencies to the British Government under a provisional agreement concluded between that Government and Maharaja Madhoji of Nagpur. In 1820 Maharaja Amar Singh was recognised as Ruler by the British Government. The present Ruler Maharaja Ramanuj Saran Singh Deo C.B.E., ascended the *gadi* in 1917 and has recently been admitted as a member of the Chamber of Princes in his own right. The Maharaja has already contributed about a lakh towards the War. He is a keen sportsman and an enlightened Ruler. Rai Sahib H. L. Varma M.B.E., retired Deputy Commissioner, is the Minister of the State.

UNDER THE GOVERNOR OF ASSAM.

Manipur—The only State of importance, under the Government of Assam, is Manipur which has an area of 8,620 square miles and a population of 445,606 (1931 Census), of which about 58 per cent are Hindus and 35 per cent animistic hill tribes. Manipur consists of a great tract of mountainous country, and a valley about 50 miles long and 20 miles wide, which is shut in on every side. The State adopted Hinduism early in the eighteenth century. In the reign of Pamheiba or Gharib Nawaz, who subsequently made several invasions into Burma. On the Burmese retreating, Manipur negotiated a treaty of alliance with the British in 1762. The Burmese again invaded Manipur during the first Burmese war, and on the conclusion of peace in 1826 Manipur was declared independent. The chief event in its subsequent history was the intervention of the British in 1891 to establish the claim of Kula Chandra Singh as Maharaja, followed by the treacherous murder of the Chief Commissioner, Mr. Quinton and the officers with him, and the withdrawal of the escort which accompanied him. From 1891 to 1907 the State was administered by the Political Agent, during the minority of H. H. Sir Chura Chand Singh. The Raja was invested with ruling powers in 1907 and formally installed on the gadi in 1908. For his services during the War the hereditary title of Maharaja was conferred on him. He was made a C.B.E. in

Dec 1917, and K.C.S.I. in Jan 1934. He is entitled to a salute of 11 guns.

The administration of the State is now conducted by H. H. the Maharaja, assisted by a Durbar, which consists of a President, who is usually a member of the Indian Civil Service, his services being lent to the State by the Assam Government, three ordinary and three additional members, who are all Manipuris. The staple crop of the country is rice. Forests of various kinds cover the great part of the mountain ranges.

Khasi States.—These small states, 25 in number, with a total area of about 3,700 square miles and a population of 180,000, are under the control of the Governor of Assam acting as the Agent of His Excellency the Crown Representative. The States have treaties or engagements with the British Government. The two largest are Khyrim and Mylliem and the smallest is Nongliwai, which has a population of only 213. Most of them are ruled by a Chief or Siem. The Siemship usually remains in one family. The succession was originally controlled by a small electoral body constituted from the heads of certain clans but in recent years there has been a tendency to broaden the elective basis. The constitution of a Khasi State has always been of a very democratic character, the Siem exercising but little control over his people.

UNDER THE RESIDENT AT GWALIOR AND FOR THE STATES OF RAMPUR AND BENARES.

Rampur State—Area 893 sq miles; Population, 476,912, Revenue Rs 59,39,021. The State of Rampur was founded by Nawab Syed Ali Mohammed Khan Bahadur in the middle of the 18th century and his dominions included a considerable portion of what is now known as Rohilkhand. The founder belonged to the famous Syed clan of Bareilly in the Muzaffarnagar district and was a statesman of remarkable ability. He rendered valuable services to the Moghul Emperor who recognised him as Ruler of Rohilkhand and bestowed on him the Mahi Maratab, i.e., the Insignia of the Royal Fish.

Upon his death, his Kingdom underwent many vicissitudes and was considerably reduced in size during the reign of his son Nawab Sayed Faizullah Khan Bahadur. The Province of Rohilkhand had then passed into the hands of the East India Company. Nawab Sayed Faizulla Khan Bahadur was very loyal to the British Government and placed his entire Cavalry of 2,000 strong, at their disposal in 1778 during the war against France.

His Highness Nawab Sir Syed Yusuf Ali Khan Bahadur spared neither men nor money in helping the British Government during the mutiny of 1857. He saved the lives of many Europeans whom he provided with money and other means of comfort. He established his reputation as a good administrator to such an extent that he was placed on behalf of the British Government, in charge of the administration of Moradabad and neighbouring districts. These signal services were recognised by the British Government by the grant of an Illaqa besides other marks of distinction.

Nawab Sir Kalbe Ali Khan Bahadur was an Oriental scholar of great repute and during

his rule the Court of Rampur was surrounded by artists, poets, and musicians, who were left without any patronage on the break up of the Moghul and Oudh Courts. Rare and most precious Persian manuscripts and Moghul miniatures were collected and preserved at the Rampur Oriental Library. The years of the rule of Nawab Sir Syed Kalbe Ali Khan Bahadur may rightly be called a period of rich renaissance for Rampur State.

His Highness Nawab Sir Syed Mohammad Hamid Ali Khan Bahadur, father of the present ruler, maintained the traditions of his house for devotion to the British Crown and the Great War of 1914 found him foremost in offering his personal services and all the resources of the State to the British Government. He contributed one lakh of rupees towards the cost of upkeep of the Hospital Ship 'Royalty'. During his rule Rampur made great strides in trade and commerce and in fact in every walk of life.

The present ruler Major His Highness Nawab Sir Syed Mohammad Raza Ali Khan Bahadur, K.C.S.I., D. Litt., I.D., succeeded his father on 20th June 1930. His Highness was born on 17th November 1906, and was educated at the Rajkumar College, Rajkot. During the short period that the reins of the State have been in his hands Rampur State has made great progress. A State Council consisting of the Chief Minister as President and three ministers as members has been responsible since 1914 for the administration of the State on the principle of the joint and several responsibilities of each member. The Council is primarily responsible for the administration of the State under the guidance of His Highness and deals with all matters except a few that fall within

the prerogative of the Ruler. The Ministers and the Secretaries enjoy defined powers and have scope for initiative. His Highness has fixed his Civil List which is distinct from the State Budget, which is controlled by the Council.

A number of experienced officers have been borrowed from the United Provinces Government to help to achieve the same standard of efficiency as obtained in British India and to train local men so that on the return of the lent officers they may be in a position to take over charge successfully. The Finance and Revenue departments have been under the control of an I C S Officer since 1935.

A High Court of Judicature consisting of a Chief Justice and two puisne judges with powers to exercise original, appellate and revisional jurisdiction was established. The local laws and enactments were completely overhauled and important laws prevailing in British India were introduced and enforced in the State. Legal qualification is a condition precedent to the appointment of a Judicial Officer.

The Legislative Committee consisting of eight officials and six non-official members usefully worked since 1935 and passed 29 Acts. The New Legislature has come into existence from 1st May, 1940, with greatly increased Legislative powers and a substantial non-official majority. It consists of 34 members, 22 of whom are non-officials. Statutory Advisory Boards which include non-official members have also been provided to assist various departments.

Education is free throughout the State. There are now 12 upper primary and three middle schools in the city and 105 vernacular schools including 5 middle schools in the Tehsils. There are 5 girls schools located at the headquarters of the Tehsils. A training school to impart training for the rural area teachers has also been opened. The City High School has been raised to the Intermediate standard.

Each Tehsil has been provided with an up-to-date hospital and the Sadar Hospital, the largest in the State, has been completely altered and renovated at a cost of over a lakh of rupees. A special ward has been added for Tuberculosis patients. The operation theatre has been brought up to modern requirements by alterations in the building and provision of shadowless lamps, high pressure steam sterilisers and modern anaesthesia implements. The Rafat Maternity and Child-Welfare Centre was started in the city in 1934 and six branches have since been opened in the city and in the rural area.

Settlement and Record operations have been carried out and rent rates on the basis of unit values and soil classification have been framed. The State demand on account of rents has been reduced from Rs 32,22,253 to Rs 26,40,326. The rents now represent one consolidated demand which is made on the tenants for their holdings. Occupancy rights have been conferred under the Rampur Tenancy Act.

The State holds investments to the value of Rs 1,55,13,570 which are being increased annually to the extent of Rs 2 lakhs. All the superior services have been given grades and their promotions and increments are regulated by time scales. The system of pension has been introduced and the employees have also been given the benefit of a General Provident Fund. Travelling Allowances and Leave Rules have been introduced and the Local Audit of the various departments is done periodically.

The budgetary system has been revised and brought into line with the system prevailing in British India. A highly beneficent scheme for the conversion of the General Provident Fund into Life Assurance has, recently been sanctioned. Besides life cover the employees will get a better yield on their G P Fund contributions, or on ordinary life assurance.

The Agriculture Department has extended its activities throughout the State. Improved seeds and implements are distributed on *Sawai* basis, and seven Seed-Stores are working in the State.

The permanent salute of the State is 15 guns. Rampur State does not pay any tribute to the Crown.

Benares.—The kingdom of Benares under its Hindu rulers existed from time immemorial and finds mention in Hindu and Buddhist literature. In the 12th century it was conquered by Shahab-ud-din Ghori and formed a separate province of the Mahommadan Empire. In the 18th century when the powers of Moghal Emperors declined after the death of Aurangzeb, Raja Mansa Ram, an enterprising zamindar of Gangapur (Benares district), founded the State of Benares and obtained a Sanad from the Emperor Mohammad Shah of Delhi in the name of his son Raja Balwant Singh in 1738. Raja Mansa Ram died in 1740 and his son Balwant Singh became the virtual ruler. During the next 30 years attempts were unsuccessfully made by Safdar Jang and after him by Shuja-ud-daula of Oudh to destroy the independence of the Raja and the Fort of Ramnagar was built on the bank of the Ganges opposite the Benares City. Raja Balwant Singh died in 1770 and was succeeded by his son Ghet Singh. He was expelled by Warren Hastings and Balwant Singh's daughter's son Mahip Narain Singh was placed on the *gadi*. The latter proved an imbecile and there was maladministration which led to an agreement in 1794 by which the lands, held by the Raja in his own right which had been granted to him by the British Government, were separated from the rest of the province. The direct control of the latter was assumed by the Government and an annual income of one lakh of rupees was assured to the Raja while the former constituted the Domains within which the Raja had revenue powers similar to those of a Collector in a British district. There was thus constituted what for over a century was known as the Family Domains of the Maharaja of Benares. On the 1st of April, 1911, the major portion of these Domains became a State consisting of the *perganas* of Bhadohi and Chakia (or Kera Mangraur). The town of Ramnagar and its neighbouring villages were ceded by the British Government to the Maharaja in 1918 and became part of the State. The Maharaja's powers are those of a Ruling Chief, subject to certain conditions, of which the most important are the maintenance of all rights acquired under laws in force prior to the transfer, the reservation to Government of the control of the postal and telegraph systems, of plenary criminal jurisdiction within the State over servants of the British Government and European British subjects, and of a right of control in certain matters connected with Excise.

The present ruler is H. H. Maharaja Vibhuti Narain Singh. Born on November 5, 1927, he was adopted by His late Highness as his son and succeeded to the *gadi* in 1939.

PUNJAB STATES.

There are 45 States and Estates in the Punjab which are in political relation with His Excellency the Crown Representative, through the Hon'ble the Resident for the Punjab States whose Headquarters are at Lahore

Q Inclusive of two personal

States Nos. 7, 11, 13, 14, 18, 19 and 21 to 45 were placed in political relations with the Hon'ble the Resident for the Punjab States, on the 1st October, 1936

Patiala.—This is the largest of the Phulkian States and the premier State in the Punjab. Its territory is scattered and interspersed with small States and even single villages belonging to other States and British districts. It also comprises a portion of the Simla Hills and territory on the border of Jaipur and Alwar States. Area: 5 942 square miles. Population 1,892,889. Gross income Rs 1,63 00,000. Its history as a separate State begins from 1762. Its Ruler, Captain His Highness Farzan-i-Khas Daulat-i-Inghishia Mansur-ul-Zaman Amir-ul-Umra Maharajadhiraj Raj Rajeshwar Maharaja-i-Rajgan Shri Yadavindra Singhi Mahendra Bahadur, Yadu Vanshavatans Bhatti Kul Bhushan GBE LL.D. was born on the 7th January, 1913, educated at the Aitchison College, Lahore, and succeeded to the *gadi* in March 1938, on the demise of Lieutenant-General His Highness Maharaja Rajindra Singhi. In 1930 His Highness accompanied His late Highness to England in connection with the first Round Table Conference; received Police Training at the Police Training College, Phillaur, held various appointments in the State administration, and rendered memorable service to sufferers in the Quetta earthquake of 1935 reaching the town a few hours after the disaster. His Highness the Maharajadhiraj enjoys a personal lute of 19 guns and he and his successors have been exempted from presenting *Nazar* to the Viceroy in Durbar in perpetuity.

The principal crops of the State are grain, barley, wheat, sugarcane, rapeseed, cotton and tobacco. A great part of it is irrigated by the Sirhind and Western Jamna Canal distributaries. It possesses valuable forests and is rich in antiquities, especially at Pinjore, Sunam, Sirhind, Bhatinda, Narnaul, etc. 135 miles of broad-gauge railway line, comprising two sections— from Rajpura to Bhatinda and from Sirhind to Rupar—have been constructed by the State at its own cost. The North-Western Railway, the E I Railway, the B B & C I Railway and the J B Railway traverse the State.

His Highness maintains a contingent of two regiments of Cavalry, four battalions of Infantry and one battery of Horse Artillery.

The State maintains a first grade college for boys and a second grade college for girls at Patiala. A second grade college for boys has recently been started at Bhatinda, one of the prosperous towns in the State. Primary education is free throughout Patiala. The Durbar sanctioned a scheme of compulsory education in 1928.

Since the State entered into alliance with the British Government in 1804 and 1809 A.D., it has rendered help to the British Government on all critical occasions, such as the Gurkha War of 1814-15, the Sikh War of 1845, the Mutiny of 1857, the Afghan War 1878-79, and the Tirah and N.W.F. campaign of 1897. On the outbreak of Great War I His late Highness placed the entire resources of his State at the disposal of His Majesty the King Emperor and offered his personal services. The entire Imperial Service Contingent was on active service throughout the period of the War and served on various fronts in Egypt, Gallipoli, Mesopotamia and Palestine, winning numerous distinctions. Two mule and one

camel corps were raised and placed at the service of the British Government for the period of the War, and in addition to furnishing nearly 28,000 recruits for the British Indian Army and maintaining the State Imperial Service Contingent at full strength, the State contributed substantially in money and material. Again in 1919 on the outbreak of hostilities with Afghanistan the late Ruler served personally on the Frontier on the Staff of the General Officer Commanding and the Imperial Service Contingent saw active service at Kohat and Quetta fronts. For his services on the N.W. Frontier, His late Highness was mentioned in despatches. His Highness the present Ruler, true to the traditions of the House of Patiala, volunteered on the occasion of the crisis in September, 1938, to place at the disposal of His Majesty's Government all the resources of the State in the event of war. The offer was renewed in August, 1939, and His Highness has made a notable contribution to the war effort by making large payments towards various Funds organised in connection with the war, in addition to placing two Infantry Units and one Cavalry Unit at the disposal of H.E. The Crown Representative for active service.

In July-August 1941, His Highness made a tour of Malaya.

His Highness has inherited fine qualities of sportsmanship and achieved distinction as a sportsman.

His Highness is a great sportsman. He captained the All-India Cricket side against the Australians and played for India against the M.C.C. and Australians in the Test matches. His Highness is a member of the re-constituted Standing Committee of the Chamber of Princes.

Bahawalpur.—Bounded on the North-East by the District of Ferozepur, on the East and South by the Rajputana States of Bikaner and Jaisalmer; on the South-West by Sind, on the North-West by the Indus and Sutlej rivers. Area, 15,000 square miles.

This State is about 300 miles in length and about 50 miles wide, is divided lengthwise into three great strips. Of these, the first is a part of the Great Indian Desert; the central track which is as barren as uplands of the Western Punjab, has however been partly rendered capable of cultivation by the network of Sutlej Valley Canals constructed recently; and the third a fertile alluvial tract in the river valley is called the Sind. The State is a partner in the great Sutlej Valley Project.

The ruling family is descended from the Abbasside Khalifas of Baghdad. The tribe originally came from Sind, and assumed independence during the dismemberment of the Durrani Empire in the Treaty of Lahore in 1809. Ranjit Singh was confined to the right bank of the Sutlej.

The first treaty with Bahawalpur was negotiated in 1833, the year after the treaty with Ranjit Singh for regulating traffic on the Indus. It secured the independence of the Nawab within his own territories and opened up the traffic on the Indus and Sutlej. During the first Afghan War the Nawab rendered assistance to the British and was rewarded by a grant of territory

and life pension. On his death his heir being minor for a time the administration of the State was in the hands of the British authorities. The present ruler is Lt-Col Dr Al-Haj His Highness Rukn-ud-Daula-Nusrat-i-Jang Saifud-Daula Hafizul-Mulk Mukhlisud-Daula, Munud-daula Nawab Sir Sadiq Mohammad Khan Sahib Bahadur Abbasi V, GCSI, GCIE, KCSI, LL D, who was born in 1904 and succeeded in 1907. During his minority the State was managed by a Council of Regency which ceased to exist in March 1924, when His Highness the Nawab was invested with full power. His Highness is now assisted in the administration of his State by a Prime Minister, Izzat Nishan, Imad-ul-Mulk, Rais-ul-Wuzra, Khan Bahadur, Mr Nabi Bakhsh Mohammad Husain, MA, LLB, CIE, a Public Works and Revenue Minister, Mr F Anderson, CSI, CIE, a Home Minister, Rafi-us-Shan, Iftikhar-ul-Mulk, Lt-Col Khan Bahadur Maqbool Hasan Kureshiy, MA, LLB, CIO, CIO, a Household Minister, Aminu-ul-Mulk, Umdat-ul-Umra, Sardar Mohammad Amir Khan, CIO, and Major Shamsuddin Mohammad, BA, Minister for Education.

The chief crops are cotton and wheat. The Lahore-Karachi branch of the North-Western Railway passes through the State. The State supports an Imperial Service combined Infantry, in addition to other troops. The capital is Bahawalpur, a walled town built in 1718.

Income from all sources Rs 1,32,21,656, population 13,75,000. Language spoken Multani, or Western Punjabi.

Resident for the Punjab States—The Hon'ble C L Corfield, CIE, CIO, ICS.

Khairpur.—The state of Khairpur lies in Upper Sind between 26°-10' and 27°-46' North Latitude and 68°-20' and 70°-14' East Longitude. It is bounded on the East by Jodhpur and Jessalmere territories and on the North, West and South by British Districts of Sind. The climate is similar to the rest of Sind. The maximum temperature in summer is 117° in the shade and the minimum in winter 30°. The nearest hill station is Quetta, 5,500 feet above sea level. Rainfall is scarce, the last 13 years' average being 4"-0". The area of the State is about 6,050 square miles. The population of the State according to the census of 1941 is 305,787 of whom 83% are Muslims. The majority of them are cultivators. Others are engaged in trade, State services and labour. The Muslims are mainly Sunnis, but the Ruler and his family and some others are Shias. The State's income from all sources for 1940-41 was Rs 27,77,131. The relations of the State with the British Government are those of subordinate alliance. The State pays no tribute either to the British Government or to any other State. The language of the State is Sindhi. Urdu and English are also spoken. The chief products of the State are grain and cotton which are cultivated on irrigation canals taking off from the Indus river at the Lloyd Barrage and to a small extent on wells. Oil-seeds, ghee, hides, tobacco, Fuller's earth ("met"), carbonate of Soda ("Kharo chaniho"), and wool are also produced. The manufactures comprise cotton, silken and woollen fabrics, lacquer work, carpets and pottery.

The Rulers are Muslim Talpur Balochs and belong to the Shia sect. Previous to the accession of this family on the fall of the Kalhora dynasty of Sind in 1783, the history of the State belongs to the general history of Sind. In that year Mir Fatehali Khan Talpur established himself as Ruler of Sind and subsequently his nephew, Mir Sohrab Khan Talpur, founded the Khairpur Branch of the Talpur family. In 1882 the individuality of the Khairpur State was recognised by the British Government. The Ruler is a first-class prince and is entitled to a permanent salute of 15 guns outside and 17 guns inside the State limits.

Present Mir His Highness Mir Faiz Mahomed Khan Talpur of Khairpur State. Born on 4th January 1913. Ascended the *Gadi* on 30th April 1936.

Resident for Punjab States The Hon'ble Mr C L Corfield, CIE, CIO, ICS.

Minister Khan Bahadur S Ijaz Ali, MBE. (Retired Collector, United Provinces).

Jind—Jind is one of the three Phulkian States (the other two being Patiala and Nabha). Its area is 1,268 square miles, with a population of 3,61,812 souls and an income of about Rs 30 lakhs.

The history of Jind as a separate State dates from 1763, when Raja Gajpat Singh, the maternal grandfather of Maharaja Ranjit Singh, and great-grandson of the famous Phul, established his principality. He was succeeded by Raja Bhag Singh, who greatly assisted Lord Lake in 1805. His grandson Raja Sangat Singh was succeeded by the nearest male collateral Raja Sarup Singh in 1837. In the crisis of 1857 Raja Sarup Singh rendered valuable services to the British and was rewarded with a grant of nearly 600 square miles of land, known as Dadri territory. He was succeeded by his son Maharaja Raghbir Singh, who gave help to the British Government on the occasion of Kuka outbreak (1872) and the 2nd Afghan War (1878). The present ruler Maharaja Ranbir Singh was born in 1879, succeeded in 1887 and was invested with full powers in 1899. The State rendered exemplary services in the Great European War. It supplied 8,673 men to the Indian Army and Imperial Service Troops and doubled the strength of its Imperial Service Infantry. The total contribution amounted to nearly 35 lakhs, in gifts of cash, materials, animals and loan.

His Highness enjoys a salute of 15 guns. The capital is Sangrur, which is connected by a State Railway with the North-Western Railway. The principal executive officer of the State is called Chief Minister.

Ruler.—Colonel His Highness Farzand-i-Dilband Rasikh-ul-Itikad, Daulat-i-Inglishia Raja-i-Rajgan Maharaja Sir Ranbir Singh Bajendra Bahadur, GCSI, GCIE, etc.

Nabha—Nabha, which became a separate State in 1763, is one of the 3 Phulkian States—Nabha, Patiala and Jind—and though second in point of population and revenue of the 3 States, it claims seniority owing to its Ruler claiming descent from the eldest branch. It consists of two distinct parts, the main portion

comprising 12 separate pieces of territory scattered among the other Punjab States and Districts, forms the City of Nabha and the Nizamats of Phul and Amloh, the second portion forms the Nizamats of Bawal in the extreme southeast of the Punjab on the border of Rajputana, this Nizamats of Bawal was subsequently added to its territory as a reward from the British Government for the loyalty of the Rulers of Nabha. The State now covers an area of about 1,000 square miles and has a population of about 3,40,000. It maintains a Field Service Unit consisting of a full Battalion of Infantry known as the Nabha Akal Infantry under the Indian States Forces Scheme, 1939, and a State Service Unit of one full Company Strength. The total strength of the state Forces is 1,600. For the preservation of the peace there is also a Police force consisting of about 500 men.

The State is traversed by the main and 3 branch lines of the N.-W. Railway and the B. B. & C. I. crosses the Nizamats of Bawal. A portion of the State is irrigated by the Sirhind Canal. The crops of the State are gram, pulses, bajra, sugarcane, cotton, wheat and barley; to facilitate trade the Durbar has opened grain markets and Banks near the principal railway stations within the State territory. The chief industries of the State consist of the manufacture of silver and gold ornaments, brass utensils, cotton, carpets, and gota, etc. There are some ginning factories and 5 cotton Steam Presses in the State which are working successfully. Lieutenant His Highness Maharaja Pratap Singh Malvendra Bahadur, who was born in 1918, was invested with ruling powers on 5th March 1941. In the administration of the State His Highness is assisted by a cabinet of Ministers. The Prime Minister General Sardar Shirdar Singh, is a premier local Sardar.

Kapurthala.—This State consists of three detached pieces of territory in the great plain of the Jullundur Doab. The ancestors of the ruler of Kapurthala at one time held possessions both in the Cis and Trans-Sutlej and also in the Bari Doab. In the latter lies the village of Ahlu whence the family springs, and from which it takes the name of Ahluwalia. When the Jullundur Doab came under the dominion of the British Government in 1846, the estates north of the Sutlej were maintained in the independent possession of the Kapurthala Ruler, conditional on his paying a commutation in cash for military service engagements by which he had previously been bound to Maharaja Ranjit Singh, of Lahore. This annual tribute of Rs 1,31,000 a year was remitted by the Government of India in perpetuity in 1924 in recognition of the splendid war record and uniformly efficient administration of the State. The Bari Doab estates are held by the head of the House as a jaghir in perpetuity, the civil and police jurisdiction remaining in the hands of the British authorities. For good services during the Mutiny, the present Maharaja's grandfather was rewarded with a grant of other estates in Oudh, which yield a large annual income equal to those of Kapurthala State. The present Ruler's titles are Col. H. Farzand-I-Dilband Rasikh-ul-Itiqad Daulat-I-Inglisla Raja-I-Rajgan Maharaja Jagatjit Singh Bahadur Maharaja of Kapurthala, G.O.S.I.

(1911), G.O.I.E. (1918); G.B.E. (1927) who was born on 24th November, 1872 and succeeded his father, His Highness the late Raja-I-Rajgan Kharak Singh of Kapurthala in 1877. He was granted the title of Maharaja as an hereditary distinction in 1911. His salute was raised to 15 guns and he was made Honorary Colonel of the 45th Rattays Sikhs. The Maharaja received the Grand Cross of the Legion d'Honneur from the French Government in 1924, and possesses also the Grand Cross of the Order of Carlo 3rd of Spain, Grand Cross of the Order of the Star of Roumania, Grand Cross of the Order of Menelek of Abyssinia, Grand Cross of the Order of the Nile of Egypt, Grand Cordon of the Order of Morocco, Grand Cordon of the Order of Tunis, Grand Cross of the Order of Chili, Grand Cross of the Order of the Sun of Peru, Grand Cross of the Order of Cuba, represented Indian Princes and India on the League of Nations in 1926, 1927 and 1929, celebrated the Golden Jubilee of his reign in December 1927, and the Diamond Jubilee in 1937.

The rulers of Kapurthala are Rajput Sikhs and claim descent from Rana Kapur, a distinguished member of the Rajput House of Jaisalmer. Only a small proportion of the population however are Sikhs, the majority being Mahomedans. The chief crops are wheat, gram, maize, cotton and sugarcane. The town of Sultanpur in this State is famous for hand-printed cloths. Phagwara is another important town in the State, has a large Sugar Factory on modern lines, and is very prosperous also on account of its grain markets and factories for manufacture of agricultural implements, and metallic utensils of household use. The situation of this town on the main railway line and the consequent facilities of export and import make its importance still greater and this is the chief commercial town in the State. The main line of the North-Western Railway passes through part of the State and the Grand Trunk Road runs parallel to it. A branch railway from Jullundur City to Ferozepur passes through the capital. The Imperial Service and local troops of the State have been re-organized and are now designated as Kapurthala State Forces. These State Troops, the strength of which was raised during the Great War, to nearly 2,000, served the Empire in that crisis in East Africa, Mesopotamia and on the Afghan Frontier. The Maharaja's third son, Major Maharaj Kumar Amarjit Singh, O.I.E., I.A., served with the Indian Army in France. Primary education is free throughout the State, and it spends a large proportion of its revenues on its Education Department. The State also possesses a Legislative Assembly which was created by the present Maharaja on the occasion of the Silver Jubilee of his reign in 1916. The capital is Kapurthala which has been embellished by the present Maharaja with a Palace of remarkable beauty and grandeur and with various buildings of public utility. The town boasts of modern amenities such as electric light, water-works, etc.

Political Officer: The Hon'ble Resident for the Punjab States.

Tehri State (or Tehri-Garhwal)—This State lies entirely in the Himalayas and contains a tangled series of ridges and spurs radiating from a lofty series of peaks on the border of Tibet. The sources of the Ganges and the Jumna are in it. The early history to the State is that of Garhwal District, the two tracts having formerly been ruled by the same dynasty since 688 A.D. Pradyumna Shah, the last Raja of the whole territory, was killed in battle fighting against the Gurkhas, but at the close of the Nepalese War in 1815, his son received from the British the present State of Tehri. During the Mutiny the latter rendered valuable assistance to Government. He died in 1859. The present Maharaja is Lieut.-Col. H. H. Sir Narendra Shah Bahadur, K.C.S.I., LL.D., who is 59th direct male lineal descendant from the original founder of the dynasty, Raja Kanak Pal. The principal products are rice and wheat grown on terraces on the hill sides. The State forests are very valuable and there is considerable export of timber. The Maharaja has full powers within the State. The strength of the State forces is 330. Tehri is the capital but His Highness and the Secretariat Office are at Narendranagar for the greater part of the year, the summer capital being Pratapnagar, 8,000 feet above the sea-level. The State is in political relationship with the Residency of the Punjab States.

Mandi is an Indian State in the Punjab Political Agency, lying in the upper reaches of Bias river, which drains nearly all its area. Its area is 1,200 square miles and it lies between 31°-23' North Lat. and 76°-22' East Long., and is bounded on the east by Kulu; on the south by Suket and on the north and west by Kangra. It has an interesting history of considerable length which finally resulted in its entering into a treaty with the British in 1840.

The present Ruler, Major His Highness Raja Sir Jogindar Sen Bahadur, K.C.S.I., assumed full powers in February, 1925. His Highness married for the first time the only daughter of His Highness the Maharaja of Kapurthala. His Highness married again in 1930 the younger daughter of K. Prithiraj Singh of Rajpipla. A son and heir was born on 7th December, 1923.

The Mandi Hydro-Electric Scheme was formally opened by His Excellency the Viceroy in March, 1932. The principal crops are rice, maize, wheat and millet. About three-fifths of the State is occupied by forests and grazing lands. It is rich in minerals. The capital is Mandi, founded in 1527, which contains several temples and places of interest and is one of the chief marts for commerce with Ladakh and Yarkand.

Sirmur (Nahan)—This is a hilly State in the Himalayas under the Political Control of the Political Agent, Punjab Hill States, Simla. Its history is said to date from the 11th century. In the eighteenth century the State was able to repulse the Gurkha invasion, but the Gurkhas were invited to aid in the suppression of an internal revolt in the State and they in turn had to be evicted by the British. In 1857 the Raja rendered valuable services to the British,

and during the second Afghan War he sent a contingent to the North-West Frontier. The present Prince is Lt. H. H. Maharaja Rajendra Prakash who was born in 1913 and succeeded in 1933. The main agricultural feature of the State is the recent development of the Kiarda Dun, a fertile level plain which produces wheat, gram, rice, maize and other crops. The State forests are valuable and there is an iron foundry at Nahan which was started in 1867 but, being unable to compete with the imported iron, is now used for the manufacture of sugarcane crushing mills. The State supports a Corps of Sappers and Miners which served in the Great War. It was captured with General Townshend's force at Kut-al-Amara but another Corps was formed which replaced it in the field.

Malerkotla.—This State consists of a level sandy plain unbroken by a hill or stream, bounded by the district of Ludhiana on the north, by Patiala territory on the east and south and by the Ludhiana District, Patiala and Nabha territories on the west. The Rulers (Nawabs) of Malerkotla are of "Kurd" descent who came originally from the Province of "Sherwan" and settled in the town of "Sherwan" north of Persia, and after settling for a time in Afghanistan near Ghazni, came to India and settled at *Malir*, the old capital of the State, in 1442. Originally they held positions of trust under the Lodhi and Moghal Emperors. As the Moghal Empire began to sink into decay they gradually became independent. They were engaged in constant feuds with the newly created adjacent Sikh States. After the victory of Laswari, gained by the British over Sindhia in 1803 and the subjugation and flight of Holkar in 1805, when the Nawab of Malerkotla joined the British Army, the British Government succeeded to the power of the Mahrattas in the districts between the Sutlej and the Jumna. The State entered into political relations with the British Government in 1809. The present Ruler is Lt.-Col. His Highness Nawab Sir Ahmad Ali Khan, Bahadur, K.C.S.I., K.O.I.E., who was born in 1881 and succeeded in 1908. He was created Hon. Major in the Indian Army in June 1916 and promoted to the rank of Lt.-Col. in December 1919.

The chief products are cotton, sugar, poppy, aniseed, mustard, ajwan, methil, tobacco, garlic, onions and all sorts of grains.

The State maintains Sappers, Infantry, Cavalry and Artillery. The capital is Malerkotla. The population of the town is 30,000. Annual revenue of the State is about 16 lakhs.

Faridkot.—The Faridkot Rajas belong to the same stock as the Phulkian Chiefs, having a common ancestor in Brar, more remote by twelve generations than the celebrated Phul. The Faridkot House was founded in the middle of the 17th century. The present Ruler, Farzand-i-Saadat Nishan Hazrat-i-Kaiser-i-Hind, Captain His Highness Raja Sir Harindar Singh Bahadur, K.C.S.I., was born on the 29th January, 1915, succeeded to the *gadi* in 1915, and was invested with full ruling powers in October, 1934. His Highness personally administers the State assisted by his younger brother, Kanwar Manjitindar Singh.

and an efficient cabinet of three Secretaries, headed by Sardar Bahadur Sardar Indar Singh, B.A. the Chief Secretary. His Highness is a member of the National Defence Council. The State comprises an area of 643 square miles with a population of 1,99,283 and has a gross annual income of 17 lakhs. The Ruler is entitled to a salute of 11 guns. The State Forces consist of a Field Company of Sappers and Miners (237 men plus a depot now called Training and Maintenance Unit 125 strong and a reserve of 100 sepoy) and His Highness's Body Guard. For the duration of the war a State Service Company 260 strong, a Faridkot Militia 633 strong and a Camel Corps of 215 have also been raised. Faridkot, the Capital town, lies on the main Delhi-Bhatinda Lahore Section of the North-Western Railway.

Chamba.—This State is enclosed on the west and north by Kashmir, on the east and south by the British districts of Kangra and Gurdaspur, and is shut in on almost every side by lofty hill ranges. The whole country is mountainous and is a favourite resort of sportsmen. It possesses a remarkable series of copper plate inscriptions from which its chronicles have been compiled.

Founded probably in the sixth century by Raja, Surajtansi Rajput, who built Brahma, the modern Barmaur, Chamba was founded by Meru Varma (650) and the town of

Chamba was built by Sahil Varma about 920. The State maintained its independence, until the Moghal conquest of India.

Under the Moghals it became tributary to the empire, but its internal administration was not interfered with, and it escaped almost unscathed from Sikh aggression. The State first came under British influence in 1846. The part, west of the Ravi, was at first handed over to Kashmir, but subsequently the boundaries of the State were fixed as they now stand, and it was declared independent of Kashmir. The present Chief is H. H. Raja Lakshman Singh who was born in 1924 and succeeded to the *gadi* in 1935. As he is a minor the Administration of the State is being conducted by a Council, consisting of a President (Lieut.-Colonel H. S. Strong C.I.E.), Vice-President (Diwan Bahadur Madho Ram) and Revenue Member (Rai Salib Raghulur Singh). The principal crops are rice, maize and millets. There are some valuable forests which were partly leased to Government in 1864 for a term of 99 years but the management of them has now been retroceded to the Chamba Durbar. The principal road to Chamba town is from Pathankot the terminus of the Amritsar Pathankot branch of the North Western Railway. Chamba town on the right bank of the Ravi contains a number of interesting temples of which that of Lakshmi Narayan, dating possibly from the tenth century is the most famous.

JAMMU AND KASHMIR STATE.

The territory known generally as the Jammu and Kashmir State, lies between 32° and 37° N and 73° and 80° E. It is an almost entirely mountainous region with a strip of level land along the Punjab border, and its mountains, valleys and lakes comprise some of the grandest scenery in the world. The State may be divided physically into three areas, the upper, comprising the area drained by the River Indus and its tributaries, the middle, drained by the Jhelum and Kishenganga Rivers; and the lower area, consisting of the level strip along the southern border, and its adjacent ranges of hills. The dividing lines between the three areas are the snow-bound inner and outer Himalayan ranges known as the Zojila and the Panchal. The area of the State is 84,471 square miles. Beginning in the south where the great plain of the Punjab ends, it extends northward to the high Karakoram mountains where three Empires meet."

Briefly described, the State comprises the valleys of the three great rivers of Northern India, viz, the upper reaches of the Chenab and the Jhelum, and the middle reaches of the Indus. The total population is 40,21,616.

History.—Various historians and poets have left more or less trustworthy records of the history of the valley of Kashmir and the adjacent regions. In 1586 it was annexed to the Moghul

Empire by Akbar. Srinagar, the capital, originally known as Pravarapura, had by then been long established, though many of the fine buildings said to have been erected by early Hindu rulers had been destroyed in the fourteenth century. In the reign of Sikandar, who was a contemporary of Tamerlane, a large number of Hindus was converted to Islam. Jehangir did much to beautify the Valley, but after Aurangzeb there was a period of disorder and decay, and by the middle of the eighteenth century the Suba or Governor of Kashmir had become practically independent of Delhi. Thereafter the country experienced the oppression of Afghan rule until it was annexed in 1819 by an army sent by Maharaja Ranjit Singh. The Sikh rule was not more beneficial to the people than that of the Afghans. The early history of the State as at present constituted is that of Maharaja Shri Gulab Singhji, a scion of the old Ruling Family of Jammu, who rose to eminence in the service of Maharaja Ranjit Singh of Lahore and was, in recognition of his distinguished services, made Raja of Jammu in 1820. He held aloof from the war between the British and the Sikhs, only appearing as mediator after the battle of Sobraon (1846), when the British made over to him the valley of Kashmir and certain other areas in return for his services in re-establishing peace. His son, His Highness Maharaja Ranbir Singhji, a model Hindu and one of the staunchest allies of the British Government, ruled from

1867 to 1885 He did much to consolidate his possessions and evolve order in the frontier districts He was succeeded by his eldest son, His Highness Maharaja Sir Pratap Singhji, who died on 23rd September 1925, and was succeeded by His Highness the present Shri Maharaja Hari Singhji Bahadur

The most notable reform effected in the State during the reign of the late Maharaja was the Land Revenue Settlement originally carried out under Sir Walter Lawrence and revised from time to time

Administration—For some years after the accession to the *gadi* of the late Maharaja, the administration of the State was conducted by a Council over which the Maharaja presided In 1905 this Council was abolished and the administration of the State was thenceforward carried on by His Highness the Maharaja with the help of a Chief Minister and a number of Ministers in charge of different portfolios This system continued until January, 1922, when an Executive Council was inaugurated Very recently certain modifications have been introduced in the constitution.

The British Resident has his headquarters at Srinagar and Sialkot and there is also a Political Agent at Gilgit A British Officer is stationed at Leh to assist in the supervision of the Central Asian Trade with India, which passes through Kashmir.

In the Dogras (Hindus and Muslims) the State has splendid material for the Army which consists of over 10,000 troops Besides this, thousands of Dogras serve in the Indian Army.

Finance—The financial position of the State is strong The total revenue, including Jagirs, is about 2,70,00,000, the chief sources being land, forests, customs and excise and sericulture. There is a reserve and no debt

Production and Industry—The population is pre-eminently agricultural and pastoral The principal food crops are rice, maize and wheat Oilseed is also an important crop Barley, cotton, saffron, tobacco, beans, walnuts, almonds and hops are also grown Pears and apples, the principal fruits of the Valley, are exported in large quantities The State forests are extensive and valuable The principal species of timber trees are deodar, blue pine and fir The most valuable forest lie in Kishtwar, Karnah and Kamraj Illaqa A survey of the mineral resources of the State is being conducted The most noteworthy of the minerals expected to be found in the State are bauxite, coal, Fuller's earth, kaoline, slate, zinc, copper and talc Gold is found in Baltistan and Gilgit, sapphires in Paddar, aquamarines in Shardu and lead in Uri The silk culture in Srinagar is the largest of its kind in the world Manufacture of silk is a very ancient industry in Kashmir Zain-ul-Abidin, who ruled from 1421 to 1472, is said to have imported silk weavers from Khurasan and settled them here Woollen cloth, shawls, carpets, papier maché and wood carving of the State are world famous The State participated in the British Empire Exhibition of 1924 where the Kashmir Court earned the name "The Gem of The Smaller Courts" and attracted

many visitors An Industrial and Agricultural Exhibition is held in the State annually, where the products of indigenous arts and craftsmanship for which Kashmir is famous, are displayed His Highness's Government are maintaining a Visitors' Bureau at Srinagar for the convenience of visitors, who are attracted by the scenery and charm of the beauty-spots of Kashmir Recently attention has been directed towards the development of tourist traffic

Communications—Great efforts have been, and are being, made towards the improvement of roads for wheeled traffic in the State The Jhelum Valley road (196 miles) which links the Kashmir Valley with the Punjab and the North-Western Frontier Province is considered to be one of the finest motorable mountain roads in the world

The Banihal Cart Road, 205 miles long, joins Kashmir with the North Western Railway system at Jammu-Tawai and is also a fine motorable road

Roads for pack animals lead from Srinagar, the summer capital of Kashmir, to the frontier districts of Gilgit and Ladakh Internal village communications have also been much improved

The Jammu-Suchetgarh Railway, a section of the Wazirabad-Sialkot branch line of the North-Western Railway system, is the only Railway in the State The mountainous nature of the country has so far prevented the extension of the line into the heart of the State

Public Works—In 1904 a flood spill channel above Srinagar was constructed to minimise the constant danger of floods in the River Jhelum A number of canals have been constructed at considerable expense both in Jammu and Kashmir The State has been recently connected with the telephone system of British India An aerodrome has been constructed five miles from Srinagar, and it is hoped that an aerial service between Lahore and Delhi and Kashmir will be established soon Good progress has been made with irrigation, but the most important scheme of recent years has been the installation of a large Electric Power Station on the Jhelum River at Mahora which was completed in 1907 The bridge over the Chenab at Aknur, which was completed in 1905 at a cost of Rs 4 lakhs, has the longest unsupported span in India

Education—According to the last census of the State, there were over 264,000 literate persons in the State including over 42,000 females The number of educational institutions is 1780 There are two Aits Colleges and one aided Oriental College The number of scholars in 1940-41 was 1,14,096 In Municipal aits education for boys was made compulsory in 1929 More schools including high schools are introduced every year and a campaign for adult education has been started recently in the State There are at present 4,253 Adult Literacy Centres and 23,109 adults including 1,851 women were granted literacy certificates, during the year ending October 1941 About 62,000 adults were receiving instructions at the close of the year

Reforms—One of the important reforms connected with the present Maharaja's reign has been the establishment of an independent High Court of Judicature modelled on British Indian lines. Important legislative measures passed by His Highness's Government in recent years include the raising of the age of marriage to 14 for girls and 18 for boys, and the Agriculturists' Relief Act designed to cope with the problem of rural indebtedness.

As signs of constitutional progress of the State may be mentioned the freedom granted to the press, and the introduction of the State Assembly. About 40 newspapers are in existence in the State.

His Highness announced further reforms on the 16th of February, 1939, by a proclamation, the main features of which being (a) an elected majority in the Praja Sabha, (40 elected members in a house of 75), (b) election by the Praja Sabha of its own Deputy President, (c) appointment of four non-official members of the Sabha as Under-Secretaries to assist His Highness's Ministers and (d) submission of proposals for the appropriation of the Revenues and other monies in any year for expenditure on items which are votable (the non-votable items being specified in the Statute) to the vote of the Sabha the form of demands.

The Kashmir Constitution Act was promulgated in 1939 and made provision for the appointment of a Board of Judicial Advisers and the creation of the post of an Advocate-General. The Board advises His Highness in the disposal of such civil and criminal appeals as lie to His Highness from the High Court of Judicature.

War Effort—With the declaration of the war in September 1939, His Highness the Maharaja Bahadur offered to His Majesty the King Emperor his personal services and placed the resources of the State at his disposal.

At present 5 Units of the State Army are serving outside the State. For maintaining the troops sent out at full strength it has been

necessary to increase the number of recruits under training. The officers and men of the State Army on active service are receiving their pay from the State and their ration allowance is being paid to their families.

In addition to the grant of Rs 52,52,000 for expenditure on the Army in the year 1939-40, a special War Budget of Rs 8,81,500 was sanctioned. The War Budget for 1940-41 rose to Rs 12,96,000.

The Jammu and Kashmir Mountain Battery achieved great distinction in the battles of Keren (Eritrea) and Damascus (Syria) and His Highness was the recipient of messages of congratulations from H E the Viceroy and General Auchinleck for the bravery displayed by the State troops.

His Highness presented 18 completely equipped motor ambulances for war purposes. He has placed the Kashmir House at New Delhi at the disposal of the Government of India. His Highness paid a visit to the Middle East in October last year. He made a number of gifts for the Indian Soldiers' Club and contributed £2,000 for the provision of comforts and amenities to the forces in the Middle East. He also contributed £1,000 for the relief of the suffering and the homeless in England. Early this year (1942) he placed his Lock-heed plane at the disposal of Government of India.

An influential War Aid Committee was set up with Her Highness the Maharani Sahiba as president to raise funds. The total receipts of the Committee to the end of February 1942 amounted to Rs 4,12,598, out of which Rs 3,05,995 was spent on contributions to various war funds and on materials purchased for working parties to provide comforts and amenities to troops.

Her Highness has organised Ladies' Working parties and Her Highness personally attends its meetings both at Jammu and Srinagar. The Committee has sent a number of parcels for use of forces overseas.

THE CHAMBER OF PRINCES.

The Narendra Mandal or Chamber of Princes came into existence, with the earnest co-operation of a number of leading Princes themselves, as one of the results of the Report on Indian constitutional reform presented to Parliament by Mr. Montagu, Secretary of State for India and H. E. Lord Chelmsford, Viceroy and Governor-General of India in 1919. The proposal was that the Chamber should exist as a permanent consultative body, with the Viceroy as President and the members composing the Chamber consisting mainly of the Princes and Chiefs having salutes or whose membership might otherwise be considered desirable by the Viceroy. Certain smaller Chiefs were grouped and were given the privilege of nominating a member to represent them from year to year. The Chamber is a recommendatory body, which performs its functions under a constitution approved by the Secretary of State and it deals with questions submitted to it concerning the Princes and their rights and privileges generally and their position in Imperial affairs.

The Chamber was formally inaugurated by H. R. H. the Duke of Connaught on 8th February 1921. It meets regularly once a year and the agenda of subjects for discussion is framed and proposed by the Chancellor of the Chamber. The Chamber selects by vote its own officers, who are the Chancellor, a pro-Chancellor to act for him in his absence out of India and a Standing Committee of the Chamber. This Committee considers before the annual meetings the subjects to be discussed at them.

Composition of Chamber—As the constitution of the Chamber provided for each State-Member exercising one vote on any question coming before the Chamber, power in the Chamber gradually fell into the hands of a majority representing the smaller States, because these States were naturally the readiest to exercise their membership privileges. This development caused serious dissatisfaction among the Greater States and out of that sprang a movement for the re-organization of the Chamber.

The differences between the Greater States and the Lesser States were much sharpened by the different viewpoints which they occupied in regard to Federation. His Highness of Patiala early in 1936 resigned the Chancellorship on this account. Thereafter His Highness of Bikaner resigned from one Standing Committee of the Chamber. Only one Ruling Prince with a salute as big as 17 guns was then left an active participant in the Chamber's affairs. His Highness of Patiala was succeeded in the Chancellorship by His Highness of Dholpur, who automatically proceeded to the appointment from that of pro-Chancellor. There was no meeting of the Chamber in 1936. His Excellency the Viceroy, in consultation with the Princes, convened a meeting commencing on 22nd February, 1937.

This meeting was preceded by intensive deliberations in the Informal Conferences of

Princes. Their Highnesses at discussions which they held in Bombay in October 1936 appointed a Constitutional Committee, under the Chairmanship of His late Highness the Maharaja of Patiala and including the Chancellor, to examine the Government of India Act of 1935 from the point of view of the States' entry into Federation. This Committee produced its report in the first week of February, 1937, and in the course of it said that upon careful consideration of the Act they had "come to the conclusion that the safeguards have been substantially met" and that certain further recommendations now newly made by themselves would, if adopted, completely fulfil them. These recommendations, the Committee said, had been drafted in consideration of the fact that the Act had already been passed. They comprised, therefore, four proposed changes in the States' Draft Instrument of Accession.

This report was taken into consideration by the general body of Princes in their Informal Conference. At the same time as His Highness the Chancellor brought it before that body, he also laid before it an Opinion upon the same subject by Counsel whom the Standing Committee of the Chamber had recently engaged from London. This Opinion was a lengthy document and in effect amounted to a warning to the Princes against the risks in which entry into Federation would involve them. Its receipt led to its urgent examination by other expert advisers to the general body of Princes. Their criticisms of it were destructive. A further opinion in favour of Federation was at the same time independently given to the Princes, at the request of His late Highness of Patiala, by the Right Hon'ble Sir Tej Bahadur Sapru.

The upshot of all this was that under the leadership of the late Maharaja of Patiala the Informal Conference adopted the report of the Constitutional Committee in favour of the entry into Federation on the basis of the Government of India Act, 1935 and subject to the satisfactory conclusion of negotiations with the Crown on the subject of the Constitutional Committee's newly made recommendations. This decision was endorsed in a formal meeting of the Chamber of Princes on 24th February by the re-election of His late Highness of Patiala to the Chancellorship by an overwhelming majority, and by the election of a pro-Chancellor and Standing Committee in sympathy with the same decision.

His Highness the Jam Sahab of Nawanager succeeded His late Highness of Patiala in the Chancellorship and continues to hold office.

Attitude to Federation—The question of accession to Federation was fully considered by a Committee of States Ministers convened by the Rt. Hon'ble Sir Akbar Hydari. The Hydari Committee closely examined the draft Instrument of Accession, which, it was claimed, revealed differences relating to certain specified subjects, such as the protection of treaty rights and the rights of administration by

the States of certain Federal subjects. After considering the opinions of legal advisers, the Committee unanimously adopted a report raising objections to certain points in the Government of India draft and left it to the Princes to take such action as they might think necessary to safeguard their rights.

These recommendations were considered at a Conference of Princes and Ministers held in Bombay in June, 1939, under the chairmanship of His Highness the Jam Sahab of Nawanagar, the Chancellor. The Conference passed a resolution stating that the Princes found the revised draft Instrument of Accession unacceptable, two of their main reasons being that the form in which it seeks to protect their treaty rights is held to be inadequate for the purpose, and secondly that the orbit of federal authority and jurisdiction has been extended beyond that contemplated by the framers of the Constitution.

Revised draft Instruments of Accession were then drawn up and circulated among individual Rulers. These elicited diverse comments and suggestions for further modification. While the negotiations were in progress, the war broke out. (A fuller account of the various stages in the discussions of the Federation will be found in past issues of this book).

The efforts of the Viceroy to inaugurate the federal part of the constitution embodied in the Government of India Act came to an abrupt end with the outbreak of the war. While affirming that federation remained the objective of His Majesty's Government, His Excellency said in September 1939 that "we have no choice but to hold in suspense the work in connection with preparations for Federation."

Internal reform in States—The pace of administrative and constitutional reform in the States has rapidly increased in the last few years owing to the introduction of provincial autonomy in British India, the approach of Federation, and pressure—sometimes direct—from the Indian National Congress.

A new factor in the accession of the State to the proposed federation arose early in 1938. The Congress which had all this while opposed the inauguration of the federal part of the Government of India Act intensified its opposition since July 1937 when its nominees became Ministers in the majority of British Indian provinces. What were merely unofficial resolutions passed at public meetings and Congress conferences became the considered judgments of these Governments. They also induced their respective legislatures to pass specific resolutions protesting against the federal scheme contained in the Government of India Act of 1935, affirming their determination to resist its inauguration and setting out in detail their objections to the proposed federation. One of the principal objections was the anomaly of "forcing an alliance between democratic British Indian provinces and autocratic Indian States." In other words, the Congress demanded as one of the conditions precedent to its active co-operation with the federal scheme the introduction in the States of self-governing institutions and an undertaking by the States rulers that in choosing their representatives to

the federal legislature they would adopt an elective element. Neither the British Government nor their representatives in India could countenance these demands which were contrary to the provisions of the Act. Nevertheless the tide of democracy could not be stemmed. Many States could not escape the influence of autonomous adjacent provinces.

Numerous States announced their Rulers' intention to liberalise their constitutional machinery and to improve their administration. Many actually introduced reforms. A few Rulers declared that responsible government was the goal of policy and took steps towards it. Many Rulers announced progressive schemes of administrative reform in their respective states.

An extraordinary development took place early in 1939 when Mr. Gandhi decided on a fast to death to compel the Thakore Sahab of Rajkot to implement his promise concerning the membership of a reforms committee. The Viceroy intervened and Mr. Gandhi agreed to the adjudication of the Chief Justice of the Federal Court, which went in his favour. But subsequently further difficulties over the constitution of the committee arose owing to Mr. Gandhi's promise to the minorities and Mr. Gandhi eventually recanted and declared that his fast had been coercive in character. He therefore left the committee to be constituted by the State. Later Mr. Gandhi announced a "new technique" for agitation by States' subjects, in which he counselled moderation in their demands and called off all civil disobedience movements in the States.

His advice and direction was followed in almost every Indian State where previously the air had been thick with strife. In some cases the response was quick, while in others the local leaders were inclined to be resentful of this sudden brake on their activities. Eventually, however, quiet was restored on the "States front," although stray "incidents" continued to engage the attention of the local public and of Mr. Gandhi himself.

As recently as October 1941 Mr. Gandhi declared "I am convinced that in the new world order which is bound to follow the insensate butchery, dignified by the name of war, the Princes will have place only if they become true servants of the people, deriving their power not from the sword, but from the love and consent of the people." Mr. Gandhi advised the people of the States to cultivate patience and prepare themselves for the responsibilities that would devolve on them, by doing mute constructive work. That did not mean submission to active and acute tyranny of which so many accounts had reached him. That the victims must resist in the best manner they could. "I would like the Princes to accept my claim to be their true friend. As such, I would like to tell them that the way to read the signs of the times is to realise the utter helplessness of the sword. The Biblical saying is going to prove true sooner than we had expected. For all they that take the sword shall perish by the sword."

Princes' War Effort—From the beginning of the war, especially since the summer of 1940 when the hostilities took a turn for the worse, the Princes of India have devoted their whole-hearted energies exclusively to activities connected with war effort. Every one of them concentrated his attention on how best he and his State could aid Britain in her struggle against the forces of tyranny. They rose to a man, ranged themselves behind the banner of His Majesty and vied with one another in the supply of men and money to assist in the prosecution of the war to a successful conclusion. There was hardly a meeting of the Princes or the States Ministers at which war effort did not figure prominently on the agenda, indeed, it is true to say that every other subject took a second place at their deliberations.

The Chamber of Princes met in March 1941 when the entire proceedings were devoted to a discussion on how best to intensify the States' war effort.

There was comparatively little activity on the part of the Indian Princes during the year 1941-42, except in respect of war effort to which they continued to devote their attention with undiminished vigour. Early in the autumn, two committees appointed by the Chamber met in Bombay. One of them discussed questions relating to the regular publication of information about the war effort and administrative activities of the States. The other examined the items which should, ordinarily, be charged to the Rulers' Civil List and the reasonable basis on which it should be settled where it had not been separated from expenditure charged to the State administration. This was evidently in response to public opinion and the suggestions made by the Viceroy.

About the same time, a number of prominent States Ministers met together and appointed special committees for the consideration of rules for the settlement of boundary disputes in Indian States, the question of release of information affecting the States, extra-territorial rights exercised or claimed by the Government of India with respect to certain categories of persons in the States, and certain matters connected with the claims of heirs of deceased persons in Indian States regarding savings banks deposits.

Other matter considered by the Committee related to the acquisition of residential and non-residential property in British India by ruling princes, the definition of the term 'direct heir', expenditure incurred on the use of British Indian or State troops in the States, representation of the States on the provincial advisory committees for supply and the desirability of ensuring a liaison at the Centre between the representatives of the States and the Supply Department of the Government of India, share of the Indian States in the surcharge of petrol, prospecting and mining leases within the territories of States, formation of transport boards in Indian States and certain points relating to the Crown Representative's Police Force Law.

An idea of the States activities to help the war effort was provided by an official document

which recorded that four regiments of Cavalry, five Batteries and one section of Artillery, four companies and one section of Sappers and Miners, 23 battalions of Infantry, one Camel Corps unit and three companies of Animal Transport left their States for service under the Crown during the period from April, 1940, to April, 1941.

The States also provided during this period 11 general purposes transport companies raised by 18 States, who will also probably undertake their reinforcement and the training of recruits, two labour companies raised by two States, and three ambulance units raised by three States. A large number of signallers from the States forces were offered for transfer to the Indian Army, and 173 have already been accepted.

The report continued. The States have been vying with one another in their offers of units for service with the armed forces of the Crown, and in raising reinforcements and replacements for those accepted. In almost every State training and maintenance establishments have had to be expanded and reorganised. States factories are busy turning out clothing and equipment, including dummy rifles for the training of recruits.

"Gifts of money by the States as contributions to the war effort, during the year reviewed totalled Rs 2,29,76,000 non-recurring and Rs 37,61,000 recurring.

"On its side, the Crown has provided the States with the necessary arms and equipment for their new units free, on loan or at cost price, has borne the cost of the mechanisation of two cavalry regiments, has presented 3,000 horses free of charge, has refunded customs duty on oil and petrol used by the States forces, and in other ways given what help may be needed."

Princes' Outlook—Speaking at a joint meeting of Indian Princes and States representatives in August 1941, the Chancellor of the Chamber of Princes accorded support to the plea that India should be made as far as possible a self-contained unit for defence purposes. The Jam Sahib revealed that the States would have an informal liaison of a few select rulers with the Commander-in-Chief relating to the progress of the war. All the States were doing their best in aiding the war effort, he added, and rulers of leading Indian States had, at his instance, agreed to participate in a scheme for pooling all expert advice available in the States for the development of war industries.

In particular His Highness welcomed the Secretary of State's assurance that an agreement between the major political parties of British India would not be enough for the settlement of the Indian problem, but that the main elements in India's national life included not only political organisations and great religious or cultural communities but also geographical and administrative elements, the provinces of British India and Indian States. He added that there need be no slavish fetish for imitating the British system of party parliamentary government as the only method suited to India.

he American and other systems of government, suited to the needs of countries concerned, and proved equally effective and progressive

The desirability of finding an enduring and honourable basis for the future constitution of India, be it federal or confederal, be it a United Dominion or the United Dominions of India or anything else, transcended any stubborn adherence to accepted formulae for the mere sake of constitutional purism; and he for one would welcome and advocate a fair and dispassionate examination of all "bona fide" suggestions which might promise a solution of their problems, with due and effective protection of the legitimate rights of the various elements in the national life of India and the upkeep of treaties and pledges

This attempt, His Highness stated, should not be shirked merely because it involved adoption of unorthodox basis which might be suited to the special needs of India

Annual session of Chamber:—The annual session of the Princes' Chamber was held about the time of the arrival of Sir Stafford Cripps. The Viceroy's inaugural address described the part which the Princes were playing in the war effort and the part they must play for their survival in Indian policy, and referring to Sir Stafford Cripps as "a friend on whose fairness India can rely" His Excellency welcomed the re-election of the Jam Saheb of Nawanagar and the Maharaja of Bikaner as Chancellor and Pro-Chancellor, recalling the English proverb that it was unwise to change horses in midstream

The Viceroy pleaded earnestly with the Princes to adjust themselves to the rapidly changing currents "to achieve not only their own healthy development but also, if I may strike a graver note, their survival as valued and respected elements in the new Indian policy which has yet to be evolved" The Viceroy re-emphasised the need for a pooling of sovereignty by smaller States and announced a new plan to "safeguard standards achieved under minority administration

The Viceroy also expressed confidence that the Princes would forego, temporarily, prerogatives and privileges should they in any way impede India's war effort and commended the action of certain Eastern States in authorising the Resident to make decisions on their behalf in matters affecting the military situation. The Chamber checked the Viceroy's faith in final victory. The Viceroy invited support to the national war front of the Princes whom he described as hereditary wardens of India's martial traditions, and hoped the national war front would derive its strength and vitality from the patriotism of private citizens and public-spirited leaders. Finally, the Viceroy referred to Sir Stafford Cripps's mission, and was sure the Princes would give wholehearted co-operation in the discharge of Sir Stafford's great responsibilities

The Princes' reaction to the Viceroy's stirring address was given in a resolution which promised every possible assistance for the successful

prosecution of the war and for the defence of their motherland to ensure victory and vindication of "sacredness of treaties and covenants"

In their reply to the Viceroy's address, the members of the Princes' Chamber said that notwithstanding the Chamber's obvious limitations, it had justified to a large measure the purpose and the lofty ideals which were set before it. Referring to their war efforts, the Princes said. "At this juncture we wish to assure His Majesty the King-Emperor that we stand determined to spare or stint nothing, within our power, till the war is won"

The Chamber adopted an important resolution on the Prime Minister's statement on India and the then impending visit of Sir Stafford Cripps. It reiterated its demand that "any scheme, to be acceptable to the States must effectively protect their rights arising from treaties, engagements and sanads or otherwise and ensure the future existence, sovereignty and autonomy of the States thereunder guaranteed and leave them complete freedom duly to discharge their obligations to the Crown and to their subjects" The resolution authorised its representatives to carry on discussion and negotiations for the constitutional advance of India with due regard to the successful prosecution of the war and "the interests of the States, and subject to final confirmation by the Chamber, and without prejudice to the right of individual States to be consulted in respect of any proposals affecting their treaty or other inherent rights"

To carry on discussions and negotiations with Sir Stafford Cripps within the framework of this resolution, the Standing Committee of the Chamber set up a small committee consisting of the Chancellor, the Maharaja Jam Saheb, and the rulers of Bikaner, Patiala, Rampur, Dewas (Junior) and the Prime Ministers of Hyderabad, Baroda and Travancore. The result of these negotiations was to be subject to final confirmation by the Chamber

The Chancellor, the Jam Saheb of Nawanagar, who moved the resolution, declared that the Princely Order was not unmindful of the fact that in this total war, India, as much as other Allied countries, must put in its total effort, so that a speedy and final victory may be achieved. "We realise that such a total effort can come through wholehearted collaboration of all the main elements that go to make the national life of this great sub-continent" he added. He explained that the Princes had on several occasions publicly associated themselves with the general desire to secure for India the fullest freedom and the highest status under the aegis of the British Crown. On behalf of the Chamber, the Jam Saheb declared that they should lend to the latest proposals of His Majesty's Government the consideration to which they were entitled. He concluded "Let us put our shoulders to the wheel to serve and save India today without prejudice to the right of pressing our respective points of view in the ultimate constitution which we shall ourselves frame on the basis of a free India"

The Maharaja of Bikaner, seconding the resolution repudiated the insinuation in certain quarters that the Princes stood in the way of the constitutional advance of the country. He cited his own efforts in 1917 in support of his contention that the Princely Order had urged for a generous measure of constitutional reform for India. His Highness declared that the constitutional advance of British India should not be at the expense or the detriment of Indian States. Subject to those reservations, the Princely Order would be prepared to make on this occasion too their fullest contribution.

The resolution was supported by the Rulers of Sangli, Mandi and Dewas (Junior) and passed.

The next resolution, which was moved by the Chancellor and seconded by the Nawab of Rampur, related to the extension of time for appeals, etc., by the Ruler or the Government of the States in cases where limitation expired during the continuation of the war.

The Viceroy promised to have due consideration given to the resolution.

An interesting part of the annual report of the Chancellor, which gave figures of progress in popularising the system of administration in States and claimed that the States were not anachronisms and that their administrations were based "on a rule of law associated with growing beneficent activities." The Chancellor explained that much solid work was done in co-ordinating and where needed in stimulating the war effort of the States. He quoted percentages to show the economic, educational and political progress of the Indian States. He claimed, for instance, that the general incidence of taxation in the States had been lower than in British India. Primary education was free in almost all the States and the laws of the States which were members of the Chamber had been modelled generally on the lines of British Indian laws. Arrangements had also been made to examine the Central or Provincial legislation affecting the States. The Jam Sahib invoked the Viceroy's good offices to resolve the few points of doubt or difficulty relating to the application of the British Indian Income-Tax Law to the Rulers and subjects of Indian States and certain questions relating to the resolutions on courts of arbitration.

The Future:—On the eve of the publication of the Cripps Scheme, His Highness the Maharaja of Jammu and Kashmir issued a public statement which set out the States' outlook on India's future. He said "On the part of the States, a considerable factor in the Indian policy and an important party to be satisfied, there has been a tendency, even within recent weeks, to give prominence to the credo of 'relations to the Crown'. These relations have so far been maintained through, and effected by, a department set up by the will of the Crown, the policy and practice of the department being determined by the Crown's functionaries. Logically, therefore, it would seem that the Princes cannot object to having dealings with a central Government of India which the Crown may constitute. Nor have they any reason to assume that they would

not get a square deal from such a Government. In any case, it is the duty of the Princes to show themselves patriots and that they desire that their countrymen should feel themselves the equals of nationals anywhere in the world.

"The Princes are justified in assuming that in a self-governing India every autonomous unit will share equally the fiscal and financial advantages accruing in such an India as well as the responsibilities and burdens entailed by the maintenance of peace and order and the provision of beneficent services and public utilities in the territories administered. And it should not be forgotten that these territories may have problems peculiar to their populations as well as to their physical conditions.

"In the India of tomorrow such of the Princes' prerogatives as enable them to afford a better life to their subjects and to ameliorate their lot must remain. Other privileges, which may be merely matters of honour and glory shedding effulgence on their personalities are of comparatively small account when set beside other considerations such as the safeguarding of resources necessary for an up-to-date government and the relief of burdens borne by the States alone.

"In promising to support the proposals brought by Sir Stafford Cripps, the Chamber of Princes added the proviso that the support would be without prejudice to the right of individual States to lay their case before him and generally without prejudice to the 'inherent, rights of the States'.

"These rights it is not easy to define or catalogue when one considers the effect of political practice inaugurated in 1860 and since maintained with the aid of 'usage and sufferance'. In any case there is a piquant irony in the contrast between the Princes' reiteration of the phrase 'treaty rights' and the Viceroy's suggestion that all Princes, for certain purposes, should voluntarily abdicate in favour of the political officers accredited to their courts.

"When at the Round Table Conference the Princes assented to the working out of a federal constitution, they were prepared voluntarily to delegate some of their sovereign powers to a federal government. In the India of the future it is possible that the matters committed to the Central Government would be far fewer than those recited in the table of federal matters appended to the Act of 1935.

"Unless, therefore, the proposals entrusted to Sir Stafford Cripps are fundamentally adverse to the interests of the Indian States—and this is unthinkable—there is no reason why there should not be ample common ground between the States and the rest of India. 'Freedom' must be our watchword—freedom from crippling restrictions and strangling control, freedom from the subordination of India's interests to the interests of other parts of the Commonwealth."

The representatives of the Princes' Chamber and some prominent States Ministers met Sir Stafford Cripps, but details are not available at the time of writing either of their demands or of the final decision of Sir Stafford Cripps on behalf of the British Government.

Payments from Indian States.

Many of the States make payments, varying in amount according to the circumstances of each case, to His Majesty. These payments are frequently due to exchange of territory or settlement of claims between the Governments, but are chiefly in lieu of former obligations to supply or maintain troops. The annual receipts on account of these payments from Indian States are summarised in the following table. The relations of the States to one another in respect of Cash Contribution are complicated, and it would serve no useful purpose to enter upon the question. It may, however, be mentioned that a large number of the States in the Western India and Gujarat States Agencies pay Cash Contribution of some kind to Baroda, and that Gwalior claims Cash Contribution from some of the smaller States of Central India States making payments directly to His Majesty.

Foreign Possessions in India.

Portugal and France both hold small territorial possessions in the Indian Peninsula

The Portuguese possessions in India, all of which are situated within the limits of Bombay Province, consist of the Province of Goa on the Arabian Sea Coast, the territory of Daman with the small territory called Pragana-Nagarely on the Gujarat Coast, at the entrance to the Gulf of Cambay; and the little island of Diu with two places called Gogola and Simbor, on the southern extremity of the Kathiawar

Peninsula. All these three territories constitute what is called by the Portuguese the State of India.

The Portuguese Empire consists of besides Portugal, Azores, Madeira, Cabo Verde Guine, S. Tome e Principe, Angola e Congo, Mozambique, India, Macau and Timor which occupy together an area several times larger than the total area of Portugal itself, which together with its colonies make up over 2 million square kilometers. Portuguese India has an area of 3,783 square kilometers

GOA.

Goa, derived from Govem or Gova, forms a compact block of territory surrounded by British districts and sea. Savantwadi State lies to the north of it, the Arabian Sea on the west and North Kanara on the South, and the eastern boundary is the range of the Western Ghats, which separates it from the British districts of Belgaum and North Kanara. The extreme length from north to south is 62 miles and the greatest breadth from east to west 40 miles. The territory has a total area of 3,806 square kilometers and consists of the *Velhas Conquistas*, or Old Conquests, comprising the island of Goa, acquired by the Portuguese in 1510, and the neighbouring municipalities of Salsette, Bardez, and Mormugao acquired in 1543, and of the *Novas Conquistas*, or New Conquests, comprising the municipalities of Pernem, Sanquelim, Ponda, Quepem, Canacona, Satari and Sanguem acquired in the latter half of the 18th century and early in the 19th century. The small island of Angediva situated opposite the port of Karwar, in the British district of North Kanara, forms administratively a portion of the Canacona municipality. This was acquired in 1505. The whole country is hilly, especially the eastern portion, the predominating physical feature being the Western Ghats, which besides bounding the country along the north-east and south-east just off westward and spread across the country in a succession of spurs and ridges. There are several conspicuous isolated peaks, of which the highest, Sonsagod is 3,827 feet high.

The country is intersected by numerous rivers running westward from the Ghats, and the principal nine—Mandovi, Zuari, Tiracol, Chapora, Baga, Sinquerim, Sal, Talpona, Galgibaga—which are all navigable, are in size of some importance. Goa possesses a fine harbour, formed by the promontories of Bardez and Salsette. Half-way between these extremities lies the *cabo*, or cape, which forms the extremity of the island of Goa. This divides the whole bay into two anchorages, known as Aguada and Mormugao. Both are capable of accommodating the largest shipping from September to May, but Aguada is virtually closed during the south-west monsoon, owing to the high winds and sea and to the formation of sand bars across the estuary of the Mandovi river which opens into Aguada. Mormugao is accessible at all times and is therefore the harbour of commercial importance. It is the terminus of the Western India Portuguese railway running to the coast from the inland British system of lines. A breakwater and port have been built

there and the trade is considerable, being chiefly transit trade from British territory. The harbour has been leased to the W I P Ry and in recent times much work has been done for its development, and large sums of money have been spent. The railway lines carry a large entrepot trade. At the outbreak of the war some German and Italian ships took refuge at Marmagoa, and their cargoes have been the object of litigation. Most of these cargoes either came from or to British Indian merchants. With the outbreak of the war the railway and port traffic of Marmagoa have dwindled very considerably.

The People.

The total population of Portuguese India was 579,970 of which 279,398 are males and 300,572 females in the 1931 census. The recent census of 1941 is expected to reveal a higher population, about 6½ lakhs of inhabitants, with a population ratio definitely in favour of Hindus. Portuguese India has 4 cities, 3 towns and 593 villages in which reside 127,180 families. The density of the country is about 153, the highest being in Bardez with 468 inhabitants per square kilometer and lowest in Sanguem with only 21 inhabitants per square kilometer. The country presents many interesting demographic problems relating to the distribution of population, birth and death rates, average span of life, density, etc. The *Velhas Conquistas* are thickly populated and offer the highest contingent for emigration and its inhabitants are to be found in almost all the parts of the world, including British India where there have settled about 75,000 Goans in various walks of life.

In the *Velhas Conquistas* the majority of the population is Christian. In the *Novas Conquistas* Hindus are more numerous than Christians. The Moslems in the territory are numbered in a few hundreds and they speak Konkani as well as Hindustani. The Christians still very largely adhere to caste distinctions, claiming to be Brahmans, Chardos, Sudras and low castes, which generally do not intermarry. The Hindus who form about one half of the total population are largely Marathi and do not differ from those of the adjacent Konkani district of Bombay. All classes of the people with the exception of Europeans, use the Konkani dialect of Marathi with some admixture of Portuguese words. Many emigrant families at Bardez and Salsette speak the English language. The official language is Portuguese, which is commonly spoken in the capital and the principal towns.

as well as by all educated people. Nearly all the Christians profess the Roman Catholic faith and are spiritually subject to an archbishop who has the titles of Primate of the East and Patriarch of the East Indies and exercises ecclesiastical jurisdiction also over a portion of British India, and the provinces of Macau (China) and Timor (Oceania), with missions in foreign countries and Mozambique (Portuguese East Africa). The Christians of Daman and Diu are subject, under a new Treaty signed in 1928 between Portugal and the Holy See, to the Archbishop of Goa. There are numerous churches in Goa, mostly built by the Jesuits and Franciscans prior to the extinction of the religious orders in Portuguese territory. The churches are in charge of secular priests. Hindus and Mahomedans enjoy perfect freedom in religious matters and have their own places of worship. In the early days of Portuguese rule the worship of Hindu gods in public and the observance of Hindu usages were strictly forbidden and rigorously suppressed.

The policy of the Portuguese Republic established in 1910 was to suppress all religious Societies which, it claimed, were interfering with the political affairs of the State. As a result of this policy Jesuits were driven away from the country. The New State under Dr Oliveira Salazar, a deeply religious statesman, has entirely reversed the religious policy of the country. All religious Orders are now freely allowed and several of them have established Convents and Schools in the country, including the Jesuits who have started a Secondary College at Panjim. A number of nuns have also come to the country. A new Seminary is being built and a new religious Order is proposed to be started in Goa. The relations between the Church and State are very cordial, though even under the anti-clerical republic the Law of separation of Church and State had never been enforced. At present the Church has obtained a legal existence in the country and Portugal even maintains in Goa and in British India a few missionaries, supported by the Lisbon treasury. The New State is based on corporative principles which have not yet been applied to Portuguese India. But there is censorship of the press and only one political party, the Uniao Nacional, supporting the Government, is in existence. A new administrative code has been promulgated and a system of excessive centralization is in force, both financial and administrative.

The Country.

A little over one-third of the entire territory of Goa is stated to be under cultivation. The present policy of the Government under Governor-General Col Jose Cabral is to bring as much land under cultivation as possible. For this purpose, technical and agricultural experts have been appointed to carry on propaganda and to demonstrate to the farmers modern methods of cultivation. Statistics are being organised referring to agriculture, rice and coconut production, area under the plough, etc. The fertility of the soil varies considerably according to quality, situation and water-supply. The Velhas Conquistas areas, as a rule, are better and more intensively cultivated than the Novas Conquistas. In both these divisions a holding of fifteen or sixteen acres would

be considered a good sized farm but the majority of holdings are of much smaller extent varying from half an acre to five or six acres. The staple produce of the country is rice, of which there are two good harvests, but the quantity produced is barely sufficient to meet the needs of the population for two-thirds of the year. Next to rice, the culture of coconut palms is deemed most important, from the variety of uses to which the products are applied. Hilly places and inferior soils are set apart for the cultivation of cereals and several kinds of fruits, the most notable of which are the famous alphonso mangoes and vegetables are cultivated to a great extent. The condition of the agricultural classes in the Velhas Conquistas has improved during recent years, owing to the general rise in the prices of all classes of agricultural produce and partly to the current of emigration to British territory. There is a great shortage of agricultural labour in the Velhas Conquistas. In the summer months bands of artisans and field labourers from the adjoining British territory make their way into Bardez and Salsette where the demand for labour is always keen. Stately forests are found in the Novas Conquistas. They cover an area of 116 square miles and are under conservation and yield some profit to the administration. Iron is found in parts of the territory; but has not been seriously worked. Manganese also exists and some mines are being worked at present, the ore being exported to Europe.

In recent years a remarkable change has come over the means of transport throughout the country. A large number of new roads have been built which have brought the most distant villages of Goa into close and intimate connection with the cities and towns. It is easy to cover the whole country in a motor car within practically a single day and Novas Conquistas are now easily accessible to the remotest parts of the Velhas Conquistas. All the principal roads are asphalted. A number of new bridges have been built which have made easy inter-district communication. There are cheap bus services throughout the country at regular intervals. These have quickened communication with British India and have enabled the district of Salcete and Bardez to import a larger quantity of foodstuffs, fruits and vegetables from the adjoining British territories. The Bombay-Goa road, when completed, will shorten substantially the distance between these two places and establish a regular bus service. Due to the present system of petrol rationing which came into existence soon after the outbreak of the war bus services have, however, become limited and work by rotation.

Commerce.

In the days of its glory, Goa was the chief entrepot of commerce between East and West and was specially famous for its trade in horses with the Persian Gulf. It lost its commercial importance with the downfall of the Portuguese Empire and its trade is now insignificant.

The present trade of Goa is not very large. Its imports amount to about Rs 141 lakhs and exports to about Rs 30 lakhs in 1937. The deficit is met from the remittances sent to Goa by the many emigrants who are to be found in British India and other parts of the world. Few manufacturing industries of any moment

exist and most manufactured articles in use are imported. The Exports chiefly consist of cocoanuts, copra, betel-nuts, mangoes, cashew nuts, bamboos, salt-fish, etc. No reliable statistics are available of the country's balance of indebtedness and of its invisible exports which are considerable and mainly responsible for the favourable terms of trade which the country enjoys.

The only industries are soap-making, tanned food products and cashew-nuts.

A line of railway connects Mormugao with the Madras and Southern Mahratta Railway. Its length from Mormugao to Castle Rock above the Ghats where it joins the British system is 51 miles, of which 49 are in Portuguese territory. The railway is under the management of the Madras and Southern Mahratta Railway administration, and the bulk of the trade of Mormugao port is what it brings down from and takes to the interior. The W I P Ry, now run by the Madras and Southern Mahratta, has, due to the suspension of coastal ferry service between Bombay and Nova Goa, recently experienced increased traffic, both passenger and goods, and has yielded enormous profits more than sufficient to pay the guaranteed rate of interest, even a surplus is left over which is paid regularly into the Lisbon treasury every six months. The Portuguese Government have, in the past, lost considerable sums in the payment of the guaranteed interest. Considerable expenditure has also been incurred in modernising the facilities in the Mormugao harbour. The telegraphs in Portuguese territories are worked as a separate system from the British. The latter, however, had an office at Nova-Goa maintained jointly by the two Governments but since 1925 the Nova-Goa office has been handed over to the Portuguese Government which now maintains and works all the telegraphs in its territories.

Most of the commerce of Portuguese India is with British India with which it maintains close commercial relations. About 65 per cent of the imports of the country are from British India which also receives most of its exports but in recent years these have shown remarkable fall due to the suspension of steamer services to Goa. Among the most important imports are rice, textiles, sugar, cereals, petrol, kerosene oil, all kinds of machinery, foreign liquor, etc. There is a large entrepot trade running into about 8 to 9 crores of rupees a year, which is generally cleared by the port and railway of Mormugao.

Taxes and Tariffs

The finances of the country showed chronic deficits for nearly sixty years with occasional exceptions. The last war increased them to alarming proportions and these were met by fresh taxes and new loans. Most of the new taxes were initiated by the Governor-General Jaime de Morais, who is popularly known as the "Governor of Taxes". Only in 1927 the country experienced the joys of a balanced budget and the public servants whose salaries had always remained in arrears are now being paid regularly. If municipal and national taxes be added together, the country presents a very high incidence of taxation, even higher than that of British India, the average coming to about Rs. 13 *per capita*. The income tax is

paid only by those merchants who make large profits and by Government servants. The average income from other sources is not fixed. There is a special ten per cent tax on all incomes derived in the shape of interest on loans. This tax is a powerful contributory cause to the flight of capital from Portuguese India. The chief sources of revenue are the land tax, interest on loans, excise and the customs. There is a special tax on emigrants—all persons, Goan and non-Goan at the time of their leaving Goa,—which yields to the State about Rs. 40,000. The country being economically backward, the taxes give very little indication of its productive capacity or of its annual wealth. The national wealth is a matter of pure conjecture for lack of statistics. It is proposed to revise the system of taxation, specially the land tax which represents 12 per cent of the nett yield. The State has established in Bombay an institution called *Instituto Indo-Portugues* with an annual subsidy of forty thousand rupees from Government and Rs. 30,000 from Santa Casa de Misericordia and Hospicio de Sagrado Coracao de Maria to be utilised for the promotion of social and economic welfare of Goans residing in British India and British East Africa. The proceeds of the emigration tax have been earmarked for the subsidy to the Institute. The additional sum of thirty thousand rupees from Santa Casa and Hospicio is derived from the profits of the Goa Lotteries which are now, by a notification of the British Indian Central Government, banned in British India.

The tariff schedule is based on the three-fold principle, fiscal, protective and preferential. There is a limited free list on which books and paper figure prominently. The fiscal tariff ranges from 10 to 30 per cent according to the nature of the commodities, but the duties in several cases are specific, not *ad valorem*. This causes considerable hardship to trade, and specially to the poorer classes of consumers. The preferential tariff applies to goods coming from Lisbon and the Portuguese Colonies. Very recently the principle of protection has been extended to the export of canned fruits which are entitled to a bounty of 10 per cent on their basic price. The tariffs were again revised last year, and the import duties on foreign goods were generally increased. The preferential duties on Portuguese wines, spirits and provisions have been lowered so as to make preference even more effective. Sugar imported from Mocambique enjoys effective protection, though its import is done through British India. But there are no exports from Goa to Mozambique.

For the last eight years the country has experienced recurring surpluses due to the increasing indirect taxes. Public revenues between 1914 and 1940 have almost doubled and the indirect taxes yield to the State about 32 lakhs of rupees and direct taxes about 9 lakhs of rupees. The surplus from 1935 to 1937 came to 17 lakhs which, together with other special funds, make up a reserve of about 65 lakhs of rupees available for developmental expenditure, in which sum is included about 17 lakhs of rupees due by other colonies of Portuguese India. The total surplus for the last decennium amounts to about 90 lakhs of rupees, of which about 61 lakhs are constituted

into a reserve fund. Recently all the different special funds have been merged into one consolidated reserve fund with the exception of the yield of the rice tax which will constitute a separate reserve ear-marked entirely for the development of rice cultivation. The duty on imported rice which was introduced towards the end of 1938 has now been withdrawn. The tax on rice was levied with a view to give protection to the local production but when Government saw that the price of paddy was soaring high, it saw that no useful purpose was served by keeping the tax on rice. Hence the repeal of this tax which has brought relief to the poor consumers. A notification in the Government Gazette says the price of paddy continues to remain at Rs 9 per candy of 160 litres with the exception of *Corgut* variety which will be sold at Rs 9-14-0 per 98 kilograms. The public debt of Goa is made up of dues to Portugal and small loans floated in the country itself. Most of the debt due to Portugal has been wiped out by lump payments. The currency of the country is the monopoly of the Banco Nacional Ultramarino which is the State Bank of issue for some of the Portuguese colonies. The State holds a percentage of share capital on which interest is payable by the Bank to the respective colonies. The total fiduciary issue of the Bank at the end of last year was about 100 lakhs, but its active note circulation did not exceed 65 lakhs of rupees. The Bank does ordinary banking business with very few central banking operations. It preserves a limited loan policy but purchases, on a large scale, British Indian notes and coins and remits them to Bombay where it maintains a branch financed by transfer of capital from Goa through the purchase of British Indian currency. There was, during 1940-1941 a considerable repatriation of funds from British India, which resulted in an expansion of the note circulation of Banco Nacional Ultramarino to over 80 lacs of rupees. There was also a large increase in the Savings Bank deposits. The heavy demand for Portuguese notes resulted in a discount being demanded for their conversion. But the Banco Nacional Ultramarino offers all reasonable facilities for transfer and conversion of notes, at present, only to its customers.

The Capital.

Nova-Goa, the present capital of Portuguese India situated on the banks of the Mandovi, comprehends Panjim and Ribandar. Old Goa is some six miles distant from the new city. Panjim occupies a narrow strip of land leading up to the Cabo, the cape dividing the Aguada bay from that of Mormugao, and mainly slopes down to the edge of the Aguada. It was selected as the residence of the Portuguese Viceroy in 1759, and in 1843 it was raised to its present rank as the capital of Portuguese India. The appearance of the city, with its row of public buildings and elegant private residences, as seen from the water is very picturesque and this impression is not belied by a closer inspection of its neat and spacious roads, bordered by decent, tidy houses. The most imposing public structures are the barracks, an immense quadrangular building the eastern wing of which accommodates the Primary School, the Public Library and the Government Press. Other noticeable buildings are the Cathedral at Velha Goa and various

churches, the viceregal palace and the High Court. The square in the lower part of the town is adorned with a life-sized statue of Albuquerque standing under a canopy.

Panjim has been undergoing in recent years many remarkable improvements. The electrical supply of the country has been reorganised under the auspices of the Municipality and an excellent system of lighting, public and private, is now in force. Most of the important roads have been asphalted at a large cost and recently a large number of buildings have come up on *Alinho* which is the Malabar Hill of Panjim. A decree has been published calling upon all houseowners to introduce septic tanks as a preliminary step to the working out of a scheme of water-supply. This decree has so far not been enforced, due to lack of water-supply.

The population of Nova Goa, according to the latest census of 1940, shows 20,291 inhabitants, 10,747 males and 9,544 females. There are 1,020 British subjects, 5 Germans, 6 Chinese, 3 Iraqians and 1 Yugo-Slavian. There are 4 up-to-date hotels with all comfort catering to the needs of visitors.

History.

Goa was captured for the Portuguese by Alfonso de Albuquerque in 1510. Albuquerque promptly fortified the place and established Portuguese rule on a firm basis. From this time Goa rapidly rose in importance and became the metropolis of Portuguese power in the East. There was constant fighting with the armies of the Bijapur kingdom, but the Portuguese held their own and gained the surrounding territory now known as the *Velhas conquistas*.

The subsequent history of the town is one of ostentation and decay. Goa reached its summit of prosperity at the end of the sixteenth century. The accounts of travellers show that the Goa of those days presented a scene of military, ecclesiastical and commercial magnificence which has had no parallel in the British capitals of India. Portugal, however, with its three millions of population, was too small to defend itself against Spain and maintain at the same time its immense Empire in the four Continents. Albuquerque tried to consolidate Portuguese rule in India by his policy of attracting the conquered Indians and granting them civil and religious liberties and by encouraging intermarriages between the Portuguese and the Indians. His contemporaries, however, could not understand his far-seeing statesmanship and after his death they undid all his work basing their dominion on conquest by the sword and military force and they laboured to consolidate it by a proselytising organisation which throws all the missionary efforts of every other European power in India into the shade. Old Goa, as the ruins of the old capital are called to-day, had a hundred churches, many of them of magnificent proportions, and was the seat of the Inquisition which was a religious power in the land. The sixty years' subjection to Spain in the 17th century completed the ruin of the Portuguese Empire in the East and though the Marquis of Pombal in the 18th century tried to stave off its decadence, his subordinates in far-off India either could not understand or would not carry on

his orders and even his strong hand was unable to stop the decline. It was in the 19th century that the colonials began to enjoy full Portuguese citizenship and sent their representatives to the Parliament in Lisbon.

Modern Times.

There was frequently recurring fighting and in 1741 the Marathas invaded the neighbourhood of Goa and threatened the city itself. An army of 12,000 men arrived from Portugal at the critical moment. The invaders were beaten off, and the Novas Conquistas were added to the Portuguese possessions. In 1844 the shelter given by Goa to fugitives from justice in British territory threatened to bring about a rupture with the British Government at Bombay. In 1852 the Ranés of Satari in the Novas Conquistas, revolted. In 1871 the native army in Goa mutinied and the King's own brother came from Lisbon to deal with the trouble and having done so disbanded the native army, which has never been reconstituted. But another outbreak among the troops took place in 1895 and the Ranés joining them the trouble was again not quieted until the arrival of another special expedition from Lisbon. The Ranés again broke out in 1901 and again in 1912, troops being again imported to deal with the last outbreak, which was only reported concluded in the summer of 1913. There has been no outbreak after that date.

The people on the whole appeared to be quite satisfied with the Portuguese connection. There was no agitation for further reforms as in British India and not a sign of disaffection against Portuguese rule. This was chiefly due to the fact that under the old regime the natives of Goa enjoyed complete equality with the natives of Portugal, many of the sons of Goa occupying high and responsible positions in Portugal. Thus Elvino de Britto who was Minister of Public Works towards the end of the last century was a native of Goa, as was the father of Dr Bettencourt Rodrigues, Minister for Foreign Affairs in General Carmona's dictatorial Government. Natives of Goa were also Dr Almeida Azêz, the President of the Supreme Court in Lisbon, Dr Caetano Gonsalves, Judge of the same Court and Mr Alberto Xavier, Secretary-General of the Ministry of Finance. The new colonial policy of Portugal is based on racial distinctions and on a classification of citizens into full-blooded and assimilated. The *Acto Colonial* is now the corner-stone of Portuguese colonial legislation and its preamble states that it is the historic function of Portugal to own and rule colonies. This function is called its *organic essence*. Colonials are debarred from entering the ranks of military officers and are not allowed to join military and naval colleges of Portugal. Thus racial discrimination in the fundamental statutes of the country has given rise to discontent and has led to many representations to the Government of Portugal. A recent Governor-General of Portuguese India, General Cravinho Lopes, voiced India's feelings at the Colonial Conference of Governors when he stated that Portuguese India was hurt by such legislation.

The establishment of dictatorship in Portugal has produced profound changes in the administrative machinery of Goa. A system of central-

isation, financial and administrative, has been introduced with the result that all important financial and administrative acts require the sanction of the Lisbon Government. The Governor-General has to submit periodical reports of his administration to the Lisbon Government. A press law controls the freedom of the Press and imposes heavy penalties on all crimes committed by newspapers. Old newspapers are exempted from deposits, but new ones have to keep with the State considerable sums of money before they are allowed to appear. Every paper has to be previously censored by official censors and so also the publication of books, brochures and pamphlets. The powers of the Council of Government are also reduced, particularly their legislative functions. A system of periodical conferences has been established, made up of all the colonial Governors now suspended due to the international situation. There is a common parliament and the whole Portuguese Empire is constituted into a single constituency electing about 90 members to the National Assembly. Presidents of municipalities and charitable associations are appointed by the Governor-General. The economic condition of the country has deteriorated considerably in recent times. Prices and production have fallen, unemployment has increased, national dividend has dwindled down. There is a widespread demand for a commercial treaty with British India.

Administration.

The Lisbon Government by Decree No. 3206, dated 27th July 1917, enacted new rules regarding the administration of Portuguese India under an Organic Charter (*Carta Organica*) in force since 1st July 1919. This Charter, regarding civil and financial administration of the colony, was modified by rules Nos 1005 and 1022, dated 7th and 20th August 1920, and decrees Nos 7008 and 7030, dated 9th and 16th October. A new Organic Charter modifying in certain parts the earlier one was granted by Decree No. 8,090 of 5th May, 1937 and is now in force.

The territory of Portuguese India is ruled by a Governor-General, residing in the Capital of the State, at Panjim *alias* Nova-Goa, and is divided into three districts: Goa, Daman and Diu. The last two are each under a Lieutenant-Governor. The district of Goa is under the direct control of the Governor-General.

Assisting the Governor-General in the administration are the Home and Political, Finance, Customs, Education, Military, Naval, Agriculture, Health and Public Works Secretariats. There are also three special and autonomous Departments, which do not constitute exclusive Secretariats, one of them being the Department of Posts and Telegraphs, the second that of Survey and the third that of the Fiscal of the W. I. R. Railway.

As the principal organ of administration next to the Governor-General and in collaboration with him works a Governor's Council (*Conselho do Governo*) with Legislative and advisory powers. The Council is constituted, in addition to the Governor-General, *ex-officio* President, of four officials (Attorney-General, the Director of Finances, the Director of Administration

and the Director of Public Works), five elected members (three representing *Felhas Conquistas*, one the *Novas Conquistas* and one the Districts of Daman and Diu) and five members nominated by the Governor-General to represent the minorities, agricultural, commercial and other interests and the press.

In each province of Goa, Daman and Diu there is a District Council to supervise the Municipalities and other local institutions. The District Council of Goa is composed of the Director of Civil Administration, President, the Government Prosecutor of the Nova-Goa Civil Court: the Deputy Chief Health Officer: the Engineer next to the Director of Public Works: the Deputy Director of Finances: the Chairman of the Municipal Corporation of Ilhas; one member elected by the Commercial and Industrial Associations of the district; one member elected by the 60 highest tax payers of Goa; one member elected by the Associations of Land-owners and Farmers of the District; and one advocate-member elected by the Legislative Council among the legally qualified.

There is one High Court in Portuguese India with five Judges and one Attorney-General; and Sessions Courts at Panjim, Margao, Mapuca,

Bicholim, Quepim e Damão; and Municipal Courts of Justice at Mormugão (Vasco da Gama), Pondá, Diu and Nagar-Aveli.

A new Administrative Code has been introduced which improves administrative discipline and holds public servants directly and personally responsible for all their actions. No public servant can profess communism and has to make a declaration to that effect before he is appointed. The Governor has wide disciplinary powers over the public servants subject to the right of appeal to the Supreme Administrative Court or the Supreme Court of Discipline at Lisbon. The Judiciary has its own autonomy independent of the Governor of the colony as regards promotions, discipline, punishments and dismissal subject to general supervision and control by the Minister for Justice. The whole Portuguese Empire forms one judicial district directly under the Lisbon Government.

There are over five English teaching High Schools recognised by the University of Bombay from which students appear for the Bombay Matriculation.

PORT OF MORMUGAO.

Mormugao is situated towards the south Aguada Bay, on the left bank of Zary River in Lat. 15° 25' N. and Long. 73° 47' E., about 225 miles south of Bombay and 6½ miles south of Panjim, the Capital of Portuguese India. The Port of Mormugao is the natural outlet to the sea for the whole area served by the M. & S. M. Ry. (metre-gauge), and offers the shortest route both passenger and goods traffic. The distance from Aden to Mormugao is about the same as from Aden to Bombay. The Port is provided with light-houses, buoys and all necessary marks and it is easily accessible to shipping all the year round and at any hour of the day or night even without the assistance of a Pilot. Pilotage is not compulsory but when usual pilot flag is hoisted, a qualified officer will board the vessel and render such assistance as is necessary.

Mormugao Harbour is the terminal station of the West of India Portuguese Railway which

is controlled by the Madras and Southern Maharatta Railway Company, with headquarters at Madras.

With a view to promoting the economical commercial and industrial development of Mormugao, a special Department under the designation of the "Mormugao Improvement Trust" with its head office at Vasco da Gama, 2 miles from Mormugao Harbour, has been created and the Local Government have introduced various regulations granting every facility to those intending to raise buildings for residential and industrial purposes in the whole area, comprising about 300 acres near the Harbour. The scheme of "free" port did not produce much commercial development. No new industries were established. But with the increase in the railway traffic to about 9 crores of rupees by sea and rail the harbour was visited by several vessels, before the outbreak of the present war.

DAMAN.

The settlement of Daman lies at the entrance to the Gulf of Cambay, about 100 miles north of Bombay and four hours run by rail from Bombay Central Station. It is composed of two portions, namely Daman proper lying on the coast and the detached part of Nagar-Aveli separated from it by a narrow strip of British territory and bisected by the B.B. & C.I. Railway. Daman proper contains an area of 22 square miles and 26 villages and has a population (1931) of 19,741 of whom 1,675 are Christians. The number of houses is 4,095. Nagar-Aveli has an area of 60 square miles and a population (1931) of 33,269, of whom only 401 are Christians. The number of houses is 6,039. The town of Daman was sacked by the Portuguese in 1531 rebuilt by the natives and retaken by the Portuguese in 1558 when they made it one of their

permanent establishments in India. They converted the mosque into a church and have since built eight other places of worship. The native Christians adopt the European costume, some of the women dressing themselves after the present European fashion, and others following the old style of petticoat and mantle once prevalent in Spain and Portugal. The language spoken here is Portuguese and Gujarati. There is an English School recognised by the Government of Portuguese India.

The soil of the settlement is moist and fertile especially in Nagar-Aveli, but despite the ease of cultivation only one-twentieth part of the territory is under tillage. The principal crops are rice, wheat, the inferior cereals of Gujarat and tobacco. The settlement contains no minerals. There are stately forests in Nagar-

Aveli, and about two-thirds of them consist of teak, but the forests are not conserved and the extent of land covered by each kind of timber has not been determined. Before the decline of Portuguese power in the East, Daman carried on an extensive commerce especially with the east coast of Africa. In those days it was noted for its dyeing and weaving.

The territory forms for administrative purposes a single district and has a Municipal Chamber and Corporation. It is ruled by a

Governor invested with both civil and military functions, subordinate to the Governor-General of Goa. The judicial department is administered by a judge, with the help of a delegate of the Attorney-General and two clerks. In Nagar Aveli the greater part of the soil is the property of the Government, from whom the cultivators hold their tenures direct. A tax is levied on all lands, whether alienated or the property of the State. The chief sources of revenue are land-tax, forests, excise and customs duties.

DIU.

Diu is an island lying off the southern extremity of the Kathiawar Peninsula, from which it is separated by a narrow channel through a considerable swamp. It is composed of three portions, namely, Diu proper (island), the village of Gogola, on the Peninsula, separated by the channel, and the fortress of Simbor, about 5 miles west of the island. It has a small but excellent harbour, where vessels can safely ride at anchor in two fathoms of water and owing to the great advantages which its position offers for trade with Arabia and the Persian Gulf, the Portuguese were fired at an early period with a desire to obtain possession of it. This they gained first by treaty with the Sultan of Gujarat and then by force of arms. Diu became opulent and famous for

its commerce. It has now dwindled into insignificance. The extreme length of the island is about seven miles and its breadth from north to south, two miles. The area is 20 square miles. The population of the town of Diu, from which the island takes its name, is said to have been 50,000 in the days of its commercial prosperity. The total population of the island, according to the census of 1931, is 16,688, of whom 251 are Christians. Most of the Goan convicts sentenced for transportation for life have recently been transferred to Diu which has been made a penal settlement. Formerly all prisoners undergoing the sentence of transportation were sent to Mocambique island but now the convicts are sent to the island of Diu.

FRENCH POSSESSIONS.

The French possessions in India comprise five Settlements, with certain dependent lodges, or plots. They aggregate 203 square miles, and had a total population on the 1st July 1911 of 323,295. The first French expedition into Indian waters, with a view to open up commercial relations, was attempted in 1603. It was undertaken by private merchants at Rouen, but it failed, as also did several similar attempts which followed. In 1642 Cardinal Richelieu founded the first *Campagnie d'Orient*, but its efforts met with no success. Colbert reconstituted the Company on a larger basis in 1664, granting exemption from taxes and a monopoly of the Indian trade for fifty years. After having twice attempted, without success, to establish itself in Madagascar, Colbert's Company again took up the idea of direct trade with India and its resident, Caron, founded in 1668 the Comptoir or agency, at Surat. But on finding that city unsuited for a head establishment, he seized the harbour of Trincomalee in Ceylon from the Dutch. The Dutch, however, speedily retook Trincomalee; and Caron, passing over to the Coromandel coast, in 1672, seized San Thome, a Portuguese town adjoining Madras, which had for twelve years been in the possession of Holland. He was, however, compelled to restore it to the Dutch in 1674.

The ruin of the Company seemed impending when one of its agents, the celebrated Francois Martin, suddenly restored it. Rallying under him a handful of sixty Frenchmen, saved out of the wreck of the settlements at Trincomalee and San Thome, he took up his abode at Pondicherry, then a small village,

which he purchased in 1683 from the Raja of Gingee. He built fortifications, and a trade began to spring up, but he was unable to hold the town against the Dutch, who wrested it from him in 1693, and held it until it was restored to the French by the Peace of Ryswick, in 1697. Pondicherry became in this year and has ever since remained, the most important of the French Settlements in India. Its foundation was contemporaneous with that of Calcutta. Like Calcutta, its site was purchased by a European Company from a native prince, and what Job Charnock was to Calcutta Francois Martin proved to Pondicherry. On its restitution to the French by the Peace of Ryswick in 1697, Martin was appointed Governor, and under his able management Pondicherry became an entrepot of trade.

Chandernagore, in Lower Bengal, had been acquired by the French Company in 1683, by grant from the Delhi Emperor, Shah, on the Malabar Coast, was obtained in 1725-6, under the government of M. Lenolr, Karikal, on the Coromandel Coast, under that of M. Dumas, in 1739. Yanam, on the coast of the Northern Circars was taken possession of in 1750, and formally ceded to the French two years later.

Administration.

The military command and administration of the French possessions in India are vested in a Governor, whose residence is at Pondicherry. The office is at present held by Monsieur Lomin (Louis). The French establishments in India have rallied to the French Movement under the leadership of

General de Gaulle He is assisted by a Chief Justice and by several "Chefs de Service" in the different administrative departments. In 1879 local councils and a council-general were established, the members being chosen by a sort of universal suffrage within the French territories. Seventeen Municipalities, or Communal Boards, were erected in 1907, namely, Pondicherry, Ariancoupam, Modeliarpeth, Oulgaret, Villenour, Tiroubouvané, Bahour and Nettapacam, for the establishment of Pondicherry; Karikal, Neravy, Nedouncadon, Tirnoular, Grande Aldée, Cotchéry, for the establishment of Karikal, and also Chandernagore, Mahé and Yanaon. On municipal boards natives are entitled to a proportion of the seats. Civil and Criminal courts, courts of first instance and a Tribunal Supérieur d'Appel compose the judicial machinery. The army and establishments connected with the Governor and his staff at Pondicherry and those of administrators at Chandernagore, Yanaon, Mahe and Karikal, together with other headquarters charges necessarily engross a large proportion of the revenue. All the state and dignity of an independent Government, with four dependent ones, have to be maintained, and the prestige of the French Government is worthily maintained in the East. Pondicherry is also a scene of considerable religious pomp and missionary activity. It forms the seat of an archbishop, with a body of priests for all French India; and of the Missions Etrangères, the successors of the Mission du Carnatic founded by the Jesuits in 1776. But the chief field of this mission lies outside the French Settlements, a large proportion of its Christians are British subjects and many of the churches are in British territory. The British rupee is the ordinary tender within French territories. A line of railway running *via* Villenour, from Pondicherry to Villupuram on the South Indian Railway, maintains communication with Madras and the rest

of British India, and Karikal is linked to the same railway by the branch from Peralam. A Chamber of Commerce consisting of fifteen members, six of them Europeans or persons of European descent, was reorganised by a decree of 7th March, 1914. The capital, Pondicherry, is a very handsome town, and presents, especially from the sea, a striking appearance of French civilisation.

People and Trade.

There were in 1937, 67 primary schools and 3 colleges, all maintained by the Government, with 353 teachers and 13,803 pupils. Local revenue and expenditure (Budget of 1942 Rs 3,082,480). The principal crops are paddy, groundnut, and ragi. There are at Pondicherry 3 cotton mills, and at Chandernagore 1 jute mill. The cotton mills have in all 1,932 looms and 87,524 spindles, employing 6,786 persons. There are also at work one oil factory and a few oil presses for groundnuts and one ice factory. The chief exports from Pondicherry are oil seeds at the ports of Pondicherry and Karikal. In 1940-41 (for the year ending 31st March 1941) the imports amounted to Rs 4,583,495 and the exports to Rs 6,714,951 to these two ports in 1940, 122 vessels entered and cleared, tonnage 240,957. Before the war Pondicherry was served by French steamers, sailing monthly between French and Indo-China via Colombo, Madras and Singapore and also fortnightly by the British India Steam Navigation Co. Steamers which plied between East Coast Ports and the Straits Settlements. The figures contained in this paragraph are the latest available and are corrected up to March 1941.

On the 15th February 1941 a Customs Union with British India came into force. As a result, all goods exported or imported into the Ports of Pondicherry and Karikal are liable to the same duties as are levied in other British Indian ports.

PONDICHERRY.

Pondicherry is the chief of the French Settlements in India and its capital is the headquarters of their Governor. It is situated on the Coromandel Coast, 105 miles from Madras by road and 122 by the Villupuram-Pondicherry branch of the South Indian Railway. The area of the Settlement is 115 square miles and its population in 1936 was 187,870. It consists of the eight communes of Pondicherry. The Settlement was founded in 1674 under Francois Martin. In 1693, it was captured by the Dutch but was restored in 1699. It was besieged four times by the English. The first siege under Admiral Boscawen in 1748 was unsuccessful. The second, under Eyre Coote in 1761, resulted in the capture of the place, which was restored in 1765. It was again besieged and captured in 1778 by Sir Hector Munro, and the fortifications were demolished in 1779. The place was again restored in 1785 under the Treaty of Versailles of 1783. It was captured a fourth time by Colonel Braithwaite in 1793, and finally restored in 1816.

The Settlement comprises a number of isolated pieces of territory which are cut off from the main part and surrounded by the

British District of South Arcot, except where they border on the sea.

At Pondicherry there is a British Consul-General accredited to the French Government, who is an officer of the Indian Political Department. The town is compact, and is divided by a canal into two parts, the Ville blanche and the Ville noire. The Ville blanche has a European appearance, the streets being laid at right angles to one another, and the houses being constructed with courtyards and embellished with green venetians. All the cross streets lead down to the shore, where a wide promenade facing the sea is again different from anything of its kind in British India. In the middle is a screw-pile pier, which serves, when ships touch at the port, as a point for the landing of cargo, and on holidays as a general promenade for the population. There is no real harbour at Pondicherry, ships lie at a distance of about a mile from the shore, and communication with them is conducted by the usual *masula* boats of this coast. Facing the shore end of the pier is a statue of the great Duplex, to whom the place and the French name owed so much.

CHANDERNAGORE.

Chandernagore is situated on the bank of the Hooghly, a short distance below Chinsura. Population (in 1941) 38,284. The town was permanently occupied by the French in 1688, though previously it had been temporarily occupied by them at a date given as 1672 or 1676. It did not, however, rise to any importance till the time of Dupleix. It changed hands between British and French various times during the Napoleonic wars and was finally restored to the French in 1816.

The former grandeur of Chandernagore has

disappeared, and at present it is little more than a quiet suburban town with little external trade. The railway station on the East Indian Railway is just outside French territory 22 miles from Calcutta (Howrah). The chief administrative officer is the Administrator, who is subordinate to the Governor of the French Possessions. The chief public institution is the College Dupleix, formerly called St. Mary's institution, founded in 1882 and under the direct control of the French Government.

KARIKAL.

Karikal lies on the Coromandel Coast between the Tanjore District of Madras and the Bay of Bengal. The settlement is divided into six communes, containing 110 villages in all, and covering an area of 53 square miles. It is governed by an Administrator subordinate to the Governor at Pondicherry. The population has in recent years rapidly decreased. In 1883 it was 98,055, in 1891, 75,526, in 1901, 54,003; in 1923, 57,023; in 1924, 56,922; in 1936, 60,447 and in 1941, 60,555, but the density is still very high, being 1,068 persons per square mile. Kumbakonam is the only taluk in Tanjore District which has a higher density. Each of the six communes—namely, Karikal, La Grande Aides, Nedungadu, Cot-Kéry, Neravy and Tirncular—possesses a mayor and council. The members are all elected by

universal suffrage but in the municipality Karikal half the number of seats are reserved for Europeans or their descendants. The country is very fertile, being irrigated by seven branches of the Cauvery, besides many smaller channels.

The capital of the settlement is situated on the north bank of the river Arasalar, about 1½ miles from its mouth. It has a brisk trade in rice with Ceylon, and to a less extent with the Straits Settlements. It has no commerce with France, and very little with other French colonies. The port is merely an open roadstead, provided with a light-house 142 feet high, the light in which having a range of from 8 to 10 miles. In 1899 Karikal was connected with Peralem on the Tanjore District Board Railway. Karikal finally came into French possession on the settlement after 1815.

The Frontiers.

By those who take a long view of politics in the wide sense of the term, it will be seen that the Indian Frontier problem, which has loomed so large in the discussion of Indian questions, has always borne a twofold character—the local issue and the international issue. For almost a century the international issue was the greater of the two, and the most serious question which the Indian Government, both directly and as the executors of British Imperial policy, had to face. But the tendency of later times until Germany's invasion of Russia was for the international aspect to recede and for the local aspect to grow in importance, until it might be said, with as much truth as characterises all generalisations, that the local issue dominated, if it did not absorb the situation.

The Local Problem.—The local problem, in its broadest outlines, may be briefly indicated before proceeding to discuss it in detail. From the Arabian Sea on the West to the confines of Kashmir is a wild and troublous sea of some of the highest mountains in the world. The thin valleys in these immense ranges are properly populated by hardy, brave, militant mountaineers. But sparse as the population is, it is in excess of the supporting power of the country. Like mountaineers in all parts of the world, these brave and fearless men have sought to supplement their exiguous agriculture by raiding the rich plains of Hindustan. We may find a fairly close parallel to the situation in the position of the Highlands of Scotland until after the rebellion of 1745 the English Government of the day sought a permanent remedy by opening for the warlike Highlanders a military career in the famous Highland regiments, and in rendering military operations easier by the construction of Wade's road. The Highland problem has disappeared so long from English politics that its pregnant lessons are little realised, but if the curious student will read again that brilliant novel by Neil Munro, "The New Road," he will appreciate what Wade's work meant for the Highlands of Scotland, and what lessons it teaches those who are called upon to face, in its local aspect, the Indian frontier problem. So far as the area with which we are dealing was concerned, two policies were tried. In Baluchistan, the genius of Sir Robert Sandeman devised the method of entering into military occupation of the principal points, and thence controlling the country. At the same time close engagements were entered into with the principal chiefs, through whom the tribesmen were kept in order. That policy was so successful that whilst the administration was so expensive the Government of India was seriously embarrassed the Government of India from the time when Sandeman set his mark on the land. Not that the country was entirely peaceful. Occasional tribal raids or risings necessitated occasional military operations, and the Gomal Pass was involved in the general tribal disturbances which followed the wanton declaration of war by Afghanistan

in 1919. But speaking broadly, Sandeman brought peace to Baluchistan, and to the large frontier area which is embraced in that generic term. So far as this section of the frontier is concerned it may be said that no frontier problem exists, save the need for an economical and constructive policy.

Towards Afghanistan.—Far otherwise has it until lately been with the section of the frontier which stretches from Baluchistan to the confines of Kashmir. That was, for three quarters of a century, the scene of almost ceaseless military operations, which constituted a devastating drain on the Indian exchequer. For years one sought for a definite policy guiding the actions of the Government of India. One explanation of their inconsistencies was found in the existence of two schools of thought. Once the frontier with Afghanistan had been delimited, the soldiers naturally pressed for the armed occupation of the whole country right up to the confines of Afghanistan, or at any rate, for military posts, linked with good communications, which would dominate the country. But those who looked at policy not only from the military standpoint, were fearful of two considerations. They felt that occupation up to the Afghan frontier would only shift the frontier problem farther north. Instead of the differing tribes, we should, they argued, have to meet the Afghan homogeneous State, that would be a matter of little account. But even under the iron rule of Abdurrahman Khan, the Amir's writ ran but lightly in the southern confines of his kingdom. Under his successor, Habibullah Khan, whose policy was generally wise and successful, it ran still less firmly. The Amir was unable to control the organisation of the tribal gatherings which involved us in the Zakka Khel and Mohmand expeditions during the Indian secretaryship of that arch pacifist, Lord Morley. Nor did it enable Habibullah to deal effectively with a rising against his own Governor in Khost. The Afghan forces melted away under transport difficulties when they were moved against the rebellious Khostwals, and the Amir had to make peace with his troublous vassals. Therefore, it was said, occupation up to what is called the Durand Line because it is the line demarcated by the Frontier Commission in which Sir Mortimer Durand was the British Plenipotentiary, would simply mean that in time of trouble we should have to deal with Afghanistan instead of a tribe or two, and with the irreconcilable tribesmen along our difficult line of communications. The Kabul Government now have greater control over their tribes near the frontier than formerly but the old argument still applies. There was the further consideration that financiers were of the fixed belief that even if the Forward Policy was wise from the military standpoint, it would involve charges over an indefinite period greater than the Indian finances would bear. Moreover on this section of the Frontier, the position was complicated by the

expansion of Russia in Central Asia. The easiest passes, and the passes down which for centuries from the time of Alexander the Great invaders have swept from Persia and Central Asia to loot the fat plains of Hindustan, traverse this region. Therefore it was deemed essential to control, if not to occupy them, in the interests of the Imperial situation. In this zone therefore policy ebbed and flowed between the Forward School, which would have occupied, or dominated, the whole frontier up to the Durand Line, that is to say up to the Afghan frontier, and the Close Border School, which would have us remain out of the difficult mountainous zone and meet the tribesmen on the plains if they sallied forth. The extreme advocates of this school would even have had us return to the line of the Indus.

The Two Policies.—The result of this conflict of opinion was a series of wavering compromises, which like all compromises was profoundly unsatisfactory. We pushed forward posts here and there, which irritated the Tribesmen, and made them fearful for their prized independence, without controlling them. These advanced posts were in many cases inadequately held and rarely were they linked with their supporting posts by adequate means of communication. We preserved between our administrative frontier and the Durand Line which demarcated our frontier with Afghanistan an irregular belt of land called The Tribal Territory, in which neither we nor the Afghan Government exercised jurisdiction. This was left entirely under the control of the tribes who peopled it. Now it was often asked why we did not follow the precedent of Baluchistan and "Sandemanise" the Independent Territory. That was one of the perennial topics of Frontier discussions. But stress was laid upon the essential differences between this zone and Baluchistan. Sir Robert Sandeman found a strong tribal system existing in Baluchistan, and he was able to enter into direct engagements with the tribal Chiefs. There is no such tribal organisation in the Independent Territory. The tribal Chiefs, or Malikhs, exercise a very precarious authority, and the instrument for the collective expression of the tribal will is not the chief, but the jirgah, or tribal council, of the most democratic character, where the voice of the young men of the tribe often has the same influence, in time of excitement perhaps more influence, as the voice of the wiser grey beard. The bitter fruit of this policy of compromise was reaped in 1897, when following a minor outbreak in the Tochi Valley the general uneasiness flamed into a rising which involved the whole of the North-West frontier, from the Gomal to the borders of Kashmir. A force over thirty thousand strong had to be mobilised to deal with it. Even this large force, owing to the immense difficulties of transportation, was unable effectively to deal with the situation, though peace was made. The emergency thus created synchronised with the advent of Lord Curzon as Viceroy. He dealt with it in masterful fashion. In the first place, he separated the frontier zone from the Government of the Punjab, which had hitherto been responsible for its administration, and had organised for the purpose a special force of frontier soldiers, known as the Punjab Irregular Frontier Force. This was the revival of a scheme as old as the Viceroyalty of Lord Lytton, though no other

Viceroy had been able to carry it through in the face of the strong opposition of successive Punjab Governments. The area so separated was constituted into a separate administrative zone under the direct authority of the Government of India, exercised through a Chief Commissioner. Then Lord Curzon withdrew the advanced military posts and concentrated the Regular troops in bases better linked with the main military centres of India by roads and railways. The advanced posts, and especially important Passes like the Tochi, the Kurram and the Khyber, were entrusted to the defence of local militia, recruited from the tribesmen themselves, and officered by British officers drawn from the ranks of the Indian Army. Later it was supplemented by a fine development policy. The construction of the Upper Swat Canal, led to such an increase in cultivation that the tribesmen were given a means of livelihood and were invested with the magic charm of valuable property. The irrigated part of the Frontier has since been one of the most peaceful in the whole border line.

Lord Curzon's Success.—Judged by every reasonable standard the Curzon policy was successful. It did not give us complete peace. There were occasional punitive expeditions demanded, such as for instance the Zalka Khel and Mohmand expeditions, and the Wazirs, and in particular the truculent Mahsud Wazirs, never ceased raiding. But in comparison with what had gone before, it gave relative peace. It endured throughout the Great War, though the Wazirs built up a heavy bill of offences, which awaited settlement when Government were free from the immense preoccupations of the war. It broke down under the strain of the wanton invasion of India by the Afghans in the hot weather of 1919. On February 20th the Amir Habibullah Khan was assassinated in his sleep near Jelalabad. Although he does not figure so prominently in frontier history as his son father Abdurrahman Khan, he nevertheless has high claims on the favourable verdict of history. None anticipated that any successor to Abdurrahman Khan could hold in the least in a single State the fractious, fanatical tribes who make up the population of the Afghan kingdom. Yet this Habibullah did. On occasions his attitude seemed to be equivocal, as when armed gatherings of the tribes called lashkars were permitted to assemble in Afghan territory and to invade the Tribal Territory, causing the Zalka Khel and Mohmand expeditions. But we must not judge a State like Afghanistan by European standards, the Amir had often to bow before the fanatical elements amongst his own people until they had burnt their fingers by contact with the British troops. At the outset of the Great War he warned the Government that he might often have to do things which seemed unfriendly, but they must trust him. In truth, the position of the Amir when Turkey entered the war, and called Moslems everywhere to arms on the side of Germany, was extraordinarily difficult. He received Turkish, German and Austrian missions in Kabul, from which British representatives were still excluded. But he kept Afghanistan out of the war, and with the complete defeat of the Central Powers and their satellites, his policy was justified up to the hilt. *Ind.*

its success was the cause of his assassination. The irreconcilable elements in the Kingdom saw that the day of reckoning had come and strove to avert the settlement of their account by the murder. When he was done to death, his brother, Nasrullah Khan, was proclaimed Amir by the assassins. But the conscience of Afghanistan revolted against the idea of Nasrullah, the arch-anarchic of the ruling House of Kabul, ascending the throne over the blood-stained corpse of his brother. A military movement in Kabul itself crushed him aside and installed the son of Habibullah, Amanullah Khan, on the throne. But Amanullah Khan soon found it was a thorny bed on which he lay, and encouraged by the disorders in India which followed the passing of stringent measures to deal with anarchical crime, set his troops in motion on April 25, 1919, and preaching a *jehad* promised his soldiery the traditional loot of Hindustan. The Indian Army was at once set in motion, and as has always been the case the regular Afghan Army was easily beaten. Dakka, beyond the Khyber, was seized, Jelalabad and Kabul were bombed from the air, and there was nothing to prevent our occupation of Kabul, save the knowledge gleaned from the bitter heritage of the years of 1838 and 1878, that it is one thing to verset a government in Afghanistan, but it is quite another to set up a stable government in its stead. The Government of India wisely held their hand, and the Afghans having sued for peace, a treaty was signed on the 8th August, 1919.

But an untoward effect of this wanton war was to set the Frontier from the Gomal to the Khyber ablaze. With one or two exceptions, the Tribal Militia, left without the support of the regular troops, who in the emergency ought to have been hastened to their succour, could not stand the strain of an appeal from their fellow tribesmen, and either melted away or joined the rising. This has often been described as the failure of the Curzon policy, which was based on the tribal militia. But there is another aspect to this question. The Militia numbered only some 3,000 men. They were distributed in a number of isolated and semi-isolated posts. There was no possibility of their withstanding the onslaught of an Afghan invading force. They were not intended for such a purpose. If they had, when the invasion began, been supported by regular troops their loyalty might have remained sound. But other counsels prevailed. It was at the outset decided in high military quarters that in the face of the Afghan invasion it was inadvisable to send regular troops to support the Waziristan militia posts as it was concluded that the Mahsud and Wazir tribes of Waziristan would join the enemy. Orders were therefore issued that the posts should be abandoned, the British officers in them withdrawing with such men as remained loyal. The officer commanding the Bannu brigade immediately despatched a movable column for the succour and reassurance of the militia garrisons in his area but superior orders followed directing the return of the column forthwith. The militia were thereupon ordered to withdraw and their commencement to do so, accompanied by the burning of such stores as they could not carry, quite naturally produced the instant uprising of the tribesmen, who began to attack and loot the retiring

convoys and the abandoned posts. To expect the militia to remain firm in retreat in such circumstances was to refuse reasonable consideration of the facts of the situation.

Russia and the Frontier.—The Curzon policy was up to this inevitable collapse greatly assisted by extraneous events. The greatest external force in moulding Indian frontier policy was the long struggle with Russia. For nearly three-quarters of a century a veiled warfare for predominance in Asia was waged between Great Britain and Russia. There are few pages in British foreign policy less attractive to the student of Imperial affairs. Russia was confronted in Central Asia with precisely the same conditions as those which faced England in India when the course of events converted the old East India Company from a trading corporation into a governing body. The decaying khanates of Central Asia were impossible neighbours. Confronted with an inferior civilisation, and with neighbours who would not let her alone, Russia had to advance. True, the adventurous spirits in her armies and some of the great administrators in the Tsarist capital were not adverse to paying off on the Indian Borderland the score against Great Britain for the Crimean War and for what the Russians thought was depriving them of the fruits of their costly victory over Turkey in 1877-78. The result was a long and unsatisfactory guerrilla enterprise between the hardest spirits on both sides, accompanied by periodic panics in the British Press each time the Russians moved forward, which induced the coming, after the Russian occupation of Merv, of the generic term "Mervousness." This external force involved the Government of India in the humiliations of the Afghan War of 1838, with the tragic destruction of the retiring Indian force between Kabul and Jelalabad, slightly relieved by the heroic defence of Jelalabad and the firmness of General Pollock in refusing to withdraw the punitive army until he had set his mark on Kabul by the razing of the famous Bala Hisar fortress. It involved us in the second Afghan War of 1878, which left the baffling problem of no stable government in Afghanistan. There was a gleam of light when Abdurrahman Khan, whom we set up at Kabul to relieve us of our perplexities, proved himself a strong and capable ruler, if one ruthless in his methods. But in the early eighties the two States were on the verge of war over a squabble for the possession of Penjdeh, and then men began to think a little more clearly. There began a series of boundary delimitations and agreements which clarified the situation, without however finally settling it. The old controversy broke out in another form when intrigues with a Buriat monk, Dorjeff, during Lord Curzon's viceroyalty, gave rise to the grave suspicion that the scene had only shifted to Tibet. An expedition to Lhasa rent the veil which had so long concealed the mysterious city and dispersed the miasma of this intrigue. But it was not until the conclusion of the Anglo-Russian agreement of 1907 that the two countries arrived at a stage long sought by those who looked beyond their noses. The actual authors of the Agreement were Lord Grey, the Foreign Secretary, and Lord Hardinge, formerly British Ambassador in Portugal but it had been desir-

ed by their predecessors, whose efforts were rendered nugatory by the intransigent attitude of the dominant forces in Petrograd. It was not until Russia was chastened on the battlefields of Manchuria by Japan, and disappeared as a sea power in the decisive battle of Tsushima, that an atmosphere was created favourable to the conclusion of an Agreement. This embraced the whole frontier zone and placed Afghanistan beyond the sphere of Russian influence. There were many unsatisfactory features in the Agreement especially in regard to Persia, for which we had to pay a considerable price in the attitude of Persians in the War. But again taking long views, the Agreement fully justified itself in a broad definition of the interest of the two countries, which put an end to the period of excursions and alarms up to the outbreak of the War. Russia then ceased to be a material factor in the Indian Frontier Problem. With the establishment of the Soviet Oligarchy in Moscow uneasiness returned, for the geographical and allied circumstances which influenced the policy of the Tsarist regime exert precisely the same pressure upon its successor, and the Soviet have a troublesome motive which the Tsars had not: their aim to produce world revolution is avowed and Britain and the Constitutionalism for which she stands were for long admittedly the greatest obstacles in their path and despite the recent effects of Totalitarianism this is still fundamentally the case.

German Influence—As nature abhors a vacuum, so in the case of States bordered by higher civilisations, no sooner does one strong influence recede than some other takes its place. Long before the signing of the Anglo-Russian Agreement the shadow of the German menace had begun to appear on the horizon. Imitative, not creative, in this, as in most other activities, the Germans adapted their methods from the penetration by railway which was so marked a feature of Russian expansion in Manchuria, brought to an end by the disastrous issue of the war with Japan. The seeds of the German effort were sown when the Kaiser, extending the hand of Christian fellowship to the Sultan of Turkey, Abdul-Hamed, at a time when that sovereign was ostracised by Europe for his direct complicity in the massacre of Armenians, or rather one of the massacres of Armenians, made German influence supreme at Constantinople. His theatrical tour through Palestine, which was generally treated in Europe as an exhibition of opera bouffe, soon bore fruit in the acquisition by German interests of the principal railways in Anatolia. Later it fructified more effectively in the Baghdad Railway concession, under which German interests secured the right of extending the Anatolian lines from the port of Haider Pasha, opposite Constantinople, to a port in the Persian Gulf. Now successive British Statesmen of both parties had declared that the acquisition of a territorial foothold in the Persian Gulf by any power—Russia and the port of Bunder Abbas being then in view—would be regarded as an unfriendly act. There followed a replica of the period of alarms and excursions which had disfigured our relations with Russia. Undaunted, even when their endeavour to secure British co-operation in the enterprise failed, and when the

Revolution in Turkey which set the Committee of Union and Progress in power entailed a temporary interruption of their influence at Constantinople, the Germans pressed forward with their enterprise. They pushed the Anatolian railways as far east as Bourgulu, and constructed a line northwards from Baghdad to Samara. They sent a mission to explore the potentialities of the port of Koweit in the Persian Gulf, and set the Turks in motion to subordinate the Sheikh of Koweit to direct Turkish sovereignty, with a nominal view to extending the Baghdad railway from Basra to Koweit, or the vicinity of Koweit at the deep water inlet behind Bubiyan Island. They commenced the most difficult part of the work in piercing the Amanus and Taurus ranges by a series of tunnels, and laid the rails on the other side of the mountains across the Euphrates to Ras-al-Ain. Behind this railway activity stood a grandiose policy, which is indicated in what became known in Germany as "B B B"—Berlin, Byzantium, Baghdad. Throughout the progress of these schemes, which did not stop short of Baghdad, but were directed through a port in the Persian Gulf, at India, the Germans were anxious to secure the co-operation of Great Britain, if they could do so on their own terms, that is to say without affecting the enterprise as a dominant German adventure. Shortly before the commencement of the war of 1914-18 the protracted negotiations with London which had this end in view ended in a definite agreement between the two Powers. Under this agreement the Gulf section of the line was to have been British, and the other portion German. But this agreement which had not been signed became waste paper with the outbreak of the war, and the German plans vanished in thin air with the complete defeat of Turkey and Germany. Nevertheless the railway did not stand still during the war. Germany made immense efforts to complete the difficult tunnel sections and the work was substantially finished when the Armistice was signed.

Turkey and the Frontier.—The position of Turkey on the Indian frontier was never of any considerable importance in itself, and never assumed any significance, save as the *avant courier* of Germany, when she passed under the tutelage of that Power, and for a limited period during the war. Although so long established in Mesopotamia, Turkey was not very firmly seated in that country, the Arabs tolerated rather than accepted Turkish rule so long as they were substantially left alone, and the administration, it is understood, never paid its way. For a brief period Midhat Pasha raised the status of Mesopotamia, and after the Revolution that fine soldier Nazim Pasha became a power in the land. But speaking broadly Turkey remained in Mesopotamia because it was no one's interest, even that of the Arab, to turn her out. When however Germany developed her "B B B." policy, Turkey was used as a stalking horse. She moved a small force to the Peninsula of Al-Katr in order to frighten the Sheikh of Bahrain, and tried to convert the nominal suzerainty exercised, or rather claimed, over the Sheikh of Koweit into a *de facto* suzerainty, exercised by military force. These efforts faded before the vigorous action of the British Government which concluded a binding arrangement with the Sheikh

Koweit, and the position of the Turks at Al-Katr was always very precarious. On the outbreak of the war, however, the situation profoundly changed. When the sound and carefully executed expedition to Basra and its strategic hinterland was developed into the insane enterprise to capture Baghdad by *coup de main*, with very inadequate forces, and still more inadequate transport, we found ourselves involved in military operations of the most extensive and unprofitable character. These were completely successful with General Maude's occupation of Baghdad. After the Russian *débâcle* we found ourselves involved in a new front, which stretched from the Euphrates to the wildest part of Central Asia, producing military exploits of an almost epic character, but exercising little influence on the war. They were brought to an end by pressure not on extensive wings, but at the heart of Turkish Power. The aftermath of the war left us in an indefinite position in Mesopotamia, with indefinite frontiers. This enabled the Turks, if they were so disposed to be troublesome through guerrilla warfare in the Mosul Zone, and by stirring up the Kurds, who are the Ishmaelites of Asia Minor. The conclusion of the Treaty of Lausanne in 1923 brought temporary relief, but it did not settle the main issue, the frontier between Turkey and Iraq. Under the Treaty it was provided that if the two parties could not agree to a boundary line delimitation should be left to the League of Nations. Negotiations were promptly opened at Constantinople, but it was immediately found that there could be no mutual agreement, the Turks demanded the whole of the Mosul vilayet, and the British delegates declared that Mosul and its hinterland were necessary to the existence of Iraq. The issue therefore went to the League of Nations. That body despatched a neutral commission to study the position on the spot, this commission reported that the best settlement would be for the Mosul vilayet to be incorporated in Iraq, if the British Government were prepared to prolong its mandate over that State for a period of twenty-five years. When the report of this commission came before the League in 1925 Britain gave the necessary guarantee, and the Council of the League unanimously allotted the Mosul vilayet to Iraq. The Turkish delegates, who at first recognised the decisive authority of the League, then declared that they would not be bound by its decisions. So the matter rested at the end of the year, with Iraq in occupation of the disputed Territory up to the temporary frontier which was known as the Brussels Line.

France and the Frontier—It is difficult to find any sound policy behind the efforts of France to obtain a coaling station at Maskat in the Persian Gulf, and her long opposition to the steps necessary to extirpate the slave trade, and hold in check the immense traffic in arms which was equipping all the tribesmen on our North-West Frontier with rifles of precision and a large supply of ammunition. We can find no more definite purpose in it than a general pin-pricking policy, a desire to play the part of Russia, and perhaps a source of annoyance to Great Britain, which would form a useful lever for the exaction of considerable cessions in West Africa, particularly in the neighbourhood of Gambia, as the price

of abstinence. These embarrassments were slowly removed one by one after the conclusion of the Anglo-French Entente. Far otherwise was it in the East. The consolidation of French authority in French Indo-China was the prelude to designs for the expansion of this authority at the expense of Siam and to find compensation there for the veiled British protectorate of Egypt. There had earlier been mutterings in Burma. We were established in Lower Burma in the thirties and in the eighties the foolish and tyrannical King Theebaw, in Upper Burma, became an impossible neighbour, and ambitious Frenchmen were not averse to fanning his opposition to the British. However, if any hopes were entertained of extending the Asiatic possessions of France in this direction, they were dissipated by the Second Burmese War and the firm establishment of British rule. Far otherwise was it on the confines of Siam. It was the fixed purpose of British policy to preserve Siam as a buffer state between Burma then a regular Province of the Indian Empire, and French Indo-China. This policy was definitely challenged by French encroachments on Siam. Matters approached a crisis in 1894, and we were within measurable distance of a situation which might have ended in open war between the two States. But as in the case of Penjdeh, and later when Major Marchand marched across Africa to Fashoda, the imminence of hostilities made statesmen on both sides ask themselves what they might be going to fight about. They found there was nothing essential and an agreement was negotiated between the two Powers, which secured the independence and integrity of Siam. With the collapse of France in the second world war, however, both Indo-China and Siam were thrown on the mercy of Japan, who joined the Axis powers against the Allies in December, 1941.

The New Frontier Problem.—The whole purpose of this brief sketch has been to show that for three generations—most assuredly since the events leading to the Afghan War of 1838—the Indian frontier problem has never been a local problem. It has been dominated by external influences—in the main the long struggle between Great Britain and Russia, for a brief period the German ambition to build up a dominant position in the East through the revival of the land route, and to a much lesser extent by the ambitions of France and Turkey. The circumstances affecting the Frontier from centres beyond it have greatly changed. Old dangers have disappeared. Recent events in China and the development of aggressive air power have during the past year given the Indian North-Eastern frontier a vital aspect which it has never before borne. And, generally, conditions have become more like those normal to critical land frontiers anywhere in the world in this present time of swift communications, aerial operations and easy propaganda. Consequently, a great deal of new attention is necessarily being directed to local aspects of the general problem. The tribesman on the Indian north-west borderland was always an opponent to be respected. Brave, hardy, fanatical, he has always been a first-class fighting man. Know-

ing every inch of the inhospitable country to which punitive operations must of necessity take place he has hung on our rearwards and given them infinite trouble. Even when armed with a jezail and when every cartridge had to be husbanded with jealous care, the tribesman was a respectable antagonist. Now these tribesmen are everywhere armed with magazine rifles, either imported through the Persian Gulf when gunrunning was a thriving occupation, stolen from British magazines, or secured from Russian and Afghan sources. They have an abundant supply of ammunition. Considerable numbers of the fighting men have been trained in the ranks of the Indian Army, either as Regulars in the Pathan regiments, or else in the tribal militias. We found this to our cost in the events following the Afghan War of 1919. The Afghan regular army was of little account. The tribesmen who rose at the call of the jihad, especially in Waziristan, were of great account. They gave our troops the hardest fighting they have ever had on the Frontier, their marksmanship and fire discipline were described by experienced soldiers as admirable. The tribal militia for all practical purposes disappeared. What was to take its place?

Immediately following the Afghan War, the frontier positions were garrisoned by regular troops, but this was only a temporary measure. It may be said that the crux of the situation was in Waziristan. This sector of the Frontier has always been the most difficult of the whole, because of the intractable character of the people, and of their inveterate raiding activities. Besides, possessing a bolt hole into Afghanistan they had in the past evaded effective punishment. In view of the complete disappearance of the external menace, and the consequent lapsing of any necessity to preserve open lines of communication which would enable us to go to the support of Afghanistan, now formally recognised in the Treaty of 1921 as a completely independent State, there were many who urged the desirability of complete withdrawal, even to the line of the Indus. This extreme school gained little support. Our position in Quetta on the one side and Peshawar on the other is fully consolidated, and no good case could be made out for withdrawing from it. On the other hand, here was a strong case made out for leaving the tribesmen severely alone from the Gomal to the Kurram, and dealing with them if they emerged from their fastnesses. The military standpoint was that the Waziristan tribes are intractable, that it was unfair to impose on troops the frequent necessity of punitive operations in most arduous conditions; and that the only solution of the question was the occupation of dominant points in Waziristan,

as far north as Ladhā, and linking these with our military bases, and particularly at the terminus of the Indian frontier railways, by good motor roads.

This controversy lasted long. It resulted in a typically British compromise which specially arose from the changed conditions in which we found ourselves in 1922, when our troops were in occupation of Waziristan as a result of the operations forced upon us for the suppression of the tribal outbreak which the Afghans stirred up in support of their invasion of India in 1919. The ensuing policy has been aptly described as the "half-forward" policy. It is in truth a repetition of the Sandeman policy, adapted to local conditions. There has been no withdrawal in the ordinary sense of the term, but the limit of the North Waziristan occupation was temporarily fixed at Razmak, not at Ladhā. A network of consequential roads was pushed forward. Its elaboration continues. In South Waziristan, Wana has been re-occupied, partly in response to a pressing invitation from the Wana Wazirs, because they wanted to share the benefits which they saw British occupation to be bringing to their cousins northward of them. In February, 1933, control over tribal territory was pushed forward beyond Razmak towards the Afghan Border because of a rebellion on the Afghan side and of the need to assist the King of Kabul by preventing excursions by bodies of Wazirs into His Majesty's disturbed territory. The work of control and of civilization rapidly progressed in the whole territory. Of this particulars are given elsewhere in this chapter. One of its recent fruits was a request by the Afridis for roads in their country of Tirah. A beginning with construction was made, but dissensions within the tribe in regard to it caused the work to be suspended. The desirability of better controlling the Afridis was demonstrated in 1930 when, incited by Congress party agents from India, the young Afridis invaded the Peshawar Plain and the need for the adoption of a more active policy in Waziristan was shown by a rising of the Tori Khel Wazirs in 1936-37, a trouble which has not yet been flattened out. A serious military campaign in Waziristan in 1936-37, necessitated by the disturbing religious agitation, showed that conditions there are far from settled. The trouble there is not yet over and its extent has resulted in serious official review of the whole problem once again.

The main Indian rail-head, which for many years terminated at Jamrud, at the easterly entrance to the Khyber Pass, was in the autumn of 1925 extended to Landi Khana, at the opposite end of the Pass and within a mile of the frontier between India and Afghanistan.

I.—THE PERSIAN GULF.

en said before it will be seen of this discussion of Indian that the external menace has d. No part of the frontier is influenced by this consideration than the Persian Gulf. Our first appearance in the Gulf was in connection with the long struggle for supremacy with the Portuguese, the French and the Dutch, who had established trading stations there. With the capture and destruction of the great entrepot which the Portuguese had established at Ormuz, the super-session of the land by the sea route, and the appearance of anarchy in the interior the importance of the Gulf declined. The Indian Government remained there primarily to preserve the peace. This work is quietly and efficiently performed. Piracy was stamped out, the Trucial Chiefs, who occupy the Pirate Coast, were gradually brought into close relations with the Government, the vessels of the Royal Navy kept watch and ward, and our consuls regulated the external affairs of the Arab rulers on the Arab coast. In return for these services Great Britain claimed no selfish advantages in the waters of the Gulf were kept free to the navigation of the ships of all nations, and enough Great Britain could have made any territorial acquisitions she pleased she retained possession of only the tiny station of Bassidu. Left to herself Great Britain desired no other policy, but for a quarter of a century the Gulf was involved in European affairs. France sought to acquire a coaling station at Jissa, near Maskat, and obstructed the efforts of the British Government to stamp out the slave trade and to check the immense traffic in arms which was equipping the tribes on our land frontier with weapons of precision and quantities of ammunition. All causes of difference were gradually removed by agreements following the Anglo-French Entente. Russia sent one of her finest cruisers to "show the flag" in the Gulf, and established consular posts where there were no interests of preserve. She was credited with the intention of occupying a warm water port, and in particular with casting covetous eyes on the most dreadful spot in the Gulf, Bunder Abbas. This menace declined after the signing of the Anglo-Russian Agreement and disappeared with the collapse of Russian power following the Revolution. Then Turkey, either acting for herself, or as the *avant courier* of Germany, under whose domination she had passed, began to stir. She threatened the Sheikh of Bahrein by the armed occupation of the peninsula of Al-Katr, and moved troops to enforce her suzerainty over Koweit, the best port in the Persian Gulf and a possible terminus of the Baghdad Railway. Further to consolidate her interests, or to stake out a claim, Germany sent the heavily-subsidised ships of the Hamburg-America line to the Gulf, where they comported themselves as the instruments of Imperial policy rather than as inoffensive merchantmen. She also strove, through the agency of the firm of Woonkhaus, to acquire a territorial footing at Shargah. These events stirred the British Government

to an unusual activity in the waters of the Gulf.

Counter Measures.

The first effective steps to counter these influences were taken during the vigorous Viceroyalty of Lord Curzon, who visited the Gulf during his early travels and incorporated a masterly survey of its features in his monumental work on Persia. He appointed the ablest men he could find to the head of affairs, established several new consulates, and was instrumental in improving the sea communications with the Gulf ports. The British Government also took alarm. They were fortified in their stand against foreign intrigue by the opinion of a writer of unchallenged authority. The American Naval writer, the late Admiral Mahan, placed on record his view that "Concession in the Persian Gulf, whether by formal arrangement (with other Powers) or by neglect of the local commercial interests which now underlie political and military control, will imperil Great Britain's naval position in the Farther East, her political position in India, her commercial interests in both, and the Imperial tie between herself and Australasia." The Imperial standpoint, endorsed by both Parties in the State, was set out by Lord Lansdowne in words of great import—"We (i.e., His Majesty's Government) should regard the establishment of a naval base or of a fortified port in the Persian Gulf by any other Power as a very grave menace to British interests, which we should certainly resist with all the means at our disposal." The negative measures following these declarations were followed by a constructive policy when the oil fields in the Bakhtiari country, with a great refinery, were developed by the Anglo-Persian Oil Company, in which the British Government has a large financial stake. Since that date the Persian Gulf has become the "Air Suez Canal" of the Empire, the main Imperial line of air communications running down its Arab littoral, and an important oil field has been discovered and is being operated at the Island of Bahrein. The Company is a branch of the Californian Standard Oil Company and bring American-owned has introduced the U.S.A. into the political complex of the Gulf. Another branch of the same Company has struck oil in Hasa—a portion of Ibn Saud's Arabian Kingdom shelving on the Gulf—and a British company is prospecting with success in Koweit. Those who desire a more complete narrative are referred to the Indian Year Book for 1923, pp. 178-183. An interesting new feature in 1931 was the decision of the Persian Government to instal a Navy of their own in the Gulf. The fleet consisting of two sloops and four launches, all suitably armed, was built in Italy and duly arrived at its destination in 1932. It is at the outset officered by Italians. The immediate reason for the new fleet is that an increase in the Persian Customs tariff for revenue purposes led to extensive smuggling. The fleet is required to check it. The British Government

in 1935 announced their decision to transfer their principal naval station in the Persian Gulf from Henjam, on Kishm island, off the Persian shore at the entrance of the Gulf, which they held on lease from the Persian Gulf to Bahrein, on the Western, Arabian coast of the Gulf. This move is calculated to remove causes of friction.

Maskat.

Maskat, which is reached in about forty-eight hours from Karachi, is outside the Persian Gulf proper. It lies three hundred miles south of Cape Musandim, which is the real entrance to the Gulf, but its natural strength and historical prestige combine to make it inseparable from the politics of the Gulf, with which it has always been intimately associated.

Formerly Maskat was part of a domain which embraced Zanzibar, and the islands of Kishm and Larak, with Bunder Abbas on the Persian shore. Zanzibar was separated from it by agreement, and the Persians succeeded in establishing their authority over the possessions on the eastern shore.

The relations between Britain and Maskat have been intimate for a century and more. It was under British auspices that the separation between Zanzibar and Maskat was effected, the Sheikh accepted a British subsidy in return for the suppression of the slave trade and in 1892 sealed his dependence upon us by concluding a treaty pledging himself not to cede any part of his territory without our consent. The Sheikh paid a State visit to New Delhi late in 1937 and thereafter to London, whither he journeyed *via* the Far East and America. On his return home *via* India the Sheikh concluded a new treaty with the representatives of His Majesty's Government in 1938.

The Pirate Coast.

Turning Cape Musandim and entering the Gulf Proper, we pass the Pirate Coast, controlled by the six Trucial Chiefs. The ill-name of this territory has now ceased to have any meaning, but in the early days it had a very real relation to the actual conditions. The pirates were the boldest of their kind, and they did not hesitate to attack on occasion, and not always without success, the Company's ships of war. Large expeditions were fitted out to break their power, with such success that since 1820 no considerable punitive measures have been necessary. The Trucial Chiefs are bound to Great Britain by a series of engagements, beginning with 1806 and ending with the perpetual treaty of 1853 by which they bound themselves to avoid all hostilities at sea, and the subsequent treaty of 1873 by which they undertook to prohibit altogether the traffic in slaves. The relations of the Trucial Chiefs are controlled by the British Resident at Bushire, who visits the Pirate Coast every year on a tour of inspection.

The commercial importance of the Pirate Coast is increasing through the rise of Debai,

Formerly Lingah was the entrepot for the trade, but the exactions of the Belgian Customs officials in the employ of Persia drove this traffic from Lingah to Debai. The Trucial Chiefs are—Debai, Abu Thabee, Shargah, Ajman, Um-al-Gawain and Ras-el-Kheyma.

Bahrein.

North of the Pirate Coast lies the little Archipelago which forms the chiefship of the Sheikh of Bahrein. Of this group of islands only those of Manama and Maharak are of any size, but their importance is out of all proportion to their extent. This is the great centre of the Gulf pearl fishery, which, in a good year, may be worth half a million pounds sterling. The anchorage is wretched, and at certain states of the tide ships have to lie four miles from the shore, which is not even approachable by boats, and passengers, mails and cargo have to be landed on the donkeys for which Bahrein is famous. But, in spite of this, the trade of the port is very large and the Customs revenue substantial in consequence, which makes the Sheikh the richest ruler in the Gulf.

The importance and wealth of these islands has been immensely increased by the development of the Bahrein oil fields referred to above.

In the neighbourhood of Bahrein is the vast burying ground which has hitherto baffled archaeologists. The generally accepted theory is that it is a relic of the Phœnicians, who are known to have traded in these waters.

The British Government as was mentioned earlier in this review announced in 1935 that they proposed transferring the principal British Naval station in the Gulf from Henjam, on the Persian side of the water, to Bahrein. The same place has since been utilised for the provision of a large aerodrome for the service of the British Imperial air line between London and Australia, which is thus enabled to take a route down the Western side of the Persian Gulf and thus avoid difficulties in Persia.

Koweit.

In the north-west corner of the Gulf lies the port which has made more stir than any place of similar size in the world. The importance of Koweit lies solely in the fact that it is a possible Gulf terminus of the Baghdad Railway. This is no new discovery, for when the Euphrates Valley Railway was under discussion, General Chesney selected it under the alternative name of the Grane—so called from the resemblance of the formation of the Bay to a pair of horns—as the sea terminus of the line. Nowhere else would Koweit be called a good or a promising port. The Bay is 20 miles deep and 5 miles broad, but so shallow that heavy expense would have to be incurred to render it suitable for modern ocean-going steamers. It is sheltered from all but the westerly winds, and the clean thriving town is peopled by some 20,000 inhabitants, chiefly dependent on the sea, for the mariners of Koweit are noted for their holdness and hardihood. As mentioned above there are good prospects of the development of an oil field in Koweit territory.

Khoramshahr (formerly Muhammerah).

On the opposite side of the entrance to the Shatt-el-Arab lie the territories of Khoramshahr. The town, favourably situated near the mouth of the Karun River, has grown in importance since the opening of the Karun River route to trade through the enterprise of Messrs Lynch Brothers. This route provides the shortest passage to Ispahan and the central tableland, and already competes with the older route by way of Bushire and Shiraz. This importance has grown since the Anglo-Persian Oil Company—now called the Anglo-Iran Oil Company—established refineries at Muhammerah for the oil which they win in the rich fields which they have tapped near Ahwaz. Its importance will be still further accentuated, by the opening of the railway to Khorremabad by way of Dizful.

Iraq.

In a sense Iraq and Turkish Arabistan can hardly be said to come within the scope of the frontiers of India, yet they are so indissolubly associated with the politics of the Gulf that they must be considered in relation thereto. Basrah is the present sea terminus of the Baghdad Railway and is also an important air port on the Empire air route. It stands on the Shatt-el-Arab, sixty miles from its mouth, favourably situated to receive the whole water-borne trade of the Tigris and Euphrates Rivers. The local traffic is valuable, for the richness of the date groves on either side of the Shatt-el-Arab is indescribable, there is a considerable entrepot traffic whilst Basra is the port of entry for Baghdad and for the trade with Persia, which follows the caravan route *via* Kerman-shah and Hamadan. Baghdad is the Capital town.

Iraq is an independent Arab State set up in what formerly was Mesopotamia, under British Aegis under the sovereignty of King Feisal I. He was, on his death, succeeded by his son, King Ghazi, who died in a Motor accident in April, 1939. His three-year old son, Amir Feizal, was then proclaimed King, and Amir Abdullah, uncle of the new ruler, was appointed Regent. When the Great War was over we found ourselves committed to immense, undefined and burdensome responsibilities in that land. The sound concepts which dictated the original expedition were dislocated in the foolish advance to Baghdad, then the great military enterprises necessitated by the fall of Kut-al-Amara carried our frontier north to Mosul and the mountains of Kurdistan, east to the Persian boundary, and west to the confines of Trans-Jordania. Amongst ardent Imperialists, there was undoubtedly the hope that this immense area would be in one way or another an integral part of the British Empire. The cold fit followed when the cost was measured, and the Arabs rose in a revolt which showed that any such domination could only be maintained by force of arms and that the cost would be prodigious. In these circumstances King Feisal was imported from the Hedjaz and installed on the throne under the aegis of Great Britain. Still we were committed to the support of the new kingdom, and that most dangerous condition arose—responsibility without any real power unless King Feisal was to be a

mere puppet, immense expenditure and indefinite military commitments. In these circumstances there was an insistent demand for withdrawal from the land. British policy moved slowly towards that end, but a definite step was taken in 1923. The Secretary of State for the Colonies announced this policy in a statement which is reproduced textually, for the purpose of reference. Addressing the House of Lords on May 3rd he said—

Your Lordships will remember that the Cabinet have been discussing this matter for some time and decisions have now been taken. Sir Percy Cox has accordingly been authorised by His Majesty's Government to make an announcement at Baghdad, the terms of which I propose to read out to Your Lordships. This announcement was drawn up in consultation with King Feisal and his Government, and has their cordial assent. It is being published at Baghdad to-day.

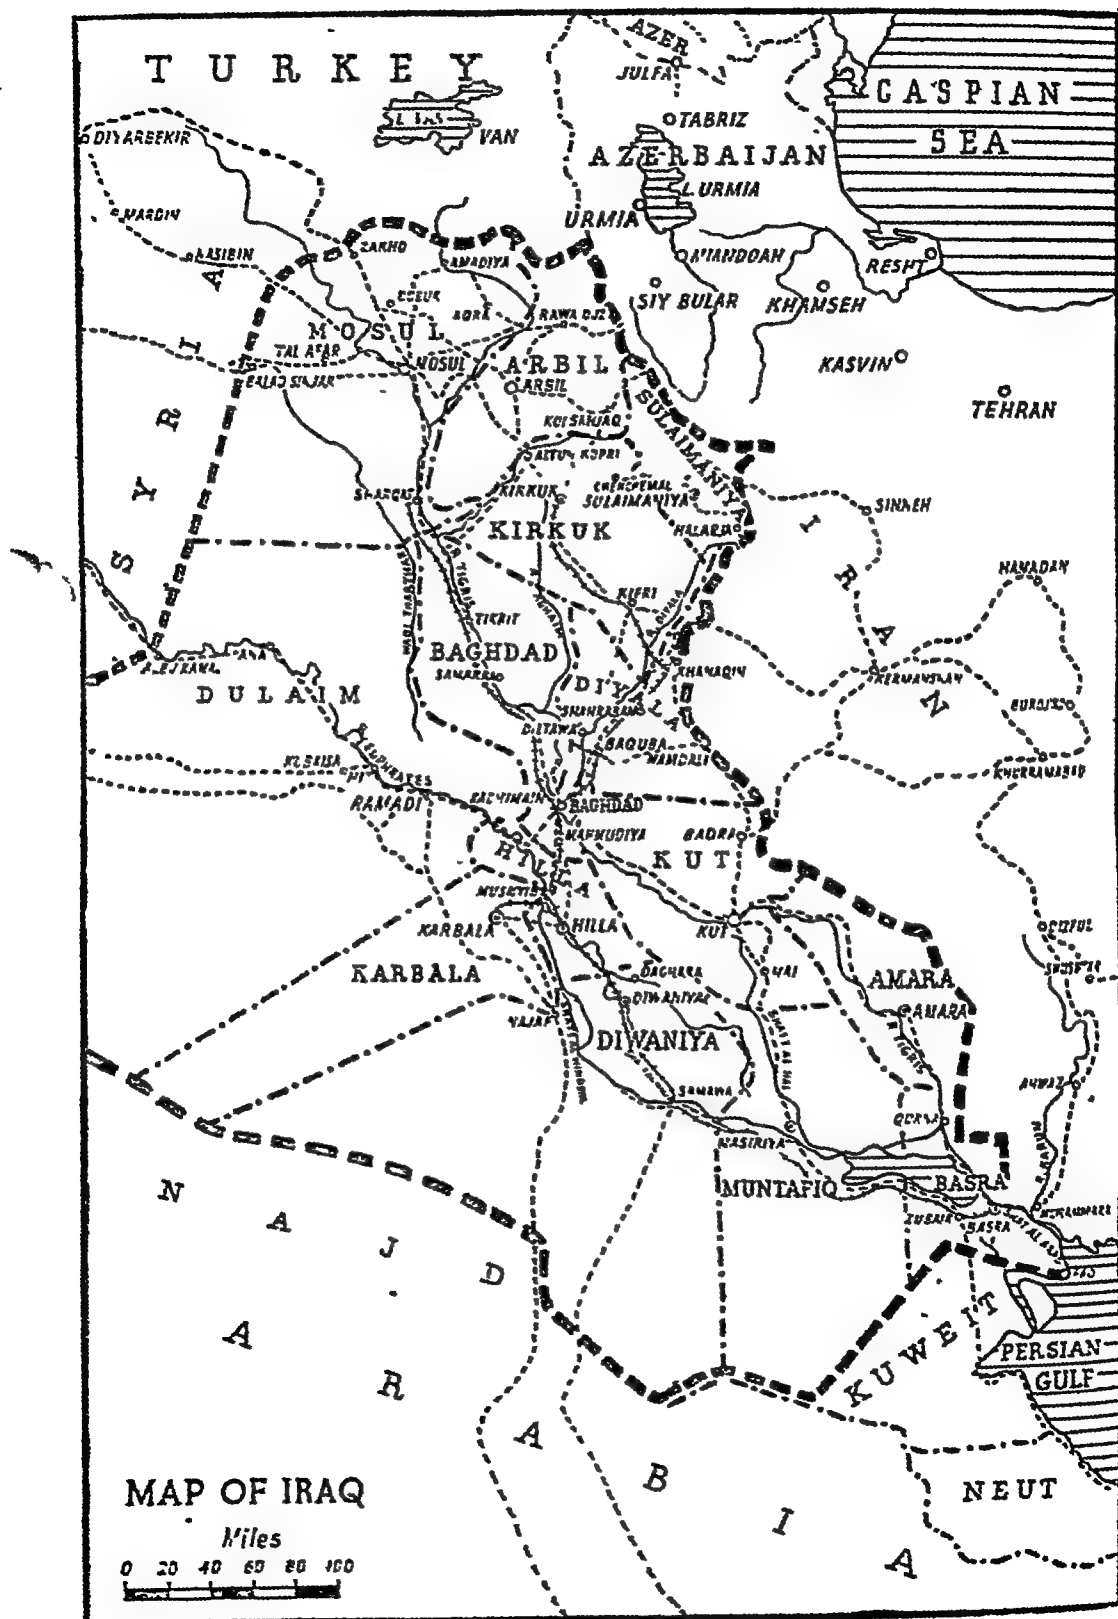

The announcement is as follows —

"It will be remembered that in the autumn of last year, after a lengthy exchange of views, it was decided between the Governments of His Britannic Majesty and His Majesty King Feisal that a Treaty of Alliance should be entered into between His Britannic Majesty and His Majesty the King of Iraq. This Treaty, which was signed on the 10th October, 1922, and the term of which was to be twenty years (subject to periodical revision at the desire of either party) provided for the establishment of an independent Constitutional Government in Iraq, enjoying a certain measure of advice and assistance from Great Britain of the nature and extent indicated in the text of the Treaty itself and of subsidiary Agreements which were to be made thereunder.

"Since then the Iraq Government has made great strides along the path of independence, and stable existence and has been able successfully to assume administrative responsibility and both parties being equally anxious that the commitments and responsibilities of His Majesty's Government in respect of Iraq should be terminated as soon as possible, it is considered that the period of the Treaty in its present form can conveniently be shortened. In order to obviate the inconvenience of introducing amendments into the body of a Treaty already signed, it has been decided to bring about the necessary modifications by means of a protocol which, like the Treaty itself, will be subject to ratification by the Constituent Assembly.

"Accordingly a protocol has now been signed by the parties in the following terms:—

It is understood between the High Contracting Parties that, notwithstanding the provisions of Article 18, the present Treaty is all terminate upon Iraq becoming member of the League of Nations and in any case not later than four years from the ratification of peace with Turkey. Nothing in this protocol shall prevent a fresh agreement from being concluded with a view to regulate the subsequent relations between the High Contracting Parties and the Kingdom of Iraq for that object shall be their mutual aim. The present Treaty shall expire on the day of the expiration of the period of four years from the date of the ratification of peace with Turkey.

It will be noticed that under this protocol the Treaty in its present form was to terminate on the entry of Iraq into the League of Nations or in four years, whichever might be earlier.

The position of Iraq as regards the League was that when the Treaty was ratified His Britannic Majesty was bound under Article 6 to use his good offices to secure the admission of Iraq to membership of the League of Nations as soon as possible. His Majesty's Government would be in a position to take this step on the fulfilment of the two following essential conditions, namely, the delimitation of the frontiers of Iraq, and the establishment of a stable government in accordance with the Organic Law.

The Council of the League of Nations in January, 1932, adopted the report of the Iraq Commission recommending the termination of the mandate subject to the admission of Iraq to membership of the League and Iraq entering into a number of undertakings, with regard to treatment of minorities and the administration of justice. This meant the termination of the mandate when the next Assembly of the League voted for the admission of Iraq to League membership.

Under the Treaty of Lausanne between Turkey and the Powers, which was signed in 1923, it was agreed that the frontier between King Faisal's State and Turkey, the important frontier because the future of Mosul was in dispute, should be settled by the League of Nations, should Great Britain and Turkey be unable to come to agreement by direct negotiation. These direct negotiations were opened at Constantinople, but no agreement was reached, so the question was opened before the Council of the League in September 1924. Whilst the matter was under discussion complaint was made by Great Britain that Turkey had violated the provisional frontier drawn in the Treaty of Lausanne, and certain irregular hostilities were carried on in the disputed zone. This matter too was remitted to the League, and a further provisional boundary was drawn, which was accepted by both parties.

Here the matter remained until the autumn of 1925. In order to secure the material for a decision the League of Nations despatched a neutral commission to Mosul to investigate the situation. This commission produced a long and involved report, but one which led by devious paths to a common sense recommendation. It was that the first essential in the Mosul vilayet is stable government. The desires of the people were for incorporation in the State of Iraq. If therefore the British Government was willing to extend its mandate over Iraq for a further period of twenty-five years—a guarantee of stable government—then Mosul should be incorporated in Iraq; if Britain was not willing, then Mosul should return to Turkey. When the matter came before the Council of the League Great Britain gave the necessary guarantee. The Turks thereupon challenged the whole competence of the Council to give an award under the terms of the Treaty of Lausanne. The issue was remitted to the Court of International Justice at The Hague which decided in favour of the

competence of the Council. Great Britain having given the necessary assurance, that she was prepared to extend her mandate over Iraq for a further twenty-five years, thereupon the Council of the League allocated the whole of the area in dispute, right up to the temporary frontier—commonly called The Brussels Line—to Iraq. The Turks refused to accept the award and withdrew from Geneva threatening force. Later, wiser counsels prevailed and in 1926 Turkey accepted a frontier substantially as drawn by the League.

A New Treaty.—A new Treaty regulating the relation of Iraq with Great Britain, the Mandatory Power, was negotiated in 1927, and signed towards the end of the year.

The Treaty declares that there shall be peace and friendship between His Britannic Majesty and His Majesty the King of Iraq. It states that "Provided the present rate of progress in Iraq is maintained and all goes well in the interval, His Britannic Majesty will support the candidature of Iraq for admission to the League of Nations in 1932." It stipulated that separate agreements superseding those of March 25, 1924, shall regulate the financial and military relations.

The King of Iraq undertook to secure the execution of all international obligations which His Britannic Majesty had undertaken to see carried out in respect of Iraq. He also undertook not to modify the existing provisions of Iraq's organic law so as adversely to affect the rights and interests of foreigners, and to constitute any difference in the rights before the law among Iraqis on the grounds of differences of race, religion, or language.

There was provision for full consultation between the high contracting parties in all matters of foreign policy which may affect their common interests. The King of Iraq undertook so soon as local conditions permit to accede to all general international agreements already existing, or which might be concluded thereafter with the approval of the League of Nations, in respect of the slave trade, the traffic in drugs, arms and munitions, the traffic in women and children, transit navigation, aviation, and communications, and also to execute the provisions of the Covenant of the League of Nations, the Treaty of Lausanne, the Anglo-French Boundary Convention, and the San Remo Oil Agreement in so far as they apply to Iraq.

There was provision against discrimination in matters concerning taxation, commerce, or navigation against nationals or companies of any State which is a member of the League of Nations, or of any State to which the King of Iraq had agreed by Treaty that the same rights should be ensured as if it were a member of the League.

Any difference that might arise between the high contracting parties was to be referred to the Permanent Court of International Justice provided for by Article Fourteen of the Covenant of the League. The Treaty was made

subjected to revision with the object of making all the modifications required by the circumstances when Iraq entered the League of Nations

It is important to remember that there is a considerable difference between the vilayet of Basra and the other portions of the Iraq State. Basra has for long been in the closest commercial contact with India, and is in many respects a commercial appanage of Bombay. Its people have not much in common with those of the North. They took no part in the Arab rising which followed the war, and they ask nothing better than to remain in close touch with India and through India with the British Government.

Iraq's alliance with Great Britain was emphasised by the Iraqi Prime Minister, General Noori Said Pasha, in April, 1939. Broadcasting to the nation, General Noori said that alliance with Britain and the neighbouring States, coupled with sincere friendship with Turkey and Iran, were two principles on which Iraq's foreign policy was based.

On the outbreak of war with Germany in September, 1939, Iraq severed diplomatic relations with Germany in accordance with the terms of her treaty with Great Britain, but for several years the German minister in Baghdad had been working against British influence. As Hitlerism went from strength to strength German influence in Iraq grew in volume and intensity, until, when the war began the expulsion of the German minister by the Cabinet threw into sharp relief the pro-German sympathies of the army leaders and the younger ambitious men who fawned upon them. Later the Cabinet fell and was succeeded by ministries backed by Rashid Ali and the army. When Italy entered the war, this cabinet took the first step in breach of the Anglo-Iraq Treaty of Alliance by refusing to break off diplomatic relations with Italy, with the result that the Italian Legation in Baghdad became an active centre of Axis propaganda and espionage. In April, 1941 a *coup d'état* put Rashid Ali into power. The administration that followed turned openly hostile to the British, demanded that no more British troops should be landed to protect lines of communication through Iraq and, when this demand was refused, began hostilities in the hope of Axis support. Iraqi forces shelled Habbaniyah, the British aerodrome, and rounded up British residents in Baghdad. The rebellion was quickly quelled and the rebel leaders, finding their position untenable, fled the country. On May 30, 1941, the Lord

Mayor of Baghdad accompanied by Iraqi Army and police officers came to the British Commander to ask for an armistice, which was quickly arranged and legal Government in Iraq was restored with the return of the Regent.

The Iran Shore.

The Iran shore presents fewer points of permanent interest. The Iranian Government has developed Bandar Shahpur as the port at the southern territory of the new Trans-Iranian Railway. The port facilities are inadequate and the site is malarious. The importance of Bushire is administrative rather than commercial. It is the headquarters of Iran authority. It is also the main entrepot for the trade of Shiraz, and competes for that of Ispahan. But the anchorage is wretched and dangerous, the road to Shiraz passes over the notorious kotals which preclude the idea of rail connection. Further south lies Lingah, reputed to be the prettiest port on the Iran coast, but its trade is being diverted to Debal. In the narrow channel which forms the entrance to the Gulf from the Arabian Sea is Bunder Abbas. Here we are at the key of the Gulf. Bunder Abbas is of some importance as the outlet for the trade of Kerman and Yazd. It is of still more importance as a possible naval base. To the west of the town, between the Island of Kishm and the mainland, lie the Clarence Straits which narrow until they are less than three miles in width, and yet contain abundance of water. Here, according to sound naval opinion, there is the possibility of creating a naval base which would command the Gulf. The great obstacle is the climate, which is one of the worst in the world. On the opposite shore, under the shadow of Cape Musandim, lies another sheltered deep-water anchorage, Elphinstone's Inlet, where the climate conditions are equally vile. But between these two points there is the possibility of controlling the Gulf just as Gibraltar controls the Mediterranean. For many years Bunder Abbas loomed large in public discussions as the possible warm water port for which Russia was seeking. There was established a British Naval station at Henjam, a small island close to Kishm, where the station was constructed under agreement with the Persian authorities. Its evacuation by Great Britain in favour of Bahrain was decided upon by the British Government in 1935. On the Mekran coast, there is the cable station of Jask, and the possible port of Chamber. An interesting development, in the Gulf within the past decade was the institution of an Iran Navy.

II.—SEISTAN.

The concentration of public attention on the Persian Gulf was allowed to obscure the frontier importance of Seistan. Yet it was for many years a serious preoccupation with the Government of India. Seistan lies midway north and south between the point where the frontiers of Russia, Persia and Afghanistan meet at Zulfiyar and that where the frontiers of Persia and the Indian Empire meet on the open

sea at Gwattur. It marches on its eastern border with Afghanistan and with Baluchistan, it commands the valley of the Helmand, and with it the road from Herat to Kandahar, and its immense resources as a wheat-producing region have been only partly developed under Persian misrule. It offers to an aggressive rival, an admirable strategic base for future military operations; it is also midway athwart

the track of the shortest line which could be built to connect the Trans-Caspian Railway with the Indian Ocean, and if and when the line from Askabad to Meshed were built, the temptation to extend it through Seistan would be strong. Whilst the gaze of the British was concentrated on the North-West Frontier, and to possible lines of advance through Kandahar to Quetta, and through Kabul to Peshawar, there can be little doubt that Russian attention was directed to a more leisurely movement through Seistan, if the day came when she moved her armies against India.

Whether with this purpose or not, Russian intrigue was particularly active in Seistan in the early years of the century. Her agents moved into Seistan and through the agency of the Belgian Customs officials, "scientific missions" and an irritating plague cordon, sought to establish influence, and to stifle the British trade which was gradually being built up by way of Nushki. These efforts died down before the presence of the McMahon mission, which, in pursuance of Treaty rights, was demarcating the boundary between Persia and Afghanistan, with special reference to the distribution of the waters of the Helmand. They finally ceased with the conclusion of the Anglo-Russian Agreement. Since then the international importance of Seistan has waned.

The natural conditions which give to Seistan this strategic importance persist. For a time,

British influence increased in substance through the Seistan trade route. The distance from Quetta to the Seistan border at Killa Robat is 465 miles, most of it dead level, and it was provided with fortified posts, dak bungalows, wells, and all facilities for caravan traffic. The railway was pushed out from Spezand, on the Bolan Railway, to Nushki, so as to provide a better starting point for the caravans than Quetta. This line was extended to Duzdap (now called Zahidan) 54 miles on the Persian side of the Indo-Persian Frontier, during the Great War as a military measure, but the traffic after the re-establishment of peace supported only two trains a week. There then arose trouble owing to Persian insistence on the collection of Customs duties on rations taken across their frontier for the railway staff. This led to the stoppage of train running on the Persian side of the Frontier and the establishment of railhead at Nokkundi 80 miles on the Indian side of the frontier. Negotiations for years dragged on to bring about a reasonable settlement in regard to the situation. The Persian Foreign Minister, Mous. B. Kazemi, paid a visit to New Delhi in November 1935, and travelled eastward from Persia by the Baluchistan route. He was interested, as his Government's representative, in the development of railways in Seistan and in securing British-Indian assistance in that enterprise. Only informal conversations on the subject took place. No constructive result has become apparent.

III—IRAN.

From causes which only need to be very briefly set out, the Iran question as affecting Indian frontier policy has receded until it is of no account. Reference is made in the introduction to this section to the fact that the conclusion of the Anglo-Russian Agreement left us a bitter legacy in Persia. That Agreement divided Iran into two zones of influence, and the Iranians bitterly resented this apparent division of their kingdom between the two Powers, though no such end was in view. German agents, working cleverly on this feeling, established an influence which was not suspected, and when the Great War broke out they were able to raise the tribes in opposition to Great Britain, in the South, and after the fall of Kutal-Amara, when a Turkish Division penetrated Western Iran, they exercised a strong influence in Teheran. With the defeat of Turkey and the Central Powers this influence disappeared, but at that time there was no authority in Iran besides that of the British Government, which had strong forces in the North-West and controlled the southern provinces through a force organised under British officers and called The South Persian Rifles. It was one of the first tasks of the British Government to regularise this position, and for this purpose an agreement was reached with the then Persian Government, the main features of which were—

To respect Persian integrity;

To supply experts for Persian administration,

To supply officers and equipment for a Persian force for the maintenance of order.

To provide a loan for these purposes;

To co-operate with the Persian Government in railway construction and other forms of transport.

Both Governments agreed to the appointment of a joint committee to examine and revise the Customs tariff.

The second agreement defined the terms and conditions on which the loan was to be made to Persia. The loan was for £2,000,000 at 7 per cent. redeemable in 20 years. It was secured on the revenues and Customs' receipts assigned for the repayment of the 1911 loan and should these be insufficient the Persian Government was to make good the necessary sums from other sources.

The Present Position.—We have given the main points in the Anglo-Iran agreement, because few documents have been more misunderstood. Those who desire to study it in greater detail will find it set out in the Indian Year Book for 1921, page 138 *et seq.* It has been explained that most Iranians construed it into a guarantee of protection against all external enemies. When the British troops in the north-west retired before the Bolsheviks, the Iranians had no use for the Agreement and it soon became a dead instrument. It was finally rejected and the advisers who were to have assisted Persia under it withdrew.

A remark frequently heard amongst soldiers and politicians in India after the Great War was that Great Britain must take an active hand in Iran because she could not be a passive witness to chaos in that country. The view always taken in the Indian Year Book was that the internal

affairs of Iran were her own concern; if she preferred chaos to order that was her own lookout, but left alone she would hammer out some form of Government. That position has been justified. The Sirdar Sipah, or commander-in-chief, a rough but energetic soldier, gradually took charge of Iranian affairs and established a thinly-veiled military dictatorship which made the Government feared and respected throughout the country for the first time since the assassination of Shah Nasr-ed-din. A body of capable Americans under Dr. Millspargh restored order to the chaotic finances. These two forces operating in unison gave Iran the best government she had known for a generation. But the Sirdar Sipah chafed under the irregularities of his position, with a Shah spending his time in Europe and wasting the resources of the country. He moved to have his position regularised by the deposition of the absentee Shah and his own ascent of the throne. At first he was defeated by the opposition of the Mullahs, but in 1925 prevailed, and the Shah was formally deposed and the Sirdar Sipah chosen monarch in his place under the title of Reza Shah Pahlavi. The change was made without disturbance, and Iran entered on a period of peace and consolidation which removed it from the disturbing forces in the post-war world. Since then considerable progress has been made with the reform of the administration. The general situation in Iran was gravely disturbed in 1932 by the sudden proclamation by the Iran Government of the Anglo-Iran Oil Co.'s concession, a matter affecting one of the biggest industrial undertakings in the world and millions sterling of capital. The intervention of the British Government led to the reference of the trouble to the League of Nations and this paved the way for negotiations between the Company and the Iran Government. While these were being settled some progress was also made with general negotiations between the British and Iran Governments for an agreement covering all outstanding points of difficulty between them.

In July, 1941, Britain drew the attention of the Iranian Government to the danger of allowing German tourists in their country. A large number of German technicians and commercial agents had been infiltrating into Iran. The Iran Government's reply being

unsatisfactory, the British and Soviet representatives made a new *Demand* to Iran in June, 1941, without any result. On one point, however, the Government of Iran made a concession to British feelings, that of restricting the activities of Roshid Ali and his supporters from Iraq who had been actively co-operating with Axis representatives. The British and Russian *Demand* requested the expulsion of Germans from Iran. On the Iran Government's failure to do so in August, 1941, the British and Soviet Governments decided to take action. The Soviet Government in their note to Iran pointed out that they found themselves confronted with the necessity of taking immediate steps and exercising their right by virtue of paragraph 4 of the 1921 treaty in the form of sending troops to Iranian territory for temporary occupation in order to safeguard the security of the Soviet. It assured the Iran Government that those measures were in no way directed towards Iran. The Soviet had no territorial desire nor any intention of infringing the independence of Iran. They also assured the Iran Government that as long as the danger threatening them was purely a Soviet Government, in obedience to the obligations undertaken in the 1921 treaty, would withdraw their forces from Iranian territory. The British Ambassador in Tehran presented a similar note simultaneously.

Following on the Allied plan of action Persia and India were entered Iran at three points. The Soviet troops entered from the Caucasus. The Allied forces met with a slight setback at first but on August 28th, 1941, the Iran Government turned to their forces the olive branch, a new Cabinet being formed under the Prime Ministership of Mr. Ali Forutan. It entered into negotiations with the Allies and concluded peace. One of the clauses of the peace terms was that the Iranians should undertake the transit of supplies and war materials to Russia. Iran agreed to the closing of German, Italian, Rumanian and Hungarian legations. Further German nationals were handed over to the Allies. The terms also included the withdrawal of the Iranian troops from certain zones. In September, 1941, the Shah of Iran, Reza Shah Pahlavi, abdicated in favour of his Crown Prince, Shahpur.

IV.—THE PRESENT FRONTIER PROBLEM

There yet remains a small part of British India where the King's writ does not run. Under what is called the Durand Agreement with the Amir of Afghanistan, the boundary between Indian and Afghanistan influence was settled, and it was delimited in 1903 except for a small section which was delimited after the Afghan War in 1919. But the Government of India have never occupied up to the border. Between the administered territory and the Durand line there lies a belt of territory of varying width extending from the Gomal Pass in the south, to Kashmir in the north; this is generically known as the Tribal Territory. Its future is the keynote of the interminable discussions of frontier policy for nearly half a century.

This is a country of deep valleys and secluded plains, which nature has fenced in with almost inaccessible mountains. It is peopled with wild tribes of mysterious origin, in whom

Afghan, Tartar, Turkoman, Persian, Indian, Arab and Jewish intermingled. They had lived their own lives for centuries, with little intercourse even amongst themselves, and as Sir Valentine Chirol truly said "the only bond that ever could unite them in common action was the bond of Islam." It is impossible to understand the Frontier problem unless two facts are steadily borne in mind. The strongest sentiment amongst these strange people is—or was until comparatively recently—the desire to be left alone. They value their independence much more than their lives. The other factor is that the country does not suffice even in good years to maintain the population. They must find the means of subsistence outside, either in trade, by service in the Indian Army or in the Afghanistan, or else in the outlet which hill-men all the world over have utilised from time immemorial, the

raiding of the wealthier and more peaceful population of the Plains. The internal peace enforced among them by British control has in late years led to an increase in their numbers and this has aggravated their economic problem.

Frontier Policy.

The policy of the Government of India toward the Independent Territory has ebbed and flowed in a remarkable degree. It has fluctuated between the Forward School, which would occupy the frontier up to the confines of Afghanistan, and the school of Masterly Inactivity, which would leave the tribesmen entirely to their own resources, punishing them only when they raided British territory. Behind both the policies lay the menace of a Russian invasion, and that coloured our frontier policy until the Anglo-Russian Agreement. This induced what was called Hit and Retire tactics. In the half century which ended in 1897 there were nearly a score of punitive expeditions, each one of which left behind a legacy of distrust, and which brought no permanent improvement in its train. The fruit of the suspicion thus engendered was seen in 1897. Then the whole Frontier, from the Malakand to the Gomal, was ablaze. The extent of this rising and the magnitude of the military measures which were taken to meet it compelled a consideration of the whole position. The broad outlines of the new policy were laid down in a despatch from the Secretary of State for India, which prescribed for the Government the "limitation of your interference with the tribes, so as to avoid the extension of administrative control over tribal territory." It fell to Lord Curzon to give effect to this policy. The main foundations of his action were to exercise over the tribes the political influence requisite to secure our Imperial interests, to pay them subsidies for the performance of specific duties, but to respect their tribal independence and leave them, as far as possible, free to govern themselves according to their own traditions and to follow their own inherited habits of life without let or hindrance.

New Province.

As a first step Lord Curzon took the control of the tribes under the direct supervision of the Government of India. Up to this point they had been in charge of the Government of the Punjab, a province whose head is busied with many other concerns. Lord Curzon created in 1901 the North-West Frontier Province, and placed it in charge of a Chief Commissioner, with an intimate frontier experience, directly subordinate to the Government of India. This was a revival of a scheme prepared by Lord Lytton in 1877, and often considered afterwards, but which had slipped for lack of driving power. Next, Lord Curzon withdrew the regular troops so far as possible from the advanced posts, and placed these fortalices in charge of tribal levies, officered by a handful of British officers. The most successful of these was the Khyber Rifles, which steadfastly kept the peace of that historic Pass until 1919. At the same time the regular troops were cantoned in places whence they could quickly move to any danger point, and these bases were connected with the Indian railway system. In pursuance of this policy

frontier railways were run out to Dargal, and a narrow-gauge line, since converted to the broad-gauge, was constructed from Kushalgarh to Kohat, at the entrance of the Kohat Pass, and to Thal in the midst of the Kurram Valley. These railways were completed by lines to Tank and Bannu. By this means the striking power of the regular forces was greatly increased. Nor was the policy of economic development neglected. The railways gave a powerful stimulus to trade and the Lower Swat Canal converted fractious tribesmen into successful agriculturists. This policy of economic development is receiving a great development through the completion of the Upper Swat Canal (q. v. Irrigation). Now it is completed there are other works awaiting attention. For many years this policy was completely justified by results.

A New Policy.

It saved us from serious complications for nearly twenty years, although the position could never be said to be entirely satisfactory, particularly in Waziristan, peopled by the most reckless raiders on the whole border line, with a bolt hole into Afghanistan when pressed from the British side. It endured through the Great War and did not break down until the Amir of Afghanistan sought refuge from his internal troubles in a jihad against India. In this insane enterprise the Afghans placed less reliance in their regular troops which have never offered more than a contemptible resistance to the British forces than in the armed tribesmen. In this they were justified, for the Indian Military authorities failed to give timely support to the advanced militia posts, some of these posts were ordered to withdraw, the militia collapsed and the most serious fighting was with the tribesmen. The Southern Waziristan Militia inevitably broke and there was serious trouble throughout the Zhob district. The Afridis, our most serious enemies in 1897, and the most powerful of the tribes on the North-West Frontier, remained fairly quiet throughout the actual hostilities with Afghanistan, but later it was necessary to take measures against a leading malcontent and destroy his fort at Chora. The Mahsuds and the Wazirs broke into open hostilities. Their country lies within the belt bounded by the Durand Line and the Afghan frontier on the west, and by the districts of Bannu and Dera Ismail Khan on the east. Amongst them the Afghan emissaries were particularly active and as they could put in the field some 30,000 warriors, 75 per cent armed with modern weapons of precision they constituted formidable adversaries. They refused to make peace even when the Afghans caved in. They rejected our terms and active measures were taken against them. The fighting was the most severe in the history of the Frontier. The Mahsuds fought with great tenacity. Their shooting was amazingly good; their tactics were admirable, for amongst their ranks were many men trained either in the militia or in the Indian Army; and more than once they came within measurable distance of considerable success. They were aided by the fact that the best trained troops in the Indian Army were still overseas and younger soldiers were opposed to them. But their very tenacity and bravery were their own

doing; their losses were the heaviest in the long history of the Borderland and when the Mahsuds made their complete submission in September 1921 they were more severely chastened than at any time during their career.

A New Chapter.—As the result of the Afghan War of 1919, Indian frontier policy was again thrown into the melting pot. There was much vague discussion of the position in the course of the months which followed the Afghan War and the troubles in Waziristan which succeeded it, but this discussion did not really come to a head until February-March 1922. The Budget then presented to the country revealed a serious financial position. It showed that despite serious increases in taxation, the country had suffered a series of deficits which had been financed out of borrowings. Further heavy taxation was proposed in this Budget, but even then the equilibrium which, the financial authorities regarded as of paramount importance was not attained. When the accounts were examined, it was seen that the heaviest charges on the exchequer were those under Military Expenses, and that there was an indefinitely large and seemingly unending expenditure on Waziristan. This forced the Military, and allied with it the Frontier, expenditure to the front. In actual practice the discussion was really focussed on Waziristan. In essentials it was the aged controversy—shall we deal with this part of the Frontier on what is known as the Sandeman system, namely, by occupying commanding posts within the country itself, dominating the tribesmen but interfering little in their own affairs; or shall we revert to what was known as the close border system, as modified by Lord Curzon, of withdrawing our regular troops to strategic positions outside the tribal area, leaving the tribesmen, organised into militia, to keep the passes open, and punishing the tribesmen by expeditions when their raiding propensities become unbearable.

The Curzon Policy.—The Curzon policy, adopted in 1899, to clear up the aftermath of the serious and unsatisfactory Frontier rising in 1897, was a compromise between the "occupation" and the "close border" policies. It was based on the withdrawal of the regular troops so far as possible to cantonments in rear whilst the frontier posts, such as those in the Tochi at Wana and in the Khyber and Kurram were held by militia, recruited from amongst the tribesmen themselves. The cantonments for regular troops were linked so far as possible with the Indian railway system, so as to permit of rapid reinforcement. But it must be remembered that like all Frontier students, Lord Curzon did not regard this as the final policy. He wrote in the Memorandum formulating his ideas "It is of course inevitable that in the passage

of time the whole Waziri country up to the Durand line will come more and more under our control. No policy in the world can resist or greatly retard that consummation. My desire is to bring it about by gradual degrees and above all without the constant aid and presence of British troops." The Curzon policy, though it was not pursued with the steadfastness he would have followed if he had remained in control, gave us moderate—or rather it should be said bearable—frontier conditions until the Afghan War. It then broke down, because the tribal militia, on which it was based, could not, when left without the support of regular troops in the day of need, withstand the wave of fanaticism and other conditions set up by the Afghan invasion of 1919. The Khyber militia faded away; the Wazir militia either mutinied, as at Wana, or deserted. The pillar of the Curzon system fell.

The Policy.—The policy first adumbrated to meet these changed conditions was outlined by Lord Chelmsford, the then Viceroy, in a speech which he addressed to the Indian Legislature. He said it had been decided to retain commanding posts in Waziristan; to open up the country by roads; to extend the main Indian railway system from its then terminus, Jamrud, through the Khyber to the frontier of Afghanistan and to take over the duties of the militia by regular troops. That immediate policy was soon modified so far as the policing of these frontier lines by regular troops was concerned. Such duties are unpopular in the regular army, which is not organised and equipped for work of this character. Irregulars have always existed on the frontier, and as they had disappeared with the militia, it was necessary to recreate them. The new form of irregular was what have been called Khassadars and Scouts. The Khassadar is an irregular in the extreme. He has no British officers and no uniform, except a distinguishing kind of *pagri*. In contradistinction to the old militia, he finds his own rifle. As one informed observer remarked, the beauty of the system is that so long as the Khassadars, under their own headmen, secure the immunity of the caravans and perform their other police duties, they draw their pay and no questions are asked. If they desert in the day of trouble, they lose their pay but the Government loses no rifles, nor does it risk mutiny or the loss of British and Indian officers. But the application of this policy produced an acute controversy. It was one thing to say that commanding posts in Waziristan should be retained, it was another to decide what these posts should be. We must therefore consider the special problem of Waziristan. The Scouts are a mobile, mounted, irregular force not territorially recruited, officered by British officers.

V.—WAZIRISTAN.

Now comes the real frontier question of the day, the future of Waziristan.

Geographically Waziristan is a rough parallelogram averaging 60 miles from East to West and 160 from North to South. The western half consists of the Suleiman Range gradually rising up to the ridge from five to ten thousand feet high, which forms the water-shed between the Indus and the Helmund Rivers and corresponds with the Durand Line separating India

from Afghanistan. This is the western boundary. On the east is the Indus. North is the watershed of the Kurram River running East and West about 30 miles north of Bannu separating Waziristan from the Kohat District. South is a zigzag political boundary from the Durand Line running between Wana and Fort Sandeman in Baluchistan with a turn southwards to the Indus.

The western half is a rugged and inhospitable

medley of ridges and ravines straggled and confused in hopeless disarray. The more inhabited portions lie well up the slope at heights of four to six thousand feet. Here are our outposts of Wana and Razmak some 15 and 20 miles respectively from the Durand Line, in the centre of the grazing district, the latter within five miles of important villages of Kaniguram and Makin.

The submontane tracts from the hills to the Indus vary from the highly cultivated and irrigated land round Bannu to the sand desert in the Marwat above Pezu.

Where irrigation or river water is obtainable cultivation is attempted under conditions which even hardly be encouraging. Other tracts like that between Pezu and Tank, usually pastoral, can only hope for an occasional crop after a lucky rainfall.

Inhabitants—The inhabitants, unable to support existence on their meagre soil, make up the margin by armed robbery of their richer and more peaceful neighbours. The name originates according to tradition from one Wazir, two of whose grandsons were the actual founders of the race. Of the four main tribes Darweshkhel, Mahsuds, Dawars and Batanni, only the first two are true Wazirs. Their villages are separate though dotted about more or less indiscriminately, and inter-marriage is the exception—in fact all traditionally are in open strife, a circumstance which, until some bright political comet like the Afghan War of 1919 joined them together, as materially aided our dealings with them.

Unlike other parts of India, however, these wild people acknowledge little allegiance to maliks or headmen. No one except perhaps the Mulla Powindah till his death in 1913 could speak of any portion of them as his following.

Policy.—The policy of the British was at first one of non-interference with the tribes. Even now only part of the country is administered. Gradually it was found that more and more supervision became necessary to control raiding and this was attempted by expeditions to portions of the country with Regulars, followed by building posts and brick towers to be held by Militia. These posts were at first placed at the points where raiders usually debouched. The Political Officers, at first supported by Regulars, built up from 1904 onwards a force of some 3,000 Militia with British Officers at their disposal, who were backed up by the garrisons at Bannu and Dera Ismail Khan. In addition certain allowances were made to the tribes for good behaviour, prevention of raids and surrender of offenders when required; also for tribal escorts as necessary. Gradually, as occasion required, posts were occupied. Wana was occupied in 1895 at the request of the Wana Wazirs. Similarly the Tochi in 1898. In the comprehensive expedition of 1895-96 when this policy was put into effect, the British arms were shown in every remote valley in the vain hope of taming the Mahsuds. It was hoped the various posts would prove a pacifying influence and a rallying ground for Government supporters. From 1904 to 1919 they were held by Militia. Roads and communications were improved and tribal allowances augmented by sales of produce to the troops on a liberal scale.

A Compromise—A full statement of the policy finally adopted by Government in view

of the situation left upon their hands after the Mahsud rebellion was made by the Foreign Secretary, Sir (then Mr.) Denys Bray, in the course of a Budget discussion in the Legislative Assembly on 5th March 1923. He outlined neither a Forward policy nor a Close Border policy. Both these terms had, in fact, ceased to be appropriate. Circumstances had so changed that neither the one plan nor the other remained within the bounds of reasonable argument.

The Foreign Secretary explained that the ingredients of the Frontier problem at the present day were essentially three, namely, the Frontier districts, the neighbouring friendly State of Afghanistan, and the so-called Independent Territory, this last being the belt of unsettled mountain country which lies between the borders of British India and India. He proceeded specially to show that this belt was, in fact, within India "... It is boundary pillars that mark off Waziristan from Afghanistan, it is boundary pillars that include Waziristan in India. We are apt to call Waziristan independent territory; and it is only from the point of view of our British districts that the tribes are trans-frontier tribes. From the point of view of India, from the international point of view that is, they are cis-frontier tribesmen of India. If Waziristan and her tribes are India's scourge, they are also India's responsibility—and India's alone. That is an international fact that we must never forget."

Sir Denys next referred to the triumph of the Sandeman policy in Baluchistan. He pointed out that some people long ago believed that the same policy would prove effective in Waziristan. "But what was a practical proposition 20 or 30 years ago is not necessarily so now. The task is infinitely more difficult to-day, chiefly because the tribesmen are infinitely better armed, their arms having increased at least tenfold during the last 20 years." Dealing with the Close Border prescription he showed that if one erected a Chinese wall of barbed-wire fence along the plain some distance below the hills, "all the time the problem in front of us would be going from bad to worse, with the inevitable increase of arms in the trans-border and with that inevitable increase in the economic stringency in this mountainous tract, which would make the tribesmen more and more desperate, more and more thrown back on barbarism... A rigid Close Border policy is really a policy of negation, and nothing more... We might gain for our districts a momentary respite from raids but we would be leaving behind a legacy of infinitely worse trouble for their descendants."

The settled policy of Government in Waziristan, Sir Denys showed, was the control of that country through a road system, of which about 140 miles would lie in Waziristan itself and one hundred miles along the border of Derajat, and the maintenance of some 4,000 Khassadars and of some 5,000 irregulars, while at Razmak, 6,500 feet high and overlooking northern Waziristan, there would be an advanced base occupied by a strong garrison of regular troops. Razmak he showed to be further from the Durand Line than the old-established posts in the Tochi. In the geographical sense, therefore, the policy was, in one sense at least, a backward policy. None the less, it was a forward policy in a very real sense, for it was

a policy of constructive progress and was a big step forward on the long and laborious road towards the pacification, through civilization, of the most backward and inaccessible, and therefore the most truculent and aggressive tribes on the border. "Come what may, civilization must be made to penetrate these inaccessible mountains or we must admit that there is no solution to the Waziristan problem, and we must fold our hands while it grows inevitably worse."

The policy thus initiated for a period proceeded with results according to the highest reasonable expectations and exceeding the most sanguine hopes of most people concerned in its formulation.

The roads were policed by the Khassadars, who in the main, until the Tori Khel rebellion of 1936-37 upset some of them, proved faithful to their trust. The open hostility of the Wazir tribesmen to the presence of troops and other agents of the Government in their midst, which at the outset they showed by shooting up individuals and small bodies of troops at every opportunity, faded away, and the people showed an understanding of the rule of law, and, under the control exercised, a readiness to conform to it. In various small but significant ways, methods of civilization caught the imagination of the people and won their approval. Thus, the safety of the roads was encouraged, and became buttressed by a considerable development of motor-bus traffic. The roads, as the King's Highway, are officially held to be sacrosanct, that is no shooting up or other pursuit of personal or tribal feuds is permitted upon them. This permits villagers to proceed to and from the plains towns in safety. Under the influence of their women, the tribesmen applied that the ban against shooting upon the highway would be extended to all the country for three miles on either side of the highway. Tentative efforts to introduce primary education proved possible and achieved as much success as could be expected. The hospitals and dispensaries maintained for irregular troops, called Scouts, employed about the country, attend to the wants of the tribespeople who come to them. So much has this arrangement been appreciated that the Mahsuds formally applied for the establishment of a hospital of their own. With grim humour, they offered to provide such an institution with the necessary surgical instruments, stating that they had saved this from the time when the British formerly left the country. In other words, they offered what they had captured or looted during the 1919 emeute. Wana was occupied, following an encouraging petition from the local Wazirs, in 1929. A motor road had already been run out from Jandola through Chagmalai and the Shahur Tangi to Sarwckai. A brigade of troops, hitherto stationed at Manzai, whereabouts the Takli Zam, after flowing down its deep valley from central Waziristan, debouches on to the Derajat, was accordingly ordered up to Wana in the autumn of 1929. It proceeded throughout the journey thither without opposition and was warmly welcomed by the tribes people at Wana, where it established itself in a favourably sited camp not far from the fort which was the earlier centre of British occupation. There it remains

The area cultivated by the villagers of Wana plain doubled by the end of 1931 and the people declared their readiness to surrender their firearms if their neighbours also gave up theirs or were deprived of them. A road has been built connecting Fort Sandeman via Gulkach, on the Gomal river, with Tanai, on the Sarwckai-Wana road. A motor road has also been constructed from Razmak through Kanigram, in the heart of the Mahsud country, to Wana. It was completed in 1933 and the only dispute connected with its construction arose from the rivalry of the tribesmen whose villages lie along the route and who sometimes fought one another to secure road-making contracts.

A startling new development upon the North West Frontier during 1930 was the spread thereto of agitation carried on by the Indian National Congress in the interior of India in pursuit of its efforts to bring political pressure to bear upon the Government of India, and above them, His Majesty's Government. The Congress at its annual session at Lahore in the week following Christmas, 1929, adopted a programme aiming at the separation of India from the British Empire and at the promotion of revolution in India to secure this end. In particular, it avowedly set out "to make Government impossible." Revolutionaries, Government, and especially a campaign to promote disobedience of the civil law in order to bring the administration to a standstill, commenced all over India immediately after the Congress meetings. The settled districts of the N.W.F.P. were the scene of this, in common with the rest of the land. The agitation was there carried on by Congress agents organized in what are known as Khilafat Committees. For their purpose they made special use of misrepresentations of the Sarda Act, recently passed by the Indian Legislature by the official and Hindu votes against the opposition of the Muslim non-official members. This measure makes illegal and provides penalties for the marriage of boys and girls below stated minimum ages. The age at which marriage may take place is also in general terms laid down for Mohammedans by their religious law. Hence, the Muslims in British India, who acknowledge that the Sarda Act would not in practice affect them, because its provisions in no way over-rule their religious law, nevertheless saw in the measure an act affecting the domain of their religious law, and passed in spite of their dissent, in a Legislature in which Muslims are, by themselves, a hopeless minority. They regarded its enactment as a grave illustration of their fears that under any scheme of democratic self-government in India, Muslim interests would not be safe against disregard by the Hindu majority.

Outbreak at Peshawar in 1930— This Muslim apprehension, after the passing of the Act, strongly influenced the attitude of the community towards all questions of political reform, and the lever which represented of the Act provided for stirring up anti-Government agitation in the wholly and fanatical Muslim province in the north can easily be understood. Grossly untrue propaganda was carried on; it was, for instance, alleged that under the Act all girls must be medically examined before marriage. An

elaboration of this untruth was that the Government were recruiting a large body of Hindu inspectors to make the examinations. And the agitation was deliberately pushed outwards from the settled districts of the N. W. F. P. into the tribal areas. Waziristan was amongst the first of them to be inundated with the propaganda. This was in March-April 1929. The poison spread outwards from Peshawar into Tirah about the same time. The agitation was sedulously carried on in the district northward of Peshawar city and from thence was pushed into Mohmand country. The first point of violent combustion was Peshawar city, where the mob murderously broke out on 23rd April 1930. Within a short time, Afridi bands descended the ravines and nullahs from Tirah to join in the fray. The Mohmands became greatly excited and sent down bands to sit near the border and watch for an opportunity to join in. The Upper Tochi Wazirs simultaneously took to arms and shortly afterwards the Mahsud Wazirs, about Ladha, did the same. At this stage, the development of the Air arm in India proved of incalculable value. Aeroplanes patrolled the whole country and were frequently employed by the political authorities to take preventive and punitive action by bombing. The road system, meanwhile, enabled troops to be moved at will to positions of advantage for dealing with whatever serious tribal aggression appeared likely.

In the result, the Mohmands, after being bombed several times, found discretion the better part of valour and made no descent in force. The Afridis twice endeavoured to raid Peshawar in force but by combined air and land action were both times driven back to their hills with no achievement to report. The Orakzais of southern Tirah threatened to descend by the Ublan Pass upon Kohat and their western clans attacked a post in the Upper Kurram and endeavoured to attack Parachinar. Helped by the machinations of Congress agents, they succeeded in drawing two or three clans of Afghan tribesmen across the border into the fray. Combined air and ground action crushed these efforts. The Tochi Wazirs heavily attacked Datta Khel, but were speedily brought to order by force. The Mahsuds were similarly repulsed and punished when they assailed Sorarogha, in the valley of the Takli Zam.

All outbreaks of revolt were suppressed in the same manner and the establishment of new fortified posts on the Peshawar plain, immediately opposite the main valleys leading out of Tirah, and the construction of roads for their service, now indicate the application of the new frontier policy in that region. The Afridis long refused to assent to these, but being thereby deprived of access to their normal winter grazing grounds on the Khajuri and Ala Khul plain, and prevented from visiting Peshawar, their marketing centre, they came in and accepted peace under the new conditions before the opening of the winter of 1931-32. The Afridis later asked for roads into Tirah but are not yet sufficiently agreed among themselves about the point for construction successfully to proceed.

Mohmand Outbreak in 1933—Disturbances in the Mohmand country during the summer of 1933 both illustrated the opera-

tion of the modern Frontier policy and the need to keep it alive. Policy if it is to be of any use at all. The Mohmands may for the purposes of present description be divided into two categories namely, the Upper Mohmands, who live in the highlands of the Mohmand country, and the Lower Mohmands, whose country stretches from the lower altitudes of the same hills down to the Peshawar Plain. Through the country of the Upper Mohmands passes the Durand line but the Afghan Government have never agreed to its delimitation in part of this region and consequently its place has long been taken over a considerable portion of the length of the Frontier by what is described as the Presumptive Frontier. The exact position of this latter has never been settled between the two governments and it is consequently sometimes difficult to say whether people from particular villages belong to one side or to the other of it.

In 1932, during the revolutionary Red Shirt campaign, in connection with the Indian National Congress, in the Peshawar Plain, the Upper Mohmands decided to join in the disturbances and raids in the administered territory immediately northward of Peshawar. The Lower Mohmands are described as the Assured Tribes. The meaning of the description is that the British Indian authorities assure them protection against the attacks of the Upper Mohmands and they, on the other hand, are bound by promises of good behaviour. The Assured Tribes in 1932 interfered with the programme of the Upper Mohmands for raiding the plain and the Upper Mohmands in 1933, when spring and early summer once more facilitated their methods of campaigning, commenced retributory raids upon the Halimzai and other Assured clans. The attacked clans appealed to the political authorities for help and that help they were obliged to give.

About the same time as this trouble was germinating, there appeared in Bajaur, a country immediately to the north of that in which the events just described developed, a Pretender to the Afghan throne. He was accompanied by two companions and started a campaign in Bajaur for a revolution or such other trouble as might be possible in Afghanistan. This compelled the British Indian authorities to take measures in fulfilment of their obligations of good neighbourliness to Afghanistan.

Road construction from the Peshawar-Shabkadr road northwards through Ghalanal into the Halimzai country and towards the passes which lead from that country into the upper extremities of the Bajaur Valley was undertaken and two brigades of troops, with other details, were sent forward up it to assist in dealing with the Upper Mohmands. At the same time, aeroplanes bombarded the village of Kotkal in Upper Bajaur, which had given shelter to the Pretender, further aerial demonstrations were made and the Bajauris were given an ultimatum demanding the surrender of the Pretender by a given date.

The Upper Mohmands continuing aggressive and the Bajauris obdurate, there was good prospect of a campaign over the same country as that covered by the campaign of 1897. It seemed likely that the Ghalanal Road would be continued into the upper extremity of Bajaur and that another road for troops would also have to be constructed from Mial and up the

Bajaur valley itself so that by the meeting of the two roads in Upper Bajaur, there would become established a circular road through this part of the tribal territory, resembling that running through North Waziristan.

In the end, the Upper Mohmands, partly doubtless because of punishment which they received in certain encounters with our troops and partly probably because of influence brought to bear upon them from Kabul, retired to their hills and after negotiations entered into bonds to keep the peace; and the Bajauris, while maintaining on grounds of tribal custom their refusal to surrender the Pretender, nevertheless expelled that person from their territory, probably into Afghanistan. Here, then, the trouble ceased. The net result of it was the construction of the road through Ghalana and the rapid development of bus services and other activities of civilization which speedily took place along it.

The Upper Mohmands made another descent in the summer of 1935. The Lower Mohmands quarrelled among themselves over the distribution of road maintenance contracts and the Upper Mohmands decided to fish in the troubled waters. Successful military operations ended in the Upper Mohmands suing for peace—and in the Ghalana road being carried forward over the Nahakki Pass and down beyond it on to the plain which extends to the natural road junction where the Upper Bajaur Valley meets the Upper Mohmand country.

Tori Khel Rebellion—The Wazirs and Mahsuds in 1930 showed signs of rebelling against Government in parallel with the Afridis. Congress party agents endeavoured to persuade them to do so. They were at the outset firmly dealt with and peace was thus assured almost without its having been broken. All went peacefully until the autumn of 1936 and then trouble was produced in North Waziristan by the faqir of Ipi, a man who was formerly in subordinate Government service in the Settled Districts and afterwards settled at the place from which he took his best known name. A Muslim lad was accused in 1936 of kidnapping a Hindu girl of Bannu. Apparently, she eloped with him. She was restored to her parents by order of the Civil Court, on the ground that she was a minor. There was a good deal of communal excitement about the matter and the faqir started an agitation about it in the Tribal country, alleging that the return of the girl to her Hindu parents was an interference with Islam. There was also, in 1936, a dispute between Muslims and Sikhs in Lahore over the possession of an old building said to have been a mosque. This was settled in the Lahore High Court in favour of the Sikhs and the Punjab Muslims accepted the decision. The faqir of Ipi lumped together the Bannu Girl Case and the Lahore (Shahidganj) Mosque Case and upon them raised among the Waziristan Tribes the slogan, "Islam in Danger." His demand for a holy war was only taken up by a sub-section of the Tori Khel section of the Wazirs of Northern Waziristan. Their elders begged Government to order a flag march of troops through their country so as to increase the credit of the loyalist element. This Government did. The troops were heavily fired upon and had to fight their way out. Efforts to round off the matter before it developed into a major affair

failed and there followed a war in which the Tori Khel were the only tribal section avowedly at war with Government but all the other tribesmen of the country were hardly more than nominally friendly, some joined in gangs fighting the authorities and others connived at such acts. Not until the fall of winter towards the end of 1937 were the Tori Khel and the bands of irreconcilables under during leaders whom the faqir inspired by his agitation, beaten by extensive military operations into asking for peace. The faqir has not been caught and continues a troublesome influence. The summer campaign in 1937 involved the employment of 50,000 troops. Before they were withdrawn in the following winter 106 miles of new roads opening up some of the hitherto inaccessible country in and about the upper reaches of the Shaktu river were made. The faqir of Ipi, however, assisted by several notorious outlaws continued to keep Waziristan, particularly the North in a disturbed condition throughout 1938 and on into 1939. It was therefore, found necessary to keep an extra brigade in the territory and spasmodic operations against recalcitrant gangs proceeded by land and air and have not yet succeeded in restoring normal conditions. In the summer of 1938 a temporary complication was provided by the appearance amongst the Mahsuds of a Syrian called the Shami Pir who was only just prevented from leading a tribal incursion to support a rebellion against the Government of Kabul. The persistence and expense of the trouble in Waziristan, constituting as it does a heart-breaking set-back to the "policy" which had seemed for fifteen years to be achieving material results, has provoked renewed discussion of Frontier policy especially in regard to military commitments which were examined by a Defence Committee under the chairmanship of Lord Chatfield who visited India on behalf of His Majesty's Government towards the end of 1938. Although hostile sections still persisted with mischief there was thought by April 1939 to be sufficient justification for the hope that the period of major military operation was over and Waziristan was in consequence returned to the charge of His Excellency the Governor of the N.W.F.P., in his capacity as A.G. for the tribal areas. Sporadic disturbances have continued into the period of the second world war and the Fakir remains a disturbing influence.

Waziristan Outrages 1939—During 1939 Waziristan was in a state of continual unrest. The list of offences committed by the Ahmedzai tribesmen by the end of the year mounted to over fifty cases of major outrage. They included blasting of bridges and destruction of communications, holding up and looting lorries, sniping, kidnapping and several cases of murder. The situation became intolerable and necessitated military operations. Two columns of troops were sent to the Ahmedzai salient and it took three months to subdue the hostile elements and clear it of offenders and outlaws.

A detailed investigation into the economic conditions in the tribal areas, as a preliminary step to the adoption of measures aimed at radical improvement of the tribesmen, was thereupon believed to be opportune and would probably have been attempted but for the pre-occupations of the war.

VI—AFGHANISTAN.

The relations of Afghanistan with the Indian Empire were for long dominated by one main consideration—the relation of Afghanistan to a Russian invasion of India. All other considerations were of secondary importance. For nearly three-quarters of a century the attitude of Great Britain toward successive Amirs has been dictated by this one factor. It was in order to prevent Afghanistan from coming under the influence of Russia that the first Afghan War of 1838 was fought—the most melancholy episode in Indian frontier history. It was because a Russian envoy was received at Kabul whilst the British representative was turned back at Ali Masjid that the Afghan War of 1878 was waged. After that the whole end of British policy toward Afghanistan was to build up a strong independent State, friendly to Britain, which would act as a buffer against Russia, and so to order our frontier policy that we should be in a position to move large forces up, if necessary, to support the Afghans in resisting aggression.

Gates to India.

A knowledge of the trans-frontier geography of India brought home to her administrators the conviction that there were only two main gates to India—through Afghanistan, the historic route to India, along which successive invasions have poured, and by way of Seistan. It was the purpose of British policy to close them, and of Russia to endeavour to keep them at any rate half open. To this end, having pushed her trans-Persian railway to Samarkand, Russia thrust a military line from Merv to the Kushkinsky Post, where railway material is collected for its immediate prolongation to Herat. Later, she connected the trans-Siberian railway with the trans-Caucasian system, by the Orenburg-Tashkent line, thus bringing Central Asia into direct touch with her European magazines. Nor has Great Britain been idle. A great military station has been created at Quetta. This is connected with the Indian railway system by lines of railway which climb to the Quetta Plateau by the Bolan Pass and through the Chapper Rift, lines which rank amongst the most picturesque and daring in the world. From Quetta the line has been carried by the Khofak tunnel through the Khwaja Amran Range, until it leads out to the Afghan Border at New Chaman, where it opens on the route to Kandahar. In view of the same menace the whole of Baluchistan has been brought under British control. Quetta is now one of the great strategical positions of the world, and nothing has been left undone which modern military science can achieve to add to its natural strength. In the opinion of many military authorities it firmly closes the western gate to India, either by way of Kandahar, or by the direct route through Seistan.

Further east, the Indian railway system was carried to Jamrud and by the autumn of 1925

up the Khyber Pass to Landi Kotal and down the other side of the Pass to Landi Khana on the Afghan Frontier. A first-class military road sometimes double sometimes treble also threads the Pass to our advanced post at Landi Kotal, and then descends until it meets the Afghan Frontier at Landi Khana. In this wise the two Powers prepared for the great conflict which was to be fought on the Kandahar-Ghazni-Kabul line.

Relations with India.

Between the advanced posts on either side stands the Kingdom of Afghanistan. The end of British policy has been to make it strong and friendly. In the first particular it has early and largely succeeded. The second aim may now also be said to have been attained. When the late Abdurrahman was invited to ascend the throne, as the only means of escape from the tangle of 1870, none realised his great qualities. Previously the Amir of Afghanistan had been the chief of a confederacy of clans. Abdurrahman made himself master in his own kingdom. By means into which it is not well closely to enter, he beat down opposition until none dared lift a hand against him. Aided by a British subsidy of twelve lakhs of rupees a year, increased to eighteen by the Durand Agreement of 1893, and subsequently to over 20 lakhs, he established a strong standing army and set up arsenals under foreign supervision to furnish it with arms and ammunition. Step by step his position was regularised. The Anglo-Russian Boundary Commission, which nearly precipitated war over the Penjdeh episode in 1885, determined the northern boundaries. The Pamirs Agreement delimited the borders amid those snowy heights. The Durand Agreement settled the border on the British side, except for a small section to the west of the Khyber, which remained a fruitful source of trouble between Afghanistan and ourselves until 1919, when the Afghan claims and action upon the undemarcated section led to war. That section was finally surveyed and the frontier determined shortly after the conclusion of peace with Afghanistan. Finally the McMahon award closed the old feud with Persia over the distribution of the waters of the Helmand in Seistan. This frontier has since been reinforced by a Turkish boundary commission appointed by Iran and Afghanistan conjointly. It was estimated by competent authorities that about the time of Abdurrahman's death, Afghanistan was in a position to place in the field in the event of war, one hundred thousand well-armed regular and irregular troops, together with two hundred thousand tribesmen, and to leave fifty thousand regulars and irregulars and a hundred thousand levies to maintain order in Kabul and the provinces. But if Afghanistan were made strong, it was not made friendly. Abdurrahman, when distrusted British policy up to the day of his

death. All that can be said is that he distrusted it less than he distrusted Russia, and if the occasion had arisen for him to make a choice, he would have opposed a Russian advance with all the force at his disposal. He closed his country absolutely against all foreigners, except those who were necessary for the supervision of his arsenals and factories. He refused to accept a British Resident, on the ground that he could not protect him, and British affairs were entrusted to an Indian agent, who was in a most equivocal position. At the same time he repeatedly pressed for the right to pass by the Government of India and to establish his own representative at the Court of St. James.

Afghanistan and the War.—These relations were markedly improved during the reign of His Majesty the Amir Habibullah Khan. It used to be one of the trite sayings of the Frontier that the system which Abdurrahman Khan had built up would perish with him, for none was capable of maintaining it. Habibullah Khan more than maintained it. He visited India soon after his accession and acquired a vivid knowledge of the power and resources of the Empire. He strengthened and consolidated his authority in Afghanistan itself. At the outset of the war he made a declaration of his complete neutrality. It is believed—a considerable reticence is preserved over our relations with Afghanistan—that he warned the Government of India that he might be forced into many equivocal acts, but that they must trust him, certainly his reception of Turkish, Austrian and German "missions" at Kabul, at a time when British representatives were severely excluded, was open to grave misconstruction. But a fuller knowledge induced the belief that the Amir was in a position of no little difficulty. He had to compromise with the fanatical and anti-British elements amongst his own people, inflamed by the Turkish preaching of a jihad, or holy Islamic war. But he committed no act of hostility; as soon as it was safe to do so he turned the members of these missions out of the kingdom. At the end of the war his policy was completely justified; he had kept Afghanistan out of the war, he had adhered to the winning side; his authority in the kingdom and in Central Asia was at its zenith.

Murder of the Amir.—It is believed that if he had lived Habibullah Khan would have used this authority for a progressive policy in Afghanistan, by opening up communications and extending his engagements with India. He was courted by the representatives of Persia and the Central Asian States as the possible rallying centre of a Central Asian Islamic confederation. At this moment he was assassinated on the 20th February 1919. The circumstances surrounding his murder have never been fully explained; but there is strong ground for the belief that it was promoted by the reactionaries who had harassed him all his reign. These realised that with his vindication by the war their time of reckoning had come; they anticipated it by suborning one of his aides to murder him in his sleep. His brother, Nasrullah Khan, the nominee of the fanatical element, was proclaimed Amir at Jelalabad in his stead, but public opinion in Afghanistan

revolted at the idea of the brother seizing power over the corpse of the murdered man. His sons, Hayat and Amanullah, were not disposed to waive their heritage. Amanullah was at Kabul, controlling the treasury and the arsenal and supported by the Army. Nasrullah found it impossible to make head against him and withdrew. The new Amir, Amanullah, at once communicated his accession to the Government of India and proclaimed his desire to adhere to the traditional policy of friendship. But his difficulties at once commenced; he had to deal with the war party in Afghanistan; he was confronted with the dissatisfaction arising from the manner in which the murderers of Habibullah had been dealt with; the fanatical element was exasperated by the imprisonment of Nasrullah; and the Army was so incensed that it had to be removed from Kabul and given occupation to divert its thoughts. A further element of complexity was introduced by the political situation in India. The agitation against the Rowlatt Act was at its height. The disturbances in the Punjab and Gujarat had taken place. Afghan agents in India, of whom the most prominent was Ghulam Hyder Khan the Afghan postmaster at Peshawar, flooded Afghanistan with exaggerated accounts of the Indian unrest. The result of all this was to convince the Amir that the real solution of his difficulties was to unite all the disturbing elements in a war with India. On the 25th April his troops were set in motion and simultaneously a stream of anti-British propaganda commenced to flow from Kabul and open intrigue was started with the Frontier tribes, on whom the Afghans placed their chief reliance.

Speedy Defeat.—The war caught the Army in India in the throes of demobilisation and with a large proportion of the seasoned troops on service abroad. Nevertheless the regular Afghan Army was rapidly dealt with. Strong British forces moved up the Khyber and seized Dakka, Jelalabad was repeatedly bombed from the air and also Kabul. Nothing but a shortage of mechanical transport prevented the British forces from seizing Jelalabad. In ten days the Afghans were severely defeated. On the 14th May they asked for an Armistice. With the usual Afghan spirit of haggling, they tried to water down the conditions of the armistice, but as they were met with an uncompromising emphasis of the situation they despatched representatives to a conference at Rawalpindi on the 26th July. On the 8th August a Treaty of Peace was signed which is set out in the Indian Year Book, 1923, pp. 196-197.

Post-War Relations.—It will be seen that under this Treaty the way was paved for a fresh engagement six months afterwards. During the hot weather of 1920 there were prolonged discussions at Mussoorie between Afghan Representatives and British officials under Sir Henry Dobbie. These were private, but it is believed that a complete agreement was reached. Certainly after an interchange of Notes which revealed no major point of difference it was agreed that a British Mission should proceed to Kabul to arrange a definite treaty of peace. This Mission crossed the Border in January 1921 and entered Kabul where a peace treaty was signed.

The main points of the Treaty are set out in the Indian Year Book, 1923, pp. 197, 198-199.

Afghanistan after the Great War.—Since the War the relations between Afghanistan and Great Britain have been good and improving. There were painful episodes in 1923 when a murder gang from the tribal territory in the British side of the Frontier committed raids in British India, murdering English people and kidnapping English women and then took refuge in Afghanistan. In course of time this gang was broken up. His Majesty the King of Afghanistan had troubles within his own borders which made him glad of British help. The main object of his government was to strengthen the resources of the country and to bring it into closer relation with modern methods of administration. But Afghanistan is an intensely conservative country and no changes are popular; especially violent was the opposition to a secular form of administration and education. The direct result was a formidable rebellion of Mangals and Zadrans in the Southern Provinces and serious reverses to the regular troops sent against the rebels. At one time the position was serious, but the rebels were not sufficiently united to develop their successes, and with the aid of aeroplanes and other assistance afforded by the Government of India the insurrection was broken. Whilst this assistance was appreciated, the whole business gave a serious set-back to the reforms initiated by His Majesty, he had to withdraw almost the whole of his administrative code and to revert to the Mahomedan Law which was previously in force.

Soviet Penetration.—Taking a long view, a much more notable development of the policies of Afghanistan, at the period to which the foregoing notes apply, was the penetration of the Russians. These astute propagandists had converted the former Trans-Caspian States of Tsarist Russia into Soviet Republics. The object of this policy was gradually to sweep into the Soviet system the outlying provinces of Persia, of China and of Afghanistan. In Persia this policy was foiled by the vigour of the Sipar Salah, Reza Khan, the ex-King. In Chinese Turkestan it was pursued with qualified success. In Afghanistan it also made certain progress. The first step of the Russians was to extend the Soviet Republics of Tajikistan, Uzbekia and Turkmanistan so as to absorb all Northern Afghanistan. This was later, apparently abandoned for the moment for a more gentle penetration. Large subsidies, mostly delivered in kind, were given to Afghanistan. Telegraph lines were erected all over the country; roads were constructed, large quantities of arms and ammunition were supplied, whilst an air force with Russian pilots and mechanics was created and was largely developed. In return the Bolsheviks received important trading facilities.

Russo-Afghan Treaty.—Outwardly the relations between the two States are friendly. In December 1926 the Afghan papers published the text of a new treaty concluded with Soviet Russia, which was signed on August 31st, but it provided that it should in no way interfere with the secret treaty signed in Moscow on

February 28th, 1921. The principal clauses of this treaty, as disclosed in the Afghan papers, are as follows —

Clause 1—In the event of war or hostile action between one of the contracting parties and a third power or powers, the other contracting party will observe neutrality in respect of the first contracting party.

Clause 2—Both the contracting parties agree to abstain from mutual aggression, the one against the other. Within their own dominions also they will do nothing which may cause political or military harm to the other party. The contracting parties particularly agree not to make alliances or political and military agreements with any one or more other powers against each other. Each will also abstain from joining any boycott or financial or economic blockade organised against the other party. Besides this in case the attitude of a third power or powers is hostile towards one of the contracting parties, the other contracting party will not help such hostile policy, and, further, will prohibit the execution of such policy and hostile actions and measures within its dominions.

Clause 3—The high contracting parties acknowledge one another's Government as rightful and independent. They agree to abstain from all sorts of armed or unarmed interference in one another's internal affairs. They will decidedly neither join nor help any one or more other powers which interfere in or against one of the contracting Governments. None of the contracting parties will permit in its dominions the formation or existence of societies and the activities of individuals whose object is to gather armed force with a view to injuring the other's independence, or otherwise such activities will be checked. Similarly, neither of the contracting parties will allow armed forces, arms, ammunition, or other war material, meant to be used against the other contracting party to pass through its dominions.

Clause 6—This treaty will take effect from the date of its ratification, which should take place within three months of its signature. It will be valid for three years. After this period it will remain in force for another year provided neither of the parties has given notice six months before the date of its expiry that it would cease after that time.

On March 23rd there was also signed in Berlin a treaty between Germany and Afghanistan which amounted to no more than the establishment of diplomatic relations.

A British Minister is established in Kabul as well as the representatives of other European States. The representatives of Afghanistan are established in India and in London, and at some of the European capitals. The various subsidiary agreements under the Treaty have been carried into effect.

The King's Tour—In the closing months of 1927 His Majesty King Amanulla, accompanied by the Queen and a staff of officials, commenced

a long tour to India and Europe. It is understood that this was one of the cherished ambitions of his father, King Habibullah, who was assassinated in 1919. King Amanullah, when he set out, was warmly welcomed in India and received a great popular greeting in Bombay both from his co-religionists and from members of other communities, who forgot the invasion of India in 1919. He then took ship to Europe. He was the guest of His Majesty King George V in London, and visited the principal European capitals. He made a State visit to Turkey, and returned to Afghanistan by way of Soviet Russia and Persia. A series of treaties with the governments of the countries visited was announced and the King returned to Kabul in the late summer of 1923, the tour having been unclouded by any untoward incident. Afghanistan was peaceful during his long absence.

Reforming Zeal.—King Amanullah returned to his realm full of reforming zeal. He was much impressed by the political and social institutions of the western lands he visited, and in particular by the dramatic forcefulness with which Muradpa Kemal Pasha had driven Turkey along the path of "reform," or perhaps it would be more correct to say westernisation. In this he was encouraged by the Queen, who was desirous of seeing the women of Afghanistan enjoy some of the freedom and opportunity won by and for the women of the West. Edict after edict was issued, changing the whole structure of Afghan society. New codes and taxes were imposed: it was proposed that women should emerge from their seclusion and doff the veil: the co-education of boys and girls was permitted; in September Government officials were forbidden to practise polygamy; in October European dress was ordered for the people of Kabul. At the same time, the pay of the regular troops fell into arrears.

With every appreciation of the spirit and direction of these changes, friends of His Majesty advised the King to moderate the pace. They reminded him that in 1924 far less drastic changes had brought serious trouble in that train. In May of that year the "Lame Mullah" raised the standard of rebellion amongst the Gilzai and Mangai clansmen of Kohistan. The Mullahs were openly active against the King and His Majesty was equally frank in his hostility to them. Possibly also well-wishers suggested that what was possible in Turkey after centuries of close contact with the West, and where the ground had been prepared by missionary effort and a long struggle for the emancipation of women, might be less easy in Afghanistan, where there had been no contact with the western world.

A change of Kings—Events moved rapidly in 1929. Anonymous north Afghan bad-mouthees, Bacha-i-Sagqao, raised the standard of revolt and inflicted severe losses on the Afghan Regular troops, discomfited as they were by arrears of pay. Day by day the Afghan representatives in various parts of the world issued messages asserting that the rebels had been destroyed, and a rapid series of pronouncements declared the withdrawal of all the reforms and the establishment of a Council of Provincial

Representatives. Communications with the outer world were broken. King Amanullah and his family fled from Kabul to Kandahar, and then from Kandahar via Quetta to Bombay where they took ship to Europe. King Amanullah on his arrival at Rome entered into possession of the Afghan Legation, where he remained. Bacha-i-Sagqao declared himself King of Afghanistan, and for a few months held his position in Kabul. Without money, administrative experience or a disciplined following his throne was a thorny one and he was harassed by constant attacks. The Royal Air Force in India meanwhile went to the rescue of the British Nationals beleaguered in and around Kabul and in a series of brilliant fights evacuated all without the slightest hitch. The most formidable of the new King's adversaries were led by General Nadir Khan, a scion of the old ruling house, with a wide knowledge of the world. Heavy fighting took place. Fortunes varied. Nadir Khan almost gave up his chances as finally lost. But a band of Wazirs from the British side of the border attracted by prospects of loot, joined Nadir and finally seized Kabul in his name and interest. Nadir Khan thus became victor and shortly afterwards, at the wish of the Afghans, Bacha-i-Sagqao was executed with other rebels, and when the year closed Nadir Khan was to all seeming in firm possession of the Kingdom. He despatched members of his family to the principal Afghan Legations in Europe. A Shinwari rising near the exit from the Khyber Pass took place in February 1930, and was repressed with unexpected success and vigour. There followed a serious rebellion in Kohistan, Bacha-i-Sagqao's country. This also was promptly quelled. And thereafter Nadir Shah ruled without challenge. He devoted himself to the reorganisation of his Army. England was strictly neutral during the successive stages of the revolution but promised support to Afghanistan to help her maintain internal peace when she had restored it and this promise was fulfilled by the provision of an interest free loan of £500,000 to King Nadir and by the supply of rifles and ammunition to him. He gave evidence of his friendliness towards Britain and India. He co-operated effectively to prevent tribes on his side of the Frontier joining those on the British side against the Government of India in response to the Congress agitation in the summer of 1930. The trade routes were re-opened and the new King again took up Amanullah's mantle of reform but in a statesmanlike manner which carried the Mullahs along with him.

Murder of Nadir Shah.—This ordered march of progress was tragically interrupted by the murder of His Majesty Nadir Shah on the afternoon of 8 November 1933. His Majesty was attending a football tournament prize-giving when a young man among the gathering stepped forward and fired several revolver shots into him at close range, killing him instantly. It later appeared that the assassin committed the crime in revenge for the execution of a prominent Afghan who had been caught deeply involved in treasonable activities after he had been mercifully treated for earlier behaviour of the

same kind. The assassin's father was stated to have been this man's servant. The murder was not followed by general or widespread disorder. The members of Nadir Shah's family and his prominent officers of State stood loyally by his heir, his son, Muhammed Zahir. The latter was duly placed on his father's throne and his accession was in due course acknowledged and confirmed throughout the kingdom in the traditional manner. The new King started his reign with a high reputation for courage and steadiness. He early issued assurances to his people that he would continue the policy of his father in affairs of State. No untoward events have occurred in the years that have since past and during them the new young King has by his sagacity and good government gradually strengthened his position on the throne and, by the development of communications and trade done much to encourage the establishment of settled conditions among his people. A mutual desire for close relations and particularly economic understanding led in 1938 to exploratory negotiations between India and

Afghanistan with a view to seeking some form of trade agreement.

The Chief Ministers of the Afghan State are Muhmad Hashim Khan (Prime Minister) and Shah Muhmad Khan, two surviving brothers of Nadir Shah, and the King's uncles. With their help the stability of the Afghan Kingdom has been successfully maintained. Their policy has remained not unfriendly to Britain and India, and they have adhered to the Saadabad Pact with Turkey, Iran and Iraq. All the great European Powers and Japan maintain Embassies or Legations in Kabul, and it must be recorded of the present Afghan Government that in tune with the ideas of their predecessors and in the interest of their continued independence as they see it, they have pursued a policy of balance in their relations with the Powers, but with careful adjustments.

VII.—TIBET.

Recent British policy in Tibet is really another phase in the long-drawn-out duel between Great Britain and Russia in Central Asia. The earliest efforts to establish communication with that country were not, of course, inspired by this apprehension. When in 1774 Warren Hastings despatched Bogle on a mission to the Tashi-Lama of Shigatse,—the spiritual equal if not superior, of the Dalai Lama of Lhasa—his desire was to establish facilities for trade, to open up friendly relations with a Power which was giving us trouble on the frontier, and gradually to pave the way to a good understanding between the two countries. After Warren Hastings' departure from India the subject slept, and the last Englishman to visit Lhasa, until the Younghusband Expedition of 1904, was the unofficial Manning. In 1885, under the inspiration of Colman Macaulay, of the Bengal Civil Service, a further attempt was made to get into touch with the Tibetans, but it was abandoned in deference to the opposition of the Chinese, whose suzerainty over Tibet was recognised and to whose view until the war with Japan, British statesmen were inclined to pay excessive deference. But the position on the Tibetan frontier continued to be most unsatisfactory. The Tibetans were aggressive and obstructive, and with a view to putting an end to an intolerable situation, a Convention was negotiated between Great Britain and China in 1890. This laid down the boundary between Sikkim and Tibet, it admitted a British protectorate over Sikkim, and paved the way for arrangements for the conduct of trade across the Sikkim-Tibet frontiers. These supplementary arrangements provided for the opening of a trade mart at Yatung, on the Tibetan side of the frontier, to which British subjects should have the right of free access and where there should be no restrictions on trade. The agreement proved useless in practice, because the Tibetans refused to recognise it, and despite their establish-

ed suzerainty, the Chinese Government were unable to secure respect for it.

Russian Intervention.

This was the position when in 1890 Lord Curzon, Viceroy of India, endeavoured to get into direct touch with the Tibetan authorities. Three letters which he addressed to the Dalai Lama were returned unopened, at a time when the Dalai Lama was in direct intercourse with the Tsar of Russia. His emissary was a Siberian Dorjjeff, who had established a remarkable ascendancy in the counsels of the Dalai Lama. After a few years' residence at Lhasa Dorjjeff went to Russia on a confidential mission in 1899. At the end of 1900 he returned to Russia at the head of a Tibetan mission of which the head was officially described in Russia as "the senior Tsanite Khomba attached to the Dalai Lama of Tibet." This mission arrived at Odessa in October 1900, and was received in audience by the Tsar at Livadia. Dorjjeff returned to Lhasa to report progress, and in 1901 was at St Petersburg with a Tibetan mission, where as bearers of an autograph letter from the Dalai Lama they were received by the Tsar at Peterhoff. They were escorted home through Central Asia by a Russian force to which several Intelligence Officers were attached. At the time it was rumoured that Dorjjeff had, on behalf of the Dalai Lama, concluded a treaty with Russia, which virtually placed Tibet under the protectorate of Russia. This rumour was afterwards officially contradicted by the Russian Government.

The Expedition of 1901.

In view of these conditions the Government of India treating the idea of Chinese suzerainty over Tibet as a constitutional question proposed in 1903, to despatch a mission, with

an armed escort, to Lhasa to discuss the outstanding questions with the Tibetan authorities on the spot. To this the Home Government could not assent, but agreed, in conjunction with the Chinese Government, to a joint meeting at Khamba Jong, on the Tibetan side of the frontier. Sir Francis Younghusband was the British representative, but after months of delay it was ascertained that the Tibetans had no intention of committing themselves. It was therefore agreed that the mission, with a strong escort, should move to Gyantse. On the way the Tibetans developed marked hostility, and there was fighting at Tuna, and several sharp encounters in and around Gyantse. It was therefore decided that the mission should advance to Lhasa, and on August 3rd, 1904, Lhasa was reached. There Sir Francis Younghusband negotiated a convention by which the Tibetans agreed to respect the trade marts at Gyantse, Gartok and Yatung; to pay an indemnity of £500,000 (seventy-five lakhs of rupees); the British to remain in occupation of the Chumbi Valley until this indemnity was paid off at the rate of a lakh of rupees a year. In a separate instrument the Tibetans agreed that the British Trade Agent at Gyantse should have the right to proceed to Lhasa to discuss commercial questions, if necessary.

Home Government intervenes.

For reasons which were not apparent at the time, but which have since been made clearer, the Home Government were unable to accept the full terms of this agreement. The indemnity was reduced from seventy-five lakhs of rupees to twenty-five lakhs, to be paid off in three years, and the occupation of the Chumbi Valley was reduced to that period. The right to despatch the British Trade Agent to Lhasa was withdrawn. Two years later (June 1906) a Convention was concluded between Great Britain and China regulating the position in Tibet. Under this Convention Great Britain agreed neither to annex Tibetan territory, nor to interfere in the internal administration of Tibet. China undertook not to permit any other foreign State to interfere with the territory or internal administration of Tibet. Great Britain was empowered to lay down telegraph lines to connect the trade stations with India, and it was provided that the provisions of the Convention of 1890, and the Trade Regulations of 1893, remained in force. The Chinese Government paid the indemnity in three years and the Chumbi Valley was evacuated. The only direct result of the Mission was the opening of the three trade marts and the establishment of a British Trade Agent at Gyantse.

Chinese Action.

The sequel to the Anglo-Russian Agreement was dramatic, although it ought not to have been unexpected. On the approach of the Younghusband Mission the Dalai Lama fled to Urga, the sacred city of the Buddhists in Mongolia. He left the internal government of Tibet in confusion, and one of Sir Francis Younghusband's great difficulties was to find Tibetan officials who would undertake the responsibility of signing the Treaty. Now the

suzerainty of China over Tibet had been explicitly reaffirmed. It was asserted that she would be held responsible for the foreign relations of Tibet. In the past this suzerainty, having been a "constitutional action," it was inevitable that China should take steps to see that she had the power to make her well respected at Lhasa. To this end she proceeded to convert Tibet from a vassal state into a province of China. In 1908 Chao Erh-feng, Acting Viceroy in the neighbouring province of Szechuen, was appointed Resident in Tibet. He proceeded gradually to establish his authority, marching through eastern Tibet and treating the people with great severity. Meanwhile the Dalai Lama, finding his presence at Urga, the seat of another Buddhist Pontiff, irksome, had taken refuge in Si-ning. Thence he proceeded to Peking, where he arrived in 1908, was received by the Court, and despatched to resume his duties at Lhasa. Moving by leisurely stages, he arrived there at Christmas, 1909. But it was soon apparent that the ideas of the Dalai Lama and of the Chinese Government had little in common. The Dalai Lama expected to resume the temporal and spiritual despotism which he had exercised prior to 1904. The Chinese intended to deprive him of all temporal power and preserve him as a spiritual pope. The Tibetans had already been exasperated by the pressure of the Chinese soldiery. The report that a strong Chinese force was moving on Lhasa so alarmed the Dalai Lama that he fled from Lhasa, and by the irony of fate sought a refuge in India. He was chased to the frontier by Chinese troops, and took up his abode in Darjeeling, whilst Chinese troops overran Tibet.

Later Stages.

The British Government, acting on the representations of the Government of India, made strong protests to China against the action. They pointed out that Great Britain, while disclaiming any desire to interfere with the internal administration of Tibet, could not be indifferent to disturbances in the peace of a country which was a neighbour, on intimate terms with other neighbouring States on our frontier, especially with Nepal, and pressed that an effective Tibetan Government be maintained. The attitude of the Chinese Government was that no more troops had been sent to Tibet than were necessary for the preservation of order, that China had no intention of converting Tibet into a province, but that being responsible for the good conduct of Tibet, she must be in a position to see that her wishes were respected by the Tibetans. Finally, the Chinese remarked that the Dalai Lama was such an impossible person that they had been compelled again to depose him. Here the matter might have rested, but for the revolution in China. That revolution broke out in Szechuen, and one of the first victims was Chao Erh-feng. Cut off from all support from China, surrounded by a hostile and infuriated populace, the Chinese troops in Tibet were in a hopeless case; they surrendered, and sought escape not through China, but through India, by way of Darjeeling and Calcutta. The Dalai Lama returned to Lhasa, and in 1913, in the House of Lords on July 28, Lord Morley

stated the policy of the British Government in relation to these changes. He said the declaration of the President of the Chinese Republic saying that Tibet came within the sphere of Chinese internal administration and that Tibet was to be regarded as on an equal footing with other provinces of China, was met by a very vigorous protest from the British Government. The Chinese Government subsequently accepted the principle that China is to have no right of active intervention in the internal administration of Tibet, and agreed to the constitution of a conference to discuss the relation of the three countries. This Convention met at Simla when Sir Henry McMahon, Foreign Secretary to the Government of India, Mr. Ivan Chen, representing China, and Mr. Long Chen Shatra, Prime Minister to the Dalai Lama, threshed out these issues. Whilst no official pronouncement has been made on the subject, it is understood that a Convention was initiated in June which recognised the complete autonomy of Tibet proper, with the right of China to maintain a Resident at Lhasa with a suitable guard. A semi-autonomous zone was to be constituted in Eastern Tibet, in which the Chinese position was to be relatively much stronger. But this Convention, it is understood, has not been ratified by the Chinese Government, owing to the difficulty of defining Outer and Inner Tibet, and in 1918 Tibet took the offensive and threw off the last vestiges of Chinese suzerainty. When the Chinese province of Szechuan went over to the South, the Central Government at Peking was unable to finance the frontier forces or to withstand the Tibetan advance, which was directed from Lhasa and appeared to be ably managed. After the Tibetan army had occupied some towns on the confines of the Szechuan marshes, hostilities were suspended and an armistice was concluded.

It will thus be seen that the importance which formerly attached to the political condition of Tibet was much less a local than an external question, and was influenced by our relations with Russia and China rather than with our

relations with Tibet. Russia having relapsed into a state of considerable confusion, and China having relapsed into a state of absolute confusion, these external forces temporarily at any rate disappeared, and Tibet no longer loomed on the Indian political horizon. The veil was drawn afresh over Lhasa, and affairs in that country pursued an isolated course, with this considerable difference. The Dalai Lama was now on terms of the greatest cordiality with the Government of India. In 1920 he requested that a British officer should be sent to discuss with him the position in Central Asia brought about by the Revolution in Russia and the collapse of Government in China, and Mr. Bell, C.M.G., I.O.S., Political Officer in Sikkim, was deputed for this purpose. In 1922 telephonic communication between Lhasa and India was established. The Chinese subsequently tried to increase their hold on Tibet but without being able to persuade the Tibetans to accept closer association.

There followed in 1936 the death of the Dalai Lama and not until 1939 were the Tibetans able to discover the babe in whose body, they believe, his reincarnation must simultaneously have occurred. In the meantime a British Goodwill Mission visited Tibet in the winter of 1936-37, spent several months in Lhasa and there established or renewed highly friendly relationships with the chief Tibetan Government officials and the Tibetan people. The Mission was led by Sir Basil J. Gould, I.O.S., of the Political Department, who has many personal friends among the leading men of Tibet, and one of his colleagues was left behind in Lhasa where he still remains to maintain the liaison between Lhasa and the headquarters of the Government of India.

The boy Dalai Lama was installed in Lhasa in October, 1939, with traditional ceremonials. The British Government were represented at the event by a delegation led by Sir Basil Gould, and gifts were exchanged between him and the Lama.

Political Officer in Sikkim—Sir Basil J. Gould, I.O.S.

VIII.—THE NORTH-EASTERN FRONTIER.

The position on the northern frontier has been considered as if the British line were contiguous with that of Tibet. This is not so. The real frontier States are Kashmir, Nepal, Sikkim, Bhutan and Burma. From Chitral to Gilgit now the northernmost posts of the Indian Government, to Assam, with the exception of the small wedge between Kashmir and Nepal, where the British district of Kumaon is thrust right up to the confines of Tibet, for a distance of nearly fifteen hundred miles, there is a narrow strip of territory between British India and the true frontier. The first of these frontier States is Kashmir. The characteristics of this State are considered under Indian States (*q.v.*); it is almost the only important Indian State in India with frontier responsibilities and it worthily discharges them through the agency of its efficient Indian State troops composed mainly of the Rajput Dogras, who makes excellent fighting material. One of the most important trade routes with Tibet passes through Kashmir—that through Ladak. Then comes the

long narrow strip of Nepal. This Gurkha State stands in special relation with the British Government. It is independent, and the British Minister at Khatmandu exercises no influence on the internal administration. The governing machine in Nepal is also peculiar. The Maharaja Dhiraaj, who comes from the Sesodia Rajput clan, the bluest blood in India, takes no part in the administration. All power rests in the Prime Minister, who occupies a place equivalent to that of the Majors of the Palace, or the Shoguns of Japan. The rulers of Nepal have given conspicuous evidence of their attachment to the British Government. It is the main Indian outpost against Tibet or against Chinese aggression through Tibet. The friction between the Chinese and the Nepalese used to be frequent, and in the eighteenth century the Chinese marched an army to the confines of Khatmandu—one of the most remarkable military achievements in the history of Asia. In recent times, Nepal has been largely free from internal disturbance, and has been

raised to a strong bulwark of India. It is the recruiting ground for the Gurkha Infantry, who form such a splendid part of the fighting arm of the Indian Empire. Beyond Nepal are the smaller States of Bhutan and Sikkim, whose rulers are Mongolian by extraction and Buddhists by religion. In view of Chinese aggressions in Tibet, the Government of India in 1910 strengthened their relations with Bhutan by increasing their subsidy from fifty thousand to a lakh of rupees a year, and taking a guarantee that Bhutan would be guided by them in its foreign relations. Afterwards China was officially notified that Great Britain would protect the rights and interests of these States. At the request of the Nepalese Government a British railway expert was deputed to visit the country and advise on the best means of improving communications with India. As the result of his report the Nepalese Government have decided to construct a light railway from Blichhakhori to Raxaul. Great success has attended the orders passed by the Nepalese Government abolishing slavery.

Assam and Burma.

There now remain the Assam border tribes—the Daffas, the Miris, the Abors and the Mishmis residing between the administered border of

Assam and the external frontier of India, in this region drawn by agreement with Tibet in 1914 by Sir Henry McMahon and known as the McMahon line. Excepting the Abors none of these tribes has recently given serious trouble. The murder of Mr. Williamson and Dr. Gregorson by the Minyong Abors in 1911 made necessary an expedition to the Dihang valley of the Abor country on the N E Frontier. A force of 2,500 and about 400 military police was employed from October 1911 to April 1912 in subduing the tribe. After two or three small actions the murderers were delivered up. The cost of the expedition was Rs 21,60,000. At the same time friendly missions were sent to the Mishmi and Miri countries. Close contact with these forest-clad and leech-infested hills has not encouraged any desire to establish more intimate relations with them. The area on the Burma side occupied by the Nagas runs northwards from Manipur. The Nagas are a Tibeto-Burman people, devoted to the practice of head hunting, which is still vigorously practised by the independent tribes. The Chin Hills are a tract of mountainous country to the south of Manipur. From the Assam boundary to the northern boundary of the Shan States is included in the Myitkyina and Bhamo districts of Burma and since the separation of Burma is no longer India's concern.

NEPAL.

The small hilly independent Kingdom of Nepal is a narrow tract of country extending for about 520 miles along the southern slope of the central axis of the Himalayas. It has an area of about 56,000 square miles, with a population of about 5,580,000, chiefly Hindus. The greater part of the country is mountainous, the lower slopes being cultivated. Above these is a rugged broken wall of rock leading up to the chain of snow-clad peaks which culminate in Mount Everest (29,002 feet) and others of slightly less altitude. The country before the Gurkha occupation was split up into several small kingdoms under Newar kings. The Gurkhas under Prithvi Narayan Shah overran and conquered the different kingdoms of Patan, Kathmandu, and Bhatgaon, and other places during the latter half of the 18th century and since then have been rulers of the whole of Nepal. In 1846 the head of the Rana family Maharaja Jung Bahadur Rana, obtained from the sovereign the perpetual right to the office of Prime Minister of Nepal, and the right is still enjoyed by the descendants of the Rana family. In 1850 Jung Bahadur paid a visit to England and was thus the first Hindu Chief to leave India and to become acquainted with the power and resources of the British nation. The relations of Nepal with the Government of India are regulated by the treaty of 1816, which brought to an end the Nepal War, and subsequent agreements. By virtue of the same Treaty either Government maintained a representative at the Court of the other and her treaty relations with Tibet allow her to keep a Resident at Lhasa of her own. Her relation with China is of a friendly nature. Ever since the conclusion of the treaty of 1816 the friendly relations with the British Government have steadily been maintained. During the rule of the late Prime Minister it has been at its height as is evidenced by the valuable friendly help in men and money which has been given and which was appreciatively mentioned in both the Houses of Parliament and by Mr Asquith in his Guildhall speech in 1915. The message from His Majesty the King-Emperor to the Nepalese Prime Minister sent on the termination of hostilities and published at the time as also Viceroy's valedictory address to the Nepalese contingent on the eve of their return home after having laudably fulfilled their mission in India eloquently and gratefully acknowledged the valuable help rendered by Nepal during the four and a half years of war. In recognition of this help Nepal receives an unconditional annual present of rupees ten lakhs from the British Government to be paid in perpetuity. To further strengthen and cement the bonds of friendship that have subsisted so long between the two countries, a new Treaty of friendship was concluded between the Government of Nepal and Great Britain on the 21st December 1923.

From the foregoing account of the history of Nepal it will be seen that the Government of the country has generally been in the hands of the Minister of the day. Since the time of Jung Bahadur this system of government has been

clearly laid down and defined. The sovereign, or Maharajadhiraja, as he is called, is but a dignified figure-head, whose position can best be likened to that of the Emperor of Japan during the Shogunate. The present King, His Majesty Maharajadhiraja Tribhubana Bir Bikram Jung Bahadur Shah Bahadur Shum Shere Jung Deva, ascended the throne on the death of his father in 1911. The real ruler of the country is the Minister who, while enjoying complete monopoly of power, couples with his official rank the exalted title of Maharaja. Next to him comes the Commander-in-Chief, who ordinarily succeeds to the office of Minister

On the demise of H.H. Maharaja Bhim Shum Shere Jung Bahadur Rana after only a short tenure of office his next brother Ojawi Rajanya, Projwala Nepal Tara, Atul Jyotirmaya Tri Shakti Patta, Ati Pravala Gorkha Dakshina Bahu Prithuladheesha His Highness Maharaja Joodha Shum Shere Jung Bahadur Rana, G O B, G O L H, G O L, G O S I, G O N T, G O S S M L, G O I E, G K R K, Yitang Paoting Shun Chiang Luh Chuan Shang Chiang, Honorary General, British Army, Honorary Colonel of all the Gurkha Rifle Regiments, Indian Army, Prime Minister and Supreme Commander-in-Chief, Nepal, succeeded to the premiership on 1st September 1932. The rich experience he had earned in highly responsible offices as he rose step by step coupled with the broader outlook of affairs gained from the visit to England with his brother the late Maharaja Chandra Shum Shere enabled the present Maharaja fully to grasp the significance of the social, economic and political problems that held and still hold the world in their grip since the great war. A deep thinker, a close observer and a man with independent views he had after much and careful deliberation matured his plans and with the courage of his conviction set himself to the carrying out of his programme. A Nepalese Legation was established in London as much to bring still closer the more than century old friendship with the British Government as also to fully implement the traditional treaty rights. The first Envoy Extraordinary and Minister Plenipotentiary (Commanding General Bahadur Shum Shere Jung Bahadur Rana) left Nepal as the head of a Mission carrying the Insignia of the newly inaugurated Royal Order of "The Ojaswi Rajanya" for H.M. The King-Emperor. With grim determination the present Maharaja fought the ravages of the Great Earthquake—an unwelcome and undreamt of calamity at the very threshold of his regime—and has evolved a better and more beautiful Katmandu within a period not hoped for even by the most sanguine of the people. The political reorganisation in the country which had to be carried through to stabilise the existing Government gave ample indication of his clear foresight. The Eastern Terai district headquarters in the Kingdom extending to some 300 miles are now in telephonic connection with the capital on the most modern line as a preliminary to link up the Western and hill districts in course of time. The remote suburbs can now be reached from the town in the valley by fair motorable roads and the main

thoroughfare has been and is being daily improved. An up-to-date Firebrigade fulfilling an urgent and long felt want, a new and larger electric installaton giving further impetus to home industries, the first industrial exhibition of local manufacture and craft all proclaim his many sided activities. The postal union connection with the Government of India now offers a much needed facility to inter-correspondence between the Nepalese at home or abroad in India. With the permanency in the tenure of army service and inauguration of a Savings Fund for the benefit of the units, the modernisation of Arsenal equipment and arrangement for manufacture of up-to-date propellants the Military side of the country has been brought more in line with present day requirements. The first Bank in Nepal and the first Jute Mill in the Terai have already come during this short regime and are functioning to-day. Sugar, cotton, wool and other industrial ventures on a moderate scale are in active discussion. A second railway in the country links up Jayanagar on the B.N.W. Railway with Janakpur, the capital of Rajarshi Janak of Ramayana fame. To further symbolise the friendship entertained for the British Government a second Mission carrying the Insignia of the Royal Order of Nepal went in charge of Commanding General Kaiser Shere Jung Bahadur Rana and Lieutenant General Narayan Shum Shere Jung Bahadur, the Maharaja's nephew and son, for H.M. George VI who also represented the independent Kingdom of Nepal in the Coronation of H.M. the King-Emperor. Thus the present

regime though still young, has been fruitful indeed and in many ways promises to become the turning point in the history of the country.

Rice, wheat and maize form the chief crops in the low-lands and in some parts of the hills too. Mineral wealth is supposed to exist but has not as yet been either prospected or developed. Communication in the hills is necessarily primitive owing to the difficult nature of the country but improvements are in evidence and progressive. Since 1920 the vehicular traffic from Amlekhganj to Bhimphe, the base of a steep ridge in the main route to the capital of the country from British India—goes over a good and permanent well maintained road linking up with the ropeway of 18 miles which was opened in 1927 and a motor trolley service which was installed in 1934 joins up the Ropeway terminus with the Customs House for transport of goods traffic. The telephone from Katmandu to Birganj, which has been extended to Raxaul, now forms part of the 300 miles main line extending from Katmandu to Bratnagar and Jhapa, the easternmost part of the Nepal Terai. The revenue is about two crores of rupees per annum. The standing army is estimated at 45,000, the highest posts in it being filled by relations of the minister. The state is of considerable archaeological interest and many of the sites connected with scenes of Buddha's life have been identified in it by the remains on inscribed pillars. *The British Envoy Extraordinary and Minister Plenipotentiary.*—Lieut.-Col. G. L. Betham, C.I.E., M.C.

Railways to India.

The prospect of linking Europe and Asia by a railway running eastwards through Asia Minor has fascinated men's minds for generations. The plans suggested have, owing to the British connection with India, always lain in the direction of lines approaching India. More than 50 years ago a Select Committee of the House of Commons sat for two years to consider the question of a Euphrates Valley railway. The Shah of Persia applied to the British Foreign Office for the investment of British capital in Persian railway construction many years before the end of the nineteenth century. A proposal was put forward in 1895 for a line of 1,000 miles from Cairo and Port Said to Koweit, at the head of the Persian Gulf. While these projects were in the air, German enterprise stepped in and made a small beginning by constructing the Anatolian railway system. Its lines start from Scutari, on the southern shore of the Bosphorus, opposite Constantinople, and serve the extreme western end of Asia Minor. And upon this foundation was based the Turkish concession to Germans to build the Baghdad Railway.

Meanwhile, Russia was pushing her railway from various directions into the Central Asian territory running along the northern frontiers of Persia and Afghanistan to the borders of Chinese Turkestan. The construction of a Trans-Persian railway, connecting India, across Persia, with the Russian lines between the Black Sea and the Caspian Sea came to the forefront after the conclusion of the historic Anglo-Russian agreement regarding Persia.

The Germans pushed forward their Baghdad railway project with a calculating shrewdness arising from their estimate of the value it would possess in their grand aim to overthrow the British Empire. The outbreak of the great war and the success of the Germans in involving Turkey into it saw the final stages of the construction of the railway pressed forward with passionate energy. Thus, before the overthrow of the Turks and Germans in Asia Minor and of the Germans in France the railway was completed and was in use from Scutari across Anatolia, over the Taurus Mountains to Aleppo and thence eastward across the Euphrates to a point between Nisibin and Mosul. The Germans had also by that time constructed a line to Baghdad at the eastern end of the route, northwards from Baghdad to a point a considerable distance beyond Samara.

The war compelled the British to undertake considerable railway development northward from Basra, the port at the mouth of the Shat-el-Arab, the broad stream in which the Tigris and Euphrates, after their junction, flow into the head of the Persian Gulf. The system consists of a metre-gauge line from Basra to Nasarich, on the Euphrates, thence northwards to Baghdad, the line passing a considerable distance westward to Kut-el-Amara, of historic fame. From Baghdad the line runs eastward approximately to the foot of the pass through which the Persian road crosses the frontier of that country. A line branches off in the neighbourhood of Kifri in the direction

of Mosul. It has for some time been open as far as Kirkuk, 200 miles northward of Baghdad and 112 miles southward of Mosul. Similarly, the Taurus railway has long been open eastward of Aleppo as far as Tel Kocheh, on the Syrian frontier, a few hours' road motor run, north-west from Mosul. Through passenger services between Iraq and Istanbul are run a road motor service linking the railway termini at Kirkuk and Tel Kocheh. The gap in the railway has now been closed, and through communication was established at the end of 1940. A line also runs westward from Baghdad to Feluja, on the Euphrates.

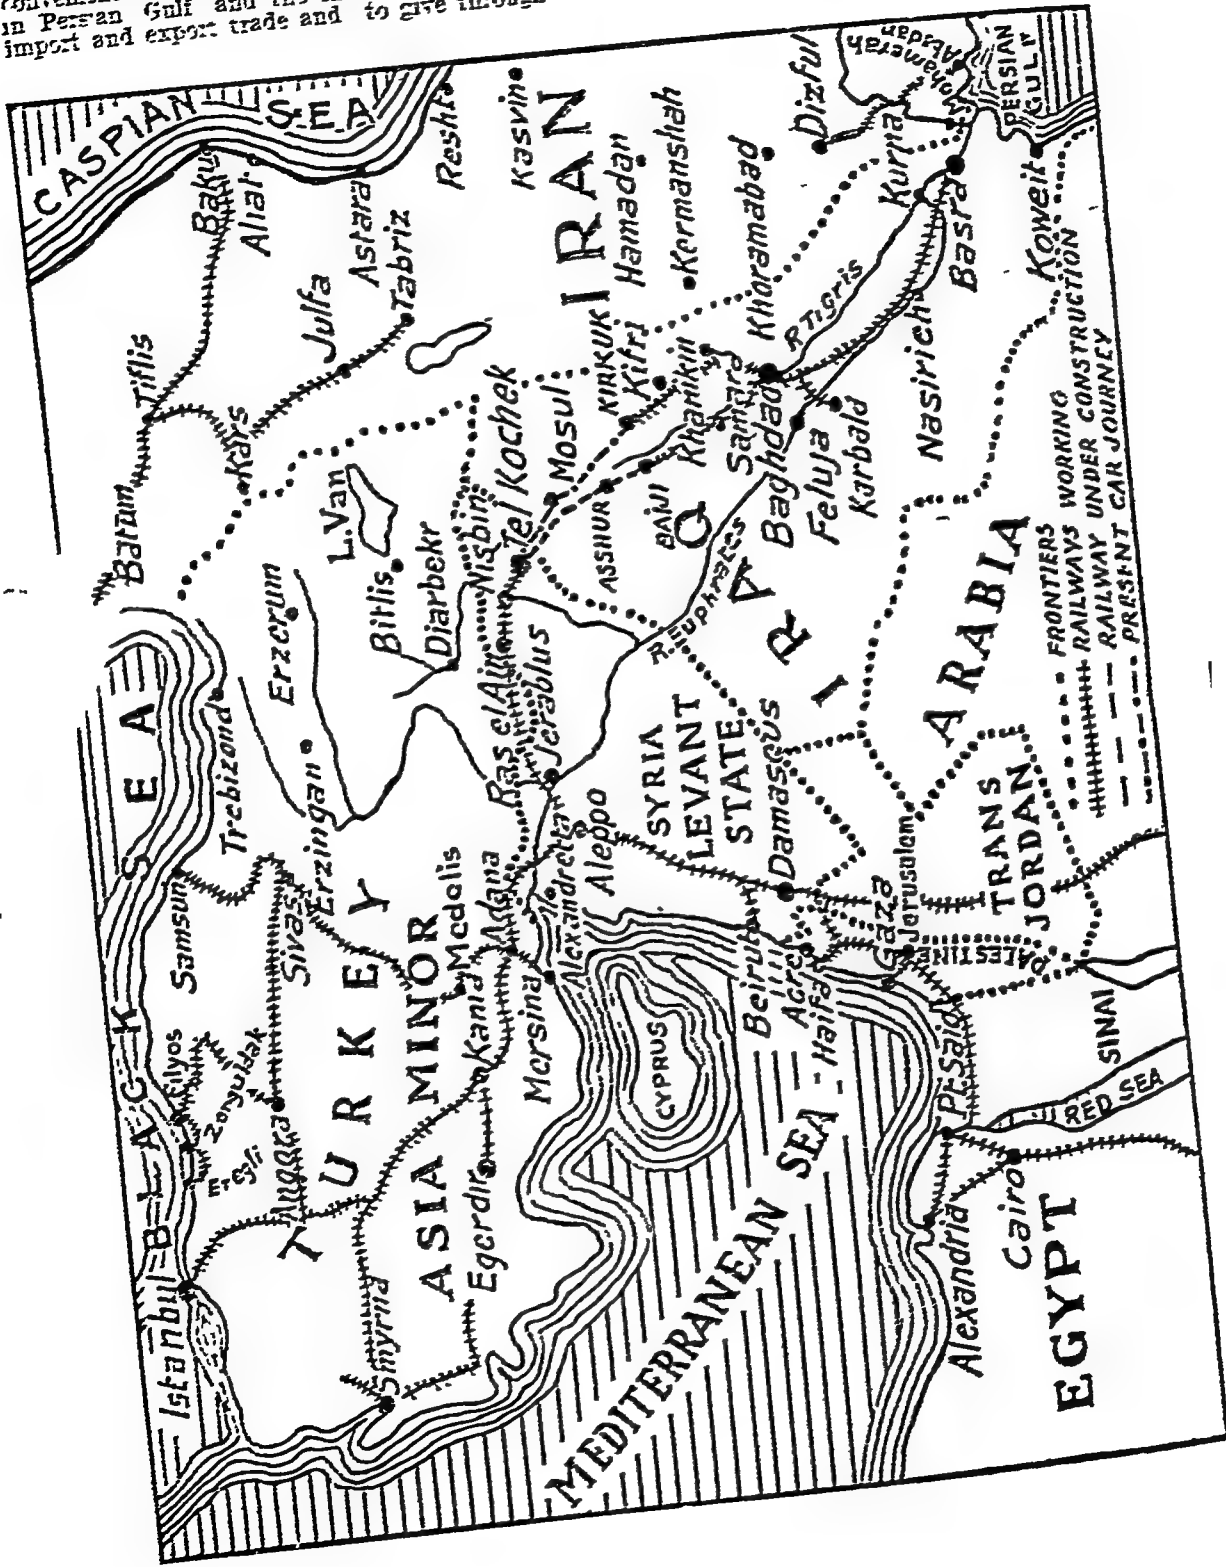

The Trans-Persian line to join the Russian Caucasian system and the Indian railways first assumed proportions of practical importance in the winter of 1911. Both the Russian and the Indian railway systems were by then well developed up to the points likely to be the termini of a Trans-Persian line. The Russian system reached Julfa, on the Russo-Persian frontier in the Caucasus. During the war this line was carried thence southward into the region east and south-east of Lake Urumia. The Indian railway system, on the borderland of India and Persia, was similarly much extended and improved during the war. A new agreement which was negotiated between England and Persia specially provided for British assistance in the development of Persian natural resources and particularly for the extension and improvement of Persian roads suitable for motor traffic, but the agreement came to naught.

A railway connection between the Indian and the Russian systems has again assumed considerable importance after the Germans attack of Russia and the alignment of Britain, India and Russia along with other democracies like China and U.S.A. against the aggression of Germany and Japan. With the whole of the European west coast under German control or domination and the eastern shores of Siberia rendered unapproachable by the Japanese, the only route which British and Indian supplies to Soviet Russia can take is via Iran. The Quetta-Nushki line which had been extended during the last Great War upto Duzdap (or Zahidan) in Persia had been put out of use afterwards beyond Nok-kundi. This is again being set in order but it is not known upto the time of writing whether through rail connections are being arranged to the Soviet front in Caucasia from either the Persian Gulf or British Baluchistan in India.

There also remains the possibility of linking the Russian and Indian railway system by way of Afghanistan. The suggestion has often been made in recent years that the Russian line from Merv to Herat, on the northern frontier of Afghanistan, should be linked to the Indian line which proceeds from Quetta to the Afghan border on Chaman. The completion of a broad-gauge line extending the Indian railway system through the Khyber Pass to Landi Khana, at its western extremity, opens a prospect of further possible rail connections with Afghanistan.

Map of the Baghdad Railway.

The main interests behind Iranian railway connections between the different countries all round Iran. The Iranian railways have, however, assumed special importance this year on account of supplies from the allies to U.S.S.R. in Persian Gulf and the interior to develop import and export trade and to give through

The great sepoy army of India originated in the small establishments of guards known as peons, enrolled for the protection of the factories of the East India Company, but sepoys were first enlisted and disciplined by the French, who appeared in India in 1665. Before this detachments of soldiers were sent from England to Bombay, and as early as 1665 the first fortified position was occupied by the East India Company at Armagon, near Masulipatam. Madras was acquired in 1640, but in 1651 the garrison of Fort St. George consisted of only ten men. In 1661 Bombay was occupied by 400 soldiers, and in 1668 the number was only 285 of whom 93 were English and the rest French, Portuguese and Indians.

After the declaration of war with France in 1744 the forces were considerably increased, but this did not prevent the French capturing Madras in 1746. Following the French example, the English raised considerable sepoy forces and largely increased the military establishments. In 1748 Major Stringer Lawrence landed at Fort St. David to command the forces of the Company. The English foothold in India was then precarious and the French under Duplex were contemplating fresh attacks. It became necessary for the English Company to form a larger military establishment. The new commandant at once set about the organisation and discipline of his small force, and the garrison was given a company formation. This was the beginning of the regular Indian Army of which Lawrence subsequently became Commander-in-Chief. In Madras the European companies were developed into the Madras Fusiliers, similar companies in Bengal and Bombay became the 1st Bengal and 1st Bombay Fusiliers. The native infantry were similarly organised by Lawrence and Clive. By degrees Royal Regiments were sent to India, the first being the 39th Foot, which arrived in 1754.

Struggle with the French—From this time for a century or more the army in India was engaged in constant war. After a prolonged war with the French, whom Duplex had by 1750 raised to the position of the leading power in India, the efforts of Stringer Lawrence, Clive, and Eyre Coote completed the downfall of their rivals, and the power of England was established by the battle of Plassey in Bengal, and at Wandewash in Southern India, where the French were finally defeated in 1761. A number of independent States, owing nominal allegiance to the Emperor at Delhi, had risen on the decline of the Mughal Empire, some ruled by Mahratta Princes and others by Musalman adventurers such as Hyder Ali of Mysore. A prolonged struggle ensued with the latter and his son and successor Tipu Sultan, which ended only with the defeat and death of Tipu and the capture of Seringapatam in 1799.

Reorganisation of 1796—In 1796 the Indian armies, which had been organised on the Presidency system, were reorganised. The European troops were 13,000 strong and the Indians numbered some 67,000, the infantry being generally formed into 75 regiments of two battalions each. In Bengal, regiments were formed by linking existing battalions of ten companies each with large establishments of

English officers. The Madras and Bombay armies were at the same time reorganised on similar lines, and cavalry and artillery companies were raised.

In 1798, the Marquis Wellesley arrived as Governor-General, firmly imbued with the necessity of destroying the last vestiges of French influence. In pursuance of this policy he reduced Mysore, where Tipu was intriguing with the French, and then turned his attention to the Mahratta States, in which Sindbia had established power over the Mughal Emperor at Delhi by means of a large regular army officered by Europeans under the French adventurer Perron. In campaigns against Sindbia in Hindustan by a British Army under General Lake, and in the Deccan against that prince and the Raja of Berar by an army under General Wellesley, afterwards Duke of Wellington, the power of these Chiefs was broken in the battles of Laswari and Assaye. French influence was finally destroyed, and the Mughal Emperor was released from the domination of the Mahrattas. Subsequently Holkar also was reduced, and British power established on a firm footing.

Mutiny at Vellore—The Indian Army had been from time to time subject to incidents of mutiny which were the precursors of the great cataclysm of 1857. The most serious of these outbreaks occurred at the fort of Vellore in 1806 when the native troops suddenly broke out and killed the majority of the European officers and soldiers quartered in the fort, while the striped flag of the Sultan of Mysore, whose sons were confined there, was raised upon the ramparts. The mutiny was suppressed by Colonel Gillespie, who galloped over from Arcot at the head of the 19th Light Dragoons, blew in the gate of the fort, and destroyed the mutineers. This retribution put a stop to any further outbreaks in the army.

Overseas Expeditions—Several important overseas expeditions were undertaken in the early part of the nineteenth century. Bourbon was taken from the French, Ceylon and the Spice Islands were wrested from the Dutch, and Java was conquered in 1811 by a force largely composed of Bengal troops which had volunteered for this service.

In 1814, the Nepal War took place in which the brave Gillespie, who had distinguished himself in Java, was killed when leading the assault on the fort of Kalunga. The Gurkhas were overcome in this war after offering a stout resistance.

In 1817, hostilities again broke out with the Mahrattas, who rose against the British during the progress of operations against the Pindaris. Practically the whole army took the field and all India was turned into a vast camp. The Mahratta Chiefs of Poona, Nagpur, and Indore rose in succession, and were beaten, respectively, at Kirkee, Sitabaldi, and Mehidpur. This was the last war in Southern India. The tide of war rolled to the north never to return. In the Punjab, to which our frontier now extended, our army came into touch with the great military community of the Sikhs.

In 1824, the armies were reorganised, the double-battalion regiments being separated, and the battalions numbered according to the dates they were raised. The Bengal Army was

organised in three brigades of horse artillery, five battalions of foot artillery, two regiments of European and 68 of Indian infantry, 5 regiments of regular and 8 of irregular cavalry. The Madras and Bombay armies were constituted on similar lines, though of lesser strength.

First Afghan War and Sikh Wars—In 1839, a British Army advanced into Afghanistan and occupied Cabul. There followed the murder of the British Envoys and the disastrous retreat in which the army perished. This disaster was in some measure retrieved by subsequent operations, but it had far-reaching effects on British prestige. The people of the Punjab had witnessed these unfortunate operations, they had seen the lost legions which never returned, and although they saw also the avenging armies they no longer regarded them with their former awe. Sikh aggression led to hostilities in 1845-46, when a large portion of the Bengal Army took the field under Sir Hugh Gough. The Sikhs were defeated after stubborn fights at Mudki and Ferozeshahr, the opening battles, but did not surrender until they had been overthrown at the battles of Allwal and Sohraon. Two years later an outbreak at Multan caused the Second Sikh War when, after an indecisive action at Chillianwala, our brave enemies were finally overcome at Ujjerat, and the Punjab was annexed. Other campaigns of this period were the conquest of Sind by Sir Charles Napier, and the Second Burmese War, the first having taken place in 1824.

The conquest of the Punjab extended over the frontier to the country inhabited by those turbulent tribes which have given so much trouble during the past sixty years while they have furnished many soldiers to our army. To keep order on this border the Punjab Frontier Force was established, and was constantly engaged in small expeditions which, while they involved little bloodshed, kept the force employed and involved much arduous work.

The Indian Mutiny—On the eve of the mutiny in 1857 there were in the Bengal Army 21,000 British and 137,000 Indian troops, in the Madras Army 8,000 British and 49,000 Indian troops; and in Bombay 9,000 British and 45,000 Indian troops. The proportion of Indian to British was therefore too large for safety. The causes of the mutiny were many and various. Among these were the annexation policy of Lord Dalhousie, especially that of Oudh from which the greater part of the Bengal Army was drawn; interference with the privileges of the sepoy with respect to certain allowances; and lack of power on the part of commanding officers either to punish or reward. The final spark which fired the revolt was the introduction of a new cartridge. The muskets of those days were supplied with a cartridge in which the powder was enclosed in a paper cover, which had to be bitten off to expose the powder to ignition. In 1857 a new cartridge was introduced with paper of a glazed texture which it was currently reported was greased with the fat of swine and oxen, and therefore unclean alike for Mahomedans and Hindus. This was interpreted as an attempt to destroy the caste and the religion of the sepoys. Skilful agitators exploited this grievance, which was not without foundation, and added reports

that flour was mixed with bone-dust and sugar refined with the blood of oxen.

Disaffection culminated in mutiny at Barrackpore where sepoy Mangal Pande attacked a European officer. The next most serious manifestation was the refusal of men of the 3rd Bengal Cavalry at Meerut to take the obnoxious cartridge. These men were tried and sentenced to long terms of imprisonment, their fetters being riveted on parade on the 9th May. Next day the troops in Meerut rose, and, aided by the mob, burned the houses of the Europeans and murdered many. The troops then went off to Delhi. Unfortunately there was in Meerut no senior officer capable of dealing with the situation. The European troops in the place remained inactive, and the mutineers were allowed to depart unmolested to spread the flames of rebellion.

Delhi is the historic capital of India. On its time worn walls brood the prestige of a thousand years of Empire. It contained a great magazine of ammunition. Yet Delhi was held only by a few Indian battalions, who joined the mutineers. The Europeans who did not succeed in escaping were massacred and the Delhi Emperor was proclaimed supreme in India. The capital constituted a nucleus to which the troops who mutinied in many places flocked to the standard of the Mughal. An army was assembled for the recovery of Delhi but the city was not captured until the middle of September. In the meantime mutiny had spread. The massacres of Cawnpore and Jhansi took place, and Lucknow was besieged until its relief on the 27th September. The rebellion spread throughout Central India and the territory that now forms the Central Provinces, which were not recovered until Sir Hugh Rose's operations in 1858 ended in the defeat of the Rani of Jhansi.

Minor Campaigns.—During the period until 1879, when the Second Afghan War began, there were many minor campaigns including the China War of 1860, the Ambeyla Campaign, and the Abyssinian War. Then followed the Afghan War in which the leading figure was Lord Roberts. There were expeditions to Egypt and China, and Frontier Campaigns of which the most important was the Tirah Campaign of 1897. There were also the prolonged operations which led up to or ensued upon the annexation of Burma, several campaigns in Africa, and the expeditions to Lhasa. But until 1914, since the Afghan War, the army of India, except that portion of the British garrison which was sent to South Africa in 1899, had little severe fighting, although engaged in many arduous enterprises.

Reorganisation after the Mutiny.—In 1857 the East India Company ceased to exist and their army was taken over by the Crown. At this time the army was organised into three armies, viz: Bengal, Bombay and Madras, the total strength being 65,000 British and 140,000 Indian troops.

Several minor re-organisations took place during the following years, such as the linking of three Regiments together and the raising of Class Regiments and Companies. In 1895 the next large reorganisation took place. This was the abolition of the three Armies and the

introduction of the command system. Four Commands were formed, viz: Punjab, Bengal, Madras and Bombay.

Lord Kitchener's Scheme.—This system lasted until 1904 when under Lord Kitchener's re-organisation the Madras Command was abolished and the Army divided into three Commands—the Northern, Eastern and Western, corresponding to the Punjab, Bombay and Bengal Commands.

In 1907, Lord Kitchener considered that consequent on the delegation of administrative powers to Divisional Commanders, retention of such powers by Lieutenant-Generals of Commands led to delay in the dispatch of business. The Command system was therefore abolished and India was divided into two Armies—the Northern and Southern—each under a General Officer who was responsible for the command, inspection and training of the troops, but was given no administrative responsibilities.

Early in the War both Army Commanders took the field and were not replaced until 1916 and 1917, when both had practically the same functions as their predecessors. It was then realised that administration was being unduly centralised at Army Headquarters and the machinery was becoming clogged with unnecessary details. To secure efficiency at A. H. Q., therefore, a certain measure of decentralisation was carried out in 1918. With the alteration of the designation "Army" to "Command" at this time, a considerable increase was made in the administrative staffs of the two Commands, and the General Officers Commanding were given powers to deal with all administrative questions other than those dealing with matters of policy, and new principles of war.

The commands were increased to four in 1920, each under a General Officer Commanding-in-Chief. One of these, namely Western Command, was abolished on the 1st November, 1938, and replaced by an Independent District.

The Chatfield Committee.—In September, 1938, an announcement was made on behalf of His Majesty's Government, that the outcome of the discussions regarding the role of land and air forces in India in relation to the defence problems of India, and the Empire which had been authorised in March of that year, had been considered by His Majesty's Government.

The need for early action to place the defence organisation of India on a more satisfactory basis was accepted, and, at the suggestion of the Government of India, an expert body of inquiry known as the Chatfield Committee was appointed by His Majesty's Government to visit India.

In the meantime and in the light of the progress made during the discussions that were held in the summer of 1938, His Majesty's Government in September, 1938, made certain offers of assistance, subject to approval of Parliament. These were an increase of £500,000 to the annual grant of £1,500,000 which had been paid to the Government of India, since 1933, in aid of India defence expenditure, a capital grant up to £5,000,000 for the re-equipment of certain British and Indian units in India, and the provision of aircraft for the re-equipment of certain squadrons of the Royal Air Force. It was further agreed that four British battalions should be transferred from the Indian to the Imperial establishment.

The following is the substance of the main recommendations of the Chatfield Committee Report.

Modernised Re-equipment.—The Committee reported that in the interests of Indian defence the whole of the army forces in India should be modernised with only such minor variations as would not affect the general level of efficiency.

The types of modernised units will be as follows—

British and Indian Cavalry light tank regiments equipped with light tanks and armoured carriers for reconnaissance,

Indian cavalry armoured regiments equipped with light tanks and armoured cars,

Indian cavalry motor regiments—provided with motor transport for conveyance of the personnel who will be normally on foot,

British and Indian field artillery regiments—all regiments are to be mechanised and in due course equipped with 25 pounder guns;

Sappers and miners units—with mechanised first line transport and mechanical power tools;

British and Indian infantry battalions—armed with rifles, Brens and 2 in mortars and fully mechanised first line transport;

Units on the North-Western Frontier will retain a certain proportion of pack mules.

It therefore recommended a thorough-going scheme for re-equipment of all branches of the service. One of the most important features of the modernisation proposals is the mechanisation of the bulk of the cavalry and of the first line transport of a large portion of the infantry with the object of greatly increasing the mobility of the units.

With this end in view the Chatfield Committee recommended that the basis of distribution of the Army in India should be (A) Frontier Defence, (B) Internal Security, (C) Coast Defence, (D) External Defence Troops.

With the increased efficiency and mobility afforded by modernisation it becomes possible to provide equal security with fewer troops, though it has to be recognised that the maintenance costs of a modernised unit are higher. The Committee carefully considered these factors in relation to the defence requirements of India and to the need for keeping the maintenance costs of the Army within the compass of what India can afford.

The total reduction of British troops as measured with the establishment on July 1, 1938, is approximately 25 per cent. A reduction in the number of units is also involved, and in this connection it has to be remembered that while the reduction of British units on the Indian establishment implies their transfer to the home establishment and consequently their retention as part of the available combatant forces, the reduction of Indian units must be absolute, except in so far as they can be employed at the cost of non-Indian revenues, in overseas stations.

The Committee's recommendations in regard to air forces and the Royal Indian Navy will be found elsewhere in this section under the respective headings.

Supply of Munitions.—The principle that India should as far as possible be made in all major respects self-sufficient in munitions in time of war was accepted, and a scheme for re-organising, and, where necessary, expanding the Ordnance Factories in India was recommended.

Defence Gift to India—His Majesty's Government have taken full account of the heavy capital cost involved, which has been estimated at some £34,330,000, or Rs 45 crores. Accepting that this capital expenditure cannot be found out of the resources available in India, His Majesty's Government have offered to provide it from the Home Exchequer. The sole condition attached to this magnificent gift is that India should bring her defence forces up to the standard of equipment necessitated by modern warfare and adjust her strategical plans to the conditions now obtaining in the world.

It is estimated that a period of five years would be required for the completion of the modernisation plan and the provision of the total capital sum would accordingly be spread over this period. Of the total amount three-quarters would be provided as a free gift while one quarter would be advanced by way of a loan. The interest on this portion, however, would be entirely remitted for the first five years, thereafter interest would become payable together with instalments of capital.

India's Defence Liabilities—In estimating India's defence requirements, the Committee had to consider how far the prevailing conceptions as regards India's liability for defence could be held valid in the light of modern conditions. Hitherto the principle has been accepted that India should be responsible for the "minor danger" of the maintenance of internal security and for the defence of her land frontiers, while Great Britain would be responsible for the "major danger" of attack by a great Power upon India, or upon Empire through India.

Modern developments have, however, clearly shown how vulnerable India is to attack in other forms than those that were envisaged when the principle was first laid down. Such attacks, if they should ever mature, would so vitally affect India's own well-being that they would demand her immediate co-operation in effective measures for her defence. In such cases India's defence would clearly be most effectively and economically assured by co-operation in the defence of points outside India strategically essential to her security.

Thus the Committee recommended as a general principle that the forces maintained by India should be adequate not merely for the narrower purposes of purely local defence, but also to assist in maintaining what they described as "India's external security," and further that India should acknowledge that her responsibility could not in her own interests be safely limited to the local defence of her land frontiers and coasts.

It was fully appreciated that the forces maintained by India could only bear a small share in those wider responsibilities, and that she could not necessarily bear in full the cost of such forces as were maintained in India. The committee recommended therefore that the contribution hitherto paid by the British Government should be continued at the higher level of £2,000,000 a year to which it has been provisionally raised by Government.

On this basis it is estimated that it should be possible for India, without enlarging the annual provisions for defence expenditure, to meet the whole maintenance costs of the forces organised and equipped on the scale proposed. From this main principle it follows that if forces held in India for the purposes covered by the joint res-

pensibility are used outside India in an emergency affecting India's external security, their ordinary maintenance charges should continue to be borne by India.

The margin for external defence suggested is one-tenth of the forces maintained in India in the case of the Army.

Present System of Administration.

The essential features of the Army, as constructed on its present basis, will be found in "The Army in India and its Evolution," a publication issued in 1924 with the authority of the Government of India.

The Secretary of State, as one of His Majesty's ministers, has a special responsibility and authority in regard to the Defence administration in India.

The Secretary of State's principal adviser on Indian military affairs is the Secretary in the Military Department of the India Office. The post is filled by a senior officer of the Indian Army with recent Indian experience. The Military Secretary is assisted by one first grade staff officer, selected from the Indian Army. In order that he may keep in touch with the current Indian affairs, the Military Secretary is expected to visit India during the tenure of his office. In addition, by a practice which had obtained for many years, a retired Indian Army officer of high rank used to have a seat upon the Secretary of State's Council, prior to its dissolution.

The superintendence, direction and control of the civil and military government of India are vested in the Governor-General in Council, who is required to pay due obedience to all such orders as he may receive from the Secretary of State. The Viceroy's Executive Council exercise in respect of Defence administration the same authority and functions as they exercise in respect of other departments of the Government, in the first phase of the representative institutions conferred upon India by the Montagu-Chelmsford Reforms Scheme. Defence expenditure and the direction of Defence policy have been excluded from the control of the Indian Legislature.

The Commander-in-Chief.—The next authority in the chain of administrative arrangements is His Excellency the Commander-in-Chief, who by custom is also the Defence Member of the Viceroy's Executive Council. The appointment is held by His Excellency General Sir Archibald Wavell, KCB, CMG, MC, who succeeded General Sir Claude Auchinleck in July 1941. He is also a member of the Council of State. All the work connected with the administration of Defence, the formulation and execution of the Defence policy of the Government of India, the responsibility for maintaining every branch of the Army, combatant and non-combatant, in a state of efficiency, and the supreme direction of any military operations based upon India are centred in one authority,—the Commander-in-Chief and Defence Member. In addition, he administers the Royal Indian Navy and the Air Forces in India.

The Defence Department.—The Department is administered by a Secretary who, like other Secretaries in the civil departments, is a Secretary to the Government of India as a whole, possessing the constitutional right of access to the Viceroy, he is also for the purposes of Sub-section 4, Section

26 of the Regimental Debts Act, 1893 (56 Vict. C. 5) and the Regulations made thereunder Secretary to the Government of India in the Military Department. He also exercises the powers vested in the Army Council by the Geneva Convention Act, -1911, so far as that Act applies to India under the Order in Council No: 1551 of 1918

The Defence Department deals with all army services proper, and also the administration of the Royal Indian Navy and the Air Forces in India, in so far as questions requiring the orders of the Government of India are concerned. It deals also with all questions connected with the administration of Ecclesiastical affairs. The Defence Department Secretariat has no direct relations with commanders of troops or the staffs of formations subordinate to Army Headquarters. It has continuous and intimate relations with Army Headquarters in all administration matters and is responsible for the administration of Cantonments, the estates of deceased officers and the compilation of the Indian Army List. The Army administration is represented in the Legislature by the Defence Member in the Council of State, and by the Defence Secretary in the Legislative Assembly.

Regular British Forces in India.

The British Armoured, Artillery and Infantry divisions of the army in India are units of the British service. No individual British service unit is located permanently in India. Units of the British Army are detailed for a tour of foreign service, of which the major part is as a rule spent in India. In the case of British Infantry battalions the system is that one battalion of a regiment is normally on home service while the other is overseas. This of course does not apply in war time. Various units of the Royal Armoured Corps also carry out tours of duty in India.

The Indian Army.

The Indian Army is divided into numerous arms of the service, in just the same way as the British Army.

The Indian Armoured Corps—Was formed from the Indian Cavalry Regiments, and many new Regiments have been raised. The Regiments are organised in a variety of ways, depending on their role. They are provided with heavy, medium and light tanks, armoured cars and carriers and trucks.

The Indian Artillery.—Is divided into a number of branches, the most famous of which is the Mountain Artillery. There is also Field Artillery, Anti-Tank Artillery, Anti-Aircraft Artillery and Coast Defence Artillery.

The Corps of Indian Engineers—Is normally divided into the Sapper and Miner groups and the Military Engineer Service. There are now many other branches, such as Bridging Units and Bomb Disposal Units. There are three Sapper and Miner groups. Queen Victoria's Own Madras Sappers and Miners, King George V's Own Bengal Sappers and Miners, The Royal Bombay Sappers and Miners.

The Indian Signal Corps—The Corps is organised on the same lines as a Sapper and Miner Corps, with headquarters for recruiting and training personnel, and detached field units for the various army formations. The head of the corps is the Signal Officer-in-Chief in the General Staff Branch at Army Headquarters. He acts as a technical adviser on questions connected with signals, and is also responsible for the technical inspection of all signal units. A chief signal officer with similar functions is attached to the headquarters of each Army Command. The British portion of the Corps has now been amalgamated with the Royal Corps of Signals.

The Indian Infantry—Is composed of a number of Regiments. They are—The 1st Punjab Regiment, The 2nd Punjab Regiment; The 4th Bombay Grenadiers, The 5th Mahratta Light Infantry, The 6th Rajputana Rifles, The 7th Rajput Regiment, The 8th Punjab Regiment, The 9th Jat Regiment, The 10th Baluch Regiment, The 11th Sikh Regiment, The 12th Frontier Force Regiment, The 13th Frontier Force Rifles, The 14th Punjab Regiment, The 15th Punjab Regiment, The 16th Punjab Regiment, The 17th Dogra Regiment, The 18th Royal Garhwal Rifles, The 19th Hyderabad Regiment, The Madras Regiment; The Assam Regiment, The Bihar Regiment, The Mahar Regiment, The Marhbi and Ramdasa Sikh Regiment and ten Regiments of Gurkha Rifles. The number of the Battalions in each Regiment varies and at present is increasing rapidly. The system of indianising certain Regiments has been abandoned and there are Indian Officers in every Battalion.

Royal Indian Army Service Corps.—The Royal Indian Army Service Corps is the counterpart of the Royal Army Service Corps of the British Army. It has developed from the Commissariat Department of an earlier period, and its immediate predecessor was the Supply and Transport Corps, by which name the service was known up to 1923. The Royal Indian Army Service Corps which is under the control of the Quartermaster-General, is constituted in three main branches, namely: (a) Supply, (b) Animal transport, and (c) Mechanical Transport.

Apart from units and vehicles employed in the conveyance of military stores, the mechanical transport service also provides motor ambulance convoys for hospitals and field medical units, and vehicles for other miscellaneous purposes.

The mechanical transport was taken over by the Royal Indian Army Service Corps in 1927. The Officers for the service were mainly drawn from the Royal Army Service Corps, and by transfers from both British and Indian units. The Royal Indian Army Service Corps has expanded during the war to many times its previous size.

Medical Services—The military medical services in India are composed of the following categories of personnel and subordinate organisations—

(a) Officers and other ranks of the Royal Army Medical Corps serving in India.

(b) Officers and other ranks of the Army Dental Corps

(c) Officers of the Indian Medical Service in military employment

(d) I. M. S. (Dental Branch) The Indian Medical Department, consisting of two branches, viz., (i) Assistant surgeons (B. C.) and (ii), Assistant surgeons (I. C.)

(e) Queen Alexandra's Imperial Military Nursing Service

(f) The Queen Alexandra's Military Nursing Service for India.

(g) The Indian Military Nursing Service.

(h) The Auxiliary Nursing Service The Indian Hospital Corps

Of these categories, the officers and men of the Royal Army Medical Corps and the Army Dental Corps, the assistant surgeons of the Indian Medical Department (B. C.) and the Queen Alexandra's Imperial Military Nursing Service and the Queen Alexandra's Military Nursing Service for India are primarily concerned with the medical care of British troops, while the officers of the Indian Medical Service, the assistant surgeons of the Indian Medical Department (I. C.) and the Indian Military Nursing Service are concerned, primarily, with the medical care of Indian troops. The Auxiliary Nursing Service and the Indian Hospital Corps serve both organisations.

Indian Army Ordnance Corps.—This Corps is the equivalent of the Royal Army Ordnance Corps in the British Army. It deals with the issue and repair of arms, ammunition clothing and equipment generally.

Veterinary Services in India.—The Veterinary services are responsible for the veterinary care, in peace and war, of animals of British troops, Indian cavalry and artillery, R. I. A. S. C. units, the remount department (excluding horse-breeding operations), etc. The veterinary services include: The establishment of Royal Army Veterinary Corps officers, serving on a tour of duty in India and those of the continuous service cadre. The establishment of warrant and non-commissioned officers, India Unattached List, and veterinary assistant surgeons of the Indian Army Veterinary Corps.

Educational Services.—The education of the army is under the control of the Army Educational Corps and of Indian officers borne supernumerary to the establishment of units of the Indian Army.

Military Farms Department.—This department, which is under the control of the Quartermaster-General consists of two branches—

(i) The military grass farms, which provide fodder for the army.

(ii) The military dairy farms, for the provision of dairy produce for hospitals, troops and families.

Frontier Militia and Levy Corps.—These forces are "Civil" troops, i.e., they are administered and paid by the Civil authorities and not by the Army. They are, however, officered by Officers of the Regular Indian Army. These forces were raised for duty on the North-West Frontier.

Air Forces in India.

The Air Forces in India are controlled by the Commander-in-Chief in India as part of the defence services of the Indian Empire. The Air Force budget is incorporated in the Defence Services Estimates. The Commander of the Air Force, the Air Officer Commanding, Air Forces in India, is an Air Marshal whose rank corresponds to that of a Lieutenant-General in the Army.

The headquarters of the Air Force is closely associated with Army Headquarters and is located with the latter at the seat of the Government of India. The Air Officer Commanding has a headquarters staff constituted in six branches, namely, air staff, personnel, technical, stores, medical and chief engineer. The system of staff organisation is similar to the staff system obtaining in the Army. Broadly speaking, the duties assigned to the divisions mentioned are those which are performed by the General Staff Branch, the Adjutant-General's and Military Secretary's branches, the Quartermaster-General's Branch, the Medical Directorate and the Engineer in Chief's branch respectively, of Army Headquarters.

The Royal Air Force Medical Services.—In India, as in the United Kingdom, the Air Force has a medical service of its own. Flying is carried out under conditions which differ widely from those on the ground. With the growth of aeronautics, therefore, it was found necessary to create a separate department of medical science whose functions, broadly stated, are to study the effect of flying upon the human constitution, both mental and physical, to study also the effects of different forms of illness and physical disability upon flying efficiency and to apply in practical form the results ascertained. The essential object in view is to save life by ensuring, so far as possible, that those who fly are physically and psychologically fit to do so. The Medical Administration is controlled by the Principal Medical Officer of the rank of Group Captain, on the staff of the Air Officer Commanding the Air Forces in India.

Indian Air Force.—This force came into existence on 8th October, 1932, the date on which the first batch of six Indian cadets, after receiving training at Cranwell, obtained commission as Pilot Officers. These officers are now serving with the Indian Air Force. The training of cadets for the Indian Air Force is undertaken in India on a large scale at the School of Air Force Technical Training in Ambala, which was started in November, 1939. It caters exclusively for the Indian Air Force and through it is now passing each month a constant flow of airmen from all parts of India.

The Indian Air Force has been in action on numerous occasions on the North-West Frontier, and has also been taking part in operations against the Japanese in Burma.

Indian Army Expansion.—The Government of India announced their decision, in June, 1940, to expand the Indian Army by an initial increase of 100,000 men, subsequent increases

to be governed by the military situation and the capacity of the authorities to equip those recruited. The 8 unit—or rather the 21 unit—complete Indianisation scheme was abandoned and the whole Indian Army is now being supplied with officers, Indian and European, wherever they can be obtained. Since then various other expansions have been announced and the total of India's armed forces now exceeds one million.

During 1940 the financial settlement with His Majesty's Government enabled the mobilization and development of India's resources for war to be expanded with the utmost rapidity and the cost to the Indian taxpayer, according to the Finance Member, represented no more than a fair charge to India for her own requirements. In addition to her contributions to the conduct of the war on many fronts, India reached the stage when virtual self-sufficiency in matters of local defence was no longer a distant dream. When the war began India's main assets were an enormous supply of man power and an abundance of raw materials. In the first twelve months of war she became a producer of a great range of manufactured stores.

Schemes for the expansion of the armed forces had to depend on the availability of supply both from the United Kingdom and other overseas sources and from the development of Indian industries, but by November 1940 the Finance Member was able to announce that the country was engaged in producing as a first step and in a comparatively short time an army of close upon half a million men of all arms, properly trained, equipped and mechanized according to modern standards.

Schools for advanced training in all branches of military knowledge and in the use of new weapons were vastly increased. The number of men undergoing instruction at the Armoured Fighting Vehicles School was by the end of 1940 more than five times what it was in August 1939. The Signals School had more than trebled its numbers. New officers' training institutions were formed and mechanical transport schools were on a tremendous scale for the training of men capable of driving and maintaining motor vehicles. Expansion in the training of Sapper and Miner and other technical troops was equally striking.

Recruitment for all arms proceeded steadily throughout the year and at a rapidly increasing tempo as the facilities for training and equipping the men increased. By the end of 1940 over 60,000 troops had proceeded overseas and over 100,000 men of all arms had joined the colours. Specialised ancillary troops raised and trained included railway construction companies, railway operating companies, engineering workshops, base depots for stores, field survey companies, bridging sections, excavating machinery establishments, signals units of all kinds, ordnance workshop companies and many other units. Expansion of the medical services was planned on the fullest scale and provision made for no less than 19 new general hospitals having in all no fewer than 200 sections. Casualty clearing stations, field ambulances, ambulance trains and hospital ships were also provided and equipped.

The Royal Indian Navy started from very much smaller beginnings than the Army. Its growth and development was even more striking. When war broke out provision for local naval defence was purely on a peace-time basis, but sloops of the Royal Indian Navy were quickly assisting the Royal Navy in Indian waters, and Indian ports and harbours were watched over by a large and growing fleet of minesweepers and anti-submarine patrol boats. More new sloops of the latest pattern were under construction in 1940 in the United Kingdom while powerful and well-armed minesweeping craft, corvettes and patrol boats were being built in Indian yards and overseas. With this expansion in the scale and activities of the Royal Indian Navy there was also a notable increase in the number of ratings of all classes, officers and warrant officers.

Difficulties to be overcome in the expansion of the air force were much greater than in the case of the other services. In addition to the expansion of the Indian Air Force, Coast Defence flights of the I A F Volunteer Reserve were established, and a scheme started for the training of 300 pilots and 2,000 mechanics to form a reserve for the air forces in India. Work in connection with the enlargement of aerodromes for the most modern types of aircraft proceeded rapidly. The expansion of the I A F is proceeding rapidly, the only factor being availability of training machines and instructors. The squadrons of the I A F are being equipped with the most modern machines.

The development of India's equipment position was phenomenally rapid. The basically important article in a mechanised army is the motor vehicle of various types, planned and adapted for military needs. Before the war India had something like 5,000. By the end of 1940 there were actually in service or on the way approximately 30,000 and by 1941 it was expected that these numbers would be doubled. Most of the difficulties in the way of producing a suitable armoured fighting vehicle in India have been successfully surmounted. Armour plate, which had never been produced in India before, was successfully manufactured during the year. A suitable type of chassis was selected by experts and plans were prepared for an output of something like 3,000 armoured fighting vehicles in 1941 for India's own requirements. With the successful harnessing of civil industry to the task of war production many new items of supply which had previously been imported from overseas, were produced and the country was by the beginning of 1941 in a position to produce far more than her requirements of many classes of lethal and ordnance stores as well as of clothing and other military equipment. The requirements of His Majesty's Government enabled Indian ordnance factories to be maintained at full blast. In the first 15 months of war over 100 million rounds of small arms ammunition were sent overseas and nearly 400,000 rounds of gun ammunition of various kinds. Large quantities of explosives were despatched. These included 100 tons of cordite and a quarter of a million detonators. India also sent overseas over 1,330,000 pairs of boots, 1,500,000 blankets, more than 10,000,000 yards of khaki drill; 1,200,000 cotton shirts and 2,500,000 pairs of socks.

The Auxiliary Force.

After the Great War, the question of universal training for European British subjects came up for consideration, and it was decided that in India, as elsewhere in the Empire, the adoption of compulsory military service would be undesirable. It was recognised, however, that India needed some adequate auxiliary force, if only on a voluntary basis, that could be trained to a fairly definite standard of efficiency; and in the result, an Act to constitute an Auxiliary Force for service in India was passed in 1920. Under this Act membership is limited to European British subjects, and the liability of members for training and service is clearly defined. Military training is graduated according to age, the more extended training being carried out by the younger members, the older members being obliged to go through a musketry course only. It was laid down that military service should be purely local. As the term of service that would be most suitable varies largely according to localities, the local military authorities, acting in consultation with the advisory committee of the Auxiliary Force area, were given the power of adjusting the form of training to suit local conditions.

To meet the emergency created by the present war a bill was introduced in Parliament by the Secretary of State for India in June 1940, empowering the Governor General to conscript European British subjects in India.

The Auxiliary Force comprises all branches of the service, cavalry, artillery, engineer, infantry—in which are included railway battalions,—machine gun companies, a Signal Company, and the Medical and Veterinary Corps. Units of the Auxiliary Force are under the command of the local military authority, and the latter has the power of calling them out for service locally in a case of emergency. Their role is to assist in home defence. Training is carried on throughout the year. Pay at a fixed rate is given for each day's training and, on completion of the scheduled period of annual training, every enrolled member of the force is entitled to a certain bonus. Men enroll in the Auxiliary Force for an indefinite period. An enrolled person is entitled to claim his discharge on the completion of four years' service or on attaining the age of 45 years. Till then he can only be discharged on the recommendation of the advisory committee of the area.

The duties connected with the Defence Light Sections at Calcutta, Bombay and Karachi are performed by the Field Companies R. E. (A. F. I.) at those stations, assisted by Indian ranks of Sapper and Miner Units.

Indian Territorial Force.

The Territorial Force is one of the several aspects of the Indianisation of the military services. The force is intended to cater, amongst other things, for the military aspirations of those classes of the population to whom military service has not hitherto been a hereditary profession. It is intended, at the same time, to be a second line to and a source of reinforcement for the regular Indian army. Member-

ship of the force for this latter reason carries with it a liability for something more than purely local service or home defence. It may, in certain circumstances, involve service overseas. The force is the direct successor of the Indian section of the Indian Defence Force created during the Great War. It has been modelled on the old militia in England. The essence of its scheme of organisation consists in training men by means of annual embodiment for a short period in successive years. By this means Indian Territorial Force units can be given sufficient preliminary training in peace to enable them, after a comparatively short period of intensive training, to take their place by the side of regular units in war.

Expansion Scheme—Indian Territorial Units have rendered meritorious service in connection with internal security and other duties since the outbreak of the present hostilities.

The force being primarily a peace-time organisation and not liable for service outside India in the absence of special legislation Government have decided to invite the territorials to volunteer for new regular units which are being formed, *inter alia* to provide representation in the Army for those classes and provinces which had remained unrepresented or not well represented in the Indian Army so far. There had been universal desire on the part of an overwhelming majority of territorials to join the Regular Army and this scheme should give all classes of people the opportunity to show their keenness for service and their worth for army service.

The scheme is purely voluntary without any element of compulsion and it is hoped, especially by the Commander in Chief, that response to it and its results will be such as to encourage the conversion of the entire Territorial Force into regular units. The present territorial units will continue their existence but only in skeleton otherwise for all practical purposes they will cease to exist during the present war. The scheme has been remarkably successful and the vast majority of Officers and men of the territorial units are now in Regular units.

An interesting feature of the scheme is the special provision for certain classes of Sikhs and Mahrattas not normally recruited to the Regular Army.

The Indian State Forces.

The Indian State Forces, formerly designated "Imperial Service Troops," consist of the military forces raised and maintained by the Rulers of Indian States at their own expense and for State service. It has been the custom in emergency for State troops to be lent to the Government of India, and the Government of India have on many occasions received military assistance of great value from this source. But the rendering of such aid is entirely at the discretion of the Ruling Princes and Chiefs. Government, on the other hand, provide permanently a staff of British officers, termed "Military Advisers and Assistant Military Advisers," to assist and advise the Ruling Princes in organising and training the troops of their States.

Officers.

There are three main categories of officers in the Indian Army, those holding the King's Commission, those holding Indian Commissions and those holding the Viceroy's Commission. The latter are all Indians, apart from the Gurkha officers of Gurkha battalions, and have a limited status and power of command, both of which are regulated by the Indian Army Act and the rules made thereunder.

King's Commissioned officers for the Indian Army are obtained from two main sources in peace time from among the cadets who pass through the Royal Military College, Sandhurst, and by the transfer to the Indian Army of officers belonging to British units. The former is the principal channel of recruitment, the latter being only resorted to when, owing to abnormal wastage or for some other special reason, requirements cannot be completed by means of cadets from Sandhurst. A third source is from among University candidates. When a cadet has qualified at Sandhurst and has received his commission, he becomes, in the first instance, an officer of the Unattached List, and is posted for a period of one year to a British battalion or regiment in India, where he receives a preliminary training in his military duties. At the end of the year, he is posted as a squadron or company officer to a regiment or battalion of the Indian Army. Administrative services and departments of the army draw their officers from combatant units, as it has hitherto been regarded as essential that every officer should, in the first instance, receive a thorough grounding in combatant duties, and acquired at first-hand an intimate knowledge of the requirements of the combatant arms.

The promotion in rank of King's commissioned officers of the Indian Army is regulated by a time-scale up to the rank of Lieutenant-Colonel but is subject also to certain professional examinations and tests being successfully passed. The rank of Lieutenant-Colonel is in normal course attained at 26 years' service; promotion beyond this rank is determined by selection.

Indian Officers.—One of the most momentous decisions of the Great War, so far as the Indian Army is concerned, was that which rendered Indians eligible to hold the King's commission in the army. King's commissions are obtainable by Indian gentlemen in peace time in three ways: (1) By Qualifying as a cadet through the Royal Military College, Sandhurst or the Royal Military Academy, Woolwich. Examinations used to be held twice a year in India for the selection of suitable candidates for admission. (2) By the selection of specially capable and deserving Indian officers or non-commissioned officers of Indian regiments promoted from the ranks or those appointed direct as jemadar. These receive their commissions after training at the Royal Military College or Academy as Cadets and qualifying in the usual way. (3) By the bestowal of honorary King's commissions on Indian officers who have rendered distinguished service, but whose age and lack of education preclude their being granted the full King's commission. The first two avenues of selection men-

tioned afford full opportunity to the Indian of satisfying a military ambition and of enjoying a military career on terms of absolute equality with the British officer, who, as a general rule, also enters the army by qualifying at Sandhurst or Woolwich. Until 1931, ten vacancies at Sandhurst and three at Woolwich were reserved annually for Indian cadets.

A further measure adopted by the Government was the establishment of the Prince of Wales's Royal Indian Military College at Dehra Dun, a Government institution for the preliminary education of Indians who desire to qualify for commissions in the Army through the Indian Military Academy, Dehra Dun.

Emergency War Commissions for Indians.—The present war has accelerated progress in this direction, and recruitment of Indians for emergency war commissions in the Indian Army is proceeding apace.

Indian Military Academy.—In order to train officers for the Indian Army of the future, the Indian Military Academy at Dehra Dun was opened in October 1932. It provides officers for all arms cavalry, infantry, artillery and signals. The first batch of officers passing out of the Academy received their commissions on the 1st February 1935.

A few years ago, how to improve the quality of candidates for the Indian Military Academy at Dehra Dun, was under consideration. A press note was issued by the Defence Department in October, 1936, in which the problem was examined in detail. It consisted of a memorandum which had been prepared on the subject by a Committee consisting of members of both Houses of the Central Legislature, and of a careful reply to this memorandum by the Commander-in-Chief, Sir Robert Cassels. The Committee was constituted as a result of a debate which took place in the Council of State, during which the present difficulty in obtaining candidates of the right type for the Academy had been discussed.

The members of the Committee prefaced their memorandum by stating in general terms that they did not agree with the policy being followed with regard to the Indianisation of the Army, since they thought that the process could be speeded up. They then made observations and suggestions on various points—as, for example, that the provision under certain conditions for a refund by parents of part of the cost of training young officers was too extensive; that more scholarships should be granted to cadets of the Academy by Local Governments; that the fees charged by the Academy should be reduced; that passage of the final examination of the Prince of Wales' Royal Indian Military College by students who did not gain admission to the Academy should entitle them to admission to the Universities; that the activities of the University Training Corps should be expanded; that more Indians should be admitted to the Staff College; and that the problems created by the disparities in age between British and Indian officers of similar rank should be favourably dealt with.

The Commander-in-Chief, in reply, expressed gratitude to the Committee for their work and for the studied moderation and reasonableness of their recommendations. Some of these recommendations he accepted, and he undertook that others would be fully and sympathetically considered. He asked the Committee not to expect startling results from the acceptance of certain of their recommendations, since the process of expanding the field of choice and improving the quality and quantity of the candidates for cadetships must inevitably be gradual, and depend largely on public opinion.

The King's Indian Orderly Officers—Since the earliest times Indian officers have been a link between Indian ranks and British officers. These Indian officers hold Viceroy's Commissions, as distinct from the King's Commissions held by British officers and Dehra Dun graduates. They are for the greater part promoted from the ranks. The highest rank is subadar-major in the infantry and artillery regiments, risaldar-major in the cavalry.

Their brilliant full-dress uniforms have one particularly distinctive decoration. The aiguillettes, or gold cords upon the shoulder, are made to a pattern chosen by Edward VII in 1903 for the King's Indian Orderly officers alone.

For this supreme honour, officers are hand-picked from all branches of the Indian Army, specially selected by the Commander-in-Chief himself.

Inheriting a record of service which dates back to the early days of the East India Company, long-serving Indian officers regard these four annual appointments as the supreme honour. The first Indian officers associated with the Sovereign were in command of detachments sent to London for Queen Victoria's Jubilees in 1887 and 1897. It was then realised that some personal link should be maintained between the King-Emperor and the Indian Army.

On January 1st, 1903, the Viceroy issued a General Order announcing certain favours and concessions to the Army in India in connection with Edward VII's Coronation, among them the annual appointment of Indian Orderly Officers.

Six Indian Orderly Officers were appointed in 1903, a number reduced to four in 1904. These four are appointed each year for the London season, from April to August. They attend the King at Courts and Levees, standing near the throne, at all reviews and at such ceremonies as Trooping the Colour. Upon these occasions they appear in full dress. For garden parties and similar engagements they are dressed in grey coats of knee length.

For their services in London, the Orderly Officers receive the Royal Victorian Medal, a souvenir of their supreme honour.

Army in India Reserve of Officers—Previous to the Great War there existed what was called the Indian Army Reserve of Officers, a body of trained officers available to replace casualties in the Indian Army. The war proved that for many reasons this reserve did not fully meet requirements and in 1922 the Army in India Reserve of Officers was constituted.

The revised Regulations for the A. I. R. O. published in 1934 provide that the following gentlemen may be granted commissions in the Reserve—

(1) Ex-Officers who, having held King's commissions in any Branch of His Majesty's British, Indian or Dominion Forces, either naval, military (including the Auxiliary Force (India) and Indian Territorial Force) Marine or Air, have retired therefrom and are no longer liable for service therein, and who are resident in India, Burma or Ceylon.

(2) Civil officials of gazetted status serving under the Government of India or a local Government, whose services can be spared in the event of general mobilization being ordered.

(3) Private gentlemen who are resident in India, Burma or Ceylon.

Ceylon Government officials are not eligible for appointment to the Army in India Reserve of Officers.

Applicants for Category-Medical (Includes Dental) must possess a qualification registrable in Great Britain and Ireland under the Medical Acts in force at the time of their appointment.

Dental applicants must possess a qualification registrable in Great Britain and Ireland under the Dentists Acts in force at the time of their appointment.

Applicants for Category-Veterinary must be in a possession of the diploma M.R.C.V.S.

The Fighting Races.—The fighting classes that contribute to the composition of the Indian Army have hitherto been drawn mainly from the north of India, but the experiences of the great war have caused some modifications in the opinions previously held as to the relative value of these and other fighting men. The numbers of the various castes and tribes enlisted in the Army have since the war undergone fluctuations, and it is not possible at present to give exact information as to their proportions. Various castes provide large numbers of recruits to the fighting services. The Sikhs, who inhabit the Punjab originated in a sect founded near Lahore by a peasant in the early part of the sixteenth century and in the course of a hundred years grew into a formidable militant power. Muhammadans of various races contribute a still larger proportion to both the cavalry and infantry. These are drawn both from the north and the south of India, as well as from beyond the Frontier. They are all excellent fighting men, hardy and warlike, who have furnished soldiers to all the great powers of India for many hundreds of years. As cavalry the Muhammadans are perhaps unequalled by any other race in the East, being good horsemen and expert men-at-arms.

Next in point of numbers are the Gurkhas of Nepal, of whom there are normally twenty complete battalions, which during the war have been considerably increased. As fighters in the hills they are unsurpassed even by the Pathans in the North-West Frontier, but the Garhwals and Kumaonis are equally good mountaineers.

The professional military caste of India from time immemorial has been the Rajput, inhabiting not only Rajputana but the United Provinces and Oudh. Of fine physique and martial bearing, these warriors of Hindustan formed the

* For a record of the services of the Indian Army in the War, see *The Indian Year Book*, 1920 on p 152, *et seq*

INDIAN SOLDIERS' BOARD.

The Indian Soldiers' Board is probably the most important and valuable non-official institution connected with the Indian Army. It was constituted on 7 February 1919, in place of the Central Recruiting Board, the purpose of which was fulfilled with the end of the last War. Its object was at the outset to deal with a number of post-war problems—the finding of employment for soldiers released from the colours, the grant of rewards to those who had rendered distinguished service, the relief of the dependents of those who had lost their lives in the war and of those who were incapacitated for further service, the education of soldiers' children and the safeguarding of the general interests of soldiers and their dependents, all matters demanding immediate and close attention. As years passed, the Board had gradually to adjust itself to normal peace conditions and it was decided to maintain it permanently for a series of duties which have from time to time expanded and developed.

The Board is composed of three members of H. E. the Viceroy's Executive Council nominated by H. E. the Viceroy, of whom one is President, H. E. the Governor of the Punjab, the Defence Secretary, the Adjutant-General in India and the Financial Adviser, Military Finance. An Under-Secretary in the Defence Department normally acts as Secretary to the Board, in addition to his other duties.

The Board has its seat at New Delhi/Simla and co-ordinates the activities of a large number of kindred organisations in the various areas from which the bulk of the Indian Army is recruited. Under the control of these Provincial Boards there exists throughout the country a network of subordinate organizations, including District Soldiers' Boards, Tehsil or Taluka Committees and other kindred bodies. There are Provincial Soldiers' Boards in Berar (C P), Bombay, Delhi, Kashmir North West Frontier Province Punjab, Rajputana and the United Provinces.

All District Soldiers' Boards were in 1931 put on a uniform footing, with the civil head of the District as President and a serving soldier as Military Vice-President. The latter was either a Recruiting Officer or an Indian Army Officer detailed by Army Headquarters—except in the North-West Frontier Province where the President was a soldier and the Vice-President a civilian. Five years' experience showed the organisation to need revision if it was to serve its purpose in the most efficient manner. It was found, for instance, that Boards in areas where recruitment had, temporarily at any rate, stopped began to decline in value through lack of attention and that the Military Vice-Presidents of Boards, mostly drawn from active battalions, could not maintain continuity of policy because of their frequent changes of station. Reorganisation was therefore undertaken in 1936. This was achieved without interference in the internal constitution of the Boards. To preserve continuity and provide constant supervision, it was decided to make Indian Infantry Training Battalions and similar units, which are not liable to changes of station, responsible for providing the Military Vice-Presidents for

the District Soldiers' Boards in their neighbourhood. At the same time full advantage was taken of the experience and influence of Recruiting Officers, who were appointed additional Vice-Presidents of District Soldiers' Boards in their Recruiting areas. Funds were made available for the allotment of travelling allowances to Military Vice-Presidents of Boards in the Punjab, U. P., Delhi, Bombay and the Central Provinces, to tour their districts or to sanction allowances to members touring on Soldiers' Board business.

The whole organisation shortly after its revision improved out of all recognition. The District Soldiers' Boards revived and the greatest importance is attached to an indirect result of this improvement, namely, the increase in the prestige of the ex-soldier among his fellow citizens and its enhancement, a fact particularly gratifying in those areas where recruitment is not now being carried on.

In May 1940, Army Headquarters appointed regimental officers as whole-time Deputy Military Vice-Presidents with the express object of frequently touring areas covered by a fixed number of District Soldiers' Boards. Three such officers were appointed for the Punjab and the North West Frontier Province. These were subsequently replaced by Civil Liaison Officers. In the other provinces four Deputy Military Vice-Presidents remain.

The following are the objects and duties of the District Soldiers' Boards:—

- (a) Constantly to endeavour to promote and maintain a feeling of good-will between the civilian and military classes,
- (b) To give all possible assistance to the President of the Board in his capacity as head of the district in all administrative matters connected with the ex-soldier or his family;
- (c) To demonstrate the benefit of and to promote the desire for mutual co-operation between ex-soldiers and civilian officials,
- (d) To represent and explain to the civil authorities all matters of particular moment to ex-soldiers that require the attention of the local administration,
- (e) Generally to watch over the welfare of the ex-soldier and his family, and the interests of serving soldiers absent with their units.

As regards item (e), quoted above, the function of the Board and corresponding organisations cover a wide range and some of their main tasks are enumerated below:—

- (a) To circulate information regarding the educational concessions available for soldiers' children;
- (b) To communicate information regarding employment, facilities for training for civilian vocations and concessions open to discharged men, and to maintain registers of ex-soldiers desirous of obtaining employment,

- (c) To ascertain and intimate the whereabouts of an absent soldier to his dependents and to communicate to him news of all important matters affecting his family's welfare;
- (d) To procure legal advice in the case of a law suit against an absent soldier where there is no male member of his family capable of protecting his interests;
- (e) To assist an absent soldier's family in the event of disease or famine;
- (f) To assist ex-soldiers and their dependents in securing medals, pensions, arrears of pay, etc.;
- (g) To keep a watch on the adequacy of the number of pension-paying branch post offices, especially in hilly districts, and, if and when there is a need for more such offices, to bring the fact to notice;
- (h) To investigate cases of ex-soldiers invalided out of the Indian Army for chronic diseases such as tuberculosis, leprosy, diabetes, etc., and to report them to the Provincial Branch of the Indian Red Cross Society for medical assistance;
- (i) To investigate applications for relief from the various military charitable funds.

Another leading development has been the institution of the "Welfare Scheme," the foundation of which is the network of District Soldiers' Boards, etc., acting under the orders of Provincial Soldiers' Boards, which have been created in all areas from which the Indian Army obtains recruits in any number for the purpose of ensuring that the home interests of Indian soldiers and their dependents are specially looked after. The Board in 1936 allotted as an experimental measure Rs 10,000 a year for three years for the promotion of schemes of Rural

Reconstruction in military villages in the Punjab. The third and final grant of Rs 10,000 was paid in 1939.

One of the most important functions of the Provincial and District Soldiers' Boards is to find employment for ex-soldiers. The Government of India and Local Governments and Administrations have accepted the principle that preferential treatment should be accorded to ex-soldiers in this respect and as a result employment under Government was found for 85,512 individuals between the years 1922 and 1939. The Board especially appeals to private employers to assist as far as they can by engaging ex-soldiers. The Recruiting Officers at Delhi, Rawalpindi, Lahore, Jullundur, Lucknow, Ajmer, Poona, Peshawar and Kohat and the Secretary of the Indian Ex-Soldiers' Employment Bureau, Esplanade Maidan, Bombay, can supply reliable Indian ex-soldiers for most kinds of civil employment, especially guards of all descriptions, motor drivers, peons, chaprasis, drill and physical training instructors, roughriders and polo orderlies (Personal servants cannot be supplied). Applications should be sent to any of the above officers. Employers should, when applying for labour, furnish particulars as to wages, quarters, etc., and state the length of time the appointment can be held open. The various district soldiers' boards also maintain lists of reliable ex-soldiers desirous of employment in their own districts. In their case applications should be sent to the Secretary of the Board.

The Board on 31 December 1922 had the residue of the war fund, known as the Imperial Indian War Relief Fund, handed over to it. This formed the nucleus of its finances. The latter have since been husbanded with great success. The face value of the securities constituting the fund amounted on 31 March 1941 to Rs 17,11,200, bearing an annual interest of Rs 59,892.

THE VICTORIA CROSS.

The announcement, made at the Delhi Durbar in 1911, that in future Indians would be eligible for the Victoria Cross, gave satisfaction which was increased during the War and afterwards by the award of that decoration to the following—

Subadar (then Sepoy) Khudadad Khan, 129th Baluchis—On 31st October 1914, at Hollebeke, Belgium, the British Officer in charge of the detachment having been wounded, and the other gun put out of action by a shell, Sepoy Khudadad, though himself wounded, remained working his gun until all the other five men of the gun detachment had been killed.

Naik Darwan Sing Negi, 1-30th Garhwal Rifles—For great gallantry on the night of the 23rd-24th November, 1914 near Festubert, France, when the Regiment was engaged in retaking and clearing the enemy out of our trenches and, although wounded in two places in the head, and also in the arm, being one of the first to push round each successive traverse, in the face of severe fire from bombs and rifles at the closest range.

Subadar (then Jamadar) Mir Dast, 55th Coke's Rifles.—For most conspicuous

bravery and great ability at Ypres on 26th April 1915, when he led his platoon with great gallantry during the attack, and afterwards collected various parties of the Regiment (when no British Officers were left) and kept them under his command until the retirement was ordered. Jamadar Mir Dast subsequently on this day displayed remarkable courage in helping to carry eight British and Indian Officers into safety, whilst exposed to very heavy fire.

Rifleman Kulbir Thapa, 23rd Gurkha Rifles—For most conspicuous bravery during operations against the German trenches south of Mauquissart. When himself wounded, on the 25th September 1915, he found a badly wounded soldier of the 2nd Leicestershire Regiment behind the first line German trench, and though urged by the British soldier to save himself, he remained with him all day and night. In the early morning of the 26th September, in misty weather, he brought him out through the German wire, and, leaving him in a place of comparative safety, returned and brought in two wounded Gurkhas one after the other. He then

280

went back in broad daylight for the British soldier and brought him in also, carrying him most of the way and being at most points under the enemy's fire.

Lance-Naik Lala, 41st

Officer C

Havildar (then Lance-Naik) Lala, 41st
 Dogas—Finding a British Officer of
 another regiment lying close to the enemy,
 he dragged him into a temporary shelter which
 he himself had made, and in which he had
 already bandaged four wounded men. After
 bandaging his wounds he heard calls from the
 Adjutant of his own Regiment who was lying
 in the open severely wounded. The enemy
 were not more than one hundred yards distant,
 and it seemed certain death to go out in that
 direction, but Lance-Naik Lala insisted on
 going out to his Adjutant, and offered to crawl
 back with him on his back at once. When
 this was not permitted, he slipped off his own
 clothing to keep the wounded officer warmer
 and stayed with him till just before dark when
 he returned to the shelter. After dark he carried
 the first wounded officer back to the main
 trenches, and then, returning with a stretcher,
 carried back his Adjutant. He set a magni-
 ficent example of courage and devotion to his
 officers.

Sepoy Chattha Singh, 9th Bhawal Infantry.—For most conspicuous bravery and devotion to duty in leaving cover to assist his Commanding Officer who was lying wounded and helpless in the open. Sepoy Chattha Singh bound up the officer's wound and then dug cover for him with his entrenching tool, being exposed all the time to very heavy rifle fire. For five hours until daylight he remained beside the wounded officer shielding him with his own body on the exposed side. He then under cover of darkness, went back for assistance and brought the officer into safety.

Narik Shahamad Khan, 56th Punjab.—For most conspicuous bravery. He was in charge of a machine-gun section in an exposed position in front of and covering a gap in our left line within 150 yards of the enemy's entrenchment. He beat off three counter-attacks, and worked his gun single-handed after all his men, except two belt-feeders, had become casualties. For three hours he held the gap under very heavy fire while it was being made secure. When his gun was knocked out by hostile fire he and his two belt-feeders held their ground with rifles till ordered to withdraw. With three men sent to assist him he then brought back his gun ammunition, and one severely wounded man unable to walk. Finally, he himself remained and removed all remaining arms and equipment except two shotels. But for his great gallantry and determination our line must have been penetrated by the enemy.

Lance-Defender Govind Singh, 28th Cavalry —
For most conspicuous bravery and devotion
to duty in thirce volunteering to carry messages
between the regiment and brigade head-
quarters, a distance of 14 miles over open ground,
which was under the observation and heavy fire
of the enemy. He succeeded each time in deli-
vering his message although on each occasion
his horse was shot, and he was compelled to
finish the journey on foot.

Rifleman Karan Babadur Raza, 5th Gurkha Rifles.—For conspicuous bravery and resource in action under adverse conditions and utter contempt of danger during an attack. He with a few other men succeeded, under intense fire, in creeping forward with a Lewis gun in order to engage an enemy machine gun which had caused severe casualties to officers and other ranks who had attempted to put it out of action. No 1 of the Lewis gun party opened fire and was shot immediately. Without a moment's hesitation Rifleman Karan Babadur pushed the dead man off the gun, and in spite of bombs thrown at him and heavy fire from both flanks, he opened fire and knocked out the enemy machine gun crew. Then switching his fire on the enemy bunker and riflemen in front of him, he silenced their fire. He kept his gun in action, and showed the greatest coolness in removing debris with his hands, twice prevented the gun from firing. He did magnificent work during the remainder of the day, and when a withdrawal was ordered, assisted with covering fire until the enemy was close to him. He displayed throughout a very high standard of valour and devotion to duty.

Risaldar Badlu Singh, 14th Lancers, attached 29th Lancers.—For most conspicuous bravery and self-sacrifice on the morning of the 23rd September 1918, when his squadron charged a strong enemy position on the west bank of the River Jordan. On reaching the position Risaldar Badlu Singh realised that the squadron was suffering casualties from a small hill on the left front occupied by machine guns and 200 infantry. Without the slightest hesitation he collected six other ranks and with the greatest dash and at entire disregard of danger charged and captured the position, thereby saving very heavy casualties to the squadron. He was mortally wounded on the very top of the hill when continuing on the machine guns single-handed, but all the machine guns and infantry had surrendered to him before he died. His valour and distinction were of the highest order.

Rifleman Gobard Sing Negi, 2nd Battalion 29th Garhwal Rifles.—For most conspicuous bravery on 10th March 1915 at Neuve Chapelle. During an attack on the German position he was one of a bayonet party with bombs and entered their main trench, and was the first man to go round each traverse, driving the enemy until they were eventually forced to surrender. He was killed during this engagement.

Sepoy (Now Subadar Major and Honorary Captain) Ishar Singh, 25th Purbajah, devotion and bravery "quite beyond praise" in Waziristan on 10th April, 1921. He received a severe gunshot wound in the chest while serving a Lewis gun, and when all the havildars had been killed or disabled he managed to his feet, called to his assistance two men and charged and recovered the gun, returned it to action. He refused medical attention, insisting first on pointing out where the other wounded were and on carrying water to them. While the medical man was attending to these wounded he shielded them with his body and he submitted to medical attention himself only after he was exhausted through three hours continual effort and by loss of blood.

2nd-Lieut. Premidra Singh Bhagat, Royal Bombay Sappers and Miners January 1941
For courage and endurance while clearing mines from the road during the advance from Gallabat into Abyssinia

Subadar Richpal Bam, 6th Rajputana Rifles, posthumous award February 1941
For the greatest gallantry in leading his Company during the attacks in the Acqua Column at Keren on 7th and 12th February.

Up to the end of March 1942, the following awards have been made to the Indian Army for services in action during the war —

Victoria Cross	3
Distinguished Service Order	26
Military Cross	53
Distinguished Service Cross	2
Indian Order of Merit (2nd Class)	63
Indian Distinguished Service Medal	152

ROYAL INDIAN NAVY.

The Royal Indian Navy traces its origin so far back as 1612 when the East India Company stationed at Surat found that it was necessary to provide themselves with armed vessels to protect their commerce and settlements from the Dutch or Portuguese and from the pirates who infested the Indian coasts. The first two ships, the Dragon and Hoseander (or Oslander), were despatched from England in 1612 under Captain Best, and since those days under slightly varying titles and of various strengths the Government in India have always maintained a sea service.

The periods and titles have been as follows—

Hon. E. I. Co.'s Marine	..	1612—1686
Bombay	..	1686—1830
Indian Navy	..	1830—1863
Bombay Marine	..	1863—1877
H. M. Indian Marine	..	1877—1892
Royal Indian Marine	..	1892—1934
Royal Indian Navy	..	1934.

India's Naval Force has always been most closely connected with Bombay, and in 1668 when the E. India Co. took over Bombay, Captain Young of the Marine was appointed Deputy Governor. From then until 1877 the Marine was under the Government of Bombay, and although from that date all the Marine Establishments were amalgamated into an Imperial Marine under the Government of India, Bombay has continued to be the port in which Indian Naval activity is chiefly centred. In the winter of 1940-41 Naval Headquarters moved to New Delhi.

During the War 1914-1918 Royal Indian Marine Officers were employed on many and various duties. Royal Indian Marine Ships "DUFFERIN," "HARDINGE," "NORTHBROOK," "LAWRENCE," "DALHOUSIE" and "MINTO" served as Auxiliary Cruisers. Officers also served in the Royal Navy in the Grand Fleet, Mediterranean, North Sea, North Red Sea and Caspian Sea Fleets.

In addition to transport duties in Indian Ports, Officers were sent to Marseilles, East Africa and Egypt for such duties, and on the entry of Turkey into the War were employed on duties towing and manning River Craft and Barges to and in Mesopotamia, and it was

necessary to enlist a number of Temporary Officers, Warrant Officers and men to the numbers of approximately 240, 60 and 2,000 respectively for these and other duties.

Reorganisation Schemes—After the War the Government of India asked Admiral of the Fleet, Lord Jellicoe, who was visiting India, to draw up a scheme for the reorganisation of the Service. His valuable suggestions were unfortunately too ambitious for Indian finances and could not be accepted.

Shortly afterwards the Esher Committee arrived in India to report on the Indian Army and although the R. I. M. was not included in their terms of reference, they strongly recommended that the R. I. M. should be reorganised as a combatant service. The Government of India in 1920 obtained from the Admiralty the services of Rear-Admiral Mawby as Director, R. I. M., to draw up a scheme of reorganisation within limited lines. His scheme, however, was not adopted, and Admiral Mawby resigned his appointment.

The R. I. M. then fell upon hard times; money was scarce, the report of the Inchcape Committee necessitated drastic retrenchments, and the working of the Montagu-Chelmsford reforms resulted in the Local Governments having to defray the cost of the work of R. I. M. ships on their various stations, on lighthouse duties, transport work, carrying of officials, etc. The Local Governments were naturally inclined to think that if they had to pay they would like to have a say in the management, and that if the work could be done cheaper locally, they should arrange to carry out the duties themselves. Further, the Inchcape Committee recommended that the three large troopships should be scrapped and all troopship carried out under contract, which would have left the Marine with only the Survey Department and the Bombay Dockyard.

A Combatant Service.—Happily for the Service, however, the Government of India in 1925 appointed a Departmental Committee under the Chairmanship of General Lord Rawlinson, in his capacity of Minister of Defence and Member of Council in charge of the Marine Portfolio, to submit a scheme for the reorganisation of the Service as a combatant force. This Committee recommended that the Service should be reorganised as a purely combatant Naval Service with the title of Royal Indian Navy, with a strength in the first instance of

Royal Indian Navy.

4 armed sloops, 2 patrol vessels, 4 mine-sweeping trawlers, 2 surveying ships and a depot ship, the Service in the first instance to be commanded by a Rear-Admiral on the active list in the Royal Navy. The scheme was accepted by the Indian and Home Governments, and the necessary Act to permit India to maintain a Navy was passed through both Houses of Parliament.

To effect this change in the title, it was necessary to draw up a new Indian Naval Discipline Act and this had to be passed through the Assembly and Council of State in India.

In February 1928, the Bill was introduced but failed to pass in the Assembly by a narrow margin of one vote. In February 1931, the Bill was re-introduced to the Assembly with certain minor amendments but in response to a plea for circulation, the Government circulated the Bill.

In August, the Bill was re-introduced and passed by the Assembly and Council of State. On 2nd October 1931 the Royal Indian Navy was inaugurated, the historic ceremony taking place in Bombay.

The Royal Indian Marine which had rendered sterling service to India and the Empire in peace and war then ceased to exist.

The Royal Indian Navy which has been evolved from the late Royal Indian Marine is one of the Empire's Naval Forces and is under the command of a Flag Officer of the Royal Navy.

The Chatfield Committee's report presented in February 1939 made far-reaching recommendations in regard to the Royal Indian Navy as well as other branches of the armed forces. Shortly before the war permission was given for the establishment of the Royal Indian Naval Reserve and the Royal Indian Naval Volunteer Reserve. With the outbreak of hostilities a large-scale programme for expanding the R.I.N. was taken in hand and in the past 21 years the increase in the number of ships, training establishments and personnel has been rapid.

Already in 1940 a senior boys' training establishment, H.M.I.S. BAHADUR, had been started at Karachi. In February 1942 a similar establishment for junior boys aged 14 to 15, H.M.I.S. DILAWAR, was opened in the same town. Boys who have completed their training in DILAWAR enter BAHADUR to which there is also direct entry from civil life.

Most of the men however enter the Navy as "special service ratings", enlisting for five years or less as sufficient for Active Service and thereafter being transferred to the Royal Indian Fleet Reserve for a further five years. They are trained in H.M.I.S. DALHOUSIE. So are Officers of the Reserves those belonging to the Executive Branch taking short but intensive

courses in seamanship, gunnery, signals, and other subjects. Part of this early instructional period is spent at sea. Having completed their training Reserve Officers are posted for service afloat. Those who have shown aptitude in a special subject may be brought back for a "long course" in it thus becoming specialist officers. There are also special courses for Reserve Officers of the Engineer and Accountant Branches.

For officers of the permanent commission a cadre as distinct from the Reserves a limited number of vacancies continue to be filled at examinations held by the Federal Public Service Commission. These "regular" officers as they are called, are as in the past trained in the United Kingdom.

A Mechanical Training Establishment was opened in 1938 for the instruction of engine room ratings. Men for the Communication Branch learn their work in the Signal School which has been greatly expanded, while ratings in the Seaman Branch qualify as gunners and for anti-submarine defence in the Gunnery and Anti-Submarine Schools respectively. In these three schools Reserve Officers are also instructed.

The growth in the number of the R.I.N. has been remarkable. On the outbreak of war a large programme of construction was initiated, the result has been a striking stimulus to the Indian shipbuilding industry. A large number of ships and small craft have already been completed, and many more are on the stocks. In July 1941 was launched H.M.I.S. TRAVIS CORE, the first vessel for the Royal Indian Navy to be built in Indian yards followed in October by H.M.I.S. BAPODA. Ships of this class are admirably fitted for minesweeping and patrol duties. Naval construction for India is also in progress in the United Kingdom and Australia. Two ships completed in the British Isles H.M.I.S. JYMSA and STILEY, have already seen much service in the Battle of the Atlantic and in Eastern waters, the JYMSA in particular destroying four Japanese bombers and the Dutch East Indies.

Ships of the Royal Indian Navy have played their part in widely separated theatres of war since September 1939. Some of them took part in the operations that led to the downfall of the Italian Empire in East Africa taking part in the reoccupation of Berbera and the capture of Massawa. During the brief campaign that followed Nazi intrigues in Iran the Royal Indian Navy helped to convoy troops support the shore and seize German and Italian vessels. When Japan entered the war, R.I.N. escorted convoys and fought hostile aircraft in Far Eastern waters and later during the Burma campaign. Along the Indian coast they have been active in patrol escort duties and in

Agriculture.

The agriculture of the sub-continent of India, with its wide range of physical and climatological conditions, varies considerably in character and scope. There is scarcely any cultivated crop of the temperate, sub-temperate or tropical zones which cannot be grown in some part of this vast country from the warm, humid coastlands to the perennially temperate altitudes of its mountain ranges. Even in the plains, the cultivation of the common crops of temperate countries is practised during the cold weather season while more truly tropical crops are grown in the same areas during summer. Further variations in agricultural practice are to be found in the irrigated and non-irrigated tracts.

The total area of culturable land in India, excluding Burma, is about 353 million acres, which is exclusive of a forest area of approximately 68 million acres. The total gross cropped area, sown annually, is roughly 245 million acres. Of this vast area, 187 million acres are under cereal and pulse crops of all kinds which supply food and fodder for India's human population of 388 million and her animal population of 380 million head of cattle, sheep and goats.

In Indian agriculture, the dominant climatological factor is the monsoon and, in most parts of the country, the total annual rainfall is precipitated between the months of June and October. The winter and early summer months are generally dry and high temperatures prevail in the months of March to June, prior to the break of the monsoon rains. Thus the agricultural season is naturally divided into two main subdivisions, the Kharif season of the monsoon and the Rabi season of the cold weather. Each of these seasons has its own distinctive crops. The greater part of the Indo-Gangetic plain and the northern tracts of the Peninsula are served by the main monsoon which falls between June and October. During these months the average rainfall for the whole of India is about 40 inches, varying from 15 (or less) to 50 inches in the main cultivated tracts. Rainfall in the cold weather season between December and March is generally not more than 2 to 4 inches. In the south of India, which includes most of the Madras Province and the bulk of the territories of the two large Indian States of Hyderabad and Mysore, the climatic and rainfall conditions are different. The bulk of the rainfall in this area is received from the North-East monsoon and falls during the period October to February. Conditions are more truly tropical, especially on the West coast and the sub-division of the agricultural season into Kharif and Rabi can hardly be said to exist.

In South India, rice and millets are the main food crops. Rice, millets, maize, hot weather pulses and oilseeds are the principal food crops of the monsoon season, in the northern parts of the Peninsula, with cotton, jute and groundnuts as the main cash crops. Sugarcane is grown as a whole year crop in both North and South India.

Soils.—Four main soil groups can be recognised in India, viz., (1) the red soils derived from rocks of the Archaean system which characterise Madras, Mysore and the South-East of Bombay and extend through the East of Hyderabad and the Central Provinces to Orissa, Chota Nagpur and the South of Bengal. (2) The black cotton or *regur* soils which overlie the Deccan trap and cover the greater part of Bombay, Berar and the Western parts of the Central Provinces and Hyderabad with extensions into Central India and Bundelkhand. The Madras *regur* soils though less typical are also important. (3) The great alluvial plains, agriculturally the most important tract in India as well as the most extensive, mainly the Indo-Gangetic Plain embracing Sind, northern Rajputana, most of the Punjab, the plains of the United Provinces, most of Bihar and Bengal and half of Assam. (4) The laterite soils which form a belt round the Peninsula and extend through East Bengal into Assam and Burma.

The great alluvial plains are characterised by ease of cultivation and rapid response to irrigation and manuring, broadly speaking there are few soils in the world more suited to intensive agriculture so long as the water supply is assured. The other soils are less tractable and call for greater skill in management and are less adapted to small holdings, of these the *regur* soils are the most valuable.

The increasing demands on the land from a constantly rising population have called forth greater attention to the question of a more effective land utilization. A considerable amount of scientific work is thus being done on all these groups to a greater or lesser extent throughout the country, both as regards their classification as well as their crop producing power. Of particular interest is the examination of land with reference to the introduction of specialised farming with new and often complicated systems of cropping. Soil studies have been given a new orientation and have received fresh stimulus due to the concept of the "soil-profile" or entire vertical cut of the soil being taken as the unit of study instead of the superficial layer supporting vegetation. A notable instance of such work is the recent classification of the black cotton soils of the Bombay Canals and the investigations regarding their suitability for sugarcane growing. The work has revealed that some of the *regur* soils are highly suitable for such intensive farming practice. However, in Bombay Province, recent scientific work done on *chopan* soils has shown that, within a certain limit of alkalinity and with proper precautions, these soils are capable of being successfully utilized for sugarcane growing without any artificial reclamation. In fact, cane growing itself has a beneficial effect of improving such soils.

In addition to the four main groups of Indian soils mentioned above, the desert soils of India occupy a large tract in Eastern Sind extending over the whole length of that Province, along the edge of the Indus alluvium, Rajputana and

the South Punjab of which the Thar a Rajputana desert alone occupies an area of 40,000 square miles. The sands of these deserts are mainly derived, according to Blandford, from the old sea coast and the transport of the sand into the interior of the country is due to the South-west wind. Alkali soils also form an important group of Indian soils which are known as *reh* or *usar* in the United Provinces, *lalar* in Sind, *rahhlar* and *thur* in the Punjab and *chopan* or *kari* in Bombay Province. Such soils are characterised by a high degree of impermeability and "stickiness" together with high alkalinity and frequent presence of large excess of free salts. They are usually poor in nitrogen and humus and unsuitable for crop growing without previous reclamation. Additional knowledge has recently been acquired regarding the soils of India as a result of investigations conducted in the United Provinces and Bengal. The cultivated soils of the Kumaun Hills, mainly under orchard cultivation, have been shown to belong to the well-known "brown earth" group and considerable new information is now available regarding the characteristic "pan" formation in the coastal soils of Bengal.

AGRICULTURAL EQUIPMENT.

Finance.—In India, farming is carried on with the minimum of capital and there is practically no outlay on buildings, fencing and agricultural machinery. The cultivators are for the most part illiterate and agricultural indebtedness is high and rates of interest on loans are heavy. During the past twenty years, very much progress has been made by the co-operative credit movement in many Provinces. In recent years of depressed agricultural prices however, it has been found necessary to supplement co-operative credit by the development of non-credit activities, e.g., purchase and sale societies, "better-farming" societies, etc. Such societies have proved of great value to the cultivators and, in combination with measures for debt redemption, etc., will contribute largely to improvement in the economic condition of the agriculturists.

Livestock.—Practically all cultivation in India is done by bullocks and the efficiency and capacity of these in different districts varies considerably. The best types in common use are capable of handling what would be considered as light single horse implements in Europe. Bullock power is also used for raising water from wells for field irrigation, for driving the chaffcutter and the sugarcane crusher and for treading out the grain in the threshing yard. Although in many districts the bullock cart is rapidly being supplanted by the motor-bus as the commonest means of human transport, the great bulk of agricultural produce is still taken to market in bullock carts. In general, the Indian cultivator cares well for his draught bullocks which, in most cases, constitute the most important part of his moveable property.

Implements.—In general, cultivating implements are few and simple and remarkably well suited for the tillage operations for which they have been evolved. The ploughs are usually of wood, tipped with an iron or steel point, and stir rather than invert the soil. Iron ploughs are also extensively used in some

districts but the demand has decreased on account of recent agricultural depression and the consequent decline in the prices of agricultural produce. A heavy wooden beam is commonly employed to serve the combined purposes of roller, clod-crusher and soil-compactor. In the black cotton soil areas, the *balhar*, a simple type of broad-bladed harrow, is in general use. In many Provinces, seed drills or seed tubes are utilised for drilling the crops in rows to facilitate inter-cultivation. In less advanced tracts, the seed is merely broadcast and ploughed into the soil. There is a great variety of hand implements to be found throughout the country, most of which are simple, cheap and efficient under local conditions. Practically no harvesting machinery is in use, the crops being cut and gathered by hand and threshed—in the case of grain crops—under the feet of bullocks. Cereal crops are winnowed by the agency of the wind although cheap mechanical winnowing machines, designed by agricultural engineers, are receiving attention from the more advanced cultivators. With reference to the introduction of improved agricultural implements, this work is now being largely done by private business and agencies which are extending rapidly in the rural areas. In 1937-38, however, it is calculated that over 22,500 improved ploughs, 28,000 fodder cutters, 2,300 iron cane mills and 20,500 other types of better implements and a very large number of spare parts were sold to cultivators through the agency of Government Agricultural Departments in British India and Indian States. Work on mechanical cultivation is still largely in an experimental stage though tractor ploughing has proved very effective in the eradication of deep-rooted weeds in the United Provinces, Bombay and certain Indian States. One notable development of recent years in connection with agricultural implements is the large extent to which improved types are now being manufactured and sold by village craftsmen.

Cultivation and Tillage.—The improvement of the ordinary cultivation and tillage methods in common use in India offers by far the widest field for increasing the yields of field crops and, consequently, the profits of the agriculturists. In many parts of India, cultivation is decidedly good but, particularly in the non-irrigated tracts and in areas liable to failure of rainfall, there is much room for improvement. In this connection, the research work on dry-farming methods, which is being conducted in Bombay, Madras and Hyderabad under the auspices of the Imperial Council of Agricultural Research, is of very great importance.

Two economic factors which tend to keep down the standard of cultivation in many Provinces of India are the fragmentation and sub-division of holdings, resulting from Indian laws of inheritance, and certain systems of land tenure whereby the cultivator, as a tenant, has no interest in permanent improvement of his holding. In addition, the agriculturists rarely live on their lands but congregate in villages for mutual protection. Efforts are now being made in many Provinces to eliminate these factors, which contribute to a low standard of cultivation, but progress in this direction must necessarily be slow.

The main object of tillage methods for *rabi*, *i.e.*, cold-weather, crops is the conservation of soil moisture and the preparation of a good seed-bed to ensure germination of seed. To achieve these objects, the land is given repeated shallow ploughings or harrowings, which produce a surface mulch over a moist sub-soil. For *kharif*, *i.e.*, hot-weather, crops, the preliminary cultivation of the fields is usually much less thorough as sowings must commence as soon as the rains break. The practice of drilling the crops in rows is rapidly supplanting the old method of broadcasting in many tracts. The former method permits the intercultivation of the crops by bullock implements and greatly reduces the cost of weeding. Harvesting is generally done by hand implements, *e.g.*, the sickle, and very little wastage occurs in the processes. The work of the Agricultural Departments in India in connection with the improvement of cultivation and tillage is largely concentrated upon (a) the demonstration of better methods on the actual lands of the cultivators and (b) research work on the improvement of indigenous agricultural implements and the distribution and extension of such improved types in the rural areas. The use of tractor outfits for mechanical cultivation is still largely limited to large estates and, in certain tracts, to such specific purposes as the eradication of deep-rooted weeds, where the work is done on a contract basis by private agencies.

Irrigation—The chief characteristics of the Indian rainfall are its unequal distribution throughout the country, seasonal irregularity of precipitation and liability to failure or partial deficiency in many tracts. The average annual rainfall for the whole country is about 45 inches and there is little variation from this average from year to year. But, within individual tracts, remarkably wide variations in total annual rainfall are found. At many recording stations, annual rainfall of less than half the average precipitation are not uncommon, and in cases of extreme drought, less than one quarter of average rainfall has been recorded in precarious tracts. Such tracts include practically the whole of the Punjab and North-West Frontier Province, the United Provinces except the sub-montane regions, Sind, a large portion of Bihar, most of Madras and the Bombay Province, omitting the coastal belts, and portions of the Central Provinces. The concentration of the principal rainfall in less than a third of the year, which is not the sowing period of the *rabi* crops, places a very definite limit on the yield which can be obtained from the principal cereal crops. Some other crops, *e.g.*, sugarcane, can hardly be grown without supplementary watering. With adequate irrigation the yield from the principal grain crops in Northern India is doubled even in areas where the monsoon is generous, whilst in the great canal colonies and in Sind, barren desert has become fertile land. The Indian canal system (excluding Burma) is by far the largest in the world. Of the total cultivated area of 246 million acres, about 55 million acres are irrigated annually from one source or another. Of this huge area, 29 million acres are irrigated by canals, 13½ million acres by wells and 12 million acres from tanks and other sources. In 1937-38, the total length

of the main and branch canals and distributaries amounted to some 73,130 miles irrigating an area of over 40 million acres. The protective effect of the canals in many areas is no less important than the enhanced yield. Protective irrigation works have made agriculture stable instead of precarious in many districts. The Indian canals are of two types—perennial and inundation—and the trend of irrigation practice is to replace the latter by the former wherever possible. The great perennial canals in the North of India draw their supply from snow-fed rivers; the inundation canals run only when the rivers rise with the melting of the snow in April-May and must close when supplies fall at the end of the monsoon. Other canals depend for their supply during the dry part of the year on water stored behind great dams thrown across suitable gorges and are in consequence less dependable than the larger snow-fed systems. Water rates are levied on the area of irrigated crops matured so that Government bears part of the risk of failure of crops. Different rates are charged for different crops and vary somewhat in different parts of India; rates are also lower when the water has to be lifted than when flow irrigation is given.

The Madras, Bombay and Sind Provinces possess some of the most spectacular irrigation schemes in the world. The Cauvery-Mettur irrigation system inaugurated in 1934 is considered to be the biggest in the British Empire and the largest single block masonry reservoir in the world, with a storage capacity of 93,500 million cubic feet. This project, together with the Kanniambadli project in Mysore, is said to bring into productive use about 80 per cent. of the flow of the Cauvery river besides serving as a great moderator of floods. The Wilson Dam at Bhandardara, impounding 272 feet of water, is far and away the highest dam in India, whilst the Sukkur Barrage in Sind across the Indus irrigates a desert whose area far exceeds that of any other scheme conceived by engineers.

About one quarter of the total irrigation of the country is got from lifting water from wells ranging in depth from a few feet to over fifty feet. Their numbers have greatly increased in recent years largely through Government advances for their construction. The recurring cost of this form of irrigation has, however, greatly increased owing to the high price of draught cattle and the increasing cost of their maintenance.

All agricultural departments are now giving increased attention to the better utilisation of underground water supplies, existing wells being improved by boring and tube wells of large capacity installed and equipped with pumping machinery. Efficient types of water lifts are rapidly replacing the old-fashioned *mhritas*.

Tank irrigation is common in Central and Southern India. Large quantities of rain water are stored in lakes (or tanks) during the rainy seasons and distributed during the drier seasons of the year. Often the indirect effect of the tank in maintaining the sub-soil water level is as important as the direct irrigation.

Manures and Manuring.—The great bulk of Indian soils are deficient in organic matter. In other agricultural countries of the world, this want is usually met by the return of farmyard manure to the land or by the use of composts made from crop residues and similar waste organic materials. In India, however, cattle dung is largely utilised for village fuel and the practice of composting is only being slowly developed. The cultivation of green manure crops is making headway, especially in the irrigated tracts, and many Provincial Governments allow concessions to encourage their extension. The use of certain oil-cakes, especially castor cake, is on the increase and this method of manuring is now common with valuable crops such as sugarcane and tobacco. With regard to artificial fertilisers, nitrogenous organic manures, e.g., ammonium sulphate and nitrate of soda, are being extended in use through the efforts of departmental and private agencies. The approximate consumption of ammonium sulphate in 1937-38 was 63,274 tons as compared with 57,164 tons in 1935-36. Imports of phosphatic manures amount to about 16,000 tons annually and of potash manures, 4,000 tons. In addition, quite appreciable quantities of such fertilisers are produced and used in India. The general fall in the prices of all agricultural commodities since 1929 has undoubtedly hampered the wider use of artificial fertilisers which are mostly confined to irrigated areas and the planting industries.

Rice.—Rice is the most extensively grown crop in India, and on an average, occupies about 35% of the total cultivated area. It predominates in the wetter parts of the country, viz., in Bengal, Bihar and Orissa and Madras. Excluding the area of Burma, which is now politically separated from the Indian Empire, the area fluctuates slightly around 72 million acres and the yield about 27 million tons. In 1938-39, total area under rice was 73 million acres with a total yield of approximately 24 million tons. The crop requires for its proper maturing a moist climate with well assured rainfall. The cultivated varieties are numerous differing greatly in quality and in suitability for various conditions of soil and climate, and the people possess an intimate acquaintance with those grown in their own localities. Rice is either broadcast drilled or transplanted. Broadcast rice is sown generally in low-lying areas and is sown before the monsoon as it must make a good start before the floods arrive. Deep water rises grow quickly and to a great height and are generally able to keep pace with the rise in water level.

For transplanted rice the soil is generally prepared after the arrival of the monsoon and is worked into a puddle before the seedlings are transplanted. The land is laid out into areas according to the level to regulate the distribution of water supply. The seedlings are planted either singly or in small bunches containing from 4 to 6 plants each and are simply pushed into the mud at distances of 6 to 12 inches apart. Either by bunding to retain rainfall or by artificial irrigation, the details varying with locality the rice fields are kept more or less under water until the crop shows signs of ripening. The

area under improved varieties of rice distributed by the agricultural departments is now approximately 4 million acres. Various schemes for the intensification of research on rice in all the principal rice-growing provinces financed by the Imperial Council of Agricultural Research and the Empire Marketing Board are in progress.

India (excluding Burma) consumes more rice than she produces, the balance in the past having been provided almost entirely by Burma. Imports in 1938-39 were 1,340,385 tons, mainly from Siam and French Indo-China.

Wheat.—Wheat is grown widely throughout Northern India as a winter crop, the United Provinces and the Punjab supplying about two-thirds of the total area, and probably three-quarters of the total output in India. This crop occupies, on an average, about 11 per cent. of the total cultivated area in the country. The majority of the varieties grown belong to the species *Triticum vulgare*. Indian wheats are generally white, red and amber coloured and are mostly classed as soft from a commercial point of view. As seen in local markets Indian wheats frequently contain appreciable quantities of other grains and even of extraneous matter due to the method of threshing employed. Wheat for export is well-cleaned and there has been great improvement in this respect of recent years. Most of the Indian wheats are soft weak wheats but there are some well-known Macaroni wheats amongst them. The largest wheat acreage of recent years was that of 1933-34, namely, 36 million acres but the yield did not come up to the record harvest of 1930 which exceeded 104 million tons. Recent crops have averaged 94 million tons per annum which is only slightly, if anything, above internal requirements. Export of wheat amounted to only 1,760,000 tons in 1939-40. With the development of irrigation from the Lloyd Barrage Canal Colonies a further increase in wheat production is practicable and, although the internal consumption of wheat will increase with the growth of population, there is likely to be a greater exportable surplus in the not distant future. The crop is generally grown after a summer fallow and except in irrigated tracts, depends largely on the conservation of the soil moisture from the previous monsoon. Rains in January and February are generally beneficial but an excess of rainfall in these months usually produces rust with a diminution of the yield. On irrigated land 2 to 4 waterings are generally given. The crop is generally harvested in March and April and the threshing and winnowing on up till the end of May. The total area under improved varieties of wheat is now over 1 million acres. The Imperial Council of Agricultural Research has recently appointed a Standing Committee to advise on problems connected with rice and wheat.

The Millets.—These constitute one of the most important groups of crops in the country supplying food for the poorer classes and for the cattle. The varieties vary greatly in quality, height and suitability to various climatic and soil conditions. Perhaps the two best known varieties are Jowar (Sorghum)

vulgare) the great millet, and Bajra the Bulrush millet (*Pennisetum typhoides*) which, between them, occupy about 50 million acres annually. In 1939-40, the total area under jowar and bajra in India was 51 million acres. Generally speaking the jowars require better land than the bajras and the distribution of the two crops follows the quality of the soil. Neither for jowar nor bajra is manure usually applied though jowar responds handsomely to high manuring and cultivation is not so thorough as for wheat. The crop is generally sown in the beginning of the monsoon and so it requires to be thoroughly weeded. It is often grown mixed with the summer pulses especially *Arhar* (*Cajanus indicus*—pigeon pea) and other crops, and is commonly rotated with cotton. The subsidiary crops are harvested as they ripen either before the millet is harvested or afterwards. In some provinces *rabdi* juar is also an important crop. The produce is consumed in the country.

Pulses.—Pulses are commonly grown throughout India in great variety and form at once the backbone of the agriculture, since even the present moderate degree of soil fertility could not be maintained without leguminous rotations, and a primary necessity in the food of a vegetarian population. The yields on the whole are fairly good, mixed cropping is common. The principal pulses are *Arhar* (*Cajanus indicus*), gram (*Cicer ariselinum*), various species of *Phaseolus* and *Pisum*.

Cotton.—Is one of the most important commercial crops in India and occupies a most prominent position in the list of exports. The average area under cotton in the quinquennium ending 1934-35 was 23.3 million acres and the average yield 4.7 million bales of 400 lbs each. During the five year period ending 1939-40, the average annual acreage increased to about 24.2 million acres and the average yield to 5.6 million bales. In 1940-41, the estimated area and yield were 22.9 million acres and 5.8 million bales respectively. The ascertained area under improved varieties of cotton in 1940-41 was about 5.4 million acres. The consumption of Indian cotton in mills in India amounted to 3,617,000 bales in 1940-41. The principal export is of short staple cotton below $\frac{3}{4}$ " in staple but there is also in normal years an export of medium and long staple Indian cotton, of staple length $\frac{3}{4}$ " to 1-1/16", such as Punjab-American. There is no Indian cotton belt. Bombay Province, the Punjab, the Central Provinces and Berar, Madras Province, Sind and United Provinces and the Indian States of Hyderabad and Borda, all have important cotton tracts producing distinct types. Sowing and harvesting seasons are equally diverse, the former extending from May to December in different parts of the country and the latter from October to May and June. Yields vary greatly, in the best irrigated tracts the normal yield is about 200 lbs of ginned cotton per acre, and yields much above this have been recorded, whilst in the poorest unirrigated tracts 60 lbs per acre is a good crop. Of recent years, as the result of the work of the Agricultural Departments and the Indian Central Cotton Committee, the quality and yield of staple cottons have improved and also the yield and cleanliness of the produce from the short staple tracts.

The Cotton Transport Act, the Cotton Ginning and Pressing Factories Act, the Bombay Cotton Markets Act, the Central Provinces Cotton Markets Act and the Madras (Commercial Crops) Markets Act have all been passed at the instance of the Committee and are doing much to check adulteration and promote better marketing. In certain provinces, legislation has been enacted, or is under consideration, with the aim of preventing the growing of very inferior varieties and of stopping certain malpractices which affect the quality and reputation of Indian cotton. Agricultural Departments have continued their campaign of cotton improvement apart from improvements in methods of cultivation.

Exports.—The figures for exports by sea of Indian cotton from British India to foreign countries for the five fiscal years (ending 31st March) 1935-40 are shown in the table below—

(In thousand bales of 400 lbs each)

Countries	1935-36	1936-37	1937-38	1938-39	1939-40
United Kingdom	456	610	395	411	473
Other parts of British Empire.	12	14	23	23	20
Japan ..	1,759	2,334	1,359	1,211	1,056
Italy ..	154	165	151	92	52
France ..	160	155	96	169	229
China (exclusive of Hong-kong)	109	63	60	103	681
Belgium ..	225	310	196	142	68
Spain ..	68	26	1	2	15
Germany ..	264	206	160	192	52
Other countries	184	257	277	268	296
Total	3,397	4,140	2,731	2,703	2,948

N B—From 1st April 1937, the above figures exclude exports from Burma. Details for 1940-41 are not available.

Sugarcane.—India, until recently a large importer of sugar, is now one of the most important sugarcane growing countries in the world. The area in 1940-41 is 3,559,000 acres as against a quinquennial average of 3,871,800 acres for the preceding five years ending 1939-40. The crop is mostly grown in the submontane tracts of Northern India, more than half the area being in the United Provinces. The indigenous hard, thin, low-sucrose canes have now largely been replaced by seedling canes of high quality, mainly the productions of the Imperial Sugarcane Breeding Station, Coimbatore. The total area under improved varieties of cane in India in 1938-39 was estimated to be 2,673,740 acres representing 82.32 per cent of the total area. In the United Provinces and Bihar and Orissa improved canes occupy 73.5 per cent of the area. The protection afforded by the Sugar Industry

Protection Act of 1932 has given a great stimulus to the production of sugar by modern methods and the number of such factories in different Provinces and States has increased from 57 in 1932-33 to 147 in 1940-41. The production of sugar direct from cane during the season 1940-41 totalled 1,082,500 tons as against 1,242,000 in 1939-40. This drop in production was due to compulsory restriction on outputs in U.P. and Bihar. The average extraction for the whole of India has shown a rise, it being approximately 9.75 in 1940-41 as against 9.29 in 1938-39 and 9.45 in 1939-40. The recoveries are high both in U.P. and Bihar in 1940-41. This was partly due to the excellent quality of the crop and partly due to the restriction on the output of factories by means of quotas. As the factories were debarred from crushing for the full season they arranged to crush their quotas during such part of the season when cane was available in the highest state of maturity. There were heavy imports in 1939-40 owing to the failure of the crop in 1938-39. The per capita consumption in India was only 6.6 lbs. in 1938-39 as against 7.2 lbs. in 1937-38 and 7.3 lbs. in 1936-37. The drop in consumption was due to the very high prices for sugar in 1938-39. The Bombay Province leads in consumption per capita, it being 17.0 lbs. as against 7.1 lbs. for U.P. and 2.8 lbs. for Bihar and Orissa, the two leading provinces in the manufacture of sugar. The Bombay Province is producing about one-third of its requirement at present in the Province itself, mainly in the Deccan Canal tract. On the whole India is now not only capable of providing her own requirements of sugar but can have a surplus for export if the quota system followed in U.P. and Bihar is removed.

During the year 1935-39 certain changes were introduced on the excise duty on Khandasari sugar, the rate and duty being reduced from Re 1 per cwt. to 8 annas per cwt. The exemption from duty hitherto enjoyed by concerns employing less than 20 persons was simultaneously withdrawn. With effect from 1st March 1940 the excise duty on factory sugar was increased from Rs 2 to Rs 3 per cwt.

Oilseeds.—The crops classified under the heading are chiefly groundnuts, linseed, sesamum and the cruciferous oilseeds (rape, mustard, etc.). Although oilseeds are subject to great fluctuation in price and the crops themselves are more or less precarious by nature, they cover an immense area.

Groundnut, though of modern introduction, is already an important crop particularly in Madras, Bombay, Burma and Hyderabad. The area has not however achieved stability. It rose steadily from 1.5 million acres in the pre-war period to 8.23 millions in 1933-34. The area for 1939-40 was 8.2 million acres. The yield in 1939-40 was about 3.1 million tons of which 543,600 tons were exported.

Linseed requires a deep and moist soil and is grown chiefly in the Central Provinces, Bihar and Orissa and the United Provinces. The crop is grown for seed and not for fibre and the common varieties are of a much shorter habit of growth than those of Europe. The yield

varies greatly from practically nothing up to 500 to 600 lbs. of seed per acre. It is grown largely for export. At the beginning of the century India supplied practically the whole of the world's demand for linseed, the area having gone as high as 5 million acres with a yield of 630,000 tons. Area in 1939-40 was approximately 3,713,000 acres and yield 466,000 tons. In recent years foreign competition, mainly from the Argentine, has contracted the market for Indian linseed and with it the area under the crop. Exports in 1939-40 amounted to 219,200 tons. The preference granted to Indian linseed in the United Kingdom under the Ottawa Agreement, combined with successive short harvests in the Argentine, helped India to regain her pre-war position in the British market in 1933-34 when Britain took 174,000 tons out of a total of 379,000 tons. In 1939-40 exports to Great Britain and the British Empire amounted to 203,000 tons.

Sesamum (Gingelly) is grown mostly in Peninsular India as an autumn or winter crop. In 1939-40, it occupied an area of 4,050,000 acres with a yield of 416,000 tons. Export amounted to 3,502 tons.

The Cruciferous Oilseeds form an important group of crops in Northern India where they grow freely and attain a fair state of development. The area under rape and mustard, including an estimated figure for the area grown mixed with other crops is about 5½ to 7 million acres annually. Production in 1939-40 was estimated at 1,120,000 tons of which 24,610 tons were exported. Several species are grown and there are numerous local varieties. A large portion of the crop is crushed locally for domestic consumption.

Jute.—Jute fibre is obtained from two species of plants called *Corchorus Capsularis* and *Corchorus Olitorius* respectively. The conditions required for jute cultivation are (a) high temperature, (b) deep soil of fairly fine texture, (c) rainfall of over 40 inches so distributed that while the young plants have enough moisture to ensure good growth, the bulk of the rainfall takes place when the crop is mature and (d) sufficient supply of clear retting water. Its cultivation is confined almost entirely to Bengal, Assam, Bihar, Orissa and to a small extent in the United Provinces.

The crop is sown broadcast during February to May, on well prepared seed beds. It is commonly weeded and thinned thrice. Four to five months after sowing, when the crop is about in flower, it is cut.

The plants often grow to a height of 12 feet or more. The plants are submerged under water for retting, and when retting is complete, that is, in about ten to twenty days, the plants are removed. The fibre is then carefully separated from the stalk, washed and dried, when it is ready for being converted into various uses.

India practically holds a monopoly of the production of raw jute. Attempts have been made and are still being made in different parts of the world to grow jute, but nowhere has it been possible to grow jute on such a scale as to break down the monopoly of India.

Compulsory restriction of the jute acreage in Bengal came into force from 1941 and only 2,132,110 acres were put under jute during that year as compared with the previous years' figures of 5,668,750 acres. According to the Government forecast the total yield during 1941 and 1940 were 5,422,555 and 13,186,450 bales respectively.

The annual world consumption of the fibre in recent years varied from 83 to 125 lacs of bales of 400 lbs each, the average consumption being near about 100 lacs of bales. Trade conditions in 1940-41 deteriorated very much owing to shipping difficulties and other factors brought about by the war, which caused the consumption of jute in 1940-41 to fall to as low a level as 75 lacs of bales.

The fibre is largely exported abroad either as raw material or as manufactured jute goods. The principal markets for jute are the United Kingdom, the United States and Germany (until the outbreak of war). The chief jute manufacturing countries are India, the United Kingdom and Germany, India having more than half the total number of looms in the world.

Tobacco is grown here and there all over the country chiefly, however, in Bengal, Bihar, Bombay, Madras and Burma. Of two varieties cultivated *Nicotiana Tabacum* is by far the most common. Maximum crops are obtained on deep and moist alluvium soils and a high standard of cultivation including liberal manuring is necessary. The crop is only suited to small holdings where labour is plentiful as the attention necessary for its proper cultivation is very great. The seed is germinated in seed beds and the young plants are transplanted when a few inches high, great care being taken to shield them from the sun. The crop is very carefully weeded and hoed. It is topped after attaining a height of say, 2 ft., and all suckers are removed. The crop ripens from February onwards and is cut just before the leaves become brittle. The greater part of the tobacco grown in India is intended for *Hookah* smoking and is coarse and heavy in flavour. Lighter kinds are also produced for cigar and cigarette manufacture. Of recent years there has been important development in the production, in commercial quantities, of better quality cigarette tobacco both in Madras and in Bihar. Exports in 1939-40 amounted to 57½ million pounds of which the United Kingdom took 16½ million pounds. The area in 1939-40 was 1,310,000 acres, as compared with 1,290,000 acres in 1938-39 and the total yield of dried leaf amounted to 476,000 tons in 1939-40 as against 50½,000 tons in 1938-39. The production in India of bright flue-cured tobacco suitable for cigarette making has increased considerably, particularly in the Guntur District of the Madras Province and several thousands of flue curing barns have been installed in recent years.

Live-stock Census—The report on the 5th quinquennial Census of Live-stock in India, taken in January 1940, shows that there were therein British India (excluding United Provinces, Bihar and Orissa), 110 million heads of bovine cattle, made up roughly of about 87 million heads of oxen and 22 million heads of buffaloes. The details shown hereunder refer to the 1940 census and are provisional and subject to revision.

For draught purposes cattle are mainly used everywhere though male buffaloes are important as draught animals in the rice tracts and damper parts of the country. Horses and mules are practically never used for agricultural purposes. For dairy purposes, the buffalo is important, the milk yield being high and the percentage of butter fat considerably above that in cow's milk. The best known breeds are the Murra buffaloes of the Punjab, the Jafferbadi buffaloes of Kathiawar, and the Surti and Pandharpuri buffaloes of the Bombay Province. The cattle and buffalo population in India is abnormally high amounting to over 60 per cent of the human population. The spread of cultivation has diminished the grazing grounds, insufficient fodder crops are raised and many of the cattle are small, ill-fed and inefficient. Nevertheless the best Indian breeds have many merits. Of the draught types the best known breeds are the Hissar (Punjab), Hansi (Punjab), Bhaganari (Baluchistan), Nellore (Madras), Anni Mahal (Mysore), Kankrej (Gujarat), Kangayam (Madras), Kherigarh (U.P.), Malvi (C.I.), Khillar (Deccan), Nimar (East Khandesh), and Dangri (Konkan). Amongst the best milking breeds are the Sahiwal (Punjab), the Gir (Kathiawar) and Sindhi (Sind). On the Government cattle-breeding farms pedigree herds are being built up and from these selected bulls are issued, preference being given to special breeding areas to villages which undertake to exclude 'scrub' bulls and where serious efforts to maintain a good strain of cow are made. Once established such breeding areas rapidly produce a supply of superior bulls for general distribution and in this way the valuable bulls from Government herds are used to advantage. The premium bull system is also working well in some tracts. H.E. the Viceroy's "Gift" Bull Scheme has given very considerable impetus to cattle improvement in all Provinces and States of India and this branch of animal husbandry is now receiving much close attention. Cattle improvement is a slow process at the best and though a start on sound lines has been made in all provinces, continued effort and persistent endeavour are essential. There is no branch of agricultural improvement where the landowners of India could render greater service.

Cattle Improvement—India possesses some very fine breeds of cattle, each breed being peculiarly suited to the area to which it is indigenous. To mention some, there is the heavy fast Kankrej breed in Gujarat, admirably suited to the sandy deep rutted roads found in this part. Then we have the Dangri or Kala Kheri born and bred in the hilly, heavy rainfall area of the western ghats. Rain and water logged conditions do not affect this breed, indeed, the more the rain, the better it thrives. On the plateau of the Central Deccan, we have the Khillar, a light fast draught animal which thrives on very meagre pastures and is essentially suited to the hard stony country in which it is reared. Then we have the many types of buffalo, the buffalo is at present, and will be for many years to come, the dairy animal of the country. The buffalo which yields fair quantities of milk with a fat percentage of from 7 to 9 per cent of butter fat cannot be beaten as a butter and ghee producer.

A large proportion of the cattle of this country depend entirely on grazing for their total food and nourishment, and considering that such grazing is only of value for about 5 months of the year, India has the material to breed very fine and profitable animals. The standard at present is low from a commercial point of view owing to neglect and sheer carelessness. The live-stock of India at present cannot compete with the cultivated crop, hence cattle breeding is relegated to those areas in which no crops can be grown. Immediate attention and large subsidies from Government will be necessary for many years to bring the standard of cattle up to a point when it will be an economical proposition to grow cattle on better land.

A good deal has been done for the improvement of cattle. The various Provinces have farms on which pedigree bulls are bred and reared. These are placed out in suitable villages on a premium system. In the Province of Bombay, Herd Registers are maintained for 8 of the breeds of the Province, shows are held annually and progress although slow, is to be noticed in those areas in which such work has been undertaken. In addition, the Bombay Live-stock Improvement Act of 1933, known as the "Castration Act," which is intended to prevent promiscuous breeding by undesirable male stock in the villages has now been applied to 70 villages in the Province. An Expert Cattle Committee appointed by the Government of Bombay has recently reviewed the methods of cattle improvement and the development of this supply in rural districts. The Report of this Committee has now been published and the recommendations made in it were recommended to all Provinces and States by the National Planning Committee under the chairmanship of Pandit Jawaharlal Nehru, as a model to be followed. More money and staff is essential to accelerate this work in the interests of the farmer. It is now a generally accepted fact that the farmer who mixes his farming with cattle breeding has been better able to stand the depression now prevalent. In the Province of Bombay, large numbers of pedigree breeding bulls are now available in the villages as a result of the combined effect of the introduction of "premium bulls," breed registration and the application of the "Castration Act."

Dairying—India is still far behind other countries in the matter of dairy farming and in the retail dairy business. This is mainly due to the climatic conditions of the country and the vast distances to be covered in transporting milk. The only solution seems to be Co-operative dairy produce, handling and sale societies. Dairy farming in India is at present, and will be for many years, a cottage industry and each household producing a few pounds of milk; at present this milk is converted by very wasteful methods into products that can be stored and transported long distances, such as ghee, (clarified butter), country butter, and Khawa, a desiccated whole milk produced by boiling milk and evaporating the water contents until a solid mass is obtained.

These products could, of course, be produced by up-to-date methods, leaving the pure sweet milk for either home consumption or to

be utilised for making casein, skim milk powder and the like, thus giving the farmer a better return. The trade, however, has been purely a cottage industry, and co-operative societies would appear to be the only solution. Each Province has its Agricultural College where Dairying in all its aspects is taught, and for higher training in this subject, there is the Imperial Institute of Animal Husbandry and Dairying. A good deal of research is still necessary.

The butter trade has improved considerably of late years. In India the sale of good quality butter in cartons is on the increase. In cities pasteurizing plants for the retail milk trade are gradually increasing. Milk is now sold in sealed bottles, thus trade, however, is small. The Indian milk consumer in large cities still demands his milk just prior to consumption, he has not learned to look after his milk. Consequently the producer has to be prepared to meet the customer's demand at any time of the day. Unlike the two deliveries of milk in other countries, the milk producer in our large cities has to deliver milk about 5 times a day; this naturally makes milk more expensive. The consumer must be educated into the habit of the two-delivery methods if any progress is to be made in the organizing of milk to be produced in the country under natural conditions rather than the present wasteful method of milk production in large cities. India is experiencing the same difficulties as other countries when milk was produced in the cities (i.e.) the destruction of cows and calves in the cities when dry.

The Government of India maintain an Institute of Animal Husbandry and Dairying at Bangalore where students are given 2 year courses for the Indian Dairy Diploma but little provision has hitherto been made for the extensive industrial research into the handling and processing of milk and dairy products under Indian conditions, which is essential for the development of dairying as a village industry. This matter is now receiving the attention of the Imperial Council of Agricultural Research. The report prepared by Dr Wright on the dairying industry of India is a most useful and comprehensive publication and indicates clearly many avenues whereby improvement can be effected.

It is sufficient here to say that there is a growing recognition of the fact that as India's economic development proceeds a better balance is needed and that the raising of crops for the feeding of dairy stock, instead of for sale as such, will be of increasing importance.

Animal Husbandry.—Details of the steps taken and progress made in the control of disease and improvement of stock are given in a biennial review of animal husbandry in India.

The control of contagious diseases of live-stock in India is carried out by the Civil Veterinary Departments in the Provinces and major Indian States. The staffs of these departments are, for the most part, recruited from among the graduates of Indian Veterinary Colleges of which there are five, viz., one each at Lahore, Patna, Calcutta, Bombay and Madras. The chief research centre is the Imperial Veterinary Research Institute at Mukteswar in the United

Provinces and its branch at Izatnagar, near Bareilly. This institute is maintained by the Government of India and has recently been considerably expanded, the latest additions being a poultry research station and a nutrition institute. A certain amount of research is also conducted at the Provincial Colleges.

In addition to research, the Imperial Veterinary Research Institute also manufactures large quantities of sera and vaccines for the use of the Provincial Departments in their fight against disease and until recently was the only manufacturing centre for these products. Serum institutes have, however, been opened in recent years at Madras and Bangalore, mainly for the manufacture of biological products for the use of the Madras and Mysore Civil Veterinary Departments respectively.

The chief diseases that the Civil Veterinary Departments have to deal with are glanders and Surra in equines, and rinderpest, foot and mouth disease, hemorrhagic Septicæmia, black quarter and anthrax in ruminants while tuberculosis, Johne's disease and contagious abortion are assuming greater importance than in the past. Glanders and Surra are both scheduled diseases under the glanders and fracy act. Glanders is incurable but surra can now be successfully treated with Naganol. This disease (surra) also affects camels, cattle and dogs and in recent years its importance as a bovine disease has been more widely recognised.

Of the diseases of ruminants mentioned, all, with the exception of foot and mouth disease, can now be controlled either by the inoculation of protective sera or by vaccination. Rinderpest is by far the most important and is responsible for the major portion of the mortality among bovines in India. The discovery at Mukteswar that it was possible to attenuate rinderpest virus by "passage" through goats and that the attenuated virus produces only a milk form of the disease in cattle has led to the almost universal use of the goat virus as a prophylactic against the disease. Experiments carried out indicate that the immunity conferred by this method may last for at least five years.

The successful manufacture of anthrax "spore" vaccine at Mukteswar is another advance of great importance in the fight against live-stock disease in India.

Indian poultry are also subject to several contagious diseases. The dreaded "Ranikhet" disease is fairly wide-spread and its ravages have seriously interfered with the poultry industry. So far no treatment, either curative or prophylactic, has proved successful and the application of strict hygienic measures still remains the chief method of controlling it. Fowl pox and Fowl cholera vaccines are available for the protection of poultry against those diseases.

The Live-stock of India are also subject to infection by a large number of parasitic disease such as parasitic gastritis, liver fluke disease, Amphistomiasis, schistosomiasis, etc. Of the external parasites ticks are important and the Imperial Council of Agricultural Research have recently started a scheme in the Bombay Presidency to test the possibility of regularly dipping or spraying cattle, its effect on the growth and health of cattle and on the thick population in village areas.

The castration of scrub bulls is an important feature of cattle improvement. The method most commonly used by the Departments is the Burdizzo method and it is quickly replacing the indigenous mulling operation.

The introduction of disease into India is controlled by the application of the "Live-stock Importation Act" at all ports at which the landing of animals is permitted.

In addition to their duties in connection with disease control, the Civil Veterinary Departments also conduct the treatment of animals in hospitals and dispensaries. The institutions are for the most part maintained by Local Boards with financial assistance from Government, the professional staff usually being provided by the Governments.

AGRICULTURAL PROGRESS.

Agricultural Progress—The historical aspect of agricultural development in India has been fully dealt with in the report of the Linlithgow Commission. The Famine Commission as long ago as 1866 made the first proposal for a separate Department of Agriculture but little resulted except the collection of agricultural statistics and other data with the object of throwing light on famine problems. The Famine Commission of 1880 by their masterly review of the possibilities of agricultural development revived interest in the matter and their proposal for a new Department for Agriculture and allied subjects in the Government of India and for provincial departments of agriculture bore fruit eventually. Dr. J. A. Voelker, Consulting Chemist to the Royal Agricultural Society, was invited to visit India and his book "Improvement of Indian Agriculture" is still a valuable reference book. In 1892 an agricultural chemist to the Government of India was appointed. Provincial Departments mainly

concerned themselves at first with agricultural statistics but experimental farms were opened at Saidapet in 1871, Poona in 1880, Cawnpore in 1881 and Nagpur in 1883, there were various sporadic attempts at agricultural improvement but no real beginning was made until technical agricultural officers were appointed. Of these the earliest were Morrison in Bombay (subsequently Inspector-General of Agriculture), Barber and Benson in Madras, Hayman in the United Provinces and Milligan in the Punjab. In 1901, the first Inspector-General of Agriculture was appointed and in the same year an Imperial Mycologist was added followed by an Imperial Entomologist in 1903. The present departments of agriculture, however, owe their existence to the foresight and energy of Lord Curzon whose famous despatch of 1903 marked the commencement of the reorganisation which took place in 1905. That scheme provided for a central research institute at Pusa, completely staffed provincial departments of agriculture

with agricultural colleges and provincial research institutes and an experimental farm in each important agricultural tract. To the establishment of the Imperial Agricultural Research Institute at Pusa, Lord Curzon devoted the greater part of a generous donation of £30,000 given by Mr. Henry Phipps of Chicago to be applied to some object of public utility preferably connected with scientific research. The Indian Agricultural Service was constituted in 1906. Since that date progress has been steady and continuous. With the advent of the reforms of 1919, agriculture became a provincial transferred subject but the Government of India retained responsibility for central research institutions and for certain matters connected with the diseases and pests of plants and animals. The addition of the Imperial Institute of Animal Husbandry and Dairying (with a branch farm at Wellington), the Imperial Cattle-breeding Farm at Karnal and the Anand Creamery enabled live-stock work to be carried out on a scale not possible at Pusa. The Imperial Sugarcane-breeding station at Colimbatore is yet another branch of the Imperial Agricultural Research Institute. The Bihar Earthquake of 1934 caused considerable damage to the Pusa Institute and Provincial Governments have steadily developed and strengthened their agricultural departments. The Institute was moved to New Delhi and the new buildings erected for the purpose were formally reopened in September 1936.

Parallel developments took place in the provision made for matters connected with animal health. The now world-famous Imperial Institute of Veterinary Research at Mukteswar started in 1893 as a modest hill laboratory for research on rinderpest. It is now a fully equipped research institute which also manufactures protective sera and vaccines of which some 6 million doses are issued annually. The Civil Veterinary Department was formed in 1891 and until 1912 was under the control of the Inspector-General. The departments were completely provincialised in 1919, the Government of India continuing to finance and control the Mukteswar Research Institute and its branch station at Izatnagar (Bareilly).

Recent Progress—As now constituted, the agricultural departments include a complete organisation for bringing the results of the application of science to agriculture into the village. At one end of the scale are the agricultural colleges and research institutes—at the other thousands of village demonstration plots where the effect of improved seed, methods, implements

and manures is shown under the cultivators' own conditions. Intermediate links in the chain are the experimental farms, where scientific research is translated into field practice, demonstration and seed farms and seed stores. The ascertained results of the work of the agricultural department are striking enough. The latest available figure regarding the area under improved varieties of crops in British India was approximately 23 00 million acres. These figures by no means represent the whole extent to which improved strains have replaced old varieties as it is almost impossible to gauge the full extent of the "natural spread" of improved varieties. Improved methods of cultivation and manuring are steadily spreading, work is in progress on most of the major crops and each year brings new triumphs. The position was authoritatively reviewed by the Royal Commission on Agriculture which reported in 1928. Recognising how much has already been done in the 20 years since the agricultural departments were created, the Commission also emphasised the enormous field for future work to which all witnesses had drawn their attention. The agricultural departments having shown that the application of science to Indian agriculture is a practical proposition and further that the individual cultivator can be reached and his methods improved, the problem is now to develop and intensify such work so that a general advance in agricultural practice will result. The recent reports submitted by Sir John Russell and Dr. Wright, who recently renewed the progress of agricultural research work in India, carried out under the auspices of the Imperial Council of Agricultural Research, contain valuable and important recommendations for breaching the gap between the research worker and the cultivator. These recommendations are being carefully examined by a special Sub-Committee of the Imperial Council of Agricultural Research. At no time has there been a greater need for co-ordinated effort directed towards the solution of agricultural problems. Only by increased efficiency can India meet the situation caused by low prices for all agricultural commodities and the intense competition in world markets arising from production in excess of effective demand.

The Government of India have recently announced their intention to render further assistance to the agriculturists by providing better facilities for credit and for the marketing of agricultural produce. A central marketing section has been established under the Imperial Council of Agricultural Research. It works in collaboration with the special marketing staff appointed in the various provinces.

THE IMPERIAL COUNCIL OF AGRICULTURAL RESEARCH.

In Chapter III of their Report, the Royal Commission on Agriculture stated that the most important problem with which they had been confronted was that of devising some method of infusing a different spirit into the whole organisation of agricultural research in India and of bringing about the realisation on the part

of research workers in this country that they are working to an end which cannot be reached unless they regard themselves as partners in a common enterprise. They had found not only a lack of sufficiently close touch between the Pusa Research Institute and the provincial agricultural departments but also between the

provincial departments themselves. After describing the way in which similar difficulties had been overcome in Canada, the United States and Australia and dismissing as inadequate the constitution of crop committees on the model of the Indian Central-Cotton Committee or the constitution of a quasi-independent governing body for Pusa on which the provincial agricultural departments and non-official interests would be represented, the Commission proposed the establishment of an Imperial Council of Agricultural Research.

The primary function of the Council would be to promote, guide and co-ordinate agricultural, including veterinary, research in India and to link it with agricultural research in other parts of the British Empire and in foreign countries. It would make arrangements for the training of research workers, would act as a clearing house of information in regard not only to research but also to agricultural and veterinary matters generally and would take over the publication work at present carried out by the Imperial Agricultural Department. The Commission proposed that the Council should be entrusted with the administration of a non-lapsing fund of Rs 50 lakhs to which additions should be made from time to time as financial conditions permit. Its Chairman should be an experienced administrator with a knowledge, if possible, of Indian conditions and, in addition, there should be two other whole-time members of the Council for agriculture and animal husbandry respectively. The Commission suggested that the Council should consist of thirty-six members, in addition to the Chairman and the two whole-time members. Of these, eight would be nominated by the Government of India, eighteen would represent the provincial, agricultural and veterinary departments, three would represent the Indian Universities, two would represent the Indian Central Cotton Committee and the planting community respectively and five would be nominated by the Council for the approval of the Government of India. The Council would largely work through a Standing Finance Committee and sub-committees. A provincial committee should be established in each major province to work in close co-operation with it. The advisory duties of the Agricultural Adviser to the Government of India would be taken over by the Chairman and whole-time members of the Research Council, his administrative duties being taken over by a whole-time Director of the Pusa Institute.

Constitution of the Council.—In a Resolution issued on May 23, 1929, the Government of India stated that whilst they were of opinion that the proposals of the Royal Commission were, on the whole, admirably designed to secure the objects for the attainment of which the establishment of the organisation outlined above was recommended, they considered a Council of thirty-nine members would be too large to be really effective and that it was not desirable that the Legislative Assembly should be deprived of its normal constitutional control over an activity which affects the staple industry of India. They had, therefore, decided that the central organisation should be divided into two parts, a Governing Body which would have the management of all the affairs and funds of the

Council subject to the limitation in regard to the control of funds which is mentioned below and an Advisory Board the functions of which would be to examine all proposals in connection with the scientific objects of the Council which might be submitted to the Governing Body, to report on their feasibility and to advise on any other questions referred to it by the Governing Body. The Governing Body would consist of the Member of the Governor-General's Council in charge of the portfolio of Agriculture, who would be *ex-officio* Chairman, the Principal Administrative Officer of the Council, who would be *ex-officio* Vice-Chairman, one representative of the Council of State, two representatives of the Legislative Assembly, one representative of the European Business community elected by the Associated Chambers of Commerce of India, one representative of the Indian business community elected by the Federation of Indian Chambers of Commerce and Industry, the Provincial Ministers of Agriculture, two representatives elected by the Advisory Board the Secretary to the Govt of India in the Dept responsible for the administration of Agriculture, the Financial Adviser, I C A R and such other persons as the Governor-General in Council might from time to time appoint.

The Advisory Board would consist of all those whose inclusion in the Council was recommended by the Royal Commission with the exception of the representatives of the Central Legislature and the representatives of the European and Indian commercial communities, who, under the modified scheme, would be members of the Governing Body. In view of their exclusion from the Advisory Board, the university representation would be increased from three to four and the scientific representation by the addition of the Director of the Indian Institute of Science, Bangalore, a representative of the Forest Research Institute, Dehra Dun, and a representative elected by the Indian Research Fund Association. A representative of the Co-operative Movement would also be added. The Principal Administrative Officer to the Council would be *ex-officio* Chairman of the Advisory Board.

The Government of India further announced that for the lump grant of Rs. 50 lakhs recommended by the Royal Commission, they had decided to substitute an initial lump grant of Rs 25 lakhs, of which Rs 15 lakhs would be paid in 1929-30, supplemented by a fixed minimum grant annually. The annual grant would be Rs 7 25 lakhs, of which Rs 5 lakhs would be devoted to the furtherance of the scientific objects of the Council and the remaining Rs 2 25 lakhs to the cost of its staff and secretariat. The Council would have an entirely free hand in regard to the expenditure of the grants made to it for scientific purposes subject to the condition that no liability in respect of such matters as leave or pension contributions after the research for which the grant had been given would be incurred.

The Government of India also stated their decision that the Council should not be constituted under an Act of the Imperial Legislature as recommended by the Royal Commission but

should be registered under the Registration of Societies Act, XXI of 1860. In pursuance of this decision, a meeting of those who would constitute the Society was held at Simla in June 1929, to consider the terms of a memorandum of association and the Rules and Regulations. At that meeting, it was announced that His Exalted Highness the Nizam's Government had offered a donation of Rs 2 lakhs to the funds of the Council. This offer was gratefully accepted and the Revenue Member of the Nizam's Government has been added to the Governing Body, the Directors of Agriculture and of Veterinary Services becoming members of the Advisory Board. Since then donations of one lakh each, payable in 20 equal annual instalments, have been made by the Mysore, Baroda, Cochin, Travancore and Kashmir States and each nominates one representative to the Governing Body of the Council and two technical members to the Advisory Board. The Bhopal State was admitted as a constituent member of the Council on payment of a donation of Rs 50,000 in 20 equal annual instalments and was allowed the same representation on the Council as has been granted to the other constituent States. The Gwalior State has also become a constituent member of the Council on payment of a donation of Rs one lakh in not more than 5 annual instalments and has been allowed the usual representation.

By a Resolution of August 4, 1930, the Secretariat of the Imperial Council of Agricultural Research was constituted a Department of the Government of India. This arrangement was ended by a Resolution of January 15 1939 and connection between the Government of India and the Council Secretariat is now through the Department of Education, Health and Lands. In the same Resolution it was announced that the two Expert Officers of the Council would henceforth be designated Agricultural Commissioners with the Government of India and Animal Husbandry Commissioner with the Government of India, respectively.

A measure of far reaching importance to the Imperial Council of Agricultural Research was the introduction by the Government of India in the Central Legislative Assembly of the Agricultural Products Cess Bill on March 1 1940. It was passed with certain amendments by Both Houses of the Central Legislature and received the assent of the Governor-General on April 15, 1940. The object of the Act is to finance the general research programme of the Council by levying a cess of 2 per cent *ad valorem* on the following commodities—1 Bones, 2 Bristles, 3 Butter, 4 Cereals other than rice and wheat, 5 Drugs, 6 Feces for brushes, 7 Fish, 8 Fruit, 9 Ghee, 10 Hides, raw, 11 Manures, 12 Oil-cakes, 13 Pulses, 14 Seeds, 15 Skins, Raw, 16 Spices, 17 Tobacco unmanufactured, 18 Vegetables, 19 Wheat, 20 Wheat four, 21 Wool, raw. The cost of the Council's office, Sugar cane research and work relating to the organization of the Marketing of Agricultural Products will continue to be financed directly from the Central Revenues as before. It is hoped that, placed in a more secure financial position and endowed with a larger and more stable income, which would comparatively be

unaffected by the financial vicissitudes of the Central Government, the Council would be able to plan and execute a long term research programme without being worried by financial difficulties. The proceeds of the cess are expected to yield in a normal year about Rs. 14 lakhs.

Personnel—In addition to the 16 *ex-officio* members including 8 nominees of Indian States, the Governing Body included at the commencement of 1942 the following gentlemen:—

The Hon'ble Mr. Hosain Imam, elected by the Council of State; Pt Sri Krishna Dutt Paliwal, M.L.A., and Mohamed Azhar Ali, M.L.A., elected by the Legislative Assembly; R. Scherre and N. G. Apte, representing the business community; B. K. Badami and H. R. Stewart, elected by the Advisory Board, and the following members appointed by the Governor-General in Council—H. M. Hood, O.S.I., C.I.E., I.C.S. Second Adviser to H. E. The Governor of Madras; H. F. Knight, C.I.E., I.C.S., J.P., Adviser to H. E. The Governor of Bombay; P. W. Marsh, O.S.I., C.I.E. Adviser to H. E. The Governor of the United Provinces; E. R. J. R. Consins, O.I.L., I.C.S. Adviser to H. E. The Governor of Bihar, Sir Geoffrey Burton, K.C.I.E., I.C.S., Financial Adviser to H. E. The Governor of the Central Provinces and Berar; Lt-Col W. F. Campbell, C.I.F., I.A., Adviser to H. E. The Governor of North-West Frontier Province; Dewan Bahadur Sir T. Vyayayaghavacharya, K.B.E. and the Hon'ble Dewan Bahadur Sir A. Ramaswami Mudaliar. The Chairman of the Council is the Hon'ble Member of the Council of His Excellency the Governor-General for the time being in charge of the portfolio of Agriculture, the Hon'ble Mr. N. R. Sarker.

Vice-Chairman and Principal Administrative Officer—P. M. Kharegat, C.I.E., I.C.S.

Secretary—B. Sahay, I.C.S.

Chief Superintendent—S. C. Sarkar, B.A.

Agricultural Commissioner with the Government of India—Dr. W. Burns, D.Sc. (Edin), C.I.F., I.A.S. (Retired).

Animal Husbandry Commissioner with the Government of India—F. Ware, C.I.E., F.R.C.V.S., I.V.S.

Assistant Agricultural Commissioner—S. C. Roy, M.Sc., B.Sc. (Lond), Dip. Agr. (Wye).

Assistant Animal Husbandry Commissioner—B. L. Kaura, B.V.Sc., M.R.C.V.S.

Agricultural Marketing Adviser—Dr. N. Das, Ph.D. (Lond), I.C.S.

Director, Imperial Institute of Sugar Technology, Calcutta—R. C. Srivastava, F.R.C., O.B.E.

Statistician—Dr. P. V. Sukhatre, D.S., Ph.D. (Lond).

Officer-in-Charge, Animal Husbandry Branch—K. P. R. Kartha, B.A.

IMPROVEMENT OF AGRICULTURAL MARKETING IN INDIA.

In view of the importance of agricultural marketing as an aid to the general economic recovery of the country, the Government of India decided to give effect to the recommendations of the Royal Commission on Agriculture and generally endorsed by the Central Banking Enquiry Committee regarding marketing surveys. After consultation with Provincial Governments, it was decided that the first step should be the appointment of a highly qualified and experienced marketing expert with practical knowledge of agricultural marketing in other countries.

In accordance with this decision, the office of the Agricultural Marketing Adviser to the Government of India, which has recently been re-designated as the Central Agricultural Marketing Department, was constituted with effect from 1st January, 1935, at Delhi with A. M. Livingstone as the Agricultural Marketing Adviser. After more than six years of useful activities in India during which period he was the guiding spirit of the marketing organisation all over India, he relinquished charge of his office on 17th March, 1941, and left for England. Pending the appointment of a successor, Dr. N. Das, Ph.D. (London), I.C.S. Deputy Agricultural Marketing Adviser has been appointed to officiate as Agricultural Marketing Adviser. The staff now consists of the Agricultural Marketing Adviser, a Deputy Agricultural Marketing Adviser (post held in abeyance), three Senior Marketing Officers, three Marketing Officers, one Supervising Officer (Grading Stations) and fifteen Assistant Marketing Officers. With the help of suitable subsidies from the Imperial Council of Agricultural Research, the Provincial Governments established similar organisations in their respective areas and have, in some cases further added to their staffs to meet the growing demand for development work of a practical nature. Certain leading Indian States agreed to co-operate by appointing full time officers. In their States and over 200 States have nominated officers to deal with marketing questions. A list of the Central Marketing Officers and Senior Marketing Officers in the provinces and States is appended. In provinces and States for which no Senior Marketing Officer is shown, the Director of Agriculture supervises the work of the Marketing Officers. The Central Marketing Staff are responsible for the survey work in a large number of States which do not have staff of their own. They also have to advise and assist the local marketing staff in carrying out their work.

The marketing scheme was originally sanctioned for a period of five years and the new organisation was given the two-fold task of (i) carrying out marketing surveys and publishing reports describing in detail the present system of marketing of some of the more important agricultural and animal husbandry products with recommendations regarding the lines of future improvement and (ii) drawing up suitable grade specifications after examining the chemical

and physical characteristics of market samples of such commodities and testing their working under practical conditions.

Apart from the Report on the Cold Storage and Transport of Perishable Produce in Delhi which was issued in 1937, all-India marketing survey reports in respect of wheat, linseed, eggs, tobacco, coffee, potatoes, grapes, milk, groundnuts and rice have been published, while the reports on hides and sugar are in the final proof stage. The report on lac was approved by the Indian Lac Cess Committee with some minor modifications and is being finally prepared for printing. Reports on skins, citrus fruits, coconuts, markets and fairs and co-operative marketing are in the press either in full or in part. A 'Hand-book on the Quality of Indian Wool,' which is intended to serve as a guide to wool merchants and persons interested in wool has also been prepared and printed. Copies of the same are expected to be released for sale shortly. To facilitate the fish survey, it was found necessary to prepare a Preliminary Guide to Indian Fish, Fisheries and Methods of Fishing and Curing. This was issued as a priced publication in March, 1941. A list of publications issued by the Agricultural Marketing Adviser is given at the end.

Survey work is still in progress in respect of a number of commodities, e.g., barley, gram, maize, mustard, rape seed and toria, apples, mangoes and certain other fruits, sheep and goats, wool and hair, ghee and butter, fish and cashewnuts. At the sixth annual Conference of Marketing Officers held at Delhi in October 1940, it was decided to undertake similar surveys in respect of 26 new sets of commodities such as millets, castor seed, pulses, oilseeds like sesamum, niger and cotton seed, poultry, animal fats, honey and wax, dairy products, fruits such as melons, guavas, pomegranates, etc., vegetables such as onion, garlic, chillies, peas and beans etc., and other miscellaneous products such as turmeric, ginger, cardamom, betel, arecanut, ram hemp, etc. Later it was considered desirable to take up the survey in batches of say 10 commodities and accordingly the seventh Marketing Officers' Conference held at Delhi in October, 1941, recommended that during 1942 fresh surveys should be taken up and completed in respect of 7 commodities only, viz. millets and castor seed in the Cereals and Oil-seeds Group, table poultry and honey in the Animal Husbandry Group and onion, garlic and chillies in the Miscellaneous Group.

With a view to studying the commercial possibilities of cold storage transport of perishable products like fruit, etc., certain refrigerated transport trials were conducted during 1940-41 on two N.W.R. cold storage wagons. All-India survey work on cold storage was also carried out in part during that period. In view, however, of the recent transport difficulties and the consequent shortage of cold storage capacity, experiments and surveys on cold storage had to be postponed for the present.

In discussing steps which might be taken to improve the general level of quality, the Royal Commission thought that organised trade associations in India could give great assistance in applying effective pressure to secure improved quality from the producer. This view was fully borne out by the preliminary marketing surveys and two general lines of action were decided upon. First, the physical grading and packing of commodities such as fruits, eggs, etc., on the basis of statutory standards and, secondly, the standardisation of contract terms for staples such as cereals and oilseeds. The former involved legislation and the Agricultural Produce (Grading and Marking) Act 1937 was passed in February 1937, for defining standards of quality and methods of marking in respect of prescribed grade designations applied to scheduled products. As a result of consultation with provincial governments and representative trade and manufacturing interests, further commodities were added to the Schedule to the Act, which now includes fruits, vegetables, eggs, dairy produce, tobacco, coffee, hides and skins, fruit products, *ata*, oilseeds, vegetable oils (including hydrogenated oils and vegetable fats), cotton, rice, lac, wheat, *sann* hemp, and sugarcane gur (jaggery). The grading and marking rules in respect of most of these commodities have been duly prepared and notified. Tentative grade specifications and rules for *bura*, *sann* hemp and several varieties of rice and fruits have also been drawn up. Several Indian States have adopted similar legislation and are giving the AGMARK to the commodities graded in their areas.

The development of trading on the basis of the standard methods of grading is definitely "catching on." In the early stages, experimental grading stations are operated on the basis of provisional standards, subsequently the process of grading and marking is done commercially on a voluntary basis by packers holding a Certificate of Authorisation issued by the Agricultural Marketing Adviser. The authorised packer may be the primary producer or co-operative society or an association of primary producers, village collectors and processors or the individual larger packer or manufacturer holding a key position in the process of distribution. By the close of the year 1941, the standardised grading and marking of the many commodities referred to above was carried out commercially at 757 centres by 586 authorised packers. During 1941 alone, more than 140 lakhs rupees worth of produce was sold under the AGMARK as compared with 102 lakhs rupees in 1940 as may be seen from the details given below—

Name of Commodity	Value of produce graded	
	1940 Rs	1941 Rs
Ghee	42,13,677	55,13,080
Hides	16,28,751	16,82,346
Eggs	3,06,744	3,99,127
Tobacco	3,25,000	2,33,442
<i>Ata</i>	3,82,067	10,51,209
Rice	10,46,759	14,38,498
Groundnuts	5,000	480
Edible Oils	2,69,990	7,99,801
Sugarcane Gur	39,319	52,372
Cotton	17,00,000	18,09,527

Name of Commodity	Value of produce graded	
	1940 Rs	1941 Rs
Citrus Fruit Products..	3,500	66,458
Butter		3,73,632
Fruits and vegetables	3,44,960	4,60,592
Seed lac		1,28,790
<i>Bura</i>		21
Total	1,02,65,767	1,40,09,875

In order to ensure adequate control of quality and proper grading, several persons in the provinces and States were authorised by the Agricultural Marketing Adviser to inspect graded produce and grading centres. The co-operation of agricultural, veterinary and allied departments in all provinces was sought for in this connection and several of their officers were provided with the necessary letters of authorisation to inspect grading stations and graded produce. It is gratifying to note that so far the grading stations have been functioning satisfactorily and there has been no instance of deliberate and improper marking of produce. In order to control the quality of graded produce suitable arrangements have been made for the systematic collection and analysis of samples of graded produce. Over 6,000 samples of ghee and nearly 300 samples of edible oils were analysed at the Central Control Laboratory, Cawnpore, during the calendar year 1941. Several samples of graded gur, butter and fruit products are being periodically analysed at the Imperial Agricultural Research Institute, white *ata* samples are being analysed at the Agricultural College, Lyallpur and at Nagpur. The Government Rice Farm, Shelkhpura, Punjab, have also undertaken analysis of rice samples.

The exercise of quality control by examination of samples at these various laboratories naturally involves a certain amount of unavoidable expenditure. This is partly offset by the sale of AGMARK labels to authorised packers. It has not been found possible, however, to get the packers to agree to contribute in this way in the early stages before the grading of any particular commodity has passed the experimental stage and proved to be of real benefit. A small beginning was, however, made in respect of a few products and during the year 1941 receipts from the sale of AGMARK labels for ghee, edible oils, rice and creamery butter totalled about Rs 4,440.

The Standard Contracts terms for wheat and linseed, were finally agreed to at the Grain and Oilseeds Conference, 1938 and similar terms for groundnuts were settled at an informal Conference held at Bombay in January 1939. While a fairly satisfactory measure of agreement has been obtained regarding the adoption of the terms and while certain trading associations have started trading on this basis, unanimous support was not forthcoming, owing partly to the existence of an excessive number of small futures trading associations scattered all over the country and partly to the opposition of one or two important trading institutions and certain influential exporting and importing interests.

With a view to bringing about uniformity in the different contract terms for wheat and

linseed (including the Standard Contract) adopted by the trade, an informal Conference of the representative of 3 important trade associations of Bombay was convened in February 1941. Besides suggesting certain changes in the tolerances and limits of rejection for damaged, slightly damaged and shrivelled grains, the Conference made 2 important recommendations, viz., that (1) 25 tons should be adopted as an alternative to 500 maunds as the minimum unit of transaction, and (2) that the Cwt should be adopted as an alternative to the maund as the unit of quotation. In the case of linseed, the Conference further suggested that the cleaning charge under "Refraction" should be lowered. These latter suggestions were circulated to the trade interests concerned, and they have been accepted.

In the case of wheat, it has been decided to amend the Standard Contract for wheat as finally agreed to in 1938 and thereby implement the above-mentioned recommendations.

The Standard Groundnut Contract was examined at the Bombay Conference, 1941, and several minor changes were suggested. These were afterwards circulated to the trade interests concerned. As regards Hand Picked Selected Groundnuts (kernels and nuts in shell), the Contract terms agreed to at a Conference held in 1940, were further revised and accepted by 2 leading trade associations of Bombay. It is expected that the trading of this commodity will be conducted on the basis of Standard Contract from the 1941-42 season.

For most commodities the containers used in India are very variable in size. Owing to their fragile nature the contents are subject to appreciable damage which also varies in extent. Every package, therefore, has to be examined at the time of sale and it is difficult for the buyer to quote with confidence a flat rate per package even for graded produce. Owing to their fragility and awkward shape of the ordinary containers they cannot be properly and safely stacked so that they occupy an excessive amount of space both in transit and in storage. To overcome these difficulties, trials on a commercial scale were carried out in Madras, Travancore, Bengal, the Punjab, the North West Frontier Province, Assam, Rampur State, United Provinces, etc., with boxes of standard patterns for use in transit of eggs and fruits. Careful records were kept of the results for comparing the standard and the ordinary containers. The Marketing Staff in Orissa have also planned to conduct experiments on improved containers for packing 'gur'.

In the Travancore experiment conducted during 1939 and 1940 covering about 3,00,000 eggs, the loss by damaged and broken eggs in the standard boxes was only 0.52 per cent, as compared with damage and loss through pilferage of 1.77 per cent in the ordinary baskets. As a result of the experiments, almost the entire exports of eggs from the State to other markets like Madras were packed in the improved containers in 1941. This was facilitated by the grant of suitable concessions in freight rates by the railway companies. In the Bengal trials the total wastage in the standard boxes was 0.5 per cent as compared with 2.5 per cent in the case of baskets. The experiments

conducted by the Rampur State revealed that in 3 out of 4 containers of eggs consigned to Nainital in August 1941, the contents were absolutely undamaged, while in the case of the fourth, the damage was only about 1 per cent. Such reductions in the physical loss of produce are of small magnitude, but even a saving of 1 per cent on the score alone would represent an economy of something like Rs 5½ lakhs in the cost of distribution of the eggs put on the market.

The draft model bill for the regulation of markets circulated by the Agricultural Marketing Adviser in the year 1938 formed the basis for necessary legislation in provinces and States. Agricultural Produce Markets Acts are now in force in the Punjab, North West Frontier Province, Sind, Madras, Bombay, Central Provinces, Mysore and Hyderabad and the question is under consideration in other provinces and States where no legislation already exists.

The attempts at regulating the markets were fittingly strengthened and supplemented by the passage on the 28th March, 1939, by the Central Government of the Standards of Weight Act, 1939. The Act will be brought into force as soon as the necessary rules have been framed and the arrangements for the preparation of sets of the standard weights made. The provincial and State marketing staffs are also taking suitable steps to have similar legislation enacted by their respective governments.

The broadcasting of Hapur Market closing quotations in respect of wheat, barley, gram, peas, arhar and gur was continued. Steps were taken to make the weekly market report more comprehensive by including the prices of groundnuts and potatoes and to give it wider publicity through newspapers and journals. The dealers of milch cattle in different places were also kept informed of the daily prices, stocks, etc., at exporting and consuming centres. Particulars of the daily arrivals, despatches to Bombay and prices of buffaloes and cows in the cattle markets of Rohtak, Bahadurgarh and Delhi were communicated to the Buffalo Merchants' Association, Bombay, and particulars in regard to the rate of milk, arrivals of milch cattle and their prices in Bombay were intimated to the cattle markets mentioned above. Similar services were also in operation between Mehsana and Bombay and between Rohtak and Calcutta. At the instance of the local All-India Radio authorities arrangements were made for supply of a summary of livestock prices for the benefit of the listeners in rural areas around Delhi. The provincial marketing staffs have made similar beginnings in their respective areas.

As usual, efforts were made to keep the public informed of the activities of the marketing staffs by taking advantage of the various agricultural exhibitions in the provinces and States. Public demonstrations were given of the technique of grading by exhibiting illustrative maps, diagrams and charts relating to the production, supplies, prices and distribution of various agricultural commodities, together with grade discs, labels and grading apparatus. Arrangements were also made

IMPERIAL INSTITUTE OF SUGAR TECHNOLOGY.

The Indian Sugar Committee of 1920 recommended *inter alia* the establishment of a Central Research Institute as necessary for the proper development of the Sugar Industry in this country. The necessity for such an Institute was greatly emphasised since the date of the Report by the rapid expansion of the industry.

The recommendation of the Sugar Committee was accepted and the Imperial Institute of Sugar Technology was started by the Government of India on 1st October, 1936, to carry out research in the different branches of Sugar Technology and to help the Indian Sugar Industry in various ways by rendering technical assistance to Sugar Factories, by training students in all branches of Sugar Technology, by providing short course to technical men already engaged in the Industry, etc. The scheme has been sanctioned in the first instance for a period of 5 years.

An Advisory Board has also been constituted with the Vice-chairman, Imperial Council of Agricultural Research, as Chairman and representatives of the different sections of the industry—cane-growers, sugar manufacturers and merchants as members.

The work of the Institute has been organized under two broad heads, (a) office work including general administration and, (b) research and teaching. The former includes the technical, the statistical and general sections, the latter consists of three main sections—Sugar Technology, Sugar Engineering and Sugar Chemistry, the last comprising of Sugar Chemistry, Organic Chemistry, Physical Chemistry and Bio-Chemistry. The laboratories are well equipped with instruments required for research on sugar and allied products. Attached to the Institute are the Experimental Sugar Factory, workshop, Sugar Engineering and Chemical Engineering laboratories, Sugar Research and testing station, Bilari, Bureau of Sugar standards and research schemes for manufacture of cattle feed from molasses and for manufacture of sugarcandy carried out at Bilari and Ravalgaon are also under the control of the Director.

The functions of the Research and Testing Station at Bilari are (i) testing of existing plants and processes in use in the open pan industry, (ii) devising complete units, (iii) giving demonstration of new machines and improved processes, (iv) undertaking research work for introducing improvements and (v) training of artisans.

The Advisory Committee of the Bureau of Sugar Standards includes members drawn from the associations of manufacturers, merchants and workers. The Indian Sugar Standards are being issued annually since 1935 and are revised periodically on the basis of experience gained in regard to trade requirements. The Institute maintains a Museum in which samples of sugar, *gur*, *rab* and allied products are exhibited.

"The sugar production Rules 1935" framed in accordance with the provisions of Section V of the Sugar Industry (Protection) Act 1932 came into force from 1st November, 1935. The Rules require Sugar factories in India to submit periodical returns in prescribed forms. The information supplied under the above Rules is treated as strictly confidential and where publication of data is considered necessary in the interest of the industry as a whole every care is taken to ensure that the names of individual factories are not divulged. The Government of India passed

orders that non-submission of returns to the Institute by the factories regularly and punctually as required by the Rules would be an offence punishable under Section 176 I P C.

Apart from the technical work under the Sugar Production Rules, 1935, technical assistance and advice on various aspects of the sugar industry are given by the Institute to sugar factories, central and provincial governments, Indian States and others. The Institute endeavours to meet all technical requirements of factories so far as its staff and equipment permit. The more important types of work which the Institute undertakes for rendering technical assistance to sugar factories are—(a) advice to promoters of new factories, (b) advice relating to extensions and alterations of existing factories, (c) advice relating to improvements in working of plant, (d) advice relating to improvements in manufacturing process, (e) technical control of manufacturing operations, (f) advice regarding working expenses and cost of production, (g) investigations into special problems and (h) analytical work.

The Sugar Trade Information Service under the control of the Director is run to meet the requirements of the sugar trade and industry in India.

The scope of the work of the Institute was brought to the notice of all persons interested in the sugar industry through a booklet entitled "Functions and Activities". In order to establish and maintain contact with the sugar factories and enable them to be in touch with research work carried out at the Institute and developments elsewhere, arrangements have been made for issuing brief summaries on matters of technical interest under the title of "Sugar Notes". Description and results of various experimental and research work carried out in the Institute are being published annually in the publication entitled "Scientific Reports of the Imperial Institute of Sugar Technology".

The Institute trains a limited number of men every year and gives them the highest and most complete training in their respective subjects. For most courses, a period of factory training is an essential condition for the grant of diploma or certificate. There are five regular courses of training for students desiring to qualify for technical posts in sugar factories, viz., Fellowship and Associateship courses in Sugar Technology and in Sugar Engineering and the Sugar Bolders Certificates Course. Besides, facilities are provided for men already engaged in the industry to have the necessary technical training during the off-season provided they have the requisite educational qualifications. The off-season courses are—(a) Chemical Control, (b) Bacteriology, (c) Pan Boiling, (d) Fuel and Boiler Control, (e) Statistical Methods (for research students), (f) Statistics (for sugar students), (g) Dutch language, and (h) German Language.

In order to afford adequate facilities to the Sugar Factories in India for selecting properly qualified staff and at the same time to reduce unemployment amongst the educated technical workers in the sugar industry, the Institute runs an Employment Bureau which collects authentic information about the qualifications and experience of those seeking employment in the sugar industry and makes it available free of charge to factories on receipt of enquiries.

AREA CULTIVATED AND UNCULTIVATED IN 1939-40 IN EACH PROVINCE.

Provinces.	Area according to survey.	Deduct Indian States.	NET AREA.	
			According to survey.	According to Village Papers.
1	2	3	4	5
	Acres.	Acres.	Acres.	Acres.

Irrigation.

The chief characteristics of the Indian rainfall are its unequal distribution over the country, its irregular distribution throughout the seasons and its liability to failure or serious deficiency. The normal annual rainfall varies from 460 inches at Cherrapunji in the Assam hills to less than three inches in Upper Sind. The greatest rainfall actually measured at any station in any one year was 905 inches, recorded at Cherrapunji in 1861, while at stations in Upper Sind it has been nil. There are thus portions of the country which suffer as much from excessive rainfall as others do from drought.

The second important characteristic of the rainfall is its unequal distribution throughout the seasons. Except in the south-east of the peninsula, where the heaviest precipitation is received from October to December, by far the greater portion of the rain falls during the south-west monsoon, between June and October. During the winter months the rainfall is comparatively small, the normal amount varying from half an inch to two inches, while the hot weather, from March to May or June, is practically rainless. Consequently it happens that in one season of the year the greater part of India is deluged with rain and is the scene of the most wonderful and rapid growth of vegetation, in another period the same tract becomes a dreary, sun-burnt waste. The transition from the latter to the former stage often occurs in a few days. From the agricultural point of view the most unsatisfactory feature of the Indian rainfall is its liability to failure or serious deficiency. The average annual rainfall over the whole country is about 45 inches and there is but little variation from this average from year to year, the greatest recorded being only about seven inches. But if separate tracts are considered, extraordinary variations are found. At many stations annual rainfalls of less than half the average are not uncommon, while at some less than a quarter of the normal amount has been recorded in a year of extreme drought.

Scarcity.—Classing a year in which the deficiency is 25 per cent as a dry year and one in which it is 40 per cent, as a year of severe drought, the examination of past statistics shows that, over the precarious area, one year in five may be expected to be a dry year and one in ten a year of severe drought. It is largely in order to remove the menace of these years that the great irrigation systems of India have been constructed.

Government Works.—The Government irrigation works of India may be divided into two main classes, those provided with artificial storage, and those dependent throughout the year on the natural supplies of the rivers from which they have their origin. In actual fact, practically every irrigation work depends upon storage of one kind or another but, in many cases, this is provided by nature without man's assistance. In Northern India, upon the Himalayan rivers, and in Madras, where the

cold weather rains are even heavier than those of the south-west monsoon, the principal non-storage systems are found.

The expedient of storing water in the monsoon for utilisation during the subsequent dry weather has been practised in India from time immemorial. In their simplest form, such storage works consist of an earthen embankment constructed across a valley or depression, behind which the water collects, and those under Government control range from small tanks irrigating only a few acres each to the huge reservoirs recently completed in the Deccan which are capable of storing over 20,000 million cubic feet of water. By gradually escaping water from a work of the latter type, a supply can be maintained long after the river on which the reservoir is situated would otherwise be dry and useless.

The Three Classes.—Previously all irrigation works were divided into three classes: Productive, Protective and Minor, but during the triennium 1921-24 the method of determining the source from which the funds for the construction of Government works were provided was changed, and now all works, whether major or minor, for which capital accounts are kept, have been re-classified under two heads, Productive and Unproductive, with a third class embracing areas irrigated by non-capital works. The main criterion to be satisfied before a work can be classed as productive is that it shall, within ten years of the completion of construction, produce sufficient revenue to cover its working expenses and the interest charges on its capital cost. Most of the largest irrigation systems in India belong to the productive class.

Unproductive works are constructed primarily with a view to the protection of precarious tracts and to guard against the necessity for periodical expenditure on the relief of the population in times of famine. They are financed from the current revenues of India, generally from the annual grant for famine relief and insurance, and are not directly remunerative, the construction of each such work being separately justified by a comparison of the value of each acre protected (based upon such factors as the probable cost of famine relief, the population of the tract, the area already protected and the minimum area which must be protected in order to tide over a period of severe drought) with the cost of such protection.

Nearly one-eighth of the whole area irrigated in India from Government works is effected by minor works for which no capital account is kept.

Growth of Irrigation.—There has, during the last sixty years, been a steady growth in the area irrigated by Government irrigation works. From 10½ million acres in 1878-79 the area annually irrigated rose to 19½ million acres at the beginning of the century and to 22½ million acres in 1937-38.

The main increase has been in the class of productive works, which irrigated 4½ million acres in 1878-79 and rose to 20,756,209 acres in 1926-27. During the year 1937-38 the areas irrigated by productive and unproductive works amounted to 24.52 and 2.82 million acres respectively.

The area irrigated in 1937-38 was the largest in the Punjab in which province 12.29 million acres were irrigated during the year, excluding area irrigated through channels which lie in the Indian states. The Madras presidency came next, with an area of 7.56 million acres, followed by the United Provinces with an area of 5.16 million acres.

Capital and Revenue—The total capital outlay, direct and indirect on irrigation and navigation works, including works under construction, amounted at the end of the year 1937-38 to Rs 15,028 lakhs. The gross revenue for the year was Rs 1,351 lakhs and the working expenses 462 lakhs, the net return on the capital being, therefore, 5.91 per cent.

The return on capital invested in productive irrigation works was highest in the Punjab where the canals yielded 14.99 per cent. The return was 11.29 per cent in the North-West Frontier Province, 9.42 per cent in Bombay, 6.36 per cent in Madras, and 5.32 per cent in the United Provinces.

Charges for Water.—The charges for water are levied in different ways in the various provinces. In some, notably in Sind, the ordinary land revenue assessment includes also the charge for water, 9/10ths of this assessment being regarded as due to the canals. In others, as in parts of Madras and Bombay, different rates of land revenue are assessed according to whether the land is irrigated or not, and the assessment upon irrigated land includes also the charge for water. These methods may, however, be regarded as exceptional. Over the greater part of India water is paid for separately, the area actually irrigated is measured, and a rate is charged per acre according to the crop grown. Lower rates are often levied in cases where irrigation is by "lift", that is to say where the land is too high for the water to flow on to it by gravity and consequently the cultivator has to lift it on to his field.

Various other methods of assessment have been tried, such as by renting outlets for an annual sum, or by charging according to the volume of the water used, but these have never been successful. The cultivator fully understands the principle of "No crops, no charge" which is now followed as far as possible in canal administration, but has no confidence in a system under which his liability for water rate is independent of the area and quality of his crop.

The rates charged vary considerably with the crop grown, and are different in each province and often upon the several canals in a single province. Thus in the Punjab, they vary from Rs. 7-8-0 to Rs. 12 per acre for sugarcane, from Rs. 4 to Rs. 7-8-0 per acre for rice, from Rs. 3-4-0 to Rs. 5-4-0 per acre for wheat, from Rs. 3 to Rs. 4-4-0 per acre for cotton and from

Rs. 2 to Rs. 3-4-0 per acre for millets and pulses. Charge is made for additional waterings. Practically speaking, Government guarantees sufficient water for the crop and gives it as available. If the crop fails to mature, or if its yield is much below normal, either the whole or part of the irrigation assessment is remitted.

A somewhat different system, the long lease system, is in force in parts of Bengal and the Central Provinces, under which the cultivators pay a small rate for a term of years whether they take water or not. In these provinces where the normal rainfall is fairly high, it is always a question whether irrigation will be necessary at all, and if the cultivators have to pay the full rate, they are apt to hold off until water becomes absolutely essential, and the sudden and universal demand then usually exceeds the supply. By paying a reduced rate every year for a term of years they become entitled to water when required; consequently there is no temptation to wait till the last possible moment, and the demand is much more evenly distributed throughout the season.

Taken as a whole, irrigation is offered on extremely easy terms, and the water rates represent only a very small proportion of the extra profit which the cultivator secures owing to the water he receives.

Central Bureau of Irrigation.—An important event of the triennium 1930-33 was the establishment of a Central Bureau of Irrigation as an essential adjunct of the Central Board of Irrigation. This organisation satisfies a want long felt by irrigation officers and has great potentialities in connection with the development of Indian irrigation. The Bureau came into being in May 1931. Its main objects are to ensure the free exchange of information and experience on irrigation and allied subjects between the engineer officers of the various provinces, to co-ordinate research in irrigation matters throughout India and to disseminate the results achieved, to convene at intervals general congresses at which selected irrigation matters will be discussed by officers from various provinces, and to establish contact with similar bureaux in other countries with a view to the exchange of publications and information. These objects necessitate among other things the maintenance of a comprehensive library of irrigation publications both Indian and foreign, and the expenditure on the establishment and on the library is considerable. The bureau was financed during the year 1931-32 by the Government of India, but local Governments have since consented to contribute towards its support, and it has thus achieved an independent existence under the Central Board of Irrigation, the Government of India contributing in the same manner as provincial Governments.

Hydro-dynamic Research—In the year 1937-38, the Government of India, at the instance of the Central Board of Irrigation, took over from the Government of Bombay their Irrigation and Hydro-dynamic Research Station at Khadakvasla near Poona. This Station deals largely with hydro-dynamic problems of all-India importance, such as the behaviour of rivers, the protection of bridges and the like.

The authorities mainly interested in hydro-dynamic research are the Government of India, who administer small irrigation schemes in Baluchistan and Rajputana and have large railway interests and the Provincial Government with large irrigation projects in operation.

The Station was originally being maintained by the Government of Bombay from Provincial revenues and in 1934-35, the cost of running it was roughly 1.02 lakhs. With the separation of Sind from Bombay, the irrigated area in the Presidency proper was reduced to about 400,000 acres and the Provincial Government did not feel justified in keeping up from their own revenues, a research station, the results of which would be applied mainly elsewhere. They, therefore, asked the Government of India to take it over with effect from April 1, 1935 when otherwise they proposed to close it down. The Government of India decided to maintain the Station from Central funds for the years 1937-38 and 1938-39 and in the meantime to consider the question of its future. Subsequently they decided to continue to maintain the Station for a further period of five years.

The results obtained in each province are given in the table below:—

Provinces.	Average area irrigated in triennium 1933-35.	Area irrigated in 1937-38.
Madras	7,448,147	7,565,100
Bombay (Deccan)	352,809	458,900
Sind	4,225,031	4,849,000
Bengal	127,808	200,300
United Provinces	3,977,404	5,162,500
Punjab	11,007,776	12,291,500
Burma	2,105,354	+
Bihar and Orissa	857,405	1,047,000
Central Provinces	332,509	317,400
North-West Frontier Province	431,135	403,400
Rajputana	26,446	26,800
Baluchistan	20,760	22,000
Total	30,972,799	32,433,200

+ Figures not available.

Productive Works.—Taking productive works only, a triennial comparison is given in the following table. It will be seen that the average area irrigated by such works during the triennium was approximately two million more than in the previous period:—

Provinces.	Average area irrigated in triennium 1933-35.	Area irrigated in 1937-38.
Madras	3,852,729	2,540,016
Bombay-Deccan	5,145	6,992
Sind	4,092,675	3,952,150
United Provinces	3,583,062	4,751,755
Punjab	10,295,230	12,245,752
Burma	1,461,310	+
Bengal	74,313	149,545
Behar and Orissa	395,172	553,545
North-West Frontier Province	231,241	207,754
Total	24,020,650	24,402,175

+ Figures not available.

Taking the productive works as a whole, the capital invested in them was, at the end of 1937-38, Rs 11,142 lakhs. The net revenue for the year was Rs. 855 lakhs giving a return 7.65 per cent. as compared with 9 per cent. in 1918-19 and 2½ per cent. in 1919-20. In considering these figures it must be remembered that the capital invested includes the expenditure upon several works which have only lately come into operation and others which were under construction, which classes at present contribute little or nothing in the way of revenue, moreover only receipts from water rates and a share of the enhanced land revenue due to the introduction of irrigation are credited to the canals, so that the returns include nothing on account of the large addition to the gross revenues of the country which follows in the wake of their construction.

Irrigation—Non-capital Works.

313

Unproductive Works.—Turning now to the unproductive works, the areas irrigated in the various provinces during the various periods were as below:—

Provinces.	Average area irrigated in previous triennium 1933-36.	Area irrigated in 1937-38
Madras	396,725	190,045
Bombay-Deccan	208,700	309,593
Sind	104,594	99,676
Bengal.. .. .	22,631	41,603
United Provinces	384,582	427,537
Punjab	712,546	754,515
Burma	572,197	†
Bihar and Orissa	490,849	411,671
Central Provinces	305,562	288,352
North-West Frontier Province	199,892	252,636
Rajputana	26,646	26,800
Baluchistan	20,760	22,172
Total .	3,445,686	2,824,600

† Figures not available

Non-capital Works—The results obtained from the non-capital works are given below:—

Provinces.	Average area irrigated in triennium 1930-33.	Average area irrigated in triennium 1933-36.
Madras	3,297,565	3,168,693
Bombay-Deccan	171,925	168,952
Sind	62,637	27,763
Bengal	24,179	30,865
United Provinces	21,748	9,757
Burma	68,145	71,877
Bihar and Orissa	2,484	1,387
Central Provinces	30,623	26,939
Total --	3,679,311	3,506,233

Irrigated Acreage—A comparison of the acreage of crops matured during 1937-38 by means of Government irrigation systems with the total area under cultivation in the several provinces is given below:—

Provinces.	Area sown	Area irrigated by Government irrigation works.	Percentage of area irrigated to total area sown.	Capital cost of Government irrigation & Navigation works to end of 1937-38. In lakhs of rupees	Estimated value of crops raised on areas receiving State irrigation. In lakhs of rupees
	Acres.	Acres.			
Madras	36,917,900	7,565,100	20.49	2,025	2,193

Total	217,593,400	32,433,300	14.68	15,028	10,494

* Excludes 24,500 acres in Indian States irrigated by the United Provinces Irrigation works.

† Includes Rs 242 lakhs on Hydro-Electric works.

‡ In addition 769,460 acres were irrigated on the Indian State channels of the Western canal, the Sirhind and the Ghaggar canals.

New Works.—The major works of exceptional importance are the Lloyd Barrage and Canals in Sind, the Cauvery (Mettur) project in Madras and the Sutlej Valley Canals in the Punjab. The Lloyd Barrage which was opened by His Excellency the Viceroy early in 1932 is the greatest work of its kind in the world, measuring 4,725 feet between the faces of the regulators on either side. The canals construction scheme has been completed, and the revenue account of the scheme was opened with effect from the financial year 1932-33.

Providing for the irrigation of a total anticipated area of approximately 5½ million acres on attainment of full development the main features of the scheme are a Barrage approximately a mile long across the river Indus near Sukkur, three large canals taking off from above the Barrage on the right bank of the River and four canals on the left bank of the River with a separate head-regulator for each canal. The extensive barrage works at Sukkur cost the Government over Rs 24 crores

from the Panjnad Headworks, were also handed over to the Bahawalpur State during the year. The total expenditure on the Project to the end of 1932-33 amounted to Rs 33.31 crores. The total area to be irrigated is 5,108,000 acres, or nearly 8,000 square miles. Of this, 2,075,000 acres are perennial and 3,033,000 acres for perennial irrigation. 1,942,000 acres are in British territory, 2,825,000 acres in Bahawalpur and 341,000 acres in Bikaner.

The Cauvery-Mettur Project is the most important project completed during the triennium, 1933-36. Its inauguration ceremony was performed on the 21st August 1934. The project was sanctioned in 1925 and its sanctioned estimate amounts to Rs. 737 lakhs. It has been framed with two main objects in view, first, to improve the existing fluctuating water supply for the Cauvery delta irrigation of over a million acres and, secondly, to extend irrigation to a new area of 391,600 acres. The project involved—

The Sutlej Valley Works which reached completion by the end of 1932-33 received the sanction of the Secretary of State for India in 1921-22. It falls into four natural groups centred on the Ferozpur, Sahiwalke, Is'am, and Panjnad Headworks. During the triennium ending 1932-33 all the State Canals taking off from the first three Headworks, namely the Bikaner Ferozpur, Eastern Sahiwal, Bahawalpur and Qanpur Canals were handed over to the States. The remaining two Canals, namely the Abbasia and Panjnad Canals taking off

(i) the construction of a large dam on the Cauvery at Mettur, the object of the dam being to store the flood waters of the river and to raise them down to the delta as and when required;

(ii) the construction of an irrigation canal (the Grand Ancient canal) taking off on the right bank of the Cauvery; and

(iii) the improvement and extension of the existing Vadavar canal in the Cauvery delta.

A saving of Rs 74 73 lakhs is expected in the sanctioned estimate and the project is estimated to yield a net revenue of over Rs. 50 lakhs. Apart from the extension of irrigation to new areas (271,000 acres on the Grand Anicut canal and 30,000 acres on the Vadavar canal) second crop cultivation is

expected to increase by 175,000 acres. The potentialities of Mettur as an industrial centre are now considerable for the area will possess the great advantages of cheap power, an ample supply of water and proximity to cotton and groundnut tracts, and there are also factory sites in the vicinity of the railway and the river Cauvery.

[Editorial Note —The figures given throughout this article are the latest obtainable from the Government of India at the time of going to press.]

WELLS AND TANKS.

So far we have dealt only with the great irrigation schemes. However, the real eastern instrument is the well. The most recent figures give thirty per cent of the irrigated area in India as being under wells. Moreover the well is an extremely efficient instrument of irrigation. When the cultivator has to raise every drop of water which he uses from a varying depth, he is more careful in the use of it; well water exerts at least three times as much duty as canal water. Again, owing to the cost of lifting, it is generally used for high grade crops. It is estimated that well-irrigated lands produce at least one-third more than canal-watered lands. Although the huge areas brought under cultivation by a single canal scheme tend to reduce the disproportion between the two systems, it must be remembered that the spread of canals increases the possibilities of well irrigation by adding, through seepage, to the store of subsoil water and raising the level.

Varieties of Wells—Wells in India are of every description. They may be just holes in the ground, sunk to subsoil level, used for a year or two and then allowed to fall into decay. These are temporary or *kacha* wells. Or they may be lined with timber, or with brick or stone. They vary from the *kacha* well costing a few rupees to the masonry well, which will run into thousands, or in the sandy wastes of Bikaner, where the water level is three hundred feet below the surface, to still more. The means of raising the water vary in equal degree. There is the *picotah*, or weighted lever, raising a bucket at the end of a pivoted pole, just as is done on the banks of the Nile. This is rarely used for lifts beyond fifteen feet. For greater lifts bullock power is invariably used. This is generally harnessed to the *mot*, or leather bag, which is passed over a pulley overhanging the well, then raised by bullocks who walk down a ramp of a length approximating to the depth of the well. Sometimes the *mot* is just a leather bag, more often it is a self-acting arrangement, which discharges the water into a sump automatically on reaching the surface. By this means from thirty to forty gallons of water are raised at a time, and in its simplicity, and the ease with which the apparatus can be constructed and repaired by village labour, the *mot* is unsurpassed in efficiency. There is also the Persian wheel, an endless chain of earthenware

pots running round a wheel. Recently attempts have been made, particularly in Madras, to substitute mechanical power, furnished by oil engines, for the bullock. This has been found economical where the water supply is sufficiently large, especially where two or three wells can be linked. Government have systematically encouraged well irrigation by advancing funds for the purpose and exempting well watered land from extra assessment due to improvement. These advances, termed *talavi*, are freely made to approved applicants, the general rate of interest being 6½ per cent. In Madras and Bombay ryots who construct wells, or other works of agricultural improvement, are exempt from enhanced assessment on that account. In other provinces the exemption lasts for specific periods, the term generally being long enough to recoup the owner the capital sunk.

Tanks.—Next to the well, the indigenous instrument of irrigation is the tank. The village or the roadside tank is one of the most conspicuous features in the Indian scene. The Indian tank may be any size. It may vary from a great work like Lakes Fife and Whiting in the Bombay Presidency or the Periar Lake in Travancore, holding up from four to seven billion cubic feet of water, and spreading their waters through great chains of canal, to the little village tank irrigating ten acres. They date back to a very early stage in Indian civilisation. Some of these works in Madras are of great size, holding from three to four billion cubic feet, with water spreads of nine miles. The inscriptions of two large tanks in the Chingleput district of Madras, which still irrigate from two to four thousand acres are said to be over 1,100 years old. Tank irrigation is practically unknown in the Punjab and in Sind, but it is found in some form or other in all other provinces, including Burma, and finds its highest development in Madras. In the ryotwari tracts of Bombay and Madras all but the smallest tanks are controlled by Government. In the zemindari tracts only the large tanks are State works. According to the latest figures the area irrigated from tanks is about eight million acres, but in many cases the supply is extremely precarious. So far from tanks being a refuge in famine they are often quite useless inasmuch as the rainfall does not suffice to fill them and they remain dry throughout the season.

Meteorology.

The meteorology of India like that of other countries is largely a result of its geographical position. The great land area of Asia to the northward and the enormous sea expanse of the Indian Ocean to the southward are determining factors in settling its principal meteorological features. When the Northern Hemisphere is turned away from the sun, in the northern winter, Central Asia becomes an area of intense cold. The meteorological conditions of the temperate zone are pushed southward and we have over the northern provinces of India the westerly winds and eastward moving cyclonic storms of temperate regions, while, when the Northern Hemisphere is turned towards the sun, Southern Asia becomes a super-heated region drawing towards it an immense current of air which carries with it the enormous volume of water vapour which it has picked up in the course of its long passage over the wide expanse of the Indian Ocean, so that at one season of the year parts of India are deluged with rain and at another persistent dry weather prevails.

Monsoons.—The all-important fact in the meteorology of India is the alternation of the seasons known as the summer and winter monsoons. During the winter monsoon the winds are of continental origin and hence, dry, fine weather, clear skies, low humidity and little air movement are the characteristic features of this season. The summer rains cease in the provinces of the North-West Frontier Province and the Punjab about the middle of September after which cool westerly and northerly winds set in over that area and the weather becomes fresh and pleasant. These fine weather conditions extend slowly eastward and southward so that by the end of October, they embrace all parts of the country except the southern half of the Peninsula, and by the end of the year have extended to the whole of the Indian land and sea area, the rains withdrawing to the Equatorial Belt. Thus the characteristics of the cold weather from October to February over India are—Westerly winds of the temperate zone over the extreme north of India; to the south of these the north-east winds of the winter monsoon or perhaps more properly the north-east Trades and a gradually extending area of fine weather which, as the season progresses, finally embraces the whole Indian land and sea area. Two exceptions to these fine weather conditions exist during this period, viz; the Madras coast and the north-west of India. In the former region the north-east winds which set in over the Bay of Bengal in October coalesce with the damp winds of the retreating summer monsoon, which current curves round over the Bay of Bengal, and blowing directly on to the Madras coast gives to that region the wettest and most disturbed weather of the whole year, for while the total rainfall for the four months June to September, i.e., the summer monsoon, at the Madras Observatory amounts to 15.46 inches the total rainfall for the three months October to December amounts to 31.78 inches. The other

region in which the weather is unsettled, during this period of generally settled conditions, is North-west India. This region during January, February and part of March is traversed by a succession of shallow storms from the westward. The number and character of these storms vary very largely from year to year and in some years no storms at all are recorded. In normal years, however, in Northern India periods of fine weather alternate with periods of disturbed weather (occurring during the passage of these storms) and light to moderate and even heavy rain occurs. In the case of Peshawar the total rainfall for the four months, December to March, amounts to 5.75 inches while the total fall for the four months, June to September, is 4.65 inches, showing that the rainfall of the winter is, absolutely, greater in this region than that of the summer monsoon. These two periods of subsidiary "rains" are of the greatest economic importance. The fall in Madras is, as shown above, of considerable actual amount, while that of North-west India though small in absolute amount is of the greatest consequence as on it largely depend the grain and wheat crops of Northern India.

Spring Months.—March to May and part of June form a period of rapid continuous increase of temperature and decrease of barometric pressure throughout India. During this period there occurs a steady transference northward of the area of greatest heat. In March the maximum temperatures, slightly exceeding 100° occur in the Deccan, in April max temperatures varying between 100° and 105° and in May between 105° and 110°, prevail over the greater part of the interior of the country while in June the highest mean maximum temperatures, exceeding 110°, occur in the Indus Valley near Jacobabad. Temperatures exceeding 120° have been recorded over a wide area including Sind, Rajputana, the West and South Punjab and the west of the United Provinces, but the highest temperature hitherto recorded is 127° registered at Jacobabad on June 12th, 1919. During this period of rising temperature and diminishing barometric pressure, great alterations take place in the air movements over India, including the disappearance of the north-east winds of the winter monsoon, and the air circulation over India and its adjacent seas, becomes a local circulation, characterised by strong hot winds down the river valleys of Northern India and increasing land and sea winds in the coast regions. These land and sea winds, as they become stronger and more extensive, initiate large contrasts of temperature and humidity which result in the production of violent local storms. These take the forms of dust storms in the dry plains of Northern India and of thunder and hailstorms in regions where there is inter-action between damp sea winds and dry winds from the interior. These storms are frequently accompanied with winds of excessive force, heavy hail and torrential rain and are on that account very destructive belts known as "Nor'westers" in Bengal.

By the time the area of greatest-heat has been established over North-west India, in the last week of May or first of June, India has become the seat of low barometric pressures relatively to the adjacent seas and the whole character of the weather changes. During the hot weather period, discussed above, the winds and weather are mainly determined by local conditions. Between the Equator and Lat. 30° or 35° South, the wind circulation is that of the south-east trades, that is to say from about Lat. 80° - 35° South a wind from south-east blows over the surface of the sea up to about the equator. Here the air rises into the upper strata to flow back again at a considerable elevation to the Southern Tropic or beyond. To the north of this circulation, i.e., between the Equator and Lat. 20° to 25° North, there exists a light unsteady circulation the remains of the north-east trades, that is to say about Lat. 20° North there is a north-east wind which blows southward till it reaches the thermal equator where side by side with the south-east Trades mentioned above, the air rises into the upper strata of the atmosphere. Still further to the northward and in the immediate neighbourhood of land there are the circulations due to the land and sea breezes which are attributable to the difference in the heating effect of the sun's rays over land and sea. It is now necessary to trace the changes which occur and lead up to the establishment of the south-west monsoon period. The sun at this time is progressing slowly northward towards the northern Tropic. Hence the thermal equator is also progressing northward and with it the area of ascent of the south-east trades circulation. Thus the south-east trade winds cross the equator and advance further and further northward, as the thermal equator and area of ascent follows the sun in its northern progress. At the same time the temperature over India increases rapidly and barometric pressure diminishes, owing to the air rising and being transferred to neighbouring cooler regions—more especially the sea areas. Thus we have the southern Trades circulation extending northward and the local land and sea circulation extending southward until about the beginning of June the light unsteady interfering circulation over the Arabian Sea finally breaks up, the immense circulation of the South-east Trades, with its cool, moisture laden winds rushes forward, becomes linked on to the local circulation proceeding between the Indian land area and the adjacent seas and India is invaded by oceanic conditions—the south-west monsoon proper. This is the most important season of the year as upon it depends the prosperity of at least five sixths of the people of India.

When this current is fully established a continuous air movement extends over the Indian Ocean, the Indian seas and the Indian land area from Lat. 30° S. to Lat. 30° N. the southern half being the south-east trades and the northern half the south-west monsoon. The most important fact about it is that it is a continuous horizontal air movement passing over an extensive oceanic area where steady evaporation is constantly in progress so that where the current enters the Indian seas and flows

over the Indian land it is highly charged with aqueous vapours.

The current enters the Indian seas quite at the commencement of June and in the course of the succeeding two weeks spreads over the Arabian Sea and Bay of Bengal up to their extreme northern limits. It advances over India from these two seas. The Arabian Sea current blows on to the west coast and sweeping over the Western Ghats prevails more or less exclusively over the Peninsula, Central India, Rajputana and north Bombay. The Bay of Bengal current blows directly up the Bay. One portion is directed towards Burma, East Bengal and Assam while another portion sweeps over Bengal and after meeting the Himalayas gets deflected and blows as a south-easterly and easterly current right up the Gangetic plain. The south-west monsoon continues for three and a half to four months, viz., from the beginning of June to the middle or end of September. During its prevalence more or less general though far from continuous rain prevails throughout India, the principal features of the rainfall distribution being as follows. The greater portion of the Arabian Sea current, the total volume of which is probably three times as great as that of the Bengal current, blows directly on to the west coast districts. Here it meets an almost continuous hill range, is forced into ascent and gives heavy rain alike to the coast districts and to the hilly range, the total averaging about 100 inches, most of which falls in four months. The current after parting with most of its moisture advances across the Peninsula giving occasional uncertain rain to the Deccan and passes out into the Bay where it coalesces with the local current. The northern portion of the current blowing across the Gujarat, Kathiawar and Sind coasts gives a certain amount of rain to the coast districts and frequent showers to the Aravalli Hill range but very little to Western Rajputana, and passing onward gives moderate to heavy rain in the Eastern Punjab, Eastern Rajputana and the North-west Himalayas. In this region the current meets and mixes with the monsoon current from the Bay.

The monsoon current over the southern half of the Bay of Bengal blows from south-west and is thus directed towards the Icnasserim hills and up the valley of the Irrawady to which it gives very heavy rain. That portion of this current which advances sufficiently far northward to blow over Bengal and Assam gives very heavy rain to the low-lying districts of East Bengal and immediately thereafter coming under the influence of the Assam Hills is forced upwards and gives excessive rain (perhaps the heaviest in the world) to the southern face of these hills. The remaining portion of the Bay current advance from the southward over Bengal, is then directed westward by the barrier of the Himalayas and gives general rain over the Gangetic plain and fairly frequent rain over the lower ranges of the Himalayas from Sikhim to Kashmir.

To the south of this easterly wind of the Bay current and to the north of the westerly

wind of the Arabian Sea current there exists a debatable area running roughly from Hissar in the Punjab through Agra, Allahabad and part of Chota Nagpur to Orissa, where one or the other current of the monsoon prevails. In this area the rainfall is conditioned by the storms from the Bay of Bengal which exhibit a marked tendency to advance along this track and to give it heavy falls of occasional rain.

The total rainfall of the monsoon period (June to September) is 100 inches over part of the west coast, the amount diminishes eastward, is below 20 inches over a large part of the centre and east of the Peninsula and is only 5 inches in South Madras; it is over 100 inches on the Tenasserim and South Burma coast and decreases to 20 inches in Upper Burma; it is over 100 in the north Assam Valley and diminishes steadily westward and is only 5 inches in the Indus Valley.

The month to month distribution for the whole of India including Burma is —

May	.	3.1	inches
June	..	7.9	"
July	.	11.2	"
August	.	10.3	"
September	..	7.0	"
October	.	3.3	"

Cyclonic storms are an almost invariable feature of the monsoon period. In the Arabian Sea they ordinarily form at the commencement and end of the season viz. May and November, but in the Bay they form a constantly recurring feature of the monsoon season. The following gives the total number of storms recorded during the period 1891 to 1937 and shows the monthly distribution —

	Jan	Feb	Mar	Apr	May	June
Bay of Bengal	3		4	15	10	25
	July	Aug	Sep	Oct	Nov	Dec
Bay of Bengal	22	14	10	33	39	19

	Jan	Feb.	Mar	Apr	May	June
Arabian Sea	3	3	8	11
	July	Aug.	Sep	Oct.	Nov	Dec.
Arabian Sea	3	..	4	14	13	3

The preceding paragraphs give an account of the normal procession of the seasons throughout India during the year, but it must be remembered, that every year produces variations from the normal and that in some years these variations are very large. This is more particularly the case with the discontinuous element rainfall. The most important variations in this element which may occur are —

- (1) Delay in the commencement of the rains over a large part of the country, this being most frequent in North Bombay and North-west India.
- (2) A prolonged break in July or August or both.
- (3) Early termination of the rains, which may occur in any part of the country.
- (4) The distribution throughout the monsoon period of more rain than usual to one part and less than usual to another part of the country. Examples of this occur every year.

About the middle of September fine and fresh weather begins to appear in the extreme north-west of India. This area of fine weather and dry winds extends eastward and southward, the area of rainy weather at the same time contracting till by the end of October the rainy area has retreated to Madras and the south of the Peninsula and by the end of December has disappeared from the Indian region, fine clear weather prevailing throughout. This procession with the numerous variations and modifications which are inseparable from meteorological conditions repeats itself year after year.

INDIA METEOROLOGICAL DEPARTMENT.

Functions of the Department—The India Meteorological Department was instituted in 1875, to combine and extend the work of various provincial meteorological services which had sprung up before that date. The various duties which were imposed on the Department at the time of its formation were from time to time supplemented by new duties. The main existing junctions, more or less in the historical order in which they were assumed, may be briefly summarised as follows —

(a) The issue of warnings to ports and coastal districts of the approach of cyclonic storms

(b) The issue of storm warnings by wireless to ships in the Indian seas, and the collection of meteorological data from ships. International

recommendations on these subjects are contained in Appendix IV.

(c) The maintenance of systematic records of meteorological data and the publication of climatological statistics. These were originally undertaken in order to furnish data for the investigation of the relation between weather and disease.

(d) The issue to the public of up to date weather reports and of rainfall forecasts. The duties were originally recommended by a Committee of Enquiry into the causes of famine in India.

(e) Meteorological researches of a general character, but particularly regarding tropical storms and the forecasting of monsoon and winter rainfall.

(f) The issue of seasonal rainfall forecasts

(g) The issue of telegraphic warnings of heavy rainfall and frost (cold wave) mainly to Government officials (e.g., canal and railway engineers, Collectors, Directors of Agriculture, etc.) and through the newspapers to the public in general.

(h) Supply of meteorological, astronomical and geophysical information in response to enquiries from officials, commercial firms or private individuals

(i) Technical supervision of rainfall registration carried out under the control of provincial Government authorities

(j) The study of temperature and moisture conditions in the upper air by means of instrument carrying balloons and of upper winds by pilot balloons, and regular compilation of statistics of upper air data

(k) The issue of weather reports and warnings to aircraft, civil and military, the latter being in collaboration with the Air Forces in India International recommendations on this subject are contained in Appendix III.

(l) The training and examination in meteorology of candidates for air pilot's licences

(m) Study of meteorology in relation to Agriculture, on which the Royal Commission on Agriculture in India made the recommendations contained in Appendix V

(n) Broadcast of weather data for the benefit of ships at sea, both naval and mercantile and of other meteorological offices in neighbouring countries as well as in India

(o) Issue of special weather reports to the A I R Stations at Delhi, Lucknow, Calcutta, Bombay and Madras for the regions served by them

In addition to these meteorological duties the India Meteorological Department was from time to time made responsible for or undertook various other important duties, such as—

(p) Determination of time in India and the issue of time-signals, also the determination of errors of chronometers for the Royal Indian Navy.

(q) Observations and researches on terrestrial magnetism at Bombay and atmospheric electricity at Bombay and Poona

(r) Regular study (mainly by spectroscopic examination) of the sun at the Solar Physics Observatory at Kodikanal

(s) Maintenance of seismological instruments at various centres

ORGANISATION.

Requirements for weather forecasts—It is necessary to note that practical meteorology implies a meteorological organisation, not merely individual meteorologists relying upon their own personal and purely local observations. The making of a single forecast in any of the larger meteorological offices of the world requires the co-operation of some hundreds of persons. First of all, it presumes that instruments have been indented according to special specifications, tested thoroughly on receipt from the makers and distributed to observers all over the country.

The mere distribution of the instruments does not see the end of the preliminary work. Sites for instruments have to be selected with care and observers everywhere have to be instructed how to read the instruments, record the observations, and prepare weather telegrams in code. In India some 400 observers co-operate daily to take simultaneous observations at about 300 separate places, and hand in their reports to telegraphists, who transmit them to forecast centres, where, for rapid assimilation, clerks decode them and chart them on maps. Meteorological experts then draw therefrom the conclusions on which their forecasts are based. There are other observatories which take observations for climatological purposes but do not telegraph them.

An efficient system of telegraphic communication of weather reports is an essential feature in all meteorological organisations. This is recognised in the International Tele-Communication Convention, from which extracts of the most recent regulations relating to meteorological messages are given in Appendix VI.

Service to public—to ports and shipping—Whereas the public, in general, are served mostly through the newspapers which daily publish extracts from the latest official weather reports and also print the heavy rainfall warnings and storm warnings, special arrangements are necessary to meet the needs of most of the individual interests concerned. Reports for shipping and to ports are issued from the meteorological offices at Poona and Calcutta. The messages to ports include advice or instructions for the hoisting of signals of varying degrees of danger, these signals being understood by men in charge of local craft as well as of the larger ships. In Bengal heavy damage is frequently caused by storms and nor'westers, particularly to small river craft and there is a special arrangement for warning river ports, river stations and police stations. When storms threaten, ships at sea can receive bulletins at least twice a day and also messages containing synoptic data which are issued as regional messages from Poona, Delhi, Karachi and Calcutta, and as an all-India message from Bombay and Poona. For the prompt issue of all these reports to ships at sea, the department is dependent upon the wireless services of the Indian Navy and the Government Telegraph Department. These synoptic reports are also welcomed by meteorological offices in neighbouring countries which use the data to extend their own daily weather charts.

Service to agriculturists and engineers—The Engineers in charge of rail roads, telegraph lines and irrigation works who are on the warning lists, receive warnings of heavy rain, high winds or untimely rain by special telegrams. Some of the Agricultural officers in British India and the Indian States and District Collectors together with their subordinates also get direct telegraphic warnings of heavy and untimely rain and low temperatures for the benefit of the agriculturists and the rural population in their areas.

The A I R stations at Delhi, Lucknow, Calcutta, Bombay and Madras get special weather reports from the forecasting centres.

at Delhi, Calcutta and Poona for broadcast at lunch time and in the evenings for the regions served by them

Meteorological statistics—The department has to organise itself not only for forecasting but also to serve as the "Public memory" of the weather and climate of India. These duties involve the proper statistical arrangement of the weather data and their periodic publication in the form of daily, weekly, monthly, seasonal and yearly reports as well as occasional papers dealing with long-term averages. These reports are used by, or in reply to enquiries from, industrialists, engineers, medical men and others.

Investigations and development—Investigations on instruments, on geophysics, on the physics of the weather from day to day and month to month have to be undertaken, partly in response to the ever increasing demands on the service and partly in response to enquiries from outside as well as inside the department. It is to be noted that outside the government agencies dealing with meteorology there are few in the world and none in India working on research problems in meteorology. The result is that practically all development and new lines of work must be evolved from within the official departments.

Requirements of airmen—Of all the major practical applications of meteorology, its service to aviation is the most recent, and has developed into a specialised and particularly designed organisation. For these reasons the service to aviators is described here in somewhat greater detail than the service to others. Aviators require detailed information about the weather, they wish to know winds at different levels aloft, have information about visibility, fogs, dust-storms, thunderstorms, height of low clouds, etc., along with forecasts of changes in these elements. Many of these are local, short-lived and rapidly changing phenomena.

Recommendations regarding the nature of information to be supplied to aircraft, the exhibition of current information at aerodromes and the meteorological organisation of international airways have been embodied in Annex G of the International Convention of Air Navigation (see Appendix III). In accordance with these recommendations, expert meteorologists should be stationed at aerodromes at reasonable intervals along the airways to supply to the aviation personnel current information and forecasts of weather conditions along the routes up to the next aerodrome of the same class. Forecast centres should be established at least at each main aerodrome along aerial routes and forecasts prepared at such centres should be transmitted to the other aerodromes for the information of pilots. Other recommendations refer to hours and kind of observations and manner of codifying them.

Service for aviation—In India, the meteorological service for aviation is, for financial reasons, not able to attain the standard recommended in Annex G of the International Convention. The network of observatories in India is much sparser than that in Europe and America and the frequency of observations taken at each of them much smaller. The

3000-mile air route between Sharjah and Akyab is served by three forecasting centres at Karachi, Delhi and Calcutta, which prepare two synoptic charts a day based on observations taken twice daily at observatories reporting to them. The sole forecasting centre in southern India is at Poona, which also prepares two synoptic charts daily.

The opening of a chain of wireless stations and fuller development of ground organisation along the main trans-India route has enabled the Meteorological Department to place the meteorological arrangements on a 'routine' basis. Under the routine system, the trans-India Air Route is divided into four sections with terminal points at Karachi, Jodhpur, Allahabad, Calcutta and Akyab. Forecasts for each section of the route are issued twice daily, at about 13-00 and 21-00 hrs, I. S. T., and are distributed by wireless to aircraft in flight and to the aerodromes principally concerned. The dissemination of the latest news about winds aloft and the latest "current weather" reports relating to cloud, visibility, rain, ground wind, etc., has been similarly placed on a routine basis. There are also arrangements for the supply of special reports of current weather at any time to aircraft in flight on request, as well as for voluntary reports regarding dangerous weather phenomena and their improvement. The work starts each day some hours before dawn, when pilot balloons with lanterns attached are released and observed through theodolites for the computation of the upper winds. The watch on the weather continues all through the day, Saturdays and holidays included well on to midnight. The stations taking part in the scheme are Karachi, Barmer (through Karachi Radio), Jodhpur, Sikar, Delhi, Cawnpore (through Delhi Radio), Allahabad, Gaya, Haridwar (through Gaya Radio), Asansol (through Calcutta Radio), Calcutta and Chittagong. On the Bahrain-Karachi route, the distribution of upper wind and current weather reports by W/T takes place on days of flight of the British Overseas Airways Corporation Flying Boats.

On other routes, the method of supplying weather reports either in person or by landline telegram or W/T to each individual aircraft separately is still in vogue, as wireless traffic with aeroplanes in flight is not yet fully organised on these routes. On the establishment of aeronautical wireless stations on the Karachi-Madras route, the routine system has, however, been partially introduced there, upper wind reports as well as current weather observations taken at fixed hours being exchanged by W/T daily as a routine measure between aerodromes. The scheme of issue of special reports of current weather at any time to airmen on request, as well as of voluntary reports regarding dangerous weather phenomena and improvements thereof has been introduced on the Karachi-Bombay section of the route. The routine system has been extended, though in a very limited form, on the Madras-Colombo route. On the Karachi-Colombo, Karachi-Lahore, Bombay-Delhi and Trivandrum-Trichinopoly routes, landline telegrams, containing news of current weather are exchanged between aerodromes and so to supplement the reports supplied by the forecasting centres and pilot balloon stations.

The abovementioned arrangements for issue of current weather and pilot reports make it possible for aircraft to have the latest weather news from important points on the air route. The principal aerodromes on the route get copies of these messages and display them on weather notice boards.

General organisation of the department—In order to fulfil the various duties described in the preceding paragraphs the department is organised into a central office, 8 sub-offices, 37 pilot balloon observatories and 326 weather observatories of various classes* distributed over a region stretching from the Persian Gulf on the west to Burma on the east. The central office at Poona is the administrative headquarters of the department. The control over weather observatories including the responsibility for scrutiny of records and for checking and computation of data received from them is divided between the offices at Poona, Calcutta and Karachi. Forecasting for aviation is divided between these three offices and the offices at New Delhi, Peshawar and Lahore, the last two forecast for military flying and do not serve civil aviation. The Upper Air Office at New Delhi is in charge of all pilot balloon observatories in India and the Persian Gulf and therefore in immediate executive charge of much of the meteorological service for aviation. It is responsible for adequate liaison with other departments concerned. The Bombay and Alibag observatories specialise in the study of Geophysics, particularly terrestrial magnetism and seismology, while the observatory at Kodakanal specialises in the study of solar physics. Section III describes in somewhat greater detail the general duties of these different offices and Appendix II shows the number of posts as on 1st December 1938, under each category in the main offices and observatories of the department.

On the separation of Burma from India on 1st April, 1937, the Government of Burma started an independent meteorological service for that country, with its headquarters at Rangoon. The Burma Meteorological Department has assumed control over all the surface and pilot balloon observatories in Burma and has taken over with effect from 1st July, 1937, the responsibility of issuing weather reports and forecasts relating to the Burma area to the general public and also to aviators flying over Burma. It has also taken over with effect from 1st April 1939, the duties of issuing storm warnings to the ports in Burma and to shipping in Burmese waters which hitherto was done by the Calcutta Meteorological Office.

GENERAL DUTIES OF THE MAIN OBSERVATORIES AND OFFICES.

Headquarters Office, Poona (F U W)—The general administration of the department, including co-ordination of technical work and administrative and financial questions relating

to aviation, is carried on by the headquarters office at Poona. In addition it is in immediate and complete charge of second, third, fourth and fifth class observatories in Central and southern India. It publishes the Indian Daily Weather Report, Weekly and Monthly Weather Reports and the annual volumes entitled the Indian Weather Review and also issues two annual volumes containing rainfall data of about 3,000 stations in India. It undertakes the issue of heavy rain warnings, frost and untimely rain warnings for the whole country excepting north-east India and the issue of warnings for storms in the Arabian Sea. This office also issues the special weather reports for broadcast through the A I R stations at Bombay and Madras. It issues through the Navy W/T Station Bombay, twice daily, synoptic data of selected land stations and ships for the benefit of shipping in Indian waters. Weather forecasts in respect of aerial flights, either routine or occasional over the Peninsula and the central parts of the country are issued from this office. Weather Charts are prepared twice daily and a telegraphic weather summary covering the whole of India is issued daily to the press, and two regional telegraphic weather summaries covering the Peninsula and the central parts of the country respectively to other subscribers. The headquarters office is responsible for practically all climatological work in India, including the preparation of normals of rainfall, temperature, humidity, etc., for all observatories. It issues a limited number of long-range seasonal forecasts for the country. It collects and analyses weather logs from ships in the Arabian sea. It is responsible for the design, specification, test and repairs of all meteorological instruments used in the department for supply of instruments and stores to the different observatories and for maintaining stocks of instruments.

It maintains an upper air observatory and a first class weather observatory. It has facilities for research in theoretical and practical meteorology. Sounding balloon work in the Peninsula is directed from this office. It collects and compiles for the International Aerological Commission the upper air data in respect of India, Burma, Ceylon, Siam, Indo China, Malaya and the Dutch East Indies. It carries on all necessary correspondence with the various international commissions on technical questions and supplies meteorological data and certain periodical returns to the international bodies. The programme of work of the Agricultural Meteorology Section of the office includes experimental work on microclimatology, standardisation of methods of observations under field conditions and construction of suitable instruments for the purpose as well as statistical investigations on the correlation of the area and yield of crops with weather.

The Headquarters Office is divided into eight sections, namely, General (including Aviation sub-section), Weather, Observatories, Upper Air

* Classified into various classes, the number as it stood on 31st March 1939 was distributed as follows—

Class	I	II	III	IV	V	VI	Total
Number	10	11	22	22	22	22	110

India Meteorological Department.

Instruments, Marine, Agricultural Meteorology, Statistics and Library for the execution of the above-mentioned work.

Upper Air Office, New Delhi (U. W. S.)—This office is the headquarters of upper air work in India and maintains more than 37 pilot balloon stations scattered over India and up the Persian Gulf. Many of these stations are on aerodromes and the Office is therefore in direct administrative charge of much of the weather service for aviation and for the efficient working of a large part of that organisation. It manufactures and supplies hydrogen to all departmental pilot balloon stations and to those in Burma as well. It is responsible for the design, specification, test, repairs, storage and supply of all instruments and stores required for the observation of winds aloft. Its workshop makes the meteorographs used in determining the temperature, pressure and humidity of the upper air. It is a principal centre of aerological research work and collects and scrutinises the data of all pilot balloon observations and also the sounding balloon data of Northern and Central India. There is a seismological observatory attached to the office.

Meteorological Office, New Delhi (F. P. W.)—This office was re-opened on 1st September 1939. It is primarily a forecasting centre for aviation. It is responsible for the issue of weather reports and forecasts for the Jodhpur-Allahabad section of the trans-India air route and for the flying boat route from Udupur through Gwalior to Allahabad. The office also issues the special weather reports for broadcast through A. I. R. stations at Delhi and Lucknow. It prepares two weather charts daily and issues a condensed weather summary for Northern and Central India to local Government officials. It issues twice daily, through the short-wave aeronautical wireless station at Delhi, synoptic data of selected stations in its own region.

Colaba and Alibaz Observatories (W. I. S. T. M.)—These observatories specialise in Geophysics, particularly terrestrial magnetism, seismology and atmospheric electricity. The Colaba observatory maintains a large number of self-recording meteorological instruments and is responsible for the time-ball service in the Bombay harbour and the rating of chronometers belonging to the Royal Navy. It publishes an annual volume of the magnetic, meteorological and seismographic observations and issues a daily weather report during the months May to November every year. It is in administrative charge of the auxiliary centre at Juhu (Bombay).

Meteorological Office, Calcutta (F. P. W. S. T.)—The Alipore Office is responsible for the publication of a Daily Weather Report for north-east India, for storm warnings in the Bay of Bengal, heavy rainfall warnings in north-east India and for squall warnings in Bengal. It gives time signals by gun to shipping at Whiting and by wireless to the Indian telegraph system. A regional telegraphic weather system for north-east India is issued daily. This office also issues the special weather reports for the coast through the A. I. R. station at Calcutta. It prepares two weather charts daily and issues forecasts to air and land in north-east India and in Allahabad. It is a centre of the auxiliary centre at Dum Dum. It also maintains a north and south class observatory in north-east India and checks and compares observations of all stations in this area. It issues twice daily through the short-wave aeronautical W. T. station at Calcutta, synoptic data of selected stations in its area. It maintains a first class observatory and also a second class observatory.

Kodaikanal Observatory (Sp. W. S.)—The observatory specialises in the study of the physics of the sun and is specially equipped for spectroscopic observations and research. It is also a seismological station and a first class weather observatory. The observatory issues bulletins from time to time describing the results of its observations of the surface of the sun and of special investigations on the subject.

Meteorological Offices at Peshawar and Lahore (F. W. P. A.)—Officers-in-charge of these stations are responsible for the issue of weather reports and forecasts to the Royal Air Force pilots flying over routes in Baluchistan, Waziristan, the North-West Frontier Province, Sind and the Punjab generally and detailed local forecasts and warnings each for his own immediate neighbourhood.

Meteorological Office, Karachi (F. W. P. A.)—This office was established primarily as a forecasting centre for aviation. It is responsible for the issue of weather reports and forecasts in respect of the 200-mile long section of the Trans-India air route extending from Karachi to Jodhpur on the coast and also all other routes in north-west India. This office prepares two weather charts daily and a daily weather report. It also issues a regional weather summary for north-west India. It is in charge of current weather stations in north-west India (excluding Karachi, India and Arabia). It is a first class observatory and also a second class observatory. It issues twice daily through the short-wave aeronautical W. T. station at Karachi, synoptic data of selected stations in its area of responsibility.

The Auxiliary centres (C) are situated at Jodhpur, New Delhi, Allahabad, Dum Dum and Juhu (Bombay). The Professional or Meteorological Assistant stationed at each of these centres is authorised to add to the weather reports received from the forecasting centres his own conclusions about the local weather and to issue the latest information available from his own local surface conditions and upper winds, also be obtained from him.

LIST OF OFFICERS IN THE INDIA METEOROLOGICAL DEPARTMENT AS ON 1st APRIL, 1942.

Meteorological Office, Poona

Normand, Charles William Blith, CIE, MA, DSc (Edin), Director-General of Observatories
Binerji, Sudhansu Kumar, MSc, DSc (Calcutta), Superintending Meteorologist
Ramanathan, Kalpithi Ramakrishna MA, DSc (Madras), Superintending Meteorologist
Sohoni, Vishwanath Vishnu, BA (Hons), MSc (Bombay), Meteorologist
Pramanik, Sushil Kumar, MSc (Lucknow), Ph D (Lond), DIO, Meteorologist (On leave)
Sri Jnanendra Mohan, BA (Cal), BSc (Eng), (Boston Tech), Meteorologist
Roy, Amiya Krishna, BSc (Cal), BA (Oxon), Meteorologist
Ramdas, Lakshminarayanaipuram Ananthakrishnan, MA, Ph D (Cal), Meteorologist
Mal, Sobhag, MSc (Benares), Ph D (Lond) DIO, I R Met Soc, Meteorologist (Offg)
Barkat Ali, BA, MSc (Punjab), Meteorologist (Offg)
Desai, Bhimbhai Nichrabhai, BA (Hons), MA, MSc (Bombay), Ph D, DSc (Edin), IRS L, Assistant Meteorologist
Ramaswami, Chandrishekhara, MA (Hons), (Madras), Assistant Meteorologist
Puri Huns Raj, MSc (Punjab), Assistant Meteorologist
Ananthakrishnan Ramakrishna Ayyar, MA DSc, Assistant Meteorologist
Pendse, Chandrakant Gajanan, MA, Ph D (Cantab) Special Officer for Seismological Research (Temp)
Mallik, Akshay Kumar, MSc BSc (Ag) Assoc IARI, Assistant Meteorologist (Temp)
Nagabhushana Rao, Kokkarachedu, MSc (Mysore), Assistant Meteorologist (On probation)
Mohammad Asim MSc (Aligarh), Assistant Meteorologist (On probation)
Menezes (Arturo da Piedade) BA BSc (Bombay), Assistant Meteorologist (Offg)
Iyer P R Chidambaram BA (Madras), Assistant Meteorologist (Offg)
Mukerjee, Bhuvan Prasad BA (Cal) Assistant Meteorologist (Offg)
Pisharoty Pisharoth Rama MA (Madras) Assistant Meteorologist (Temp)
Tandon Anurath MSc DPhil (Alld) Assistant Meteorologist (Temp)
Kipuri Purna Lal MSc Ph D (Cantab) Assistant Meteorologist (Temp)
Sarma, Sukumar Das MSc (Cal) Assistant Meteorologist (Temp)
Gangopadhyaya Muniraj MSc (Dacca) Assistant Meteorologist (Temp)

Meteorological Office, Bombay

Saxer Simbha Rao MA (Madras), Ph D (Lond), Meteorologist

Meteorological Office, Alipore, Calcutta.

Sur, Nolini Kanta, DSc (Allahabad), Meteorologist
Lal, Shyam Suran MSc (Lucknow and Lond) DIO, Inst P I R Met Soc (Lond) Assistant Meteorologist
Sen-Gupta, Prabhat Kumar, DSc (Allahabad), Assistant Meteorologist (On probation)
Koteswaram Pancheti DSc (Madras), Assistant Meteorologist (Temp)

Meteorological Office, Karachi

Sen, Sachindra Nath, MSc (Cal & Lond), Ph D (Lond), Meteorologist
Sreenivasiah, Bettidapur Narasimbalu, MSc (Cal), Assistant Meteorologist (On leave)
Malurkar, Sreenivas Laxminarasimha, BSc (Mys), MSc (Cantab), Assistant Meteorologist
Roy Chandrani, Sachindra Nath, MSc (Cal), Assistant Meteorologist (Offg)

Solar Physics Observatory, Kodaikanal.

Ayyar, Appadwala Lakshmi, MA, DSc (Madras), Director
Das, Anil Kumar, MSc (Cal), DSc (Paris), Assistant Director

Upper Air Office and Forecasting Centre New Delhi.

Chatterji Gouripati, Rai Bahadur, MSc (Cal), Superintending Meteorologist
Kabraji, Kaekhashro Jehangir BA (Hons), BSc (Bombay), MSc, Ph D (Lond), Meteorologist
Bassi, Saradindu, MSc (Allahabad), Meteorologist
Das, Kusumeshu, MSc (Punjab), Ph D (Lond), Assistant Meteorologist
Venkateshwarin Sekharipuram Padmanabha Iyer, BA (Hons) (Madras), Assistant Meteorologist (On leave)
Mithur Lakshmi Shriv, MSc DPhil (Allahabad) Assistant Meteorologist
Chatterji Nri mhu Prasad MSc (Cal) Assistant Meteorologist (On probation)
Ramakrishnan K P BA (Madras), Assistant Meteorologist (Offg)

Meteorologist with the Royal Air Force, Lahore.

Krishna Rao Punadi Raghavendrarao MSc (Mysore) Meteorologist (Temporary) with the Air Force in India
Sen Sudhendra Nath MSc (Dacca), Assistant Meteorologist (Temp)

On Deputation to Burma Meteorological Department

Roy Sures Chandra, MSc (Cal), DSc (Dacca), Meteorologist
Das, Santosh Kumar MSc (Dacca & Lond) Ph D (Lond), Assistant Meteorologist
Ghosh Upendra Narayan MSc (Cal), Assistant Meteorologist (Offg)

MONSOON OF 1941.

The monsoon burst on the Malabar coast on the 22nd May. This outburst was followed by a severe cyclone in the Arabian Sea which struck Malabar and caused severe floods and loss of life and property there in the last week of the month. About the same time, a cyclone from the Bay of Bengal struck east Bengal and prepared the way for the advance of the monsoon in north-east India.

The monsoon strengthened in Malabar on the 1st of June and rapidly advanced into the interior of the country. By the middle of the second week, it had extended its sway practically over the whole of India. But this unusual vigour of the monsoon was short-lived, both branches of the current considerably weakened by the end of the second week and remained feeble practically till the end of the month.

In the beginning of July, the monsoon was exceptionally vigorous and caused concentrated and phenomenally heavy rainfall and disastrous floods in the coastal districts north of Bombay and in Gujarat. In the second week it gave further heavy downpours and more floods in Gujarat. Thereafter, the monsoon became feeble over the whole country and continued so till the end of the month.

In the first week of August there was good rainfall in the Konkan, Malabar, the Deccan and Mysore. In the second and third weeks the monsoon displayed its activity mainly in the west Central Provinces, Bihar, west Central India and Rajputana. While in the last week it gave extensive precipitation only in north-east India and the east United Provinces.

September was a month of abundant rainfall in north-east India, the Madras Presidency,

The total rainfall for the season—June to September—averaged over the plains of India was 27.7 inches, 11 per cent below the normal. The following table gives detailed information of the seasonal rainfall of the period.

Mysore, south Hyderabad and the Bombay Deccan. The first eleven days of the month were marked by copious rains in north-east India, the east United Provinces, Central India, the Punjab and Kashmir. During the third week and the beginning of the fourth there was more than the normal precipitation over most of the Peninsula. In the west Central Provinces and from west Central India to Assam.

The monsoon withdrew from north-west India, the United Provinces and the central parts of the country by the end of the third week of September. During the rest of the month its activity was mainly confined to Bengal and Chota Nagpur. It withdrew from the country finally by the 2nd of October.

Considering the season as a whole, the monsoon burst over the country earlier than usual but except in north-east India and Malabar it was characterised by spells of heavy rain with rather long breaks in between. The Arabian Sea current was generally feeble, being conspicuously so in the second fortnight of June and July and the last third of August. The regions which suffered most from the rigours of an unsteady or weak monsoon were Gujarat and the Konkan. Although the total rainfall for the season in Gujarat was nearly normal, most of it fell in short spells of exceptionally heavy downpours. The Konkan had abnormally deficient rainfall during most of the season.

The rainfall for the season was more than 40 per cent in defect in the Konkan and Sind. The only subdivisions which had an appreciable excess of rainfall were Kashmir, Bengal and Chota Nagpur. Averaged over the plains of India, the total rainfall was in defect by 11 per cent.

Famine.

To the student of Indian administration nothing is more remarkable than the manner in which great problems arise, produce a corresponding outburst of official activity to meet them and then fall into the background. This general truth is illustrated by a study of the history of famine in India. For nearly forty years it was the bogey of the Indian administrator. The forecasts of the rains were studied with acute anxiety. The actual progress of the rains was followed with no less anxiety, and at the first signs of a bad or poor season the famine relief machinery was furnished up and prepared for any emergency. The reason for this is clear if we examine for a brief space the economic condition of the Indian peasantry. Nearly three-quarters of the people are directly dependent on agriculture for their daily bread. Very much of this agriculture is dependent on the seasonal rains for its existence. Immense areas in the Bombay Presidency, Madras, the United Provinces and Central India are in a region of erratic and uncertain rainfall. The rainy season is short and if for any natural reason there is a weakness or absence of the rain-bearing currents, then there is either a poor harvest or no harvest at all. In Western lands everyone is acquainted with the difference between a good and a poor season, but Western countries offer no parallel to India, where in an exceptionally bad year wide tracts of thickly populated land may not produce even a blade of grass. In the old days there were no railways to distribute the surplus of one part of India to the districts where the crop had failed. There were often no roads. The irrigation works were few and were themselves generally dependent on the rainfall for their reserves. The people lived from hand to mouth and had no store of food to fall back upon. Nor had they any credit. In the old days then they died. Commencing with the Orissa famine of 1865-67 the Government of India assumed responsibility for the saving of human life in such crises. After the famine of 1899-1900 this responsibility was also shouldered by the Indian States. Stage by stage this responsibility was expressed in the evolution of a remarkable system of famine relief covering the whole field. But now that machinery has reached a remarkable degree of perfection, it is rusting in the official armouries, because the conditions have changed. The whole of India is covered with a network of railways, which distributes the produce of the soil to the centres where food is required. The extension of irrigation has enormously increased the product of the soil and rendered large areas much less dependent on the monsoon rainfall. At the same time the scientific study of the problems of Indian agriculture has raised the capacity of even the "dry" zones. The peasantry has accumulated a certain reserve against the rainless days from the prosperity which accompanied the period of high prices. The rapid spread of the co-operative credit movement has mobilised and strengthened rural credit. The spread of manufacturing enterprise has lightened the pressure on the soil. The relation of famine to the question of Indian administration has therefore changed. In an exceptionally bad year it may create administrative difficulties, it has ceased to be an administrative and social problem.

Famine under Native Rule.

Famines were frequent under Native rule, and frightful when they came. "In 1630," says Sir William Hunter, in the History of British India, "a calamity fell upon Gujarat which enables us to realise the terrible meaning of the word famine in India under Native rule. Whole cities and districts were left bare of inhabitants." In 1631 a Dutch merchant reported that only eleven of the 260 families at Swally survived. He found the road thence to Surat covered with bodies decaying on the highway where they died, there being none to bury them. In Surat, that great and crowded city, he could hardly see any living persons, but "the corpses at the corner of the streets lie twenty together, nobody burying them. Thirty thousand had perished in the town alone. Pestilence followed famine." Further historical evidence was adduced by Sir Theodore Morrison in his volume on the Economic Transition of India. It has come to be seen that whilst railways have checked the old-fashioned practice of storing grain in the villages they have made the reserves, where they exist, available for the whole of India. In India there is now no such thing as a food famine; the country always produces enough food for the whole of the population; famine when it comes is a money famine and the task of the State is confined to providing the means for those affected by drought to earn enough to buy food. The machinery, whereby this is done will be examined after we have seen the experiences through which it was evolved.

History of Recent Famines.

The Orissa famine of 1865-67 may be taken as the starting point because that induced the first great and organised effort to combat distress through State agency. It affected 180,000 square miles and 47,500,000 people. The Bengal Government was a little slow in appreciating the need for action, but later food was poured into the district in prodigious quantities. Thirty-five million units were relieved (a unit is one person supported for one day) at a cost of 9½ lakhs. The mortality was very heavy, and it is estimated that a million people or one-third of the population died in Orissa alone. This was followed by the Madras famine of 1866, and the famine in Western India of 1868-70. The latter famine introduced India to the great migration from Marwar which was such a distinguishing feature of the famine of 1899-1900. It is estimated that out of a total population of a million and a half in Marwar, one million emigrated. There was famine in Behar in 1873-74, then came the great South Indian Famine of 1876-78. This affected Madras, Mysore, Hyderabad and Bombay for two years and in the second year extended to parts of the Central and United Provinces and to a small tract in the Punjab. The total area affected was 257,000 square miles and the population 58,500,000. Warned by the excessive expenditure in Behar and actuated by the desire to secure economy the Government relief programme was not entirely successful. The excessive mortality in this famine is said to have been 5,250,000 in British territory alone. Throughout British India 700,000,000 units were relieved.

at a cost of Rs. 8½ crores. Charitable contributions from Great Britain and the Colonies aggregated Rs 8½ lakhs

The Famine Codes.

The experiences of this famine showed the necessity of placing relief on an organised basis. The first great Famine Commission which sat under the presidency of Sir Richard Strachey, elaborated the Famine Codes, which, amended to meet later experience, form the basis of the famine relief system to-day. They recommended (1) that employment should be given on the relief works to the able-bodied, at a wage sufficient for support, on the condition of performing a suitable task, and (2) that gratuitous relief should be given in their villages or in poor houses to those who are unable to work. They recommended that the food supply should be left to private agency, except where that was unequal to the demands upon it. They advised that the land-owning classes should be assisted by loans, and by general suspensions of revenue in proportion to the crop failure. In sending a Famine Code to the provincial governments, the Government of India laid down as the cardinal feature of their policy that the famine wage 'is the lowest amount sufficient to maintain health under given circumstances. Whilst the duty of Government is to save life, it is not bound to maintain the labouring population at its normal level of comfort.' Provincial codes were drawn up, and were tested by the famine of 1896-97. In that 307,000 square miles were affected, with a population of 69,500,000. The numbers relieved exceeded 4,000,000 at the time of greatest distress. The cost of famine relief was Rs 7½ crores, revenue was remitted to the extent of Rs 1½ crores, and loans given aggregating Rs 1½ crores. The charitable relief fund amounted to about Rs 1½ crores, of which Rs 1½ crores were subscribed in the United Kingdom. The actual famine mortality in British India was estimated at 750,000. The experiences of this famine were examined by a Commission under Sir James Lyall, which reported that the success attained in saving life and the relief of distress was greater than had ever been recorded in famines, comparable with it in severity, and that the expense was moderate. But before the Local Governments had been given time to digest the proposals of this Commission or the people to recover from the shock, the great famine of 1899-1900 supervened.

The Famine of 1899-1900

This famine affected 475,000 square miles with a population of 59,500,000. In the Central Provinces, Berar, Bombay, Ajmer, and the Hissar district of the Punjab famine was acute; it was intense in Rajputana, Baroda, Central India, Hyderabad and Kathiwar and was marked by several distinctive features. The rainfall over the whole of India was in extreme defect, being eleven inches below the mean. In several localities there was practically no rain. There was in consequence a great fodder famine, with a terrible mortality amongst the cattle. The water supply was deficient and brought a crop of difficulties in its train. Then districts like Gujarat, where famine had been unknown for so many years that the local population was thought to be immune, were

affected, the people here being softened by prosperity, clung to their villages, in the hope of saving their cattle, and came within the scope of the relief works when it was too late to save life. A very large area in the Indian States was affected, and the Marwaris swept from their impoverished land right through Central India like a horde of locusts, leaving desolation in their train. For these reasons relief had to be given on an unprecedented scale. At the end of July 4,500,000 persons were supported by the State, Rs 10 crores were spent on relief, and the total cost was estimated at Rs 15 crores. The famine was also marked by a widespread acceptance by Indian States of the duty hitherto shouldered by the Government of India alone—the supreme responsibility of saving human life. Aided by loans to the extent of Rs 3½ crores, the Indian States did a great deal to bring their administration into line with that in British India. Although actual deaths from starvation were insignificant, the extensive outbreaks of cholera, and the devastating epidemic of malaria which followed the advent of the rains induced a famine mortality of approximately a million. The experiences of this famine were collated by the Commission presided over by Sir Antony MacDonnell. This Commission reported that taking the famine period as a whole the relief given was excessive, and laid down certain modified lines. The cardinal feature of their policy was moral strategy. Pointing out that if the people were assisted at the start they would help themselves, whilst if their condition were allowed to deteriorate it proceeded on a declining scale, they placed in the forefront of their programme the necessity of "putting heart into the people." The machinery suggested for this purpose was the prompt and liberal distribution of interest-free loans, the early suspension of revenue, and a policy of prudent boldness, starting from the preparation of a large and expensive plan of relief and secured by liberal preparations, constant vigilance, and a full enlistment of non-official help. The wage scale was revised, the minimum wage was abolished in the case of able-bodied workers, payments by results were recommended, and proposals were made for saving cattle.

The Modern System

The Government of India are now in possession of complete machinery to combat the effects of drought. In ordinary times Government is kept informed of the meteorological conditions and the state of the crops, programmes of suitable relief works are kept up-to-date, the country is mapped into relief circles, reserves of tools and plant are stocked. If the rains fail, policy is at once declared, non-officials are enlisted, revenue suspended and loans for agricultural purposes made. Relief works are then opened, and if labour to considerable quantities is attracted, the are converted into relief works on a large scale. Poor houses are opened and assistance given to the infirm. On the advent of the rains the people are moved from the large works to small works near their homes. Advances are made to small traders for the purchase of food, clothing and other necessities.

the principal autumn crop is ripe, the few remaining works are gradually closed and gratuitous relief ceases. All this time the medical staff is kept in readiness to deal with cholera which so often accompanies famine, and malaria, which generally supervenes when the rains break.

Famine Protection.

Side by side with the perfection of the machinery for the relief of famine has gone the development of famine protection. The Famine Commission of 1880 stated that the best, and often the only means of securing protection from the extreme effects of famine and drought, are railways and irrigation. These are of two classes, productive and protective. Productive works being estimated to yield profits which will pay interest and sinking fund charges are met from loans; protective works, which do not pay, directly from revenue. In order to guarantee that there should be continuous progress with protective works, the Famine Insurance Grant was instituted in 1876. It was decided to set apart from the general revenues Rs 1½ crores annually or one million sterling. The first charge on this grant was famine relief, the second protective works, the third the avoidance of debt. The chain of protective railways is now practically complete. Great progress is being made with protective irrigation. Acting on the advice of the Irrigation Commission an elaborate programme of protective irrigation works has been constructed, particularly in the Bombay Deccan—the most famine-susceptible district in India—and in the Central Provinces.

Under the Devolution Rules made under the Government of India Act, 1919, Provincial Governments were required to establish and maintain a Famine Relief Fund by annual assignment from their revenues. The provision of the annual assignment was optional when the accumulated total of the fund amounted to a prescribed sum. The balance at credit of the Fund was regarded as invested with the Government of India which paid interest on it and it was available for expenditure on famine relief, proper and on certain conditions on other objects prescribed in the Devolution Rules. The new constitution embodied in the Government of India Act, 1935, contains no provision for a separate Famine Relief Fund and it has been left to Provincial Governments and their legislatures to take the measures formerly prescribed for them. Provision for the establishment and maintenance of a new fund on somewhat similar lines and the investment of the balances thereof in securities of the Central Government has been made by an Act of the Provincial Legislature in Madras, Bombay, Bengal, United Provinces, Bihar, Central Provinces and Berar, North-West Frontier Province, Orissa and Sind. The Punjab Government have decided to continue the Famine Relief Fund but have considered it unnecessary to have an Act of the Legislature to constitute the new Fund. There is no Famine Relief Fund in Assam.

The Outlook.

Such in brief is the official programme and organisation which has been built up out of the experience and practice of the past. Yet everything goes to show that Govern-

ment activity to save human life will never be wanted in the future on the colossal scale of former times, even so recently as 1899-1900. Each succeeding failure of the rains indicates that there has been in silent progress an economic revolution in India. In the year 1918 the rains failed more seriously and over a wider area than during any monsoon in the recent history of India. The deficiency in the rainfall was more marked than in the great famine of 1899. Yet such was the increased resisting power of the people that instead of a demand for State relief from over five millions, the maximum number at any time in receipt of public assistance was never so large as six hundred thousand. The shock to the social life of the community was insignificant; the effects of the drought completely disappeared with the good rains of the following year.

Increased Resisting Power.

The causes of this economic change in the conditions of India, whose influence is widespread are many. We can only briefly indicate them here. There is a much greater mobility in Indian labour. Formerly when the rains failed the ryot clung to his village until State relief in one form or another was brought almost to his doors. Now at the first sign of the failure of the rains he girds up his loins and goes in search of employment in one of the industrial centres, where the supply of labour is, when general economic conditions are normal, rarely equal to the demand, or on the constructional works which are always in progress either through State or private agency in the country. Then the ryot generally commands some store of value, often misnamed a hoard. The balance of exports in favour of India in normal times is approximately £50 millions a year. The gold and silver bullion in which this is largely liquidated is distributed all over the country, in small sums or in ornaments, which can be drawn upon in an emergency. The prodigious coining of rupees during the last two years of the war, and the continuous absorption of gold by India, represent small diffused savings, which take this form owing to the absence of banking institutions and lack of confidence in the banking system. There has been a large extension of irrigation. More than one-third of the land in the Punjab is now under irrigation, and in other Provinces particularly in the famine-susceptible tract of the Bombay Deccan, irrigation works have been constructed, which break the shock of a failure of the rains. The natural growth of the population was for some years reduced by plague and famine diseases, followed by the great influenza epidemic of 1918-19, which swept off five millions of people. This prevented the increase of congestion, but brought some areas particularly in the Indian States, below their former population-supporting capacity. (The 1931 census showed an increase of over 30 million in the population since 1921.) The increase of railways distributes the resources of the country with ease; the spread of the co-operative credit movement has improved rural credit. Finally, there is the considerable development of manufacturing industry, which is generally short of labour and helps to absorb the surplus of a famine year. Whilst the Government is completely equipped with a famine code, there is no reason to suppose

that there will ever recur such an emergency as that of 1899. Famine can now be efficiently met by the liberal distribution of tagari, the suspension and remission of the land revenue demand, the relief of the aged and others who cannot work, the provision of cheap fodder for the cattle, with possibly some assistance in transporting the affected population of the famine-affected tract to the industrial centres.

The increased resisting power of the people was effectively demonstrated during the famine of 1920-21, which was due to the failure of the monsoon towards the end of the year 1920. The distress which appeared in the end of 1920 persisted during the early months of 1921 and regular famine was declared in parts of Madras, Bombay, Central Provinces and Baluchistan. Local distress prevailed also in Bengal, Punjab and Central India. The largest number of persons on relief of all kinds did not exceed 0.45 million which was considerably less than 3% of the total population of the area affected by the failure of the monsoon.

The Indian People's Famine Trust.

Outside the Government programme there is always scope for private philanthropy, especially in the provision of clothes, help for the superior class, poor who cannot accept Government aid, and in assisting in the rehabilitation of the cultivators when the rains break. At every great famine large sums have been subscribed, particularly in the United Kingdom, for this purpose, and in 1899-1900 the people of the United States gave generous help. With the idea of providing a permanent famine fund, the Maharaja of Jaipur gave in 1900 a sum of Rs 15 lakhs, in Government securities to be held in trust for the purposes of charitable relief in seasons of general distress.

This Trust Fund in a few years increased to Rs 28,10,000. During 1934 it increased further, the invested balances of the United Provinces Famine Orphans' fund being transferred to the Trust. It now stands at Rs 32,78,400. It is officially called the Indian People's Famine Trust, and was constituted under the Charitable Endowment Act 1890. The income of the Trust is administered by a board of management consisting of 13 members appointed from different provinces and Indian States. Sir Cameron Bledsoe, C.S.I., C.I.E., I.C.S. Auditor General of India, is the Secretary & Treasurer of the Trust. The endowment of Rs 32,78,400 abovementioned is permanently invested and the principal never taken for expenditure. The income from it is utilised for relief work as necessary and unexpended balances are temporarily invested, so as to make available in years of trouble savings accumulated when expenditure is not necessary. The temporary investment—in Government securities—at the end of 1941 stood at Rs 2,200 (face value) and the cash balance at the same time was Rs 7,42,678.

The whole conditions to meet which the Trust was founded have changed in recent years. This is the result of the improved policy of Government in regard to famine relief and of the difference in the meaning of the word famine in consequence of the improvement of transport, communications and other factors affected by modern progress. An area stricken by failure

of seasonal rains now obtains supplies from other regions in a manner impossible before the development of railways and of modern marketing practice and Government help its people by loans given direct or through Co-operative Societies to tide them over the period of scarcity. The experience of successive visitations of scarcity in different parts of the country also proves that the general economic progress of the people makes them able to meet temporary periods of stress in a manner formerly unimaginable. Famine in the old terrible sense of the term has in fact largely ceased to occur. This was well illustrated by the events of 1919, when the land suffered from a failure of the rains more general throughout India and worse in degree than any previously recorded by the Meteorological Department but the crisis was borne with a minimum of suffering.

During the period 1929 to 1938 demands upon the Famine Trust were more for relief of distress caused by floods and other calamities than for famine relief. The terms of the Trust fortunately permit of management on lines according to changing needs. In 1929 the amount of grants for famine relief was Rs 50,000, while that for relief of distress caused by floods was Rs 4,75,000. In 1933, 1934 and 1936 grants of Rs 1,30,000, Rs 1,50,000 and Rs 90,000 respectively were made for flood relief and no grant had to be given for famine relief. Grants of Rs 8 lakhs and Rs 50,000 were made for relief of distress caused by the earthquakes of 1931 and 1935 in Bihar and Orissa and Baluchistan respectively. The amount of grants made in 1938 was Rs 1,65,000,—Rs 70,000 for famine relief and Rs 95,000 for flood relief. Grants aggregating Rs 1,67,500 were made in 1939, in this year, however, the entire amount was for alleviation of distress caused by famine due to successive failures of rains in Rajasthan and parts of the Punjab and the adjoining provinces. Grants amounting to Rs 1,16,000 were made in 1940, in this year also the entire amount was for famine relief. The amount of grant made in 1941 was Rs 1,10,000—Rs 50,000 for famine relief, Rs 20,000 for flood relief and Rs 40,000 for relief of distress caused by cyclone.

The Trust is only supposed to supplement expenditure on relief measures undertaken from public funds by the Government or State concerned.

In 1939, large tracts of Kathiawar suffered from serious famine owing to the failure of rains. What would have placed them in a most dire plight was, however, averted to a certain extent by belated showers. Nevertheless, the very inadequate rainfall precipitated a serious situation. Its effects on cattle through lack of fodder were very serious.

Famine relief measures on a generous scale were undertaken by the Rulers of the various Kathiawar States affected. The Maharaja of Gondal made a gift of a crore of rupees for famine relief in Gondal, while the Jam Sahib of Navsari reduced his privy purse by 50% to meet the cost of famine relief in his State. In addition, a comprehensive system of relief was instituted for people who perished under the pest and fodder was made available to the distressed. As a result, the supply of food and fodder was maintained and the famine was borne with a minimum of suffering.

Hydro-Electric Development.

India promises to be one of the leading countries of the world in regard to the development of hydro-electric power and great strides in this direction have already been made. India not only specially lends itself to projects of the kind, but peremptorily demands them. Cheap motive power is one of the secrets of successful industrial development and the favourable initial conditions caused by the war, the enthusiasm for industrial development which has seized nearly all classes of educated Indians, and the special attention which the circumstances of the war have compelled Government to direct towards the scientific utilisation of Indian natural resources all point to a rapid growth of industrial enterprise in all parts of India within the next few years. Indeed, the process, for which sound foundations had been laid before the war, is now rapidly under way. India is severely handicapped compared with other lands as regards the generation of power by the consumption of fuel, coal or oil. These commodities are all difficult to obtain, and costly in India except in a few favoured areas. Coal supplies, for example, are chiefly centred in Bengal and Chota Nagpur and the cost of transport is heavy. Water power and its transmission by electricity offer, on the other hand, immense possibilities, both as regards the quantity available and the cheapness at which the power can be rendered, in all parts of India.

Water power schemes, pure and simple, are generally difficult in India, because the power needs to be continuous, while the rainfall is only using a small portion of the year. Perennial rivers with sufficient water throughout the year are practically non-existent in India. Water, therefore, must be stored for use during the dry season. Favourable sites for this exist in many parts in the mountainous and hilly regions where the heaviest rainfalls occur and the progress already made in utilising such opportunities by the electrical transmission of power affords high encouragement for the future. Further, hydro-electric schemes can frequently be associated with important irrigation projects the water being first used to drive the turbines at the generating stations, and then distributed over the fields.

The Industrial Commission emphasized the necessity for a Hydrographic Survey of India. On this recommendation the Government of India in 1918 appointed the late Mr G T Barlow, C.I.E., then Chief Engineer, Irrigation Branch, United Provinces, to undertake the work, associating with him Mr J W. Meares, M.I.C.E., Electrical Adviser to the Government of India. Mr. Barlow died, but Mr. Meares issued a preliminary report in September, 1919, summarising the state of knowledge of the problem in India and outlining a programme of investigation to be undertaken in the course of the inquiry. Mr Meares showed that industries in India absorbed over a million horse power, of which only some 285,000 h.p. is supplied by electricity from steam, oil or water. The water power so far actually in slight amount to 1½ million horse-power, but this excludes practically all the great rivers, which are at present uninvestigated. Thus the minimum flow of

the seven great rivers eastward from the Indus is stated to be capable of giving not less than three million horse-power for every thousand feet of fall from the Himalayas, while similar considerations apply to rivers in other parts. Some doubt is expressed as to the estimate of seven million horse-power in the Irrawaddy and Chindwin rivers, given in the report of the London Conjoint Board of Scientific Studies.

The Report points out that the Bombay Presidency holds a unique position owing to its great existing and projected schemes at Lonavla, the Andhra Valley, the Nila Mula and the Koyna Valley and has the still greater advantage of possessing a firm ready to develop its resources.

Bombay Hydro-Electric Works.

The greatest Hydro-Electric undertakings in India are the three schemes developed and brought into operation by Tata Sons, Ltd., and continued under their management until 1929, when they were transferred to the management of the Tata Hydro-Electric Agencies, Ltd., in which Messrs Tata Sons retained a substantial interest. These undertakings are —

- (a) The Tata Hydro-Electric Power Supply Company, Ltd. Supply started in 1915
- (b) The Andhra Valley Power Supply Company, Ltd. " " 1922
- (c) The Tata Power Company, Ltd. " " 1927.

These Hydro-Electric schemes have a combined normal capacity of 246,000 H.P. and provide electrical energy for the City of Bombay, Bombay suburbs, Thana, Kaljan and Greater Poona.

Bombay, after London, is the second largest City in the British Empire and is the largest manufacturing centre in India. Its population including suburbs at the 1931 census was 1,326,313 with a total population of approximately 1,600,000 in all of the areas served by these companies. Its cotton mills and other factories consume about 150,000 H.P., which until these Hydro-Electric schemes came into operation, was entirely produced by thermal stations using fuel coming from great distances.

The favourable position of the Western Ghats which rise to a height of more than 2,000 feet above sea-level within a few miles of Bombay City, situated on the shores of the Arabian Sea with their heavy rainfalls was taken full advantage of for providing Bombay City and vicinity with an adequate and economical power supply.

The hydraulic works of the Tata Hydro-Electric Power Supply Company are situated near Lonavla at the top of the Thor Ghat. The monsoon rainfall is stored in three lakes, namely, Lonavla, Walwan and Shirawta, from which it is conveyed in open masonry canals to the Forebay at Khandala and thence through steel pipes to the Power House at Khopoli the foot of the Ghats, where the head at turbine nozzles is 1,725 feet or approximately 750 lbs. per sq. inch. The normal capacity of the Power Station at Khopoli is 48,000 H.P. or 64,300 H.P.

This scheme was formally opened by H E The Governor of Bombay on the 8th of February 1915.

Investigations in 1917-18 led to the discovery of a site on the Andhra River just to the North of the Tata Hydro-Electric Supply Company's lakes, where an additional 48,000 K W (or 64,300 H P) could be developed. These investigations resulted in the formation of the Andhra Valley Power Supply Co and the construction of the schemes, the principal features of which consist of a reservoir formed by a dam about 190 feet high, across the Andhra River and a tunnel 8,700 feet long driven through solid trap rock to the scarp of the Ghats, from which the water is taken in steel pipes 4,600 feet long to the turbines in the generating station at Bhilypur. The head of water at turbine nozzles is 1,740 feet or approximately 750 lbs per sq inch. The electrical energy is transmitted to Bombay over a transmission line 56 miles long for augmenting the supply from Khopoli.

The Tata Power Company's scheme on the Nila-Mula River to the South-East of Bombay was investigated and developed along lines similar to the Andra Valley scheme and has a normal installed capacity of 87,500 K W or 117,000 H P. The power is transmitted to Bombay over a transmission line 76 miles long and is used to augment the supply of the two earlier companies to mills, factories and railways.

The Tata Hydro-Electric Power Supply Co, the Andhra Valley Power Supply Co, and the Tata Power Company operating as a unit under one management supply the whole of the electrical energy required by the Bombay Electric Supply & Tramways Co Ltd, the majority of the mills and industries in Bombay City, the B B & C I Railway for their suburban electrification, the whole of the energy required by the G I P Railway in Bombay City and for their main line traction up to Poona and Igatpur, the whole of the electrical energy required by the Poona Electric Supply Company and the distributing licensees in Thane, Kalyan and the Bombay suburbs.

These three schemes operating as a unit under one management provide an adequate and economical power supply in the areas mentioned above for all purposes. The rate for energy delivered to the Mills, Factories and Railways has, for several years, shown a steady decrease and now averages 0.35 of an anna per unit, which downward trend will continue as industries develop and individual consumptions increase. This power supply greatly enhances the natural advantages Bombay has as a great manufacturing, trading and shipping centre.

The fact that the Bombay Electric Supply and Tramways Company has shut down its steam driven generating plant and now takes its supply in bulk from the various Tata companies is of note, and it is of more than passing interest to note that the Poona Electric Supply Company has recently adopted a similar course. This is a phase of hydro electric distribution which is quite in its infancy in India, but it is possible to foresee the time when every village within a couple of hundred miles of

a hydro-electric power station will receive its supply of electric current in bulk, thus greatly reducing capital and administrative charges and minimising the price of current to the consumer. It is a system which has become something of a fine art in California, where current is transmitted by overhead wires for many hundreds of miles at a pressure of 200,000 volts or double the pressure commonly employed in India for overhead long-distance transmission.

Mysore Hydro-Electric Works.

The first Hydro-Electric Scheme of any magnitude undertaken in India or indeed in the East, was that on the Cauvery River in Mysore State, which with its generating station, transmission line and distributing system was inaugurated in 1902.

The Cauvery River rises in the district of Coorg in the Western Ghats and flows across Mysore State. The principal object of this scheme was the supply of power to the mining companies on the Kolar Gold Fields about 92 miles from Sivsamudram, the site of the generating station. This transmission line was for a number of years the longest line in Asia. Since 1902 the supply of electrical energy from Sivsamudram has been provided for Bangalore and Mysore cities and about 200 other towns and villages in the South-Eastern half of the State.

The initial undertaking has constantly been expanded so that its total normal capacity now stands at 69,000 H P. This great increase has been made possible by the construction of the Krishnarajasagar reservoir near Mysore City, which has a capacity of 44,000 million cubic feet of storage above the minimum draw off.

The number of the consumers of all classes continues to increase rapidly every year with greatly increased power demands. The Government of Mysore have encouraged the use of electrical energy and have made a survey of Hydro Power resources of the State and prepared plans for the construction of a second generating station at the most economical site.

The number of lighting and power consumers of all classes in about 200 towns and villages within the Mysore State has increased to more than 50,000. Demands for very large additional blocks of power made it necessary for Government in continuing its policies for the industrial development of the State, to sanction the construction of a Power Station at the Shimsha Falls for the production of 23,000 H P and the construction of a Power Station at the Jog Falls for the production at the first instance of about 24,000 H P. The power station at Shimsha Falls was completed in June 1930 thus bringing the total installed capacity of Sivsamudram and Shimsha Stations to about 80,000 H P.

The transmission system consists of 216 route-miles of 78,000 and 77,500 volt lines with a total of 1,100 miles of circuits. The transmission system is now being extended into over 100 miles within the State which together with the appropriate distribution system will supply electric power to more than 200 towns and villages within the next 2 to 3 years.

Electricity in Travancore State.

Electric supply undertakings are of recent growth in Travancore. Although the first power station was in existence in the High Ranges as early as 1905, it was only towards the latter part of 1927 that Government created a separate organisation to carry out a programme of electrical development in the State. Electric supply was first introduced in Trivandrum in March 1929. The capital outlay on this undertaking till last financial year was Rs. 11.5 lakhs. The scheme has been paying a satisfactory return on its investment ever since it started working. The gross revenue during the last financial year was Rs. 2.75 lakhs and the total generation 1.59 million units. The number of consumers at present is about 2,800. There are 88 miles of L.T. overhead distribution lines besides 16 miles of 3.3 kV underground cables.

With the lead given by Government in the supply of electric power to the capital, two other undertakings worked by private agencies, one in Kottayam and the other in Nagercoil, were shortly afterwards inaugurated. The former came into existence early in 1932 while the latter was put into operation towards the middle of 1934. The Kottayam Electric Supply distributes power to nearly 800 consumers from a distribution net work of about 27 miles. The Nagercoil Electric Supply supplies power to nearly 600 consumers from a distribution network of about 26 miles.

A scheme to supply Quilon was inaugurated towards the middle of 1934. The capital expenditure on this undertaking is about Rs. 1.4 lakhs. Very rapid progress has been made in its operation during the last three years, the generation towards the end of the last year having reached over 2 million units per annum bringing in a gross revenue of about Rs. 12 lakhs. The supply covered about 20 miles of 11 kV lines, 45 miles of L.T. Distribution and 2½ miles of 3.3 kV underground cables and caters for about 800 consumers. Power was supplied from a thermal station of about 650 kW capacity till the supply was changed over to the Pallivasal Hydro Electric System in May 1940.

Quilon is an important industrial town and the power requirements have not been able to be met from this small thermal station to any appreciable extent. The total capacity of installed power plants in Quilon is well over 2,000 H.P. but as many of them are in a very unsatisfactory condition on account of their old age it should be possible to secure all these loads now that the Hydro Electric Supply is available from the Pallivasal system, the bulk of which is utilised by the Ilmenite Mining Industry, the Cotton Mills and the Ceramic factory at Kundara.

Pallivasal System

A preliminary survey of the hydro electric possibilities of the State was carried out as early as 1919 by Mr. I. J. Jacob, the then Chief Engineer of the Public Works Department. But as a result of the subsequent investigations conducted in 1925 by Mr. K. P. P. Menon, the present Electrical Engineer, Government came to the conclusion that the development of a

power scheme utilising the falls of the Mndrapuzha river possessed great economic possibilities. Accordingly, detailed investigations were taken up and completed by 1933. The work was started in 1934. The scheme is very economical and will be self-supporting soon.

The first stage of development of the Pallivasal Hydro-Electric Project was nearly completed by the beginning of 1940 and it was inaugurated in March when the supply was switched on by Sir C. P. Ramaswamy Aiyar from the Pallivasal Generating Station. The scheme as now completed comprises of a temporary diversion dam, a pressure tunnel of 10,200 ft in length and 8 ft diameter section and two penstocks each 7,800 ft in length, the generating station and transmission lines extending up to Alwaye on the west and up to Kundara in the south. The power station has three 11,000 volts, 3 phase, 50 cycle alternator sets each of 4,500 kW capacity directly coupled to the pelton wheels operating at a head of 1,980 ft. The total effective capacity of the station is 9,000 kW. The third generating set will be used as a standby. Power is transmitted to the plains at 66,000 volts. The transmission system consists of 134 miles of 66 kV double circuit lines connecting the generating station with 5 major sub-stations at Kothamangalam, Alwaye, Pallom, Mavelikara and Kundara besides 26 miles of 33 kV single circuit line connecting Alleppey with Mavelikara and 3 miles of double circuit of 66 kV lines from Alwaye to the aluminium factory now nearing completion.

The mains distribution comprises of 174 miles of 11 kV single circuit and 10½ miles of double circuit lines and about 92 miles of L.T. distribution net work. Almost all the Municipal Towns coming within the network of the Pallivasal Hydro-Electric Supply have been provided with low tension distribution. Thus the first stage of the scheme covers a large portion of the north and central Travancore, and it has been so designed that extensions to the transmission system can be added easily to distribute power to other areas such as Peermade in the east and Trivandrum in the south.

The availability of electric power in most places in Travancore and the very low rates of tariff now offered are expected to open up great possibilities in the industrial and agricultural development in the State. By the end of the last financial year the system had a connected load of over 6,000 kW and 2,775 consumers distributed over 19 distribution centres. The peak load of the generating station had reached 2,500 kW and the generation 11.2 million units.

The Department has been keenly alive to the need of the agriculturists for electric power, the chief uses of which are for dewatering the punja fields, the crushing of sugarcane and lifting water for irrigation. All reasonable and is rendered to prospective consumers. Proposals for the supply of electrical machinery on hire purchase system were sanctioned by Government in September 1940 and the response from consumers has been so great that purchases of electric motors totalling nearly 2,124 H.P. have been arranged.

A satisfactory agreement was reached between Government and the Aluminium Production Company of India Ltd, towards July 1940 whereby Government have agreed to supply 4,500 kW of power from the middle of 1941 and 7,500 kW by the middle of 1944 for an Aluminium smelter plant to be installed near Alwaye. The Company will be requiring another block of power aggregating to a total of 14,000 kW for bringing their factory to its fullest output. Government have agreed to make this block of power also available within one year after the company begins to take 7,500 kW. An agreement is also expected to be reached very shortly with the Cochin Government for the supply of power for the entire requirements of that State. The demand from this source will be about 3,500 kW.

The agreement with the Aluminium Production Co. has necessitated the full development of the Pallivasal Hydro-Electric Scheme so as to bring the generation and transmission capacity to cope with their large demand. This development will consist of the installation of 3 further generating sets of 7,500 kW each, 2 more penstocks and the provision of adequate storages in the upper reaches of the Mudirapuzha river. Two more 66 kV transmission lines from Pallivasal to Alwaye are also proposed to be constructed.

Within the next ten years the maximum demand of the system will reach about 29,000 kW with an annual generation of over 200 million units. The total capital expenditure on the Project till the end of the last financial year was 148.79 lakhs.

Works in Madras

The Pykara Hydro Electric Scheme, an undertaking of the Madras Government, was commenced at the end of 1929, the first stage of the project being completed at the end of 1932. The waters utilised for the development of the scheme are taken from the Pykara river which drains from the Nilgiri Plateau having a catchment area of nearly 38 sq. miles.

The Scheme utilizes a fall of about 3,100 feet available in the passage of the Pykara river in the Nilgiri District. The flow, though perennial, is very irregular and often drops to values around 20 cusecs during the dry season. The topography, however, embraces a number of feasible storage sites which could be developed according to the growth of power demand. The estimated potential capacity of the full development is around 40,000 kW continuous. The initial development utilizes the regulated flow of the river with small storages of 58 million cubic feet in the forebay and 26 million cubic feet in the Glen Morgan Reservoir which is the first storage site.

Civil Works—Water from the intake of the river is led by a flume to the forebay from whence it is led through a single 78" diameter steel pipe 1,000 feet long to a surge tank at the head of the penstock consisting of two pipes, each in three sections of 27 inches, 24 inches and 21 inches in diameter and a total of about 9,300 feet in length.

Power Station—The initially installed plant comprises of three 6,250 kW, 3-phase, 600 R.P.M. alternator, coupled to 11,000 H.P.

pelton wheels. Power is generated at 11,000 Volts, 50 cycles and stepped up to 110,000 Volts, by means of three 7,810 kVA 3-phase, 11 kV/66-110 kV transformers. The supply to Nilgiri District is at 11 kV from a 1,000 kVA 11 kV/11 kV transformer at the power station.

Transmission & Distribution—Power is transmitted to Coimbatore which is the main receiving station as also the chief load centre, by means of a 50 mile double circuit 110 kV line. 66 kV lines have also been extended to Erode, Trichinopoly and Negrapatnam a distance of nearly 200 miles from Coimbatore. But the loads at the latter places have recently been transferred to the Mettur Scheme, which came into operation in June 1937. Also the 66 kV system has been extended to Udumalpet, Sembatti, Madura, Virudhunagar, etc., a distance of about 130 miles. A 66 kV line from Virudhunagar to Kollipatti has also been completed.

In addition to the above main transmission lines, considerable lengths of 11, 22 and 33 kV distribution lines have been constructed or are under construction particularly in the Coimbatore, Madura and Ramnad Districts. At all load centres step down substations have been constructed with the necessary transformers and switchgear. At Madura which is an important station two 3,000 kVA synchronous condensers are installed for ensuring proper voltage regulation.

Pykara Scheme Extensions—To provide for the rapidly increasing demand in the existing area and also the extensions to Madura and Ramnad Districts one additional penstock (two 12,500 kVA 600 R.P.M., 11 kV generators and two 12,500 kVA, 11 kV/110 kV transformers) have recently been added. The Pykara-Coimbatore transmission line has been changed over to 110 kV operation to suit the increased load demand. Provision is also made for installing at a later date two additional generating units of the same capacity.

The rapid growth of the Pykara load in 1934 necessitated the early construction of the Mukurti Dam, which is the first large storage contemplated in the original scheme. This was sanctioned in January 1935. The work was commenced in January 1935 and completed in June 1938. The Dam as completed with open spill way stores 1,400 million cubic feet of water but the capacity can be increased to 1,800 million cubic feet when required later.

The financial position of the Pykara System is most satisfactory. The third year revenue was more than that expected in the tenth year of the forecast and the system has proved a splendid investment to the State. The paid load on the system is 26,200 kW. The revenue was approximately Rs. 47 lakhs in 1940-41. The industrial development at Coimbatore accounts for more than 50 per cent of the total load and also the high load factor of the system.

The Mettur Hydro-Electric Scheme—The engineering features of the Mettur Hydro-Electric Scheme provide an interesting contrast to the Pykara Hydro-Electric Scheme. The Mettur Stanley Dam, one of the largest dams of its kind in the world, is 176 feet high and 1,100 feet long.

impound a total of 93,500 million cubic feet of water. This storage is primarily for irrigation purposes, but part of the water let down for irrigation is utilised to the best advantage for the generation of hydro-electric power.

During the construction of the dam four cast-iron pipes 8'-6" in diameter were built into the structure and equipped with the necessary valves, gates, screens and other fittings. Each pipe is designed to discharge a maximum of 1,250 cusecs for power purposes.

The first stage of development providing 3 units of 10,000 kW each was sanctioned in 1935 and the power station construction commenced in the latter part of 1935. The station commenced operation in June 1937.

The operating head will vary from 160 feet at full reservoir level to a minimum of 60 feet. The average head will be 135 feet.

As the potential output of the Mettur station is very variable due to the wide variations in head and discharge, three classes of load are adopted. These are

- (1) Primary power available at all times,
- (2) Secondary power subject to restricted use in dry months but which can be made into primary power by the assistance of the existing Pykara station (and later of the proposed Madras steam-station)
- (3) Tertiary power generally available for eight months in the year.

The scheme supplies power to the districts of Salem, Trichinopoly, Tanjore, North Arcot, South Arcot, Chittoor and Chingleput.

Power House—The power house is situated immediately below the Mettur Dam and in it are now installed three 10,000 kW, 250 R P M generator, coupled to overhung type twin horizontal Francis Turbines one on each side. The turbines operate under a variable head of from 60 to 160 feet developing a maximum of 16,000 H P each. Power is generated at 11,000 volts, 50 cycles, 3 phase and stepped up to 66,000 volts (110,000 volts later) for transmission to various load centres.

Transmission and Distribution System.—Power is transmitted to Singarapett in the north and Erode in the south by means of two 66/110 kV trunk lines (a total mileage of 100 miles) taking off from the power station. At Erode the Mettur System is linked with Pykara network and both stations can work in parallel as and when operating conditions demand 66 kV lines have also been extended to Vellore, Tiruvannamalai and Villupuram a distance of about 140 miles.

Considerable lengths of 11, 22 and 33 kV lines have also been constructed or are under construction for extending power to various places.

At all important load centres out-door transformer stations are provided for stepping down the voltage to 11, 22 or 33 kV as required. At Trichinopoly which is an important station in the southern area, two $\frac{+2,500}{-2,000}$ kVA synchronous condensers are installed for ensuring proper voltage regulation.

Mettur Scheme Extensions—The peak load at the Mettur power house has already risen to about 14,000 kW.

A 4th generating unit and the 3rd 12,500 kVA transformer have been ordered and are being installed for increasing the capacity of the station to meet the load demands successfully even during periods of low heads in the reservoir and to afford greater relief to Pykara in emergencies.

It is expected that these will be operating in 1943.

Papanasam Hydro-Electric Scheme—This is the third hydro-electric scheme to be undertaken by the Madras Government. The scheme was sanctioned in 1938 and is expected to commence operation by 1943.

The scheme is to utilize the fall of about 330 feet in the passage of the Tambraparni river in the Tinnevely District. A reservoir of 5,500 million cubic feet capacity is being created by the construction of a masonry dam across the Tambraparni river in the foot hills of the Western Ghats above Papanasam in the Tinnevely district.

The following are the main features of the scheme.

(a) A masonry dam 176 feet high constructed on the Tambraparni river just below where it is joined by Kariar. The reservoir so formed will have a storage of 5,500 million cubic feet and water will be drawn therefrom by means of two 8½ feet pipes embedded in the dam and fitted with valves to control flow.

(b) A diversion weir located lower down the river near the head of the Papanasam Falls, which will provide a small storage of 28 million cubic feet for daily regulation.

(c) Two 9 feet diameter steel pipes leading water from the diversion weir to the headworks about 3,500 feet long. Only one pipe is being installed in the first stage.

(d) Four 60 inches penstock pipes, each 630 feet long leading the water down the hill slope from the headworks to the power station below. Only three penstocks are being erected in the first stage.

(e) The power house is situated near the Agastya temple at the foot of the Papanasam Falls. The gross head developed is 330 feet. Four 600 R P M, 7,000 kW, 11 kV, 50 cycle, 3 phase vertical generating sets each coupled to a vertical type Francis reaction turbine of 9,850 B H P. Only three units are being installed initially.

(f) A transmission system extends to Tuticorin, Kolpatti and Madura. It will incorporate the existing lines in the area. The system will be linked to Pykara at Madura.

Construction work on all the above is in progress.

Works in Kashmir.

A scheme of much importance from its size, but more interesting because of the developments that may be expected from it than for the part which its current supply already plays in the life of the countryside, is one installed a few years ago by the Kashmir Durbar, utilizing the river Jhelum, near Baramulla, which lies

thirtyfour miles north-west of Srinagar. The headworks of the Jhelum power installation are situated six and a half miles from the power house at Mohora and the main connection between the two is a great timber flume. These works and the forebay at the delivery end of the flume have a capacity for carrying water sufficient for the generation of 20,000 electrical horse-power. Four pipes 600 feet long lead from the forebay to the power house, and from forebay to water-wheel there is an effective head of 395 feet. There are four vertical water-wheels, each coupled on the same shaft to a 1,000 kVA, 3-phase, 2,3003 volt, 25 cycle generator running at 500 r.p.m., and each unit is capable of taking a 25 per cent overload, which the generator end is guaranteed to maintain with safety for two hours. The power house is of sufficient capacity to allow of 15,000 kW, generating plant being installed within it. Two transmission lines run side by side as far as Baramulla, 21 miles distant, at which point one terminates. The other continues to Srinagar, a further 34 miles. The installation at Baramulla was originally utilised for three floating dredgers and two floating derricks, for dredging the river and draining the swampy countryside and rendering it available for cultivation. The lighting of Baramulla has been taken in hand with satisfactory results and the power load is building up. At Srinagar, the line terminates at the State silk factory, where current is supplied not only for driving machinery and for lighting, but for heating. The whole of Srinagar city is now electrically lighted and there are a number of power loads.

Besides the Jhelum power installation, there are two other schemes. The Muzaffarabad hydro electric installation utilising the river Krishen Ganga and the Jammu hydro-electric installation. The Muzaffarabad power house has one 130 H.P. pelton wheel directly coupled to a 110 kVA 3300 volt, 50 cycle alternator. This serves Muzaffarabad town and Domel on J.V. Road. The Jammu power house employs five generating sets. Of these one 265 kW set is driven by a diesel oil engine whereas the remaining four, generating among themselves 1226.5 kW, are driven by water turbines.

In addition to the above schemes, new sources of power capable of feeding large-scale manufacture are, in view of the beginning of large-scale industries in Jammu and Kashmir State, being explored. In this connection Messrs. Tata Sons Ltd., recently carried out a thorough investigation into the possibilities of generating more power. The State has already provided Rs. 10,05,000 from capital expenditure not charged to revenue for the improvement of the State electrical system. The necessity for augmenting the power supply in the Jammu area being urgent a provision of Rs. 6,00,000 has been made in the budget for the purchase of a thermal plant to supplement the power now available.

United Provinces Works

The Ganges Canal Hydro electric Grid supplies power at attractive rates for domestic, industrial and agricultural purposes to 14 districts in the west of the province and to Shahdara in Delhi province. Seven of the ten falls available for

electrification have been developed and a stand-by steam power station at Chandausi of 9,000 kW has been constructed. From 1938 no less than 27,000 kW in all has been available. A further steam station at Moradnagar with an initial capacity of 6,000 kW is under construction. Besides supplying some 93 towns with current for light and fans and minor industries, the grid provides energy for irrigation pumping from rivers and open and tube wells. The Ganges Valley State Well Scheme comprises about 1,650 tube-wells, covering the districts of Moradabad, Bijnor, Budaut, Muzaffarnagar, Saharanpur, Meerut, Bulandshahr and Aligarh, introducing irrigation on the volumetric system over approximately one million acres hitherto without any source of irrigation. This supply of cheap power from some 2,000 sub-stations is already having an important bearing on the economic disposal of crops and the development of minor industries in the urban centres.

The steam power house at Sohwal is capable of supplying 2,500 kW. The energy is being used to electrify Fyzabad and Ajodhya and to pump 160 cusecs from the Gogra into the Fyzabad canal system 120 miles in length.

Investigations into the electrical and financial possibilities of a chain of hydro-electric power generating stations from the Jamna river in the Himalayas are under consideration.

Punjab's Hydro-Electric Project

The Uhl River Scheme—Perched on hill-tops 6,000 and 4,000 feet above sea-level, connected by means of a tunnel 15,000 feet long, are the headworks of the Uhl river hydro-electric project, supplying electricity to 19 towns in the Punjab, including important industrial centres like Amritsar, Lahore, and Ludhiana, and to the vast workshops of the North-Western Railway at Moghalpura.

A power house equipped with three alternators each of 12,000 kW capacity driven by 18,000 horse-power turbines operating under a head of 1,800 feet of water which are carried along the 3 mile long tunnel, convert the snow-fed waters of the Uhl river and its tributary into electric energy, supplying as much as 103,000 units of electric current to the consumers in the Punjab.

The tunnel is one of the longest in India, and the first steel mantled tunnel to be built in Asia. It measures about 2½ miles in total length and has a diameter of 9.25 feet.

The Uhl river hydro-electric project owes its origin to the need which had begun to be felt for conserving fuel resources in the Punjab some years ago.

The site was chosen in 1922, a detailed project prepared by 1923, and sanction given in 1926. Construction began in 1928 and was not completed until 1933. Though the cost of the scheme was originally estimated at Rs. 450 lakhs it finally amounted to Rs. 600 lakhs on 31st March 1934.

From the power station at Jogendernagar current produced at 11 kV is "stepped-up" to 132 kV for transmission—the highest voltage adopted for this purpose in India—and is conveyed 173 miles to Lahore by a trunk line.

supported on steel towers 80 feet high, set 1,000 feet apart in the plains and over 3,360 feet apart in the hills

There are also four travel lines totalling 232 miles in length on 50-foot towers carrying current at lesser voltage from Lahore to Ferozepore, Amritsar to Kartarpore, Kartarpore to Ludhiana, and Lahore to Lyallpur

Provision has been made for the expansion of the scheme in two stages according to requirements. The first of these contemplates the building of a dam about 270 feet high in the vicinity of the headworks, increasing the storage there. The quantity of water conveyed by the tunnel will then be doubled, four more generating sets installed in the power house, and the output also practically doubled. It will then be possible to cater for the needs of another half a dozen large towns

The next stage of development would be effected on different lines, for it is not possible to increase the capacity of the tunnel any further. This stage, therefore, envisages the construction of a second power house lower down, to which water from the tail race of the existing power house will be led by means of an open duct about 3 miles long with a fall of 1,200 feet

The new power house will generate another 48,000 kW, giving a total output of 118,600 kW, a quantity more than sufficient to meet the needs of the present generation in an area extending from Delhi in the north to Sialkot and Lyallpur in the north. In this stage over 50 towns in all will be served

The possibility of electrifying some of the railways in the Punjab, and, more important, of introducing tube-well irrigation adds to the interest of this project

The former would cheapen and quicken the transportation of passengers and goods. The latter would enable some 2½ million acres of uncommanded land to be brought under cultivation, greatly increasing the food supply of the Province

So much machinery had to be used in the construction that it was found both convenient and economic to build two small temporary hydro-electric power stations, one at Dholu near Shanon and the other at Thuji near the headworks on the Uhl. These stations were linked up by a 11,000 volt transmission line and their combined total output amounted to 1,080 kW

Despite the outbreak of war, 1930-40, the seventh year of the Commercial operation of the Scheme, has been a period of considerable progress. Owing to the difficulty of obtaining machinery and equipment, the project for installation of a Thermal Station at Lahore to augment the reserve of energy available from the Shanon Power House at Jogindernagar during the winter months when water supplies in the Uhl and Lambadag rivers are low.

HYDERABAD (DECCAN) PROJECTS

The following is a brief description of the several hydro-electric schemes that can be developed in the State—

Tungabhadra Project—This project is across the river Tungabhadra, one of the large

tributaries of the river Kistna. The question of apportionment of waters between the interested States, viz., Mysore, Madras and Hyderabad, has been under consideration for some time. From the probable share of waters it will be possible for Hyderabad to generate 28,000 kW continuous of primary power by utilising three drops in the canal aggregating to 325 ft., and to irrigate 754,000 acres. Pending the agreement for the apportionment of the waters, the Governments of Madras and Hyderabad have agreed to undertake, for the present, a joint scheme for the partial utilisation of the waters of the river. In the partial scheme now being drawn up, Hyderabad will be able to generate 15,300 kW continuous of primary power and to irrigate 3,60,000 acres. This project, besides giving a fairly large amount of power, specially for economical working of the extensive gold fields in Raichur District, will also safeguard this large tract from the occasional ravages of famine

The Devanoor Project—This project is across the river Manjira, a tributary of the Godavary. Near Bidar, the river takes a long loop round one of the intervening ridges, till it debouches into the Nizamsagar lake. It is proposed to construct a reservoir a little below Bidar, tunnel through the intervening ridge, drop the waters generating hydro-electric power, and let the tail race run into the Nizamsagar lake. This river is likely to give a dependable supply of 41,000 m.c. ft. and, with a canal discharge of 1,000 cusecs, it will be possible to generate 18,000 kW continuous at three different drops aggregating 265 ft. This site is situated almost in the centre of the State and nearly all the load centres already developed are close by. As a commercial enterprise, this project is likely to pay a handsome return

The Nizamsagar Project—Combined with Devanoor is the Nizamsagar project, where drops in the canal of about 30 ft. can be utilised to generate 1,500 kW continuous of primary power and 3,000 kW continuous of tertiary power for 9 months. The canal has already been constructed as also the Nizamsagar Reservoir. This scheme together with Devanoor project will generate over 22,500 kW continuous of primary power

The Godavary-Kaddam Project—The river Kaddam, a tributary of the Godavary, rises in Boath Taluq of the Adilabad District. About 7 miles below the crossing of the Nirmal-Adilabad road, it falls through a vertical drop of 107 ft., known as Somanagudam falls. Including the rapids above the fall, it is possible to concentrate a drop of 386 ft., to generate power. This scheme is proposed to be linked with the Godavary scheme. The Godavary river starts descending a rapid near Soan bridge and falls 500 ft. in 50 miles. It is proposed to construct reservoirs across the rivers Godavary and Kaddam, and on the tributaries of Kaddam. The total power that could be generated is expected to be 94,600 kW continuous primary and 9,600 kW continuous tertiary for 8 months. It will also irrigate 4,84,000 acres. Extensive deposits of iron ore are available on the banks of the Godavary and if a steel industry is established the power can be fully utilised immediately.

The Purna Project—The river Purna rises in the plateau of Aurangabad, and after traversing a distance of 250 miles, it joins the parent river Godavary near Kanteshwar. A little below the crossing of Jalna-Buldana road near the village Sawangi it offers a fine site for a storage reservoir. It is proposed to keep the sill of the supply sluice at a high level and to drop the water direct into the river from the reservoir. The average drop will be about 120 ft and it will be possible to generate 4,400 kW of primary power. In addition to this 1,100 kW continuous can be generated by constructing a lift dam lower down. This project is expected to be a very remunerative proposition. Besides being near the cotton centre like Nanded, Parbhani and Jalna, it can also irrigate 2,50,000 acres in Nanded District.

The Mannar Project—This project across the river Mannar in Sirilla Taluq of Kareemnagar district is a smaller scheme. The river descends into a rapids, after its junction with Kundlur and falls 207 ft in 6 miles. By constructing a reservoir above the rapids, a power channel can be taken and dropped 120 ft. The power generated will be about 700 kW continuous and irrigation of 17,680 acres is possible.

The Penganga Project—This is a boundary river between Berar and Hyderabad State. It falls through a height of 120 ft near Islampur, midway between Badgaon and Kinwat. The possibilities of generating power have so far not been investigated but, from the study of the features of the river it seems possible to construct a reservoir above the Sahasrakund falls to get a direct drop of about 100 ft. There are also possibilities of constructing a lift dam 70 ft high about 10 miles below the reservoir, an ancient 11½ miles below the lift dam, with a diversion canal which can be dropped by about 100 ft, and a reservoir near Hattighat village from which half the discharge can be dropped into the river by 70 ft and the other half drawn into the canal irrigate 1,39,000 acres in the Hyderabad territory. The total power that could be generated at the above four drops is expected to be 21,000 kW continuous primary.

The Lower Kistna Project—The river Kistna is proposed to be harnessed at a point after its junction with its tributaries the Bheema and the Tungabhadra. Soon after the junction, it cuts its course for nearly 110 miles through the Amaravati Nallamala hills. Just at the exit from these hills it is proposed to construct a high dam and generate power by dropping the water needed for lower delta irrigation into the river. It is expected to generate about 2,00,000 kW continuous and irrigate 10,88,000 acres besides safeguarding another 9,00,000 acres of delta irrigation in the British territory.

The Upper Kistna Project—The river in its upper reaches soon after entering the Hyderabad Dominions descends some 250 ft within a distance of 10 miles between the villages of Melreddy and Jamulpur. The drops known as Jaldurg falls aggregate to 130 ft within 2½

miles. By constructing a reservoir above the falls and taking a canal therefrom, it will be possible to generate about 21,660 kW continuous primary and 9,920 kW continuous tertiary and also irrigate about 7,52,000 acres.

The Bheema Project—The river Bheema rises in the Western Ghats and, after traversing a length of 370 miles in the Bombay Presidency, it forms the boundary of the State for a length of 45 miles and then after traversing 125 miles in the State joins the river Kistna. The river offers a feasible site for constructing a reservoir below its junction with Kagna. From this reservoir water will have to be let down for Lower Kistna project. This water can be dropped direct into the river and the fall, available for 8 months, from June to January, will be about 50 ft which will give about 5,000 kW continuous of tertiary power. This project will irrigate 3,34,000 acres.

The Dindi-Manpedda Project—A reservoir across the river Dindi, a tributary of the river Kistna, in Kalyakurthy Taluq, Mahabubnagar district is under construction. It will irrigate 16,300 acres. The irrigation channel from the reservoir is dropped at three places aggregating to 148 ft and can be utilised to generate 566 kW continuous of tertiary power for 8 months. This power can be linked with the power that could be obtained from the adjacent river Manpedda, draining about 220 sq miles. Before its junction with Kistna, it drops through a height of 600 ft in three miles. The river above the drop runs through deep and narrow rocky gorge. It is proposed to be banded up by a constant angle arch dam. The power canal will be taken with the sill 65 ft above the bed of the river right on to the banks of the river Kistna and the water dropped by 600 ft through pipe lines. The generation of power from this scheme can be so regulated as to give in combination with Dindi scheme, about 2,000 kW continuous of primary power.

It will thus be seen that the State is favourably placed for electric power owing to the large rivers of the Deccan, Godavary and Kistna, flowing through the Dominions. The power that can be generated from these two rivers alone will amount to 3,30,000 kW continuous, and there are possibilities of generating another 85,500 kW from their large tributaries, such as Tungabhadra, Manjira, Kaddam, Purna, Penganga and Mannar. In all, there is the possibility of generating over 4,21,500 kW continuous of 6,00,000 kW peak.

In addition to the electrical power, it will also be possible to irrigate more than three and half million acres and will also considerably accelerate industrial development of the State through rural electrification. The total probable cost of all these projects will be Rs. 85 crores and it is expected that on an average, a return of 6 to 9 per cent will be realised. At first sight the amount of investment required may appear enormous but this expenditure will be spread over at least half a century, if not more.

All these generating units will be connected up in one complete grid so that any deficiency or supply under a particular project can be easily supplemented from other schemes.

Local Self-Government.

A field of the administration of India profoundly affected by the Reforms of 1919, and again by the India Act of 1935, was that of local government. This was one of the subjects transferred to Indian ministers, and under their leadership considerable developments have been essayed. On the whole, the progress of local government in India for the past quarter of a century has been encouraging, but uneven. As the annual reports of provincial governments show, there are some towns which have shown a real sense of responsibility in civic affairs and have administered them efficiently. In a minority of cases, however, the local "city fathers" have signally failed to discharge their duties to the public benefit, with the result that they have been superseded and the conduct of municipal affairs has reverted to official control. The greatest successes have been won in the Presidency towns, and particularly by the Municipality of Bombay. The difficulties in the way of progress were manifest. Local government had to be a creation—the devolution of authority from the Government to the local body, and that to a people who for centuries had been accustomed to autocratic administration. Again, the powers entrusted to local bodies were insignificant and the financial support was small. There are, however, many encouraging signs of improvement.

Throughout the greater part of India, the village constitutes the primary territorial unit of Government organisation, and from the villages are built up the larger administrative titles—*tahsils*, sub-divisions, and districts.

"The typical Indian village has its central residential site, with an open space for a pond and a cattle stand. Stretching around this nucleus lie the village lands, consisting of a cultivated area and (very often) grounds for grazing and wood-cutting. The inhabitants of such a village pass their life in the midst of these simple surroundings, welded together in a little community with its own organisation and government, which differs in character in the various types of villages, its body of detailed customary rules and its little staff of functionaries, artisans and traders. It should be noted, however, that in certain portions of India, *e.g.*, in the greater part of Assam, in Eastern Bengal, and on the west coast of the Madras Presidency, the village as here described does not exist, the people living in small collections of houses or in separate homesteads."—(*Gazetteer of India*.)

The villages above described (of which there are 700,000 in India) fall under two main classes, viz—

Types of Villages.—(1) The 'severalty' or *raiyatwari* village which is the prevalent form outside Northern India. Here the revenue is assessed on individual cultivators. There is no joint responsibility among the villagers, though some of the non-cultivated lands may be set apart for a common purpose, such as grazing, and waste land may be brought under the plough only with the permission of the Revenue authorities, and on payment of assessment. The village government rests in a hereditary headman, known by an old vernacular name, such as *patel* or *reddi*, who is responsible for law and

order, and for the collection of the Government revenue. He represents the primitive headship of the tribe or clan by which the village was originally settled."

"(2) The joint or landlord village, the type prevalent in the United Provinces, the Punjab and the Frontier Province. Here the revenue was formerly assessed on the village as a whole, its incidence being distributed by the body of superior proprietors, and a certain amount of collective responsibility still, as a rule, remains. The village site is owned by the proprietary body who allow residences to the tenantry, artisans, traders and others. The waste land is allotted to the village, and, if wanted for cultivation, is partitioned among the shareholders. The village government was originally by the *punchayet* or group of heads of superior families. In later times one or more headmen have been added to the organisation to represent the village in its dealings with the local authorities, but the artificial character of this appointment, as compared with that which obtains in a *raiyatwari* village is evidenced by the title of its holder, which is generally *lambaridar*, a vernacular derivative from the English word 'number'. It is this type of village to which the well-known description in Sir H. Maine's *Village Communities* is alone applicable, and here the co-proprietors are in general a local oligarchy with the bulk of the village population as tenants or labourers under them."

Village Autonomy.—The Indian villages formerly possessed a large degree of local autonomy, since the ruling dynasties and their local representatives did not, as a rule, concern themselves with the individual cultivators, but regarded the village as a whole, or some large landholder as responsible for the payment of the Government revenues, and the maintenance of local order. This autonomy has now disappeared owing to the establishment of local, civil and criminal courts, the present revenue and police organisation, the development of communications, the growth of individualism, and the operation of the individual *raiyatwari* system, which is extending even in the north of India. Nevertheless, the village remains the first unit of administration; the principal village functionaries—the headman, the accountant, and the village watchman—are largely utilised and paid by Government, and there is still a large degree of common village feeling and interest.

Punchayets.—For some years there was an active propaganda in favour of reviving the village council-tribunal, or *Punchayet*, and the Decentralisation Commission of 1908 made the following special recommendations.—

"While, therefore, we desire the development of a *punchayet* system, and consider that the objections urged thereto are far from insurmountable we recognise that such a system can only be gradually and tentatively applied, and that it is impossible to suggest any uniform and definite method of procedure. We think that a commencement should be made by giving certain limited powers to *Punchayets* in those

villages in which circumstances are most favourable by reason of homogeneity, natural intelligence, and freedom from internal feuds. These powers might be increased gradually as results warrant, and with success here, it will become easier to apply the system in other villages. Such a policy, which must be the work of many years, will require great care and discretion, much patience, and judicious discrimination between the circumstances of different villages, and there is a considerable consensus of opinion that this new departure should be made under the special guidance of sympathetic officers."

These recommendations, however, were never implemented and the *punchayat* system, while it still exists in non-official form, is tending to decline. There is still the possibility that it may be revived. For present purposes it is unnecessary to refer at greater length to the subject of village self-government. Various measures have been passed, but it is too early to say what life they have. The Punjab Government has passed a Village *Punchayat* Act, which enables Government to establish in a village, a system of councillors to whom certain local matters, including judicial power, both civil and criminal of a minor character, may be assigned. In Bihar a Village Administration Act has been passed for the administration of village affairs by villagers themselves, including minor civil and criminal cases. Other Governments have taken steps in the same direction.

Municipalities—The Presidency towns had some form of Municipal administration, first under Royal Charters and later under statute, from comparatively early times, but outside of them there was practically no attempt at municipal legislation before 1842. An Act passed in that year for Bengal, which was practically inoperative, was followed in 1850 by an Act applying to the whole of India. Under this Act and subsequent Provincial Acts a large number of municipalities was formed in all provinces. The Acts provided for the appointment of commissioners to manage municipal affairs, and authorised the levy of various taxes, but in most provinces the commissioners were all nominated, and from the point of view of self-government, these Acts did not proceed far. It was not until after 1870 that much progress was made. Lord Mayo's Government, in their Resolution of that year introducing the system of provincial finance, referred to the necessity of taking further steps to bring local interest and supervision to bear on the management of funds devoted to education, sanitation, medical, charity, and local public works. New municipal Acts were passed for the various provinces between 1871 and 1874, which, among other things, extended to the elective principle, but only in the Central Provinces was popular representation generally and successfully introduced. In 1881-2 Lord Ripon's Government issued orders which had the effect of greatly extending the principle of local self-government. Acts were passed in 1883-4 that greatly altered the constitution, powers, and functions of municipal bodies, a wide extension being given to the elective system, while independence and responsibility were conferred on the committees

of many towns by permitting them to elect a private citizen as chairman. Arrangements were made also to increase municipal resources and financial responsibility, some items of provincial revenue suited to and capable of development under local management being transferred, with a proportionate amount of provincial expenditure, for local objects. The general principles thus laid down have continued to govern the administration of municipalities down to the present day. As the population of most Indian towns rises, so does the number of municipalities increase. For the most part they display a lively interest in civic affairs and are actively engaged in improving the conditions under which their fellow citizens live.

District Boards—The duties and functions assigned to the municipalities in urban areas are in rural areas entrusted to district and local boards. In almost every district of British India save in the province of Assam, there is a board subordinate to which are two or more sub-district boards, while in Bengal, Madras and Bihar and Orissa, there are also Union Committees.

As in the case of municipalities the tendency has been throughout India to increase the elected members at the expense of the nominated and the official members. The boards are practically manned by Indians. The most important item of revenue is provincial rates. The principal objects of expenditure are education which has come remarkably to the front within the last three years and civil works such as roads and bridges. Medical relief is also sharing with education though in a less degree the lion's share of the available revenue.

The annual audit reports on the working of local self-government institutions in the various provinces reveal on the whole a disappointing record. There is a general reluctance to increase local taxation and several municipalities are conspicuous for their negligence in recovering rates. There are, of course, some honourable exceptions, in Bombay Presidency, Ahmedabad and Sholapur furnish encouraging examples. In 1939 a Local Self Government Committee was appointed by the Bombay Government under the chairmanship of Professor V. G. Kulkarni. The Committee made several recommendations to overcome the general reluctance to impose additional taxation. The Committee suggested that taxation by local authorities was likely to be better appreciated if it were associated with specific services rendered to the people, the idea was to earmark yields of certain taxes for definite purposes. The Committee also laid down the principle that citizens generally should understand that amenities can be provided only if they are paid for, thus a compulsory education cess was suggested to finance ambitious educational schemes.

In August 1940 the Bombay Government convened a conference of Presidents of all important local bodies at Poona to consider the Committee's report under the presidency of J. A. Mulla I.C.S. then Advocate General of Bombay Government. The conference was presided over by Sir J. J. Lawrence who put forward the following resolutions:—

judgment which had been brought to bear on the complicated problems of municipal administration. The conference discussed the recommendations of the Committee and there was unanimity of opinion on a large number of the Committee's proposals. These proposals, however, still remain to be implemented by the Bombay Government.

Improvement Trusts.—A notable feature in the recent sanitary history of India is the activity played by the great cities in the direction of social improvements. In Bombay, Calcutta, Lucknow, Allahabad, Lahore, Rangoon,

and Cawnpore the Improvement Trusts developed important activities which are described in a separate chapter (q.v.). (In Bombay the work of the Improvement Trust is carried on by the Bombay Municipality). Other cities are beginning to follow the examples of these great cities. The Government of India in 1937 established an Improvement Trust to attend to slum clearance in old Delhi City and to the general expansion of their Winter Capital. This body has lately undertaken an ambitious scheme, costing many lakhs of rupees, for the abolition of slums and the re-housing of dispossessed workers.

Calcutta Improvement Trust.

The Calcutta Improvement Trust originated from a medical enquiry into the sanitary condition of the town in 1896, owing to the outbreak of plague. Preliminary investigation continued for several years, and the Trust was instituted in January, 1912, with a view to making provision for improvement and expansion of Calcutta by opening up congested areas, providing open spaces and improved buildings sites, laying out or altering streets and for rehousing of the poorer and working classes. The Act provided for a large expenditure on improvement schemes and for local taxation or raising of loans to this end. It provided for the constitution of a Board of Trustees of eleven members with a whole-time Chairman.

The following constituted the Board of Trustees at 1st March 1942:—C. W. Guiney, C.S.I., I.C.S., Chairman, Sailapati Chatterjee, Chief Executive Officer, Calcutta Corporation (ex-officio), Sudhir Chandra Ray (Chaudhuri), elected by the Corporation of Calcutta under Section 7 (1) (a) of the Calcutta Improvement Act, 1911, Md. Rahque, elected by the elected Councillors, Corporation of Calcutta, under Section 7 (1) (b) of the Calcutta Improvement Act, 1911, as modified by the Amendment Act of 1926, J. J. N. Buch, elected by Councillors other than elected Councillors of the Corporation of Calcutta, under Section 7 (1) (c) of the Calcutta Improvement Act, 1911, as modified by the Amendment Act of 1926, F. Rooney, elected by the Bengal Chamber of Commerce, Sir Hari Sunkar Paul, Kt., elected by the Bengal National Chamber of Commerce, Mrs. Hasina Murshed, M.B.E., M.L.A., Rai Saheb Chandan Mul Karnani, J.P., Abdul Rahman Siddiqui, M.A., LL.B., Bar-at-Law, M.L.A., A. J. Thompson, D.S.O., M.C., F.R.I.B.A., F.A.S.I., appointed by the Local Government.

During the 29 years that it has now been at work, the Trust has carried through many improvement schemes both in the city proper and the suburban areas which have changed the face of Calcutta wholly and beyond recognition. It has constructed over 67 miles of new roads, 37 public parks covering an area of about 304.8 acres and a large lake with 80.22 acres of water area.

In Central Calcutta many highly insanitary bustees have been done away with and several roads of an improved type laid out, the most important of which is the Chittaranjan Avenue,

100 ft. wide, which at present extends from Chowringhee, past Shambazar, to Raja Raj Ballav Street, a stretch of 3 miles. It is intended ultimately to extend it up to the Chitpur Bridge. The Section of Chittaranjan Avenue near the Chowringhee end is well placed for commerce and trade and has gained increased importance by being linked up with Dalhousie Square on the West by means of a new road 84 feet wide which the Trust has constructed between Mission Row and Mangoe Lane. A further extension of this road from Chittaranjan Avenue to Wellington Street on the east and the clearing-up of an adjacent area in Chandni Chawk by the construction of a 40 feet road have been completed. The most important of the recent Schemes of the Trust is the approach road to the new Howrah Bridge from Dalhousie Square. The first section of this project, which has already cost Rs. 1,02,00,000 nearly, from St. Andrew's Church to Canning Street, is now complete with a 100 feet wide road from Dalhousie Square corner to Canning Street. Another 60 ft wide road has been completed diagonally from Royal Exchange Place to Lower Chitpur Road. This route is already functioning as a new avenue through the heart of the city, but its immediate importance up to the present has been rather in creating a thoroughfare from Olive Street to Lower Chitpur Road than in promoting traffic northwards from Dalhousie Square, as Canning Street at which it ends on the north is a street of very limited traffic value. It is also in the programme of the Trust to extend this road through Terrill Bazar, one of the still existing dirtiest spots in the heart of the city, to Circular Road near Sealdah Station. For the second section of the project from Canning Street to Strand Road, the acquisition of land is almost complete—cost of acquisition to January, 1942, is approximately a crore and a quarter. The work for the first section of the main roadway from Strand Road has just been started.

In the north of the City, two large and sixteen small parks have been constructed in different quarters. Of the two large parks one is named Deshabandhu Park and the other Cossipore-Chitpore open space measuring 53 bighas and 156 bighas respectively. The Cossipore-Chitpore Park has a small artificial lake and the layout of the area surrounding the lake has been completed. Four football grounds have been provided for schools.

and clubs of North Calcutta. Some tennis courts are also being made. The Deshabandhu Park has also been provided with play-grounds. Several wide roads have been laid through this highly congested area. The approaches to the City have also been adequately widened.

Good progress has also been made with that highly congested area to the west of the City by opening up new roads and widening the existing ones. This Scheme is known as Maydapatl, Scheme No. XXVII.

A 81 ft road connecting Chittaranjan Avenue with Strand Road slightly to the north of Jagannath Ghat has been constructed, which provides a continuous main traffic route with the same width of roadway as Chittaranjan Avenue, extending right across Calcutta from Strand Road on the west to Upper Circular Road on the east. An interesting small work is the extension of a storm water sewer from Jagannath Ghat Road to Strand Bank Road carrying with it the construction of a 60-ft roadway. Another important scheme which has been completed of late is the new 60 ft road between Darpanarayan Tagore Street and Pathurighat Street which, with the side roads, opens up a very congested area and forms a portion of a main projected north and south road through Bara Bazar from Harrison Road to a new main east-and-west diagonal road through Ahiritollah. The completion of the widening of Kalakar Street represents the most important effort yet made to penetrate the inner recesses of Bara bazar and provides a new 60 feet road from Harrison Road to Jagannath Ghat Road with short lengths of widening of cross roads in accordance with existing alignments. Running, as it does, through an area with a population of over 200 to the acre and closely built up with four or five storeyed houses, the gross cost of acquisition of land was exceptionally high. Demolition was of greater difficulty than usual owing to the height of the buildings and the narrowness of the lanes.

The passing of the Calcutta Improvement (Amendment) Act, 1931, which empowers the Board of Trustees in certain cases to levy betterment fees on properties which abut on to a new or widened street instead of acquiring the properties has made it financially possible for the Trust to proceed with some portion of its original programme for the improvement of Bara Bazar and other costly and thickly-populated commercial areas.

The Suburban Areas to the south and south-east of Calcutta required greater attention and extensive development schemes were undertaken. Several open spaces and squares have been laid out in various parts. In sanitary tanks have been filled up which required approximately 200000 cu ft of earth. Russa Road which forms the southern approach to the town has been widened to 150 ft for a length of one mile and 100 ft for a length of another mile. It now gives a most pleasant drive from Chowringhee to Tollygunge. A 100 ft wide East-to-West road from Ballygunge Railway Station to Chella Bridge, and for recreation an artificial lake of 167 bighas with adequate grounds have been constructed.

Another small lake has also been completed and a road is being constructed round it to link

up with the road surrounding the main lake. The road round the main lake has been surfaced with asphalt and lighted with electricity and is much frequented in the evenings. Sites for club houses adjoining the main lake have been allotted to several clubs. Excavation has been completed in the new section of the lake which is being attractively laid out with an island to which the public will have access by means of a footbridge. The two lakes have been linked up by a concrete bridge constructed before the joining canal was excavated. The Calcutta Tramways Co., Ltd, have now extended tram tracks from Russa Road along Rash Behary Avenue to Ballygunge Station. The "Lake Area," as it is now commonly known, consisting of land originally acquired for the provision of earth and partly for a statutory open space in scheme No XXXIII, assumes more and more the nature of a Model Park, and comprises well laid out football grounds in addition to its natural amenities. The Trust continues the policy of planting and embellishing it as a place of public recreation for south Calcutta and finds scope here for various experiments in Park technique, of which the most interesting was a Children's Pool properly designed for the purpose and believed to be the first of its kind in the Indian city. The Swimming Pool, the origin of which was to attract youths from swimming in the main lake, continues to grow in popularity to such an extent that the large crowds frequenting it in mid summer tend occasionally to be a cause of some anxiety, and considerable expenditure has had to be met on security precautions.

The second section of the Southern Avenue on the east of Landsdowne Road Extension, has now been taken up and the extension of the 150 ft wide Southern Avenue upto Garlhat Road at the junction of Monoharpookar Road is approaching completion. This area with the large lake and its amenities has already proved very attractive for residential houses and almost a new city is springing up, relieving considerably the congestion in the main city. From the junction of Southern Avenue and Garlhat Road the work of widening Garlhat Road and Old Ballygunge Road upto Sved Amer Ali Avenue has been taken up now and the work in the section upto Old Ballygunge Road is complete and work in the second section is in progress. The Calcutta Tramways Company will extend their service through this widened road from the Park Circus.

The central section of the eastern part of Calcutta has already been developed by the Trust into a beautiful residential area with the amenity of a large park near Park Circus known as Eastern Park, measuring 65 bighas, with large playing fields for football, tennis, etc. The Gorachand Road Scheme providing for the completion of the northern portion of this park and the commencement of a wide avenue running parallel to Lower Circular Road through the outer fringe of Lalbally has been completed and the Scheme providing the wide Avenue on its north has been taken up during the year.

The Trust pursues a liberal policy in the development of open spaces and recreation grounds. The public square created by the Calcutta Corporation in 1911 and a total of 100

about 96 acres In 1912, Bompas the first Chairman of the Trust, pointed out that in the ratio, viz., about 9 per cent. of its public open spaces which measured about 1,250 acres (including the Maidan, the Horticultural and the Zoological Gardens) to its total acreage, Calcutta was almost on a par at that time with London possessing 6,675 acres of public parks or gardens, while its percentage exceeded that of New York, Berlin and Birmingham But it must be pointed out that about 1,000 acres of Calcutta's 1,250 was accounted for in the Maidan and new open spaces in other parts of Calcutta were an urgent need Up to date the Trust had added (including the new lake at Dhakuria)—over 300 acres

The Trust has so far added over 300 acres in open spaces Of this the Dhakuria Lake comprises the most important as well as the most popular feature The Eastern Park at Gorachand area, the Deshbandhu Park and Cossipur-Chitpur Open Spaces at the north of the city are the larger of the parks laid out, besides a large number of parks scattered throughout the city Among the less conspicuous but very useful activities in this regard is the adaptation of land acquired on alignments of future streets, which will not be required for the purpose for several years, as temporary recreation grounds These play-grounds, while for the most part individually small in area, are very popular with children

For the housing of the displaced population the Trust has undertaken on a large scale the following schemes —

In the early stages three blocks of three storeyed tenement buildings containing 252 lettable rooms were built in Wards Institution Street for the poorer classes It was found, however, that the persons displaced preferred to take their compensation and migrate to some place where they could erect *bastis* of their own, the class of structures they were accustomed to live in. These chawls were then filled with persons of limited means, e.g., school masters, poor students, clerks and persons of the artisan class. As many as 1,200 people are housed in these chawls The buildings, including land, cost Rs 2,44,368 and are let at very low rents—ground floor rooms at Rs 4 per mensem and top floor rooms at Rs. 6 per mensem, each room measuring 12' x 12' with a 4 ft. verandah in front and opening on to a central passage 7 ft. wide.

As these chawls failed to attract the people for whom they were meant, the Board next tried an experiment in providing sites for busters. Two sites with a lettable area of 16 bighas were acquired within the area of Maniktola Municipality, but they failed to attract because they were out of the way and were expensive

Kerbala Tank Lane Re-housing Scheme.—In this scheme 4 detached and 35 semi-detached houses were built The detached houses were sold as this scheme never became popular with the class of tenants for whom they were originally intended. Owing to this unpopularity the Board further decided to throw open to tenants of all classes 18 out of the remaining

35 semi-detached houses This change of policy, however, produced no effect on the letting.

Owing to want of suitable tenants the entire dwellings in Kerbala Tank Re-housing Scheme was sold by private sale in 1927

Bow Street Re-housing Scheme.—Seven blocks of buildings containing one-roomed, two-roomed and three-roomed suites have been constructed to re-house Anglo-Indians displaced by the operations of the Trust. This scheme has proved a striking success.

Paikpara Re-housing Scheme.—This scheme has an area of 36 bighas well laid out in 96 building sites. A new re-housing scheme has been undertaken by the Board, as already stated, at Christopher Road for the bustee population to be displaced by the execution of Scheme No. XXXV (Eastern Park to Gorachand Road) and Schemes XLIX and LII on its North A special feature of the new scheme is that the land is to be developed as a model bustee for displaced bustee dwellers

Special facilities are offered to dishoused persons for securing land in various improved areas for reinstatement purposes

Bridges—The old bridges of Calcutta, which are hemmed in by canals and railway lines inadequately bridged, have almost all of them replaced by modern and up-to-date bridges to suit the growing traffic requirements The new bridges of the city have traffic capacity comparing favourably with those of London. The new bridges at Maniktola, Behaghata and at Shambazar have roadways of 37 feet, with two footpaths each 10 feet in width. The Chitpore Bridge reconstruction of which has been completed has been redesigned as a reinforced concrete bridge capable of accommodating four lines of fast traffic and two lines of slow traffic The Alipore Bridge, the reconstruction of which has been completed, has a roadway of 80 feet (3 traffic widths) and 2 footpaths of 6 feet each.

The Tollygunge Bridge across Tolly's Nullah has been completed and transferred to the Irrigation Department and the last bridge taken up and completed is the Bairackpore Bridge The next bridge to be taken up is the Ultadanga Bridge, specifications and estimates for which have been completed A start would have normally been made by now, but has been somewhat delayed due to the present situation

Financial.—Capital charged during the year 1940-41 amounted to Rs 92.77 lakhs which included Rs 80.20 lakhs spent on land acquisition and Rs 10.55 lakhs on engineering work. The gross expenditure of the Trust on Capital Works up to the end of the year 1940-41 was 20.1 crores To meet this large expenditure, the Trust has borrowed Rs 4,17,50,000 Other Capital receipts (mainly from the sale of land and buildings) have yielded Rs 10.78 crores and the revenue fund from its annual surplus (after providing for the service of loans) has contributed Rs 5.21 crores to Capital Works

Up to 1940-41 the Trust spent nearly Rs 16.42 crores on land acquisition and Rs 3.20 crores on engineering work

The Indian Ports.

The administration of the affairs of the larger ports (*Calcutta, Bombay, Madras, Karachi and Chittagong*) is vested by law in bodies specially constituted for the purpose. They have wide powers, but their proceedings are subject in a greater degree than those of municipal-bodies to the control of Government. At all the ports the European members constitute the majority and the Board for Calcutta consists mainly of European members.

Figures for 1939-40 relating to income, expenditure and capital debt of the five principal ports managed by Trusts (Aden and Rangoon are excluded from the tables) as obtainable from the Department of Commercial Intelligence and Statistics (India) are shown in the following table —

	Income.	Expenditure.	Capital Debt.
	Rs	Rs.	Rs.
Calcutta	3 55,93,950	3,30,79,802	21,28,63,833
Bombay	2,70,61,588	2,58,53,856	17,94,85,168
Madras	45,87,408	46,97,170	1,42,17,739
Karachi	73,40,574	65,59,044	3,85,69,000
Chittagong	8,91,724	6,48,225	(a) 43,39,507

(a) Includes the first instalment of Rs 15 lakhs, the second instalment of Rs 2 lakhs, the third instalment of Rs 2 lakhs, the fourth instalment of Rs 3 lakhs, the fifth instalment of Rs 3 lakhs, the sixth instalment of Rs 4 lakhs, the seventh instalment of Rs. 2 lakhs, the eighth instalment of Rs 8 lakhs, and the ninth instalment of Rs 5 lakhs, of a loan of Rs 50 lakhs from Government

BOMBAY.

BOARD OF TRUSTEES OF THE PORT OF BOMBAY—Sir B Rama Rao, CIE, ICS (Chairman) Nominated by Government—Major-General F V B Wills, CBE, DSO, MC, Commodore A R Ratnay, RIN, PN Chandavarkar, GE Cusse, GC Laughton, CII, R R Bakhale, NV S Murli, ISR, MD Bhargava, ICS

Elected by the Bombay Chamber of Commerce—W A Bell, R W Bullock, R C Lowndes, A McIntosh, G S Taunton. The revenue of the Trust in 1940-41 amounted to Rs 2,70,11,002 and the expenditure to Rs 2,33,17,733. The surplus of Rs 36,14,080 under General Account has been transferred to the Revenue Reserve Fund, and a surplus of Rs 70,182 under Pilotage Account has been

transferred to the Vessels' Replacement Fund. The Revenue Reserve Fund at the close of the year amounted to Rs 1,08,89,577. The aggregate capital expenditure during the year was Rs 3,50,395. The total debt of the Trust at the end of the year amounted to Rs 1,707.06 lakhs repayment of which is provided for by annual sinking fund contributions from revenue, the accumulation of the sinking fund at 31st March 1941 was Rs 468.00 lakhs, in addition to this apart from property appreciation, the Reserve and other funds total Rs 181.67 lakhs.

The trade of the Port of Bombay last official year aggregated Rs 136 crores in value (exclusive of Government transactions).

Number of steam and square rigged vessels which during recent years have entered the docks

or been berthed at the harbour walls and paid dues, excluding those which have unloaded and loaded in the stream —

Year	Number.	Tonnage Nett
1916 to 1921 (average)	2,086	4,738,888
1921 to 1926	1,962	4,574,817
1926 to 1931	1,954	4,749,570
1931 to 1936	1,894	4,901,261
1936-37	1,954	4,998,513
1937-38	1,866	5,001,521
1938-39	1,862	5,041,888
1939-40	1,797	5,200,543
1940-41	1,579	5,143,010

The two dry docks were occupied during the year by 238 vessels, the tonnage amounting to 1,410,078 an increase of 628,761 tons from the previous year.

CALCUTTA.

The Commissioners for the Port of Calcutta are as follows —

Sir Thomas H. Elderton, *Chairman*

W. A. Burns, *Deputy Chairman*

Elected by the Bengal Chamber of Commerce —

R. R. Huddow, W. L. Gordon G. V. Lloyd,
I. S. Goldstone, The Honble Sir John
Richardson, K. J. Nicolson

Elected by the Calcutta Trades Association —

F. J. Read

Elected by the Bengal National Chamber of

Commerce — I. B. Sen, D. S. C. Law
M. A. Bhattacharya

Elected by the Indian Chamber of Commerce —

C. I. Mehta

Elected by the Muslim Chamber of Commerce —

Khan Ibrahim C. A. Durrani

Elected by the Municipal Corporation of
Calcutta — Sir Hari Sankar Paul

Nominated by Government — Captain C. R.

Bluett, R. N., R. Mar, L. P. Misra,
A. Duncan, C. E., F. M. Innes, I. C. S.

The principal officers of the Trust are —

Secretary — W. T. Hook (on leave) Offg
Secretary S. L. Das

Traffic Manager — W. Steer

Chief Accountant — J. Dand, C. A.

Chief Engineer — A. M. Ward, M. I. O. E.,
A. M. I. E.

Deputy Conservator — Lt. Commander L. L.
Pawsey, R. N. (Retd.)

Medical Officer — Lt. Col. F. J. Anderson,
M. C. I. E., M. B., B. S., F. R. C. S., I. M. S.

Consulting Engineers and London Agents —
Messrs. Rendel Palmer & Tutton.

The traffic figures and the income of the Trust for the last fifteen years are as follows —

Year	Docks			Jetties	Stream.		Nett tonnage of shipping entering the Port	Income
	General Exports	Coal Exports	Imports	Imports	Exports	Imports		
	Tons	Tons	Tons	Tons	Tons	Tons	Tons.	Rs.

CHITTAGONG.

Chittagong in Eastern Bengal, lying on the right bank of the river Karnafull at a distance of 12 miles from the sea, was already an important Port in the sixteenth century, when the Portuguese gave it the name of Porto Grande.

The construction of the Assam-Bengal Railway has facilitated the trade with Assam and Eastern Bengal for which the Port of Chittagong is the natural outlet.

Chittagong, Bengal, Lat. 22° 21' N, Long 91° 50' E, 1933 Pop 53,156.

TRADE

Imports—Salt, mineral oil, machinery, tea estate, stores, rice, coal and railway material.

Exports—Wax, jute, tea, hides, cotton, capes, rice, paddy, eggs, poultry and live stock.

Accommodation—Vessels of any size can proceed 9 miles up the Karnafull to Chittagong at H W O S draught of 22 ft to 26 ft.

There are 5 berths for ocean-going vessels at the Bengal-Assam Railway jetties, also one set of fixed moorings.

Jetties are 2,100 ft long, provided with hydraulic cranes 17 to lift 35 cwt and 4 to lift 10 tons, ample shed accommodation, and jetties are in direct rail communication with the Bengal-Assam Railway system, cargo in bulk being dealt with direct into wagons. Depth at jetties about 26 feet at L W S T.

Provisions—Fresh provisions, good drinking water and coal obtainable.

Navigation—Conditions over the three river bars have been improved by river training works such that dredging has been practically eliminated.

Night pilotage which is in force except during the S W monsoon has been suspended until further notice.

Charges—Port dues 4 annas 6 pies per reg ton. Hospital dues 2 pies per reg ton. Harbour Master's fee Rs. 32. Mooring and unmooring in fixed berths Rs. 32, swinging berths Rs. 16. Berth alongside jetties Rs. 40, per day, night work and holidays extra.

Pilotage not exceeding—	Rs a.	Rs a
10 ft to 20 ft from ..	67 8	to 304 4
21 ft	337	8
22 ft	385	4
23 ft	430	4
24 ft	486	0
25 ft	553	8

Towage by Port Commissioners' Tug

Port Authority The Commissioners for the Port of Chittagong.

Officials—Deputy Conservator, Commander G M Osborne Smith, R.N., Port Engineer, F J Green, R.N., M.I.C.E., Secretary, A V Ramasubba Aiyar, B.A., A.S.A., Lloyd's Agents, James Finlay & Co.

COCHIN.

Cochin, the newest port of the East, lies in the direct route to Australia from Europe. It serves a vast hinterland comprising the States of Cochin and Travancore, and the southern districts of the Madras Presidency. The harbour fulfils the long felt need of a port open throughout the year on this coast. It is the natural outlet for the chief planting areas of South India.

The development of the harbour involved the cutting of a passage through the bar which blocked the entrance from the sea to an extensive backwater. The first cut through the bar of a wide and deep channel was made in 1928. The channel through the outer bar is now 3 miles long by 450 feet wide and a minimum depth of 30 feet at L W O S T is maintained throughout the year. Since 1930 the harbour has been in constant and regular use by all ships and regular passenger services have been maintained by the P & O, the Bibby Line and the B I S N Co. To facilitate night navigation the channel has been lighted. A powerful tug has been provided and ships can enter and leave the harbour at all states of the tide. A hotel on modern lines has been constructed to provide accommodation for passengers and other visitors to the port.

Cochin was declared a major port under the control of the Government of India on 1st August 1936, and rapidly converted into a modern terminal port. The works so far completed include the construction of a deep water wharf and sidings fitted with travelling electric cranes for rapid handling of cargo, a fitting out wharf with an up to date workshop by its side, fire proof transit sheds and warehouses for hinterland goods traffic, roads and bridges linking the wharves with the broad gauge railway system of the rest of India, three railway stations including the Harbour Terminal and a Pier Station for ocean passengers, a land wireless station, an aerodrome and large administrative offices. Reservoirs and pipes ensure a supply of fresh water to the ships at all times. The trade is increasing with the provision of these facilities.

The Principal Officers are—

Administrative Officer and Chief Engineer—

A G Mudge, M.I.C.E., M.I.N.E.

Executive Engineer, Cochin Harbour District—

V Srinivasan, I.A.S., M.A., M.I.C.E.

Port Officer—Lieut. Col. H. G.

Hecker, R.N.

Harbour Master—H A Srinivasan

TRUSTEES

Electd by the Karachi Indian Merchants' Association—Sukhdev Udhwadas (R. B. Vishandas Sukhdev), Lala Jagannath

Chief Storekeeper.—C. J. T. Rozario
Revenue Receipts and Expenditure of the
Port of Karachi for the year 1940-41.

Revenue Receipts	Rs. 68,05,000
Revenue Expenditure	Rs. 64,68,000
Surplus	Rs. 3,37,000
Reserve Fund	Rs. 60,43,748 (Securities at cost price)

CARGO

The total volume of imports and exports was 1,996,000 tons against 2,134,000 tons in the previous year.

MADRAS.

Principal Officers — G P Alexander, M Inst.
C.E., Port Engineer Lt-Commander A D
Barnington, R N R (Retd.). Deputy Controller

The receipts of the Trust during 1940-41 on Revenue Account from all sources were Rs 31 09 524 as against Rs 48 57,405 in 1939-40 and the gross expenditure out of revenue was Rs 29 05 525 as against Rs 46,97 170 in 1939-40. Contribution of Rs 1.42 739 was made to the Reserve Funds during 1940-41.

VIZAGAPATAM HARBOUR AND PORT.

Vizagapatam Harbour was created in order to supply an outlet for a large area of fertile country adjacent to the east coast of India, with considerable mineral resources and no alternative access to the outside world. The scheme was first formulated many years ago in the days of the East India Company, but was not actually taken up before 1925. In 1932, the Harbour

was first opened for sea-going vessels, and it now provides the following facilities:—

An Entrance Channel sheltered by hills with a minimum depth sufficient to admit a draught of 25 feet of water on any day of the year, gives access to a completely sheltered harbour, provided with three quay berths, each

500 feet long, and equipped with fully portal electric cranes, transit sheds, and railway lines, both behind and on the quay-side of the transit sheds. Two of these berths are specially equipped for the rapid shipment of manganese ore in bulk, one of them is also equipped as an auxiliary coal bunkering berth. In addition, a special coal bunkering jetty berth is provided, at which coal is carried on board ships direct over adjustable gangways. Four mooring berths are also provided, at which vessels are served by a fleet of lighters operated by the Port.

Storage Sheds, for lease to import and export merchants, are provided with water frontage and rail service in the rear. From these sheds, export cargo can be carried directly alongside vessels by means of lighters.

The hauling equipment of the Harbour comprises five tugs of 1500, 600, 450, 120 and 100 H P respectively.

A graving dock with an entrance 60 feet 6 inches wide is provided, but in view of the fact that its length is at present limited to 300 feet, it is used principally for docking the craft of the Port, although it is also used by a certain number of small size vessels of other ownership.

The port, can, by special arrangement, deal with lifts up to 50 tons on the quay, but cannot lift more than 3 tons into and out of vessels.

Simultaneously with the construction of the harbour, a special railway connection, linking it with the Central Provinces, was constructed by the B N Railway. This line takes off at Raipur from the Calcutta-Bombay main line of the B N Railway, and joins the Calcutta-Madras main line at Vizianagram, which is a station situated some 40 miles north of Vizagapatam. This connection reduces the distance between Vizagapatam and a large section of the Central Provinces to such an extent that the rail route from that section to Vizagapatam is 180 miles shorter than the rail route either to Calcutta or to Bombay.

The Port is administered by the Government of India through the Agent & Genl Manager, of the B N Railway who is ex-officio Administrative Officer of the Vizagapatam Port, and is represented at Vizagapatam by a Deputy Administrative Officer.

Principal Officers —

Administrative Officer — A Duncan, Calcutta
Deputy Administrative Officer and Traffic Manager — W E W Crealock, Vizagapatam

Port Engineer — S Nanjundiah

Harbour Master — J W Day

Supdt of Machinery — F H McD Wilson, Vizagapatam.

PORTS AND TRADE CENTRES IN INDIA.

Following are other Ports in British India and in Indian States. Ports in French possessions (Pondicherry, Karikal and Chandanagore) and in Portuguese Possessions (Marmugao, Daman and Diu) are given separately in those sections of the Year Book —

Keti Bandar	Surat	Honavar	Dhanushkodi
Sirganda	Bulsar	Jaigad	Negapatam
Mandvi	Revdanda	Vijaydurg	Cuddalore
Navlakhi	Bankot	Bhatkal	Masulipatam
Bedi	Dabhol	Coondapoor	Cocanada
Okha	Ratnagiri	Mangalore	Bimlipatam
Dwarka	Jaitapur	Tellicherry	Gopalpur
Porbandar	Malwan	Calicut	Chandbali
Bhavnagar	Vengurla	Alleppey	Cuttack
Dholera	Karwar	Quilon	Puri
Broach	Sanikata	Tuticorin	

Following are the principal Ports and Trade Centres in Portuguese and French India —
Marmugao (Portuguese India), Mahe (French India), Pondicherry (French India)

Following is a list of Trade Centres additional to the list of ports given above —

Cawnpore	Jaipur	Nagpur	Madura
Delhi	Indore	Srinagar	Vizagapatam
Ahmedabad	Bangalore	Hyderabad	Dacca
Amritsar	Lahore	Baroda	Sholapur
Agra	Sialkot	Gwalior	Allahabad
Amsool	Benares	Jubbulpore	Mysore
Amrota	Lucknow	Mirzapur	

KETI BANDAR AND SIRGANDA are two other minor ports in Sind. They are under the jurisdiction of the Principal Collector of Customs, Sind. Neither of them, however, is of sufficient importance to deserve detailed mention.

MANDVI which is situated south of Sirganda is the chief port of Cutch.

NAVLAKHI is the Chief Port of the State of Morvi and has a fine situation on the coast of Kathiawar. Ships anchor two miles from the pier. Navlakhi is the terminus on the metre gauge line of the Morvi Railway and is thus directly connected with Delhi, Rajputana, Gujarat and Kathiawar. The port is open throughout the year and has been greatly developed in the last decade.

BEDI: Bedi Bandar is the principal port in the State of Kutch, situated a few miles from the city of Jamnagar, at the head of a tidal creek some eight miles long, near the mouth of which is the roadstead called Rozi, in which ocean-going vessels lie at anchor.

There is at the head of the creek a spacious basin equipped with warehousing accommodation and railway connections offering facilities to merchants for the effective conduct of extensive trade. Goods are transhipped between the basin and steamers which lie in the Gulf of Cutch by means of lighters which are towed up and down the creek by tugs as the state of the tide permits.

The consistent encouragement of the Ruler and the number and importance of the merchant class in Jamnagar with their trade connections at other places in Kathiavar and beyond, have all assisted in developing a large and important traffic.

No merchandise is handled at Rozi. Its landing stage, connected by road and rail to Jamnagar, is used exclusively for mails and passenger traffic to and from Cutch.

OKHA: Port Okha situated in a detached portion of Baroda State far distant from the Governor's main territories in Gujarat is dissimilar from other Kathiavar ports. It is an entirely modern conception, begun and completed with enterprise for the express purpose of dealing with ocean-going traffic and commodities.

It lies in a strategic position at the extreme north-east point of the Kathiavar Peninsula, readily accessible to all steamers trading along the coast. The Harbour scheme has been well conceived; there is an excellent pier-concrete pier, served by tugs, and a long and straight approach pier which can be at all states of the tide and there are also numerous moorings for other vessels in a protective position. The harbour is well equipped with accommodation and railway connections. Okha is far removed from the coast, the nearest port being 231 miles from Madras. It is connected through a branch railway with the main traffic routes.

DWARKA: Just below Port Okha is Dwarka, a famous place of pilgrimage, and a port of call on the Bombay-Karachi route, although it is at some distance from the shore and the traffic is chiefly local.

PORBANDAR: The former trade of Porbandar was at one time prosperous, but it is now declining.

BHAVNAGAR: The capital of Bhavnagar State, lies halfway up the Gulf of Cambay on its western side. The Gulf is dried up a very great range of tide, sometimes as much as 40 feet. Bhavnagar, which is situated on a creek several miles from the open waters of the Gulf. The port facilities comprise an anchorage 5 miles or more from the port proper, between which and the main body of the anchorage are moored in between while the port itself can accommodate small coasting steamers moored on the mud at low tide. There is ample warehousing accommodation and good direct railway communication with the rest of India.

PORTS IN BOMBAY PRESIDENCY: Apart from Bombay, which is the most important Port in the Presidency, there are no other Major Ports, though there are a number of Minor Ports at which trade is carried on in fair weather. Among these may be mentioned Dholera, Broach, Surat and Bulsar on the Gujarat Coast; and numerous small ports on the Konkan coast, the more important among these from the point of view of trade, being Ratnagiri, Dabhol, Malwan, Vengurla and Honavar.

The Dholera port is connected by road to the Railway Station at Dhandhuka at a distance of 16 miles. It possesses natural advantages and is situated within convenient distance from the chief centres of trade and industry in Kathiavar and North Gujarat. Broach and Surat are well known old ports.

The safest harbours on the Konkan coast are Jaizad and Vijaydurg in the Ratnagiri district and Karwar in the North Kanara district. Details regarding the value of import and export trade in 1937 at these various minor ports are given below:—

		(Rupees in Lakhs)	
		Imports.	Exports.
Dholera	1-9	4 0	
Broach	50-1	45 7	
Surat	20 7	10 5	
Bulsar	11 7	8 6	
Revdanda	12-4	10 2	
Bankot	22-0	6 4	
Dabhol	25-7	11 0	
Ratnagiri	43-5	15 7	
Jaitapur	22 2	5 1	
Malwan	31-6	6 1	
Vengurla	20-5	10 2	
Karwar	10 0	6 1	
Sanikata	9 2	11 0	
Honavar	16-8	12 5	
Jaizad	11-7	0 6	
Vijaydurg	10 5	1 2	
Bhatkal	4-2	6 2	

SURAT is situated 14 miles from the sea, with which it is connected by a river navigable only by small country craft. Surat was one of the earliest and most important of the East India Company's factories, and its trade was very considerable in agricultural produce and cotton, the value of which was estimated in 1891 at over £1,000,000. A hundred years later this total had contracted to £200,000, and in the last fifteen years the decrease has been even more marked, most of the trade being now transferred to Bombay owing to the linking up of the two ports by the Bombay, Baroda and Central India Railway.

COONDAPOOR is a port of call only for steamers on the Bombay-Mangalore run.

MANGALORE: To the south of Goa, in the Madras district of South Kanara, the district headquarters is Mangalore, one of the chief ports of the coast. Honavar and Bhatkal are situated at the junction of the

Corpur & Netravati Rivers, about 130 miles south of Mornugao. It is a tidal port served chiefly by backwater communication with the hinterland. It is the North-Western terminus of the South Indian Railway. Vessels up to 200 tons can anchor inside the backwater, larger vessels lie about two miles from the shore.

The chief exports to Europe are pepper, tea and cashew kernels (exported also to the United States) from neighbouring areas, coffee and sandalwood from Mysore, rubber to Ceylon and tiles, rice, salt fish, dried fruits and fish manures to Ceylon, Goa and the Persian Gulf. The foreign import trade is steadily increasing.

Mangalore is the favourite port on the coast for the Laccadive and Amindivi Islanders, who bring their coir and other cocoanut produce there for sale.

TELLICHERRY is situated on the Calicut-Mangalore extension of the South Indian Railway, about 94 miles South of Mangalore and 14 miles South of Cannanore, a town of about the same size with much smaller foreign trade. Steamers which anchor about two miles off the shore, can work at Tellicherry even during the monsoon when all the other ports on the coast are closed, owing to the natural backwater provided by the rocky approaches to the port.

The principal exports are coffee and pepper, which come down by road from estates in Mysore and Coorg, copra, sandalwood, tea, ginger, cardamom and rose-wood. The foreign trade is steadily increasing. The chief imports are sugar from Java, wet dates, rice and provisions and machinery for estates.

CALICUT, the capital of the Malabar District, is some 42 miles south of Tellicherry and about 90 miles north of Cochin. It is 413 miles by rail from Madras. The Port is practically closed during the South West Monsoon from the end of May until the latter half of August. The sea is very shallow and steamers anchor about three miles from the shore, connection being maintained by lighters and small boats. Native craft of 150 tons and below lie about 800 yards off the shore.

Besore, seven miles to the south of the mouth of the river of that name, is regarded as a wharf of Calicut Port. It has a number of wharves along the river bank and native craft of 150 tons burthen are able to anchor half a mile from the mouth.

The principal exports are coir, coir fibre, copra, coffee, tea, pepper, ginger, rubber, roundnut, raw cotton and fish manure. The foreign import trade, which is insignificant, consists chiefly of metals.

ALLEPPEY, the premier port and commercial centre in Travancore, is situated about 50 miles North of Quilon and 5 miles South of Cochin. A canal connects the port with the interior backwaters. Its warehouses are a convenient depot for the storage and disposal of all local produce and it possesses a roadstead affording safe anchorage during the greater part of the year.

The chief exports are copra, coconuts, coir fibre and matting, cardamoms, ginger and pepper.

QUILON, the "Coilum" of Marco Polo, has been a trading centre from very early times. It is connected with Alleppey by backwater, and is on the Shencottah-Quilon-Trivandrum branch of the South Indian Railway. Vessels anchor about 2 miles from the shore and a railway siding runs up to the landing place.

The chief exports are coconut oil, coir mats, timber, and fish, but the foreign trade is insignificant.

TUTICORIN. After rounding Cape Comorin, the southern most point of the Indian Peninsula, one enters again the Madras Presidency and reaches Tuticorin. This port, which is open all the year round, has, next to Madras and Cochin, the largest trade in Southern India.

The harbour is so shallow that steamers anchor about 5 miles from the shore and continuous dredging is necessary to keep the channel open between the shore and the roadstead. At the same time Hare Island upon which the Light House is situated, affords considerable protection to the lighters and other craft used for landing and shipping, and the work is seldom interrupted by bad weather. The South Indian Railway runs alongside the landing and shipping wharves from which passengers and goods can be transhipped to launches and lighters.

There is a very considerable trade with Ceylon in rice, pulses, onions, chillies and livestock for consumption in that island. Other chief articles of export are raw cotton (to Japan and United Kingdom), tea, scama leaves, Palmyra fibre and cardamoms.

DHANUSHKODI is the terminus of the South Indian Railway on the South-Eastern extremity of the Island of Rameswaram at the junction of Palk Strait with the Gulf of Mannar and connected with Talimannur in Ceylon 21 miles distant by steamer service, the journey being made in about two hours. The port is equipped with a pier. Cargo is loaded direct from the railway trucks on this pier into steamer hatches.

The chief exports are fish (dry and salted), rice, tea and cotton piecegoods.

NEGAPATAM, the Chief Port in the Pandya District is about 13 miles South of Kattal. The harbour is equipped with wharves and other facilities for the landing and shipment of goods and the considerable fore-shore to the north is utilized for the storage of timber. Nagore is the eastern terminus of a branch of the South Indian Railway and a siding runs into the harbour premises at the Negapatam Beach Station. The port is further connected by river and canal with the tobacco grown there to the south. The harbour is situated at the junction of the Kalluvayar River with the sea. Nagore, 5 miles to the north, is a place of importance for Muhammadans. Negapatam.

The principal exports from Negapatam are groundnuts for Europe and coloured cotton piecegoods tobacco and fresh vegetables for Penang, Singapore and Colombo the port being the chief provisioning centre for the coolies who are constantly leaving by this route to work on rubber and tea estates in Ceylon and the Federated Malay States

CUDDALORE is situated about 15 miles south of Pondicherry. Steamers anchor about a mile off-shore, and the harbour wharves are situated on the western bank of the Uppanar Backwater and have been provided with a quay wall to facilitate the loading and unloading of cargo boats therefrom

The export trade consists principally of groundnut kernels and coloured piecegoods in small quantities. The coasting trade consists mainly of grain and pulse. The foreign import trade is chiefly of boiled betelnuts from the Straits

MASULIPATAM, the principal port in the delta of the Kistna River, has few natural advantages. Large vessels cannot anchor within five miles from the shore and the harbour wharves are distant another three miles up a tortuous tidal creek. Native craft up to about 150 tons can cross the bar at the south of this creek at high tides but in foul weather communication between ship and shore is practically suspended. Steamers touch at the port occasionally and foreign trade is chiefly by steam vessels with foreign ports, the principal exports being groundnuts, castor-seed and oil cake

The prosperity of the port has never recovered from the cyclone of 1864, when a tidal wave caused a disastrous inundation involving the loss of 30,000 lives

COCANADA is situated on the Cocanada Bay, just north of the Godavari River, some 40 miles south of Vizagapatam and 270 miles north of Madras. In spite of several disabilities, it ranks fifth in importance among the ports of the Madras Presidency. Large steamers anchor about 6 to 7 miles from the shore and service is maintained with lighters which land cargo at the numerous small wharves and jetties constructed on the banks of the Cocanada Canal

The principal shipments to Europe are raw cotton and groundnuts and castor-seeds. The import trade consists chiefly of kerosene from America, sugar from Java and metals from the United Kingdom, Germany and Belgium

BIMLIPATAM is 22 miles north-west of Waltair. A good road connects it with Vizagapatam sixteen miles distant and another road with Vizagapatam. The harbour is an open roadstead and ships lie about a mile off the shore and loading and unloading is effected by lighters. The foreign trade has revived to some extent. The imports are of little importance. There are considerable exports of Bimlipatam jute, mircobalan, niger seeds, gingelly seeds and groundnut kernels

Coastwise imports and exports are of little importance

GOPALPUR in the Ganjam District, is situated ten miles from Berhampur on the Bengal Nagpur Railway

North of Gopalpur, the sea board for 250 miles is that of Orissa, the maritime trade of which is chiefly inter-Provincial and the only ports that deserve mention are Balasore, Chaudhali, Cuttack, False Point and Puri

BALASORE, situated on the right bank of the Burabalang river and headquarters of the district of that name, was the only port of which Orissa could boast until the opening up of the country after the great famine of 1866. It was frequented at that time by vessels with cargoes of rice from Madras and with cowries, then largely used for currency, from the Laccadives and Maldives. The port is of historical interest as being one of the earliest European Settlements in India, factories having been established here in the 17th century by English, Dutch, French, Danish and Portuguese Merchants

Balasore as a port is practically defunct. Foreign ships have ceased to visit since 1904 and coastal ships since 1910. An occasional country craft of negligible tonnage enters during the cold weather season for paddy, but beyond that there is no sea-borne trade. There is no import trade

CHANDBALI situated on the left bank of the Baitarani River is a port of some importance on the Orissa Coast. It has a flourishing coasting trade with Calcutta but there is no direct foreign trade as in former days. The exports consist mainly of rice and the imports are cotton twist, piecegoods, kerosene oil, salt and gunny bags

CUTTACK is situated 253 miles from Calcutta at the apex of a triangle formed by the Mahanadi and Katjuri rivers. It is on the main line of railway running between Madras and Calcutta and is connected by canal with Chandbali between which a small inland steamer trade exists and which links Cuttack with Calcutta. A short distance up the coast from Cuttack lies the port of False Point which has been closed since 1924, as the seaborne trade had entirely disappeared

The decline of the small ports is said to be due to a variety of reasons and usually the chief reason quoted is that the Ports have silted up but this is not actually the case. The Ports have declined for two main reasons namely the coastal Railway which has automatically cut out the sea trade since it cannot assist it and secondly that larger deep draft steamers have taken the place of the smaller coasting steamers and sailing ships of 30 years ago. The long and deeper draft steamers cannot enter such small ports as Balasore, Chandbali and False Point and hence the trade which at one time found its way by sea has now been caught by the railway and carried to the larger ports like Calcutta from where it is distributed elsewhere

PURI is an open roadstead. It has a small Customs Office

Education.

Indian education is unintelligible except through its history. Seen thus, it affords the spectacle of a growth which, while to one it will appear as a blunder based on an initial error easily avoided, to another it stands out as a symbol of sincerity and honest endeavour on the part of a far-sighted race of rulers whose aim has been to guide a people, alien in sentiments and prejudices, into the channels of thought and attitude best calculated to fit them for the needs of modern life and western ideals. There is to-day no subject in the whole area of administrative activity in India which presents greater complexities and differences of opinion than education. Government, local bodies and private persons of learning have in the past devoted their limited funds to meeting the demands of those who perceived the benefits of education, rather than to cultivating a desire for education where it did not exist. The result is that the structure has become top-heavy. The lower classes are largely illiterate, while the middle classes who constitute the bulk of the *intelligentsia* are in point of numbers at least educated to a pitch equal to that of countries whose economic conditions are more highly developed. As might be expected from this abnormal distribution of education, the form which it has eventually assumed contains corresponding defects. In recent years, however, strenuous efforts have been made to remedy these defects. Primary Education Acts have been passed in the several provinces in favour of the expansion of primary education among the masses. On the other hand, the numbers of students in colleges and universities have grown apace, and the volume of middle class unemployment has reached alarming proportions. A movement has therefore set in with the object of stemming the drift of unsuitable students to universities by means of a radical reconstruction of the school system of education. The inauguration of provincial autonomy in 1937 has given a further impetus to educational reconstruction.—The mass literacy campaigns, launched with salutary enthusiasm by the Provincial Governments, are a visible index of the new educational awakening.

The Introduction of Western Learning

In the early days of its dominion in India, the East India Company had little inclination for the doubtful experiment of introducing western learning into India. Warren Hastings, the dominating figure of the time, was a genuine admirer of the laws and literature of the East. His policy was to enable the ancient learning to revive and flourish under the protection of a stable government, and to interfere as little as possible with the habits and customs of the people. Even the Act of 1813 which set apart a lakh of rupees for the introduction and promotion of a knowledge of the sciences was interpreted as a scheme for the encouragement of Sanskrit and Arabic. In the following year the Court of Directors instructed the Governor-General to leave the Hindus "to the practice of usage, long established among them, of giving instruction in their own homes, and to encourage

them in the exercise and cultivation of their talents by the stimulus of honorary marks of distinction and in some cases by grants of pecuniary assistance." But mass education was not touched.

It was from sources other than Government that the desire for western knowledge arose in India. In 1816, David Hare, an English watchmaker in Calcutta, joined hands with the great Indian reformer, Raja Ram Mohan Roy, to institute the Hindu College for the promotion of western secular learning. The new institution was distrusted both by Christian missionaries and by orthodox Hindus, but its influence grew apace. Fifteen years later, the Committee of Public Instruction in Bengal reported that a taste for English had been widely disseminated and that independent schools, conducted by young men reared in the Hindu College, were springing up in every direction. In Bombay, the Elphinstone Institution was founded in memory of the great ruler who left India in 1827. A still more remarkable innovation was made in 1835 by the establishment of the Calcutta Medical College, whose object was to teach "the principles and practice of medical science in strict accordance with the mode adopted in Europe." Many pronounced the failure of the undertaking to be inevitable; for, under the Hindu custom the higher castes were forbidden to touch the dead. This obstacle was surmounted by Madhusudan Gupta who, with a few courageous pupils, began the dissection of a human body.

Another impetus to the introduction of western learning was the devotion of Christian missionaries. The humanitarian spirit, which had been kindled in England by Wesley, Burke and Wilberforce, influenced action also in India. Carey, Marshman and Ward opened the first missionary College at Serampore in 1818, and twelve years later, Alexander Duff reversed the whole trend of missionary policy in India by his insistence on teaching rather than on preaching, and by the foundation of his school and College in Calcutta. In Madras, the missionaries had been still earlier in the field, for as early as in 1787 a small group of missionary schools were being directed by Mr. Schwarz. The Madras Christian College was opened in 1837. In Bombay, the Wilson School (afterwards College) was founded in 1834.

Lord William Bentinck's minute of 1835 (based upon Macaulay's famous minute) marks a somewhat tardy acceptance by Government of the new policy. Government then determined while observing a neutrality in religious matters to devote its available funds to the maintenance of secondary schools and colleges of western learning, to be taught through the medium of English. But this decision did not entail that Oriental learning should be neglected; still less that the development of the vernacular should be discouraged. Other changes powerfully contributed to the success of the new system. The freedom of the Press was established in 1835; English was substituted for Persian as

Growth of English Education.

the language of the Courts in 1837, and in 1844 Sir Henry Hardinge ordained that preference in Government appointments should be given to those who had received a western education. In the following decade the new learning took firm root in India, and, though the Muhammadans still held aloof, the demand for English schools outstripped the means of Government for providing them. Fortunately there has been of late a marked appreciation among Muslim leaders of the need for improving the instruction-

al level of their co-religionists; and in many of the provinces of India a great impulse towards educational advance among the Muhammadan community is now noticeable.

To Missionary Societies is due the initiative in the modern education of women, strongly supported by Hare and Ram Mohan Roy. The establishment of a girls' school in Calcutta in 1849, by Drinkwater Bethune is a landmark in the history of female education in India.

GROWTH AND ORGANISATION OF ENGLISH EDUCATION.

An epoch in Indian educational history is marked by Sir Charles Wood's despatch in 1854. Perhaps its most notable feature was the emphasis which it laid on the importance of primary education. The old idea that the education imparted to the higher classes of society would filter down to the lower classes was discarded. The new policy was boldly "to combat the ignorance of the people which may be considered the greatest curse of the country." For this purpose Departments of Public Instruction were created on lines which do not differ very materially from the Departments of the present day. The despatch also broke away from the practice followed since 1835, whereby most of the available public funds had been expended upon a few Government schools and colleges, and instituted a policy of grants-in-aid to private institutions. It emphasised the importance of encouraging the study of the vernaculars as the only possible media for mass education.

Another feature of the despatch was an outline of a university system which resulted in the foundation of the Universities of Calcutta, Madras and Bombay three years later. The affiliating type of university then became the pivot of the Indian education system. It has undoubtedly been of value in several ways. It enabled Government to select recruits for its service on an impartial basis, it did much, through the agency of its Colleges to develop backward places, it accelerated the conversion of Indians to a zeal for western education, and it cost little at a time when money was scarce. On the other hand, the new universities were not corporations of scholars, but corporations of administrators, they did not deal directly with the training of men, but with the examination of candidates, they were not concerned with learning, except in so far as learning can be tested by examination. The colleges were fettered by examination requirements and by uniform courses, which teachers were denied that freedom which encouraged not to value training for its own sake but as a means for obtaining marketable qualifications. In certain important respects the recommendations in the despatch were not followed. The Directors did not intend that university tests, as such, should become the sole tests qualifying for public posts, they recommended the institution of civil service examinations. They did not desire the universities to be deprived of all teaching functions, they recommended the establishment of

university chairs for advanced study. They were aware of the dangers of a too literary course of instruction; they hoped that the system of education would rouse the people of India to develop the vast resources of their country.

The encouragement of the grant-in-aid system was advocated to an even greater extent by the Education Commission of 1882, which favoured the policy of withdrawing higher education from the control of Government within certain limits and of stimulating private effort. In theory the decision was correct, but in practice it was irretrievably wrong. In its fatal desire to save money, Government deliberately accepted the mistaken belief that schools and colleges could be maintained on the low fees which the Indian parent could be expected to pay. And, in the course of time, an unworkable system of dual control grew up, whereby the Universities with no funds at their disposal were entrusted with the duty of granting recognition to schools and the Departments of Public Instruction were encouraged to cast a blind eye on the private institutions and to be content with the development of a few favoured Government institutions.

The Reforms of 1902-4.

In 1902, the Universities Commission was appointed by Lord Curzon's Government, and its investigation was followed by the Universities Act of 1904. The main object of the Act was to tighten up control, on the part of Government over the universities, and on the part of the universities over the schools and colleges. The Government retained the power of cancelling any appointment and all university resolutions of colleges were to be subject to Government sanction. The universities were given the responsibility of granting recognition to schools, and of inspecting all schools and colleges, the inspection of schools being ordinarily conducted by the officers of the Department of Public Instruction. Permission was also given to the universities to undertake direct teaching functions and to make appointments, subject to Government sanction, for these objects, but their scope was in practice limited to post-graduate work and research. The territorial limits of each university were defined, so that universities were precluded from any connection with institutions lying outside those boundaries. Neither the Commission nor the Government discussed the fundamental problem of university organisation, but dealt only with the immediate difficulties of the Indian system.

Recent Developments.

Government of India Resolutions on Indian Educational Policy.—The Indian Universities Act of 1904 was followed by two important resolutions of the Government of India on Indian Educational Policy—one in 1904 and the other in 1913. The resolution of 1904 was comprehensive in character and reviewed the state of education in all its departments. The following passage from it summarises the intentions of Government:—

"The progressive devolution of primary, secondary and collegiate education upon private enterprise and the continuous withdrawal of Government from competition therewith was recommended by the Education Commission in 1883 and the advice has generally been acted upon. But while accepting this policy, the Government of India at the same time recognise the extreme importance of the principle that in each branch of education Government should maintain a limited number of institutions, both as models for private enterprise to follow and in order to uphold a high standard of education. In withdrawing from direct management it is further essential that Government should retain a general control, by means of efficient inspection, over all public educational institutions." The comprehensive instructions contained in this resolution were followed in the next few years by the assignment to the provinces of large Imperial grants, mainly for University, technical and elementary education. The resolution of 1913 advocated, *inter alia*, the establishment of additional but smaller Universities of the teaching type; it reaffirmed the policy of reliance on private effort in secondary education; it recommended an increase in the salaries of teachers and an improvement in the amounts of grants-in-aid; and it insisted on proper attention being paid to the formation of character in the education given to scholars of all grades. It further discussed the desirability of imparting manual instruction and instruction in hygiene; the necessity for medical inspection; the provision of facilities for research; the need for the staffing of the girls' schools by women teachers and the expansion of facilities for the training of teachers. The policy outlined in 1913 materially accelerated progress in the provinces, but the educational developments foreshadowed were in many cases delayed owing to the effects of the Great War.

The Reforms Act.—The Reforms Act of 1919 altered the conditions of educational administration in India. Education became a provincial 'transferred' subject in the Governors' provinces under the charge of a Minister, but the education of Europeans was made a provincial 'reserved' subject, i.e., it was not within the charge of the Minister of Education. The introduction of provincial autonomy under the Government of India Act, 1935, brought education in these provinces under the full control of their Ministers of Education. Broadly speaking, an educational policy for India as a whole no longer exists.

At the time of handing over the administration of education to the provinces, the Government of India retained under their immediate

control all education in the Centrally Administered Areas. They still deal with matters relating to Universities like Aligarh, Benares and Delhi. The Government of India are also in charge of the institutions maintained by the Governor-General in Council for the benefit of members of His Majesty's Forces or of other public servants or of the children of such members or servants. The Chiefs' Colleges are now the concern of the Crown Representative.

Administration.—The transfer of Indian education to the charge of a Minister responsible to the Provincial Legislative Assembly, of which he himself is an elected member, brought the subject directly under popular control in the eleven major provinces, but owing to the resignation of Congress Governments in six provinces, the subject is now under the control of the Adviser to His Excellency the Governor in each of those provinces. Generally speaking, education is not, however, under the charge of a single Minister in all the provinces of India. Certain forms of education have been transferred to the technical departments concerned and come within the purview of the Minister in charge of those departments. In most of the provinces the functionary who 'presents orders' on behalf of Government in educational matters is the Secretary for Education. In each province, the Director of Public Instruction is the permanent administrative head of the Department of Education and acts as expert adviser to the Education Minister. He controls the inspecting staff and the teaching staff of Government institutions and is generally responsible to the provincial government for the administration of education. The authority of Government, in controlling the system of public instruction, is in part shared with and in part delegated to Universities as regards higher education and to local bodies as regards elementary and vernacular education. In some provinces, boards of secondary, or of secondary and intermediate education have also been set up and have to some extent relieved the Universities in those provinces of their responsibilities in connection with intermediate education and with entrance to a University course of studies. Institutions under private management are controlled by Government and by local bodies by "recognition" and by the payment of grants-in-aid, with the assistance of the inspecting staffs employed by Government and by local bodies.

Department of Education, Health and Lands of the Government of India—

In 1910 a Department of Education was established in the Government of India with an office of its own and a Member to represent it in the Executive Council. The first Member was Sir Harcourt Butler. In 1923, the activities of the Department were widened, in the interests of economy, by absorption in it of the Department of Revenue and Agriculture. The enlarged Department has been designated the Department of Education, Health and Lands. The present Member in Charge of the Department is the Honourable Mr. Adil Pasha Sarker. The Department possesses an educational adviser, styled Educational Commissioner with the Government of India.

service and all posts were thrown open to Indian recruitment. The Provincial Educational Service was simultaneously reorganised and a number of posts, generally with their Indian incumbents, were transferred to the superior service. This reorganisation resulted in a considerable Indianisation of the superior educational services in India.

In 1924, all recruitment to the Indian Educational Service was stopped as a result of the recommendations of the Royal Commission on the superior services in India. The Commission recommended that "the personnel required for these branches of administration should in future be recruited by local Governments." The Commission further recommended in regard to the question of the future recruitment of Europeans that "it will rest entirely with the local Governments to determine the number of Europeans who may in future be recruited." As a result of the acceptance of these recommendations, the Indian Educational Service is dying out and with the gradual retirement of its existing members, the history of the service which has had a brief but fine record will be brought to an end.

The new Provincial Educational Services which function under provincial control as the superior educational services, have been constituted in most provinces. These schemes vary from province to province, but it may be generally remarked that, while the rates of pay are not uniform, they consist of two main classes—class I into which the existing Indian Educational Services have been merged for the time being, and class II which may be said to represent the old Provincial Educational Service.

The existing Provincial and Subordinate Educational Services in the provinces have been affected, more in some provinces than

others, by the changes which have taken place since 1919. Communal interests have influenced recruitment, and in some places they have influenced promotions also, in a direction which has not always tended towards service contentment. But these results are the natural consequences of the devolution of the control of education and power of recruitment to provincial and local authorities.

Hartog Committee on Education—The Auxiliary Committee of the Indian Statutory Commission was appointed in 1928 under the Chairmanship of Sir Philip Hartog, to report on the growth of education in India. The report of the Committee, which was published in 1929, constitutes an invaluable document for India.

Lindsay Commission—Another Commission, which deserves mention was appointed in 1929 by the International Missionary Council to investigate the various problems connected with the higher education provided by the various Missionary bodies working in India. It was presided over by Dr A. D. Lindsay, Master of Balliol College, Oxford. The Commission visited India in 1930-31 and its report was published in 1931.

Unemployment Committee, United Provinces—This committee known popularly as the Sapru Committee from the name of its distinguished chairman, the Right Hon'ble Sir Tej Bahadur Sapru, was appointed by the Government of the United Provinces in 1934 to investigate the question of unemployment among educated young men and to suggest practical ways and means for reducing the same. The report of the committee, which was published in 1936, constitutes a valuable document not only for the United Provinces but for the whole of India.

Statistical Progress.

The two tables given below afford useful comparisons with previous years and serve to illustrate the growth and expansion of education in India.

(a) STUDENTS

Year	In Recognised Institutions			In All Institutions (Recognised and Unrecognised).		
	Males	Females	Total	Males	Females	Total
1931-32	9,752,937	2,369,529	12,122,466	10,273,568	2,492,649	12,766,217
1932-33	9,715,753	2,476,384	12,192,137	10,247,026	2,606,470	12,853,496
1933-34	9,866,619	2,625,177	12,491,796	10,417,839	2,755,051	13,172,890
1934-35	10,063,528	2,757,232	12,820,760	10,616,623	2,890,246	13,506,869
1935-36	10,241,889	2,873,188	13,115,077	10,802,709	3,012,440	13,815,149
1936-37	10,434,858	2,999,524	13,434,382	11,007,681	3,138,257	14,145,938
1937-38	10,428,815	2,881,531	13,310,346	10,819,592	3,012,268	13,831,860
1938-39	10,908,720	3,002,495	13,911,215	11,344,972	3,133,415	14,478,387
1939-40	11,434,120	3,270,174	14,704,294	11,874,492	3,421,007	15,295,499

with an attendance order. The Acts generally provide that, subject to the sanction of the provincial Government, education where compulsory shall be free. The Madras Elementary Education Act of 1920 contained such provision, but it has recently been amended so as to allow fees to be charged in schools under private management situated in areas where education is compulsory, reserving however a number of free places for poor pupils in such schools in areas where there are no free schools. Such in brief are the ordinary provisions of the various provincial Education Acts. Local bodies have not however shewn as yet any great alacrity in availing themselves of the opportunity afforded them by these Acts.

Compulsory Primary Education.—The following table shows the number of urban and rural areas in which compulsion had been introduced by the year 1939-40.—

Province.	Acts	Areas under "Compulsion."		
		Urban areas.	Rural areas	No of Villages in Rural areas under compulsion
Madras ..	Elementary Education Act, 1920 ..	28	7	104
Bombay ..	Primary Education (District Municipalities Act, 1918)	4
	City of Bombay Primary Education Act, 1920	1
	Primary Education Act, 1923 ..	4	2	153
Bengal ..	Primary Education Act, 1919 & 1930.	1
United Provinces.	Primary Education Act, 1919	36
	District Boards Primary Education Act, 1926	357	1,224
Punjab ..	Primary Education Act, 1919 ..	65	2,851	10,385
Bihar ..	Primary Education Act, 1919 ..	15	1	1
Central Provinces and Berar.	Primary Education Act, 1920 ..	32	8	1,210
Assam ..	Primary Education Act, 1926
North-West Frontier Province	Primary Education Act, 1938 ..	1
Sind ..	Bombay Primary Education Act, 1923	1	4	1,285
Orissa ..	Bihar and Orissa Primary Education Act (1 of 1919)	1	22
	Madras Elementary Education Act, 1920	1
Delhi ..	(Punjab Act extended to Delhi, 1925)	1	9	15
Total ..		190	3,240	14,129

N.B.—This table does not include areas for which schemes of compulsory primary education are under consideration or have been sanctioned but not yet introduced. It includes, on the other hand, areas in which such schemes have been partially introduced.

Due to the indifferent attitude of the local bodies, compulsion has not proved as fruitful as it was intended to be. The mere passing of a Compulsory Education Act, even in those areas where compulsion is considered desirable, does not in itself either bring children to school or keep them there. The effective administration of the Act is necessary. Difficulties arise in the administration which tend to make the Act inoperative. The lack of attendance officers, the difficulty of deciding who is to prosecute in many cases the indifference of magistrates, the law's long delays, the absence of up-to-date local census records are instances of weaknesses in the administration of Compulsory Education Acts. These difficulties are, however, surmountable and

in some provinces, steps are being taken to improve the situation.

The provinces now appear to realise the danger of the transference of the control of primary education to local bodies without retaining sufficient powers of control. In some provinces, there is a move to take over control of primary education from local bodies. For example, the Government of Madras amended their Primary Education Act during the year 1935-36 to enable them to exercise more powers in the control of primary education. A similar purpose is achieved by the amendment to the Bombay Primary Education Act. The amended Act secures to Government full control

which recognises the schools has no power whereby to improve them; and the Department of Public Instruction, which allots the Government grants, has no responsibility for the recognition of schools, and no connection whatever with the private unaided schools. This dual authority and this division of responsibility have had unhappy effects. The standard of the schools also is very low, so that the matriculates are often unable to benefit by the college courses. In some provinces an endeavour has been made to raise the standard of the schools by withdrawing from the University the Intermediate classes and by placing them in a number of the better schools in the State. In Bombay, the gravity of the situation created by the dual control of secondary education was realised and consequently in 1935 negotiations began between the University and the Education Department which resulted in the passing of a number of new University Statutes governing the inspection and affiliation of high schools by the university. These Statutes are expected to remove all causes for friction between the University and the Department in the matter of inspection and affiliation of high schools. Machinery has also been devised whereby any difference of opinion between the University and the Department as to the eligibility of a school to receive recognition will be decided by a joint inspection of the University and the Department.

As has already been stated, there is now a widespread desire to cure these evils by a radical reconstruction of the school system of education. The main defect of the present system is that all pupils, even those in the primary stages, are educated on the assumption that they will ultimately proceed to a university. In consequence, very many pupils drift on to a university and prolong unduly their purely literary studies. In order to counteract this tendency, the school system should be divided into separate stages, each with a clearly defined objective released from the trammels of a university. On the successful completion of each stage, pupils should be encouraged either to join the humbler occupation of life or to proceed to separate vocational institutions, which should be provided in more ample measure than at present.

Reconstruction along these general lines was first proposed by the Punjab Universities Committee, and was subsequently endorsed by the Universities Conference which met in Delhi in 1934. Its details were worked out in greater detail in an important Resolution of the Government of the United Provinces later in the same year. The matter was also considered by the Central Advisory Board of Education, which generally endorsed the views expressed by the Universities' conference and suggested that expert aid should be obtained to work out the scheme of school reconstruction in the provinces. The Government of India, in consultation with the provincial Governments, accepted this suggestion and the services of two experts, Mr. A. Abbott, and Mr. S. H. Wood, were obtained for this purpose. As these experts considered that an intensive study of a few areas would be more profitable than a more superficial survey of the greater part of India, they limited their investigations to a few

Adult Literacy.—The adult education movement received further impetus during 1940-41 and 1941-42. In some areas some of the illiterate who became literates evinced a desire to continue their studies and to qualify for higher education. Efforts were made to meet this desire. In Assam during the period October 1940 to September 1941 53,498 persons passed the literacy test. In Bihar 221,396 adults were made literate during 1940-41. In Bombay, the whole scheme was reviewed and many innovations introduced. A scheme for the training of adult education workers was sanctioned during 1941-42. In the Central Provinces, work was carried out only on a very limited scale, there were 78 schools run by local bodies during 1940-41. In Madras, the Provincial Government took up the whole work to be done by private individuals and local bodies. Both in the Punjab and the United Provinces literacy work was done on a substantial scale, 67,415 adults attained literacy during 1940-41 in the Punjab and in the United Provinces. Since literacy certificates were awarded during the quarter ending June 1941, there are hopeful signs for the future of adult education in this country where the illiterate population is so high.

Secondary and High School Education.—
 Some attempts have been made to give a
 practical turn to the more practical form
 of education in these schools. The Com-
 mission of 1882 suggested that there should
 be two classes in secondary schools, one
 for the entrance examination of the
 University and the other of a more practical
 nature intended to fit youths for commercial
 and other non-literary pursuits. Some
 years later what were called B and C
 classes were started in some schools in Bengal
 but they did not lead to a university course,
 the former being useless. In more recent
 years the Government of India have advocated
 the institution of a school final examination
 in which the more practical subjects may be
 introduced. Efforts have also been made to
 improve the conduct of the matriculation and
 to emphasize the importance of oral tests and
 of the language. In Madras, this examination,
 which is due for the direction of a Board
 of the Government of the University and of
 the Government, proved somewhat cumbersome
 and no real reforms were made. In the
 United Provinces and the Central Provinces,
 the mode of secondary education has been
 referred to special Boards created for this pur-
 pose. At present, the Administration of D.D. has
 been transferred to the Board of Secondary Education for
 the Province. The Government of India have
 established a Board of Intermediate and High
 Schools in 1913, with headquarters at Ajmer,
 for the Punjab, C. and B. India and Gwalior. In
 the last few years the Board has been established in
 the following provinces:—Bihar, Central Provinces,
 Madras, Mysore, and the United Provinces. The University

three provinces, viz, the United Provinces, the Panjab, and Delhi, although they discussed their problems with administrators, teachers and others concerned with education from practically every province. Their recommendations are contained in their report commonly called the Wood-Abbott Report on Vocational Education in India.

Mention may be made here of the United Provinces Primary and Secondary Education Reorganisation Committee, which was appointed by the Provincial Government to suggest changes in the educational system of the Province in the light of the Wood-Abbott Report and the Wardha Education Scheme. The Committee has now submitted its report to the Provincial Government. Its main recommendations are that there should be a uniform system of free and compulsory primary education for all children, both in rural and urban areas, extending over seven years and beginning from the age of seven, the medium of instruction being "Hindustani", taught in both the scripts (Devanagiri and Persian), that throughout this period education should, as far as possible, be carried on through concrete life situations and should be correlated with one or more forms of manual and productive work, and that the system of secondary education should be a complete and integrated whole and the courses should be self-sufficient and constitute a unit by themselves.

In July 1940, the Madras Government arrived at some very important decisions on the subject of reorganisation of secondary education. One of the decisions was that the secondary school course should be bifurcated at the end of the IV form into a pre-university side and a vocational side, there being no examination to determine who should go to the pre-university course and who to the vocational. If the voluntary diversion fails the question of introducing a test-examination will be considered.

In Bombay also the Government sanctioned a scheme for the introduction of a vocational bias in five of the Government Secondary Schools, three of which were converted into Agricultural High Schools, one into a Technical High School and one into a Commercial High School.

In Delhi also, some progress in this direction has been made. A polytechnic Institute was started during the current year.

Education for Special Communities — There are schools for Europeans and Anglo-Indians which are placed under the control of special inspectors for European Schools. The education of the domiciled community has proved to be a perplexing problem, and in 1912 a conference was summoned at Simla to consider the matter. The difficulty is that European Schools are very remote from the general system of education in India. But efforts are being made to bring these schools more into line with the ordinary schools, and Indian Universities generally are affording special facilities for Anglo-Indian boys who may proceed for higher education in Indian colleges.

As a result of the recommendations made by the Irwin Sub-Committee of the Third Indian Round Table Conference, Provincial Boards for Anglo-Indian, and European Education have been constituted in almost all Provinces; and an Inter-Provincial Board has

also been constituted, the first meeting of which was held in January 1935 under the auspices of the Government of India. The office of the Inter-Provincial Board has been located in Delhi. The Secretary of the Board is also the Chief Inspector of Anglo-Indian and European Schools in India. The Provincial and Inter-Provincial Boards of Anglo-Indian and European Education are functioning satisfactorily and will, it is hoped, lead to an improvement in the courses of study and to a higher standard of education for the Anglo-Indian and European Communities.

Although, thanks to the establishment of 'separate' or 'special' educational institutions for Muslims, the community has made considerable progress in education, the girls still lag very much behind. While, at the bottom of the educational ladder, Muslims are substantially represented, at every higher stage they dwindle and drop out. The main obstacle in the way of the spread of secondary education among them is the inadequacy of schools teaching through Urdu. Even the 'special' schools have tended to accentuate their educational backwardness, the pupils lose much of the stimulus of healthy competition and much of the training in personality which is to be found in the corporate life of an ordinary school. The future of Muslim education lies in the organisation of enlightened private effort. A roving Commission of prominent Muslim educationists has only recently concluded a successful tour of the country, and its findings are keenly awaited.

The education of the depressed classes does not now present the same difficult problem as it did previously. Several facilities by way of scholarships, exemption from fees, free supply of books, etc., have been provided by Provincial Governments. Depressed class pupils are encouraged to attend ordinary schools and separate schools are being gradually abolished. It is true however, that in certain places, orthodox element prevails and puts obstacles in the way of their education, but such element will have to give way to public opinion. During the year 1939-40, the total enrolment of depressed class pupils rose by about 58,158 to 11,33,756.

Medium of instruction in public schools — The position of English as a foreign language and as a medium of instruction in public schools was discussed by a representative conference which met at Simla in 1917 under the Chairmanship of Sir Santaran Nair, the then Education Member. Although it was generally conceded that the teaching of school subjects through a medium which was imperfectly understood led to cramming and memorising of text-books, the use of the English medium was defended by some on the ground that it improved the knowledge of English. The result of the conference was therefore inconclusive. Some local authorities have since then approved of schemes providing for the recognition of local vernaculars as media of instruction and examination in certain subjects. There seems to be no doubt that the use of the vernacular as the medium of instruction and examination is gradually increasing all over India.

The main difficulty, however, is that in many classes have often to be split up at once into a number of classes, each of which

and the Indian Institute of Science at Bangalore, the product of generous donations by the Tata family. The tendency in recent years has been to place these institutions under the control of the Departments of Industries. In addition to a number of engineering schools, there are Engineering Colleges at Roorkee, Sibpur, Poona, Guindy (Madras), Mughalpur, Patna and Benares, each of which except that at Roorkee is affiliated to a university. The engineering colleges maintain a high standard and great

pressure for admission is reported from several provinces. There are schools of art in the larger towns where not only architecture and the fine arts are studied, but also practical crafts like pottery and iron work. There are two forest colleges at Dehra Dun and Coimbatore, and a Technical Institute is in existence at Cawnpore and a Mining School at Dhanbad. Mining and metallurgy are also taught at the Benares Hindu University which provides a 4-year course leading to a B.Sc. degree in each subject;

The following table shows in summary form the number of such institutions and the students attending them—

Type of Institution	1938-39		1939-40	
	Institutions.	Students	Institutions	Students
I College—				
Training	24	2,024	25	2,374
Law	14	6,709	15	6,749

Total .	1,556	86,585	1,732	94,367
GRAND TOTAL	1,635	110,227	1,813	119,840

N.B.—Figures against 'training college' include those of the training colleges attached to the Universities at Benares and Aligarh and of the teaching department of Rangoon University.

I. M. M. T. S. Dufferin.—On the recommendations of the Indian Mercantile Marine Committee in 1923 and Capt Saver's Report, the Government of India, in the Department of Commerce, started the Indian Mercantile Marine Training Ship "Dufferin" in Bombay waters. The then Viceroy, Lord Irwin, formally opened the Ship on 1st November 1927, with an opening batch of 30 cadets, Capt H. Dighy-Beste, R.N., being the first Captain-Superintendent.

Since its establishment 13 years ago, the "Dufferin" has trained 332 Indian cadets, of whom 13 are officers in the Royal Indian Navy, and 100 are in the Mercantile Marine; 29 are serving as officers in the ancillary or other services and 130 are at present apprentices either at sea or in workshops ashore. At present there are 123 cadets in training.

The affairs of the Ship are managed by a Governing Body, with the Commerce Member to the Government of India as *ex-officio* Chairman.

The present Captain-Superintendent is Capt R. C. G. McClement, R.N., J.P., who is assisted by 3 Executive Officers, 2 Engineer Officers, 1 Head Master and 5 Assistant Masters.

The age limit for admission is between 13 years 8 months and 16 years on 15th January of the year of entry. Annually 60 Cadets—25 for the Executive and 25 for the Engineering Branch—are admitted for a 3-year course, terminating in the Final Passing Out Examination of the Ship, which is recognised as equivalent to Matriculation in India.

The total cost to the parent of training a boy is about Rs. 1,800 for the 3 year course.

Indian School of Mines.

The Government of India maintain the Indian School of Mines at Dhanbad for high grade instruction in Mining Engineering and Geology. A Diploma (A.I.S.M.) is granted and certain statutory privileges are enjoyed by Diploma-holders in respect of the examinations of the Department of Mines for the Coal Mine Managers' Certificates of Competency. There are three-year Certificate Courses but the full Diploma Course occupies four years. The Secretary for Mines, Great Britain, has approved the school in respect of its Diploma of Association in Mining Engineering under Section 9(b)

of the British Coal Mines Act, 1911. A holder of the Certificate or Diploma of the school is thereby entitled to claim exemption from the period of practical mining experience normally required from applicants for first or second class certificates of competency prescribed by the Act. The Diploma has also been recognised by the University of London for the purpose of its B.Sc. degree in Engineering (Mining) and the University has agreed to the holding of its Intermediate and Final Examinations for that degree in the premises of the School at Dhanbad.

These measures concerned only Bengal but it was generally recognised that some of the criticism made by the Commissioners admit of a wider application. The Committee were consequently appointed by the University in the United Provinces, Patna and the Punjab to consider the findings of the Commission in the United Provinces two committees were appointed, one to prepare a scheme for a military teaching University at Lucknow, the second to consider measures for the reorganisation of the Allahabad University and the creation of a Board to control secondary and intermediate education.

[illegible]

The Committee reported in the following year. The Committee reported that the number of its students many of whom were re-adjusted so that many pupils would be

Statistics of Universities—1939-40.

The last University in India was established
about all these Universities :—

There are now 19 Universities in India of which three are now in the private hands. The following table gives the latest available figures of the income of the Universities in 1937.

There are now
in Taxincore in 1937.

Universities.	Type (a)	Original date of foundation.	Facilities in which degrees are awarded. (b)	No. of Members of Teaching Staff		No. of Institutions.			No. of Students in Arts and Science.

(c) Reconstituted in 1921

(f) Reconstituted in 1933

(h) Situated at Waltair (South India)

(i) Situated at Annamalainagar, Chidambaram.

The All-India Women's Conference on Educational Reform, which holds its meetings annually, and has constituent conferences established all over the country, is also doing good work. An All-India Women's Educational Fund Association has also been established in connection with this Conference. This association appointed in 1930 a special committee to enquire into the feasibility of establishing a central Teachers' Training College of a specialised Home Science character. This committee recommended the establishment of such a college "on absolutely new lines which would synthesise the work of existing provincial colleges by psychological research." The proposal was adopted by the Association and a college called the Lady Irwin College, was established in New Delhi. The college provides three years' teachers' course for those who wish to qualify as High School teachers of Home Science. Others take the Home Course of two years.

Education of Indian Women and Girls —
The first objective is to progress. It has been recognized that the education of women is necessary for happiness and progress in the country, with the result that the forces of conservatism have weakened. Customs and traditions which were for long detrimental to the progress of female education are now disappearing. In some parts of the country, especially in the west of India, for example,

The comparative statement below shows the state of women's education during 1939-40 —

	No of Institutions		Enrolment		Total No of Female scholars under instruction
	1938-39.	1939-40.	1938-39	1939-40

Includes figures for Centrally Administered Areas.
(a) Includes both District Board and Municipal Funds.

Physical Education.—The principle of the integration of intellectual and physical education is now generally admitted in India. Physical training has come to be regarded as a compulsory subject in school courses of study, with "the strains of a major subject". This salutary enthusiasm, however, has not often gone beyond the stage of games and formal drill and the realization that physical education is education and ought therefore to be guided by the same principles as general education, has been somewhat slow in coming. The residential Institute for Physical Education at Kandivlee, Bombay, however, has been doing much useful work in raising the standard and status of physical training.

Education in the Indian Army.—The Army in India has a system of education whereby all officers are under instruction as an integral part of their training. Their school knowledge, if any, is revived and extended. The non-commissioned officers are taught to read and to write and the certificates awarded range from

The joint committee of Education and Health Boards, the appointment of which was referred to in the last issue after a comprehensive enquiry into the existing condition, made a number of recommendations for the improvement of the present system of medical inspection treatment and follow-up physical education and administration and put forward a number of suggestions relating to nutrition, personal and environmental hygiene and corporate activities of school children. The report of the committee, which is a published document, has been adopted by the Boards, of Education and Health.

elementary to advanced certificates of the order of matriculation. The army has a school for the training of its own teachers and these are available in every unit. The objective is twofold: a modern soldier requires knowledge and initiative, if his training is to be effective, and his future, after his service

The University Training Corps has overcome much distrust and prejudice and cadets show great initial keenness. The exigencies of national defence under war conditions have prompted vigorous efforts on the part of the Universities and some of them have already launched programmes for a fifty per cent expansion of recruits.

is ended, depends upon his standard of education and his trustworthiness. In short, the army aims to make him an intelligent soldier and a good citizen. Specialised schools are maintained according to English public school tradition, some pupils of which become commissioned officers.

The demand for education in the Indian Army is growing. standards are rising continuously and the number of candidates for the higher certificates steadily increases. The annual number who take the highest Indian Army certificate is 634 (1938). The soldier receives instruction in Rural Reconstruction and Citizenship and he is provided with an excellent newspaper printed in Urdu, Hindi, Gurmukhi and English.

Doon School.—This school which is established in the Chand Bagh and Skinner's Estates at Dehra Doon owes its origin to the initiative and enthusiasm of the late S R Das. The aim of the school is to develop in an atmosphere of India culture and social environment many of the best features of English Public Schools. The school opened in September 1935 with 70 boys, there are now four houses with accommodation for 258 boys in all, and a holding house in which 12 additional new boys stay until there are vacancies in the large houses. A E Foot continues to be the Headmaster. He is assisted by twenty masters, of whom five have been appointed from England. The school prepares candidates for the Senior Cambridge Examination, Cambridge Higher School Certificate and thereafter for the United Provinces Intermediate Examination, and subsequently for entrance to the Indian Military Academy, and Medical and Engineering colleges or for English Universities. The school is open to all boys in India without distinction of caste, creed, or colour and the school will aim at providing a thorough general education for boys between 11 or 12 and 18. The maximum age for admission is 13. The Board of Governors of the Society which maintains the school,

includes the Hon'ble Sir A Ramaswami Mudaliar (Chairman), Sir B L Mitter (Vice-Chairman), Sir J. G Laithwaite, John Sargent, M S A Hydar, Rai Bahadur Amarnath Atal, Rai Bahadur Chhuttan Lal, Dr Syama Prasad Mookerjee and A C Turner (Honorary Treasurer). His Excellency the Viceroy is the President.

Indigenous Education.—Of the 15,296,399 scholars being educated in British India 592,105 are classed as attending 'private' or 'unrecognised' institutions. Some of these institutions are of importance: The Gurukula near Haridwar and Sir Rabindra Nath Tagore's School at Bolpur have attained some fame. There is also an Indian Women's University at Bombay, to which reference has been made under the education of Indian women and girls. This University provides instruction through the medium of vernacular, English being, however, a compulsory subject. Four colleges are affiliated to the University which are situated at Bombay, Poona, Ahmedabad and Baroda. Connected with every big mosque in northern India there is some educational organisation and the schools attached to the Fatehpuri and Golden Mosques at Delhi and the Dar-ul-Ulm, Deoband, are noted. The Jamia Millia Islamia, Delhi, is another important institution. These institutions generally have a religious or 'national' atmosphere.

The Ayurvedic and Unani Tibbia College, Delhi, founded by the late Hakim Ajmal Khan, is an important unrecognised institution. It provides instruction in the indigenous system of medicine up to the highest standard and also gives some training in surgery.

BOY SCOUTS.

The Boy Scouts movement initiated in England by the late Lord Baden-Powell (the Chief Scout), has spread widely in India, both among Europeans and Indians. The Viceroy is Chief Scout for India and the heads of Provinces and States are Chief Scouts in their own areas. The aim of the Association is to develop good citizenship among boys by forming their character—training them in habits of observation, obedience and self-reliance—inculcating loyalty and thoughtfulness for others—and teaching them services useful to the public and handicrafts useful to themselves. The Association is now directly affiliated with the Boy Scouts International Bureau.

INDIAN HEADQUARTERS.

Chief Scout for India.—His Excellency The Most Honourable the Marquess of Linlithgow, K.T., G.C.S.I., G.M.I.F.

Chief Commissioner.—The Right Hon'ble Sir Tej Bahadur Sapru, P.C., K.C.S.I., M.A., LL.D., D.C.L., D.Litt.

Honorary Treasurer.—F B Blomfield, F.R.I.B.A.

General Secretary for India.—Rao Bahadur G T J Thirudayars, B.A., D.O.C., A.K.L.

Assistant General Secretary.—J K Dutta, M.A.

Headquarters Council for India—

President.—The Chief Scout for India.

Chairman.—The Chief Commissioner (ex-officio).

Secretary.—The General Secretary (ex-officio).

Members—

G A Small, I.R.S., Assam.

B Bosu, Barrister-at-Law, Bengal.

The Co-operative Movement.

Rural Poverty—The outstanding feature of Indian rural economy that is bound to arrest the attention of any observer is the appalling poverty of the rural population. The various estimates, official and non-official, that have been made of the income per head of population in India at various times leave the matter absolutely in no doubt. The Central Banking Enquiry Committee estimates that the average income of an agriculturist in British India does not work out at a higher figure than Rs 42 a year. The vast magnitude of this evil will be better realised when we take into account the pre-eminence of the agricultural population in India. In 1891, 61 per cent of the total population of the country lived on agriculture; this percentage rose to 66 in 1901 and to 73 per cent. In 1921, in 1931, the percentage has fallen a little to 67. The poverty of the agriculturist may be due to a variety of causes, but we cannot ignore the fact that agriculture has in a large measure ceased to be an industry worked for profit, the cultivator labours not for a net return but for subsistence. The extent of an average holding which works out at about 6 acres for an agricultural family of 5 persons is too inadequate to maintain it in ordinary comfort even with the low standard of living which is so characteristic of the rural population of India. Moreover the Indian cultivation is in a large measure exposed to the vicissitudes of seasons and the vagaries of the monsoon. In every 5 years there is but one good year, one bad year and three indifferent years. These unfavourable conditions might be mitigated to some extent

by a well devised policy of irrigation by the State, but as far as the total cultivated area is concerned, about 16 per cent only has been irrigated, the remainder from rivers, tanks or wells. The remaining 84 per cent depends merely on rainfall. Thus the frequency of failure of crops, owing to drought and floods frost and pests coupled with the low vitality and high mortality of the live-stock, render the economic position of the cultivator worse still. The inadequacy of the subsidiary occupations to supplement the slender income from agriculture contributes further to his extreme economic weakness. He has sufficient spare time on his hands to devote himself to industrial occupations but he has been exposed to the full blast of competition of forces from the rest of the world and many of the industries on which he relied in the past have suffered largely from or been wiped out by the competition of machine-made articles. The recent fall in the world prices of agricultural products has affected him powerfully for he has been drawn steadily into the sphere of influence of markets both national and international and he has neither the organisation nor the facilities to help him as countries like the United States of America and Canada or several European countries. In addition to these numerous difficulties, the Indian agriculturist has another serious handicap in this that he is largely illiterate. The percentage of literacy in India is still very low being only 8 per cent and any progress in agriculture is well nigh impossible without the background of general education. All these factors lead to the most

outstanding feature of Indian rural economy—the chronic and almost hopeless indebtedness of the cultivator. The Central Banking Enquiry Committee has estimated that the total rural indebtedness in India is about Rs 900 crores. Though indebtedness of the agricultural population has been there from old times, it is acknowledged that the indebtedness has risen considerably during the last century and more especially during the last 50 years. The colossal burden of debt is the root problem which has got to be faced in any attempt towards the economic regeneration of the mass. Numerous causes have been advanced in account for rural indebtedness and we already have pointed out some of the general evils which give rise to it. A peculiarity, however, that we notice is that the debt which remains unpaid during the lifetime of the cultivator, contracted it passes on as a burden to his heirs so that many agriculturists start their career with a heavy burden of ancestral debt which they in their turn pass on with some further increase to their successors. Ignorance, improvidence, extravagance and conservatism have further been held forth as the reasons for the continued growth of this heavy load. Marriage festival in the family tempts him to launch out into extravagance while funerals and feasts prove no less costly. All these factors add to the uneconomic nature of the agricultural industry, chronic and heavy indebtedness, illiteracy form a thoroughly depressive background of Indian rural economy.

Genesis of the Movement—It is no wonder under the circumstances detailed above that the Indian agriculturist has recourse to borrowing and that too not only for any land improvement that he may contemplate but for his current agricultural needs as also for periodical unproductive purposes such as weddings and funeral feasts. The absence of any banking organisation in the country-side has driven him into the arms of the sower or the moneylender who, while providing a very accommodating person, has exercised a grip on him from which it has been almost impossible to extricate him. Usurious rates of interest charged, coupled with various devices which increase still further the actual rate of interest, and the numerous vicissitudes which the sower performs as a tradesman and the buyer of his produce, make him the dominant force in the village, reduce the agriculturist to the position of a serf, a tool for generation after generation, without hoping for a release from his clutches, getting bare subsistence as a reward for all the trouble that he might take and therefore becoming listless, fatalistic and absolutely unprogressive. In 1893 the Land Improvement Loans Act was passed and this was followed in the next year by the Agriculturists Loan Act enabling the Government to advance loans repayable in easy instalments and at low rates of interest for improvements and also for current agricultural needs. In 1892 Sir Frederick Meade submitted a report to the Madras Government on the possibility of introducing land and agricultural banks and the discussion thus initiated by him was continued by Mr Dugmore of C. P. in his "Peoples Banks for North

India". The caste system of the Hindus and the ideas of common brotherhood among the Moslems were evidences of the peoples' natural aptitude for co-operation and the *midis* of Southern India furnished a practical proof of this aptitude. The Government of India in 1901 appointed a committee to consider the question of the establishment of agricultural banks in India and the report of this committee resulted in the passing of the Co-operative Credit Societies' Act of 1904. The co-operative movement was thus launched in India on the 25th March, 1904. The Act aimed at encouraging thrift, self-help and co-operation amongst agriculturists, artisans and persons of limited means and the societies that were to be started were intended to be small simple credit societies for small and simple folks with simple needs and requiring small sums only. Knowledge of and confidence in their fellow members which are the keynote of success were ensured by providing that a society should consist of persons residing in the same town or village or group of villages and should be members of the same tribe, class or caste. In order to provide facilities in urban areas for the small man, urban societies were also permitted. The Act introduced the principle of unlimited liability for rural societies following the Raiffeisen system in Germany, though it permitted urban societies to choose the Schulze-Delitzsch model. The local Governments were empowered to appoint special officers called Registrars of Co-operative Societies, whose duty it would be to register societies formed under the Act, to get the accounts of such societies audited by a member of their staff and in general to see that the societies worked well. The seed thus sown has grown to-day in the course of 38 years into a fine tree with twigs and branches, spread out in many directions. In spite of several weaknesses in the co-operative movement in India to-day, it is beyond dispute that the movement has been a powerful instrument towards the awakening of the country-side and has led to a steady improvement in various directions of the life of the Indian cultivator. Moreover, the use of the vote, the elective system, self-help, self-reliance, compromises, gives and takes, work on an organised plan, rounding of angularities are great items in the training up of a citizen and the co-operative societies have been great schools for political and civic education. Since the launching of the movement in 1904, there have been amendments of the co-operative law and committees and commissions of enquiry to remedy defects and to suggest further lines of action. These we shall note later on.

Growth of Co-operation—In the first few years of the movement the number of societies grew up very slowly but the growth was considerable accelerated from 1910 and the average number of societies from 1910 to 1915 was about 1,100. The pace of growth still further quickened and now there are 1,18,988 agricultural societies and about 16,760 non-agricultural ones. Table I shows the distribution of these societies by provinces. It will appear from the table that progress in different parts of India has not been uniform. Bengal, the Punjab and Madras have the largest number of Societies—while the other major provinces like Bombay Bihar, the United Provinces, the Central

Provinces and Assam show distinctly smaller figures. The Punjab with 25,103 societies stands first in the number of societies (94.7) per one lakh inhabitants, while Bengal which has a larger number of societies than the Punjab stands second in that respect with 70.1. The progress in smaller areas, like Coorg and Ajmer-Merwara, must be regarded as very satisfactory in view of their small population, since the number of societies per one lakh inhabitants works out in their case at 154.5 and 124 respectively. It is satisfactory to note that the co-operative movement has spread not only among the British Indian Provinces but also in Indian States and compared to the total population, Gwalior, Kashmir and Bhopal lead in this matter though the premier States of Mysore, Baroda and Hyderabad have also made considerable progress. Even more instructive are the figures in Table 2. The total number of members of primary societies stands on the 30th of June 1940 at 60.8 lakhs. Taking the normal family at a little under 5, it is clear, therefore, that about three crores of the people of India are being served by this movement. There is no single movement in the country fraught with such tremendous possibilities for the uplift of masses as the co-operative movement and there is no single movement with such a large percentage of the population affected by it. Though the Punjab leads in the number of members of societies 37 per one thousand inhabitants, Bombay comes next with 30.6, while Madras, Bengal and Sind rank thereafter. This shows that the size of societies varies in different Provinces and that Bombay, while having a smaller number of societies, has a larger average of membership per society as compared with the other provinces of British India. Of the smaller areas, Coorg takes a leading place with 103.6 members per one thousand inhabitants, while Travancore has an average of 28.4. Membership is a much better test in many respects of progress than the number of societies and from this point of view, the progress in the Punjab, Bombay, Coorg, Travancore and Ajmer-Merwara must be regarded as distinctly satisfactory. There is, however, a third aspect also of the growth of the movement. Merely the number of societies, or the membership in the societies is not an index of the work that is being done and of the benefits which are being conferred by the movement on the population affected. The societies are predominantly credit organisations or rather small banking institutions and the part that they play can be better appreciated from their working capital than from merely the number of members. In this direction also we must note the marvellous progress so far achieved by the movement. From about Rs. 68 lakhs, which was the average up to 1910, the working capital has advanced very rapidly and stands to-day at more than 107 crores. It is pleasing to note from Table 3 that this large sum has been derived mostly from non-Government sources. The share capital, the reserve fund and the deposits from members together contribute more than Rs. 42 crores and this is really owned capital or the members' own money. The provincial or central banks and other societies contribute a little less—3.1 crores while the non-members or the outside public contribute about 29 crores. This latter item shows to a remarkable extent the growth

of public confidence in co-operative institutions and speaks well in general of the management of the societies and the very useful purpose they serve in the banking organisation of the country. The distribution of the working capital by Provinces and States gives us a further insight into the progress made in this direction by the co-operative movement in different parts of India. Bombay and Sind lead in this respect with 120 and 100 annas per head of population respectively. The Punjab is a close second with 97. Madras and Bengal fall behind with 77 and 65 respectively. Among the smaller areas, Coorg comes out second with 160 annas per head of population while Ajmer-Merwara leads with 164. Of the Indian States, Indore takes the first place with 96, while Mysore, Baroda and Cochin follow with 60, 58, 50 respectively. Bombay stands an easy first in the matter of deposits from members which amount to over three crores out of a total working capital of 160 crores and this is one of the best tests of the success of a co-operative society. It is obvious from a glance at the figures in the tables that there has been very rapid progress in the number of societies, in their membership and in the working capital of these societies. The Punjab, generally speaking, leads in many respects with Bombay coming close behind. The smaller areas and the Indian States have also achieved considerable progress though the movement there started comparatively later. The agricultural societies predominate in all the Provinces and States while non-agricultural, that is, urban societies show a much slower development. While there is much room for improvement at the phenomenal growth of the movement in rural and urban areas, it must be admitted, however, that merely the figures of the number membership and working capital are not enough to be conclusions upon. But to proceed further, we must now explain the important part of the structure, as it has been built up, of the co-operative movement in the country.

Financial Structure of the Movement.—First from the comparatively few co-operative societies at present working in India for non-profit purposes, it must be recognised that whether in urban or rural areas, a co-operative society largely means a small bank or a credit institution for providing financial accommodation to its members on a co-operative basis. Of these credit institutions, by far the greater proportion is rural. The rural credit society is for its main purpose, the financing of the agricultural and as such it needs funds. The essential of co-operative credit lies in making available to the needy the surplus of the well-to-do members through the medium of the society. In the Indian village, the well-to-do and the needy rather form distinct groups, the former paying or trying to pay the former. Thus instead of a village more or less all sections of the population of the village, the society is rather made up of the needy section only, at any rate, very largely. Even otherwise, the slender surplus of the well-to-do could not be enough to meet the wants of the needy and each village society is not, therefore, able to be self-sufficient, making available the deposits of its well-to-do members as loans for the needy ones. The heavy load of unproductive debt

of the average Indian farmer, his habit of investing his savings, if any, in lands and ornaments, and his illiteracy and consequent lack of the banking habit, soon made it apparent that the rural credit societies could not be expected to raise the required funds in deposits either from members or locally. The question of funds for the working of a rural co-operative Society thus becomes a vital question indeed. Central banks have therefore been brought into existence at the district headquarters in order to raise money from towns and make them available to the primary rural societies. Following up the idea further, it has been found necessary to have a provincial bank at the provincial headquarters to serve as a balancing centre for the central banks and to make available larger funds for the primary societies through the central banking institutions. The financial structure of the co-operative movement is thus largely composed of three parts—(i) the Agricultural Credit Society, (ii) the central financing agencies, and (iii) the provincial banks. Obviously one more part in the structure seems possible and desirable, namely, an Apex All-India Co-operative Bank. So far, however, such an All-India Bank has not been started and the provincial banks have been content with an All-India Provincial Co-operative Banks' Association.

Agricultural Credit Societies.—The success of these societies is closely related to their very peculiar constitution. In an ordinary joint stock company, a member is liable only to the extent of the value of his share holding and his liability is therefore limited; but in the case of agricultural credit societies, the liability is unlimited, that is to say, members are jointly and severally liable to the creditors of the society for the full amount of the debts incurred by it. Such a liability would never be acceptable to any person, unless he was imbued with the broader vision of brotherhood between members and unless he himself had an active voice in the management of the society and had a more or less full knowledge of the character and antecedents of his fellow members. Co-operative credit is the capitalisation of character and unlimited liability is the great instrument to secure the admission into a society as members of these persons only, who by their character and antecedents deserve to be taken into that brotherhood which imposes such an obligation as unlimited liability on all, so that they either swim or sink together. To secure success, therefore, the proper selection of members is of the utmost importance; and it has been unfortunate that in India this has not been in practice as well kept in view as it should have been, in the eager desire to promote the formation of more and yet more societies.

Credit is a blessing only if turned to profit the account; if used up for unproductive purposes, it is a curse. It would enrich the producer but it would only impoverish the consumer. It is capable of fruitful employment by the intelligent but it leads the illiterate and the ignorant towards perdition. The Indian credit society needs money for productive purposes, such as his current agricultural needs, land improvement, purchase of stock and implements, manures and so on as also for unproductive purposes, such as repayment of old debts,

weddings and funerals. He thus requires credit not only as a producer but also as a consumer—a producer who hardly makes profits from his industry and a consumer who has no past savings to enable him to tide over a bad period, but who is a perpetual borrower ready to live for to-day and letting the to-morrow take care of itself. He is besides ignorant and illiterate and though sufficiently conversant with the routine of his industry, hardly awake to the need or scope for improvements in his methods. Under such circumstances, it is imperative for the management of the rural co-operative society very carefully to scrutinise the loan applications and examine the purpose for which loans have been asked and to see carefully that the loan when sanctioned is used for the specific purpose. And yet, it is in this respect that there is considerable scope for improvement.

The funds of an agricultural credit society are raised from entrance fees, share capital deposits or loans from non-members, loans from the central or provincial banks, loans from Government and the reserve fund. The income from entrance fees and share capital is small compared with the financial requirements of the members. The large sources from which funds are derived are deposits and loans. The volume of deposits which a society is able to secure on terms offered by it is an index of the measure of the public confidence it has inspired and the soundness and the stability of its financial position. The ideal placed before these societies is the development of members' deposits to the extent of making the society financially self-sufficient. These deposits by members further serve the purpose of stimulating thrift and saving habit among them, and are, therefore, eminently desirable. Attempts are everywhere made to encourage them, but the response has been small, except in the province of Bombay, where they form one fifth of the total working capital. Loans from central banks therefore furnish the bulk of the working capital of these agricultural credit societies at present.

Low dividends and voluntary services resulting in low cost of management have made it possible to divert a substantial proportion of the profits of these societies to reserve funds, and thereby provide against unforeseen losses, bad debts and losses on the realisation of certain assets such as by investment depreciation. The general practice in regard to the use of the reserve fund in the business of the societies is that it is used as ordinary working capital.

The funds collected by the agricultural societies in India at present are by no means negligible. They aggregate to about 31 crores of rupees. Their financial position as on the 30th of June 1940 stood thus—

	In thousands of rupees
Share capital	4,07.93
Reserve and other Funds ..	8,26.67
Deposits	2,42.75
Loans	15,73.61
Total Working Capital ..	30,50.96

The figures show that these tiny agricultural societies in India work with about Rs 14 crores of their own capital (including members' deposits

in this head) as against their outside borrowed capital of about Rs. 16 crores. The owned capital was thus about 44.5 per cents. of their total working capital, and this proportion is rising steadily as years pass by.

Central Financing Agencies.—The formation of banks in urban areas on co-operative principles, with the sole object of raising funds for advances to societies having been found necessary to place the financial structure of the movement on a sound basis, the Co-operative Act of 1904 was amended in 1912 and the Co-operative Societies Act II of that year provided for the registration of central banks with the sole object of financing societies. Soon thereafter the number of central financing agencies grew rapidly all over the country, especially in the United Provinces. The function of these central societies was not only to supply the required capital to the primary societies but also to make the surplus resources of some societies available for other societies suffering from a deficiency of funds and to provide proper guidance and inspection over them. On the 30th June 1940 the number of central banks was 600.

There are four main sources from which a central bank derives its working capital which stood in 1939-40 at 29.2 crores: (a) Share capital, (b) Reserve, (c) Deposits, (d) Loans.

The paid up share capital and reserves of central banks constitute the owned resources of these banks as distinguished from borrowed resources and provide the guarantee fund against which additional funds are raised by them in the shape of deposits or loans. It is usual to prescribe a suitable proportion between the owned and borrowed resources of central banks in each province. The most usual proportion observed in practice between the borrowed and owned resources in all parts of the country is 1 to 8. Deposits from members and non-members constitute the bulk of the borrowed capital of central banks. The total amount of deposits held by central banks in the year 1939-40 from individuals and other sources amounted to Rs. 14.4 crores and from primary societies to Rs. 3 crores. Deposits in central banks are mainly of two kinds, viz., savings and fixed. Current deposits are not universal but confined only to selected central banks in selected areas. The principle usually observed by these banks is not to grant loans to societies for periods longer than those for which deposits are available and where loans for long periods are advanced, the periods of deposits are also comparatively long. In addition to funds obtained by deposits, central banks raise loans either from outside banks, from other central banks, from the local provincial bank or from Government. The total amount of loans held by the central banks in 1939-40 from outside banks, from other co-operative banks and from the provincial banks was Rs. 4.5 crores and from Government Rs. 50 lakhs. Central Banks do not directly borrow loans from Government; the central banks of Indian States, excepting Mysore and Cochin do to a greater or less extent hold loans from Government, while in Gwalior, loans from Government constitute the most important item of the total working capital. Borrowings from outside banks are generally confined to accommodation obtained from the Imperial

Bank of India against Government Securities or Promissory Notes executed by societies in favour of the central bank and endorsed by the latter in favour of the Imperial Bank. This recommendation is, however, limited and advances from other joint stock banks are also now rare. The main source of loans is, therefore, the provincial bank, and where a provincial bank exists, the central banks are generally prohibited from having any direct dealings with either the Imperial Bank or any other joint stock bank or with one another. This rule is however not rigidly observed in the Punjab and Madras. Several central banks in the country, due to their long standing, now possess sufficient resources to be independent of any outside financial assistance but they all continue credit arrangements mainly with the provincial bank on which they rely for emergencies.

In the initial stages, several central banks developed from ordinary urban societies which granted advances to individual shareholders. A few of such central banks have continued the practice and the amount advanced by central banks to individual members during the year 1939-40 was Rs 1.08 crore—chiefly in the Punjab, Bombay and Madras. This practice, however, is gradually being abandoned as the chief function of a central bank is to finance societies and to serve as their balancing centre. The total advances made by central banks to societies at the end of the year 1939-40 amounted to over Rs 4.5 crores.

After meeting management expenses the profits of central banks are distributed as allocations to reserves and dividends to shareholders. The combined net profits of the 600 central banks of the country during the year 1939-40 amounted to Rs 27 lakhs on the total working capital of Rs 20 crores, the rate of dividend paid varied from 3 to 6 per cent in different parts of the country but the most usual rate paid was 4 per cent per annum.

Provincial Co-operative Banks—In India, at present, all the major Provinces except the United Provinces have apex banks functioning in them. There are apex institutions in two of the Indian States, Mysore and Hyderabad, though in the others also there are institutions corresponding to the apex bank or functioning as such. There are 10 such institutions in all out of which, 8 are in British India and two in the Indian States. The constitutions of these institutions vary considerably, but the functions of all these institutions are more or less the same, namely, the coordination of the work of the central banks and provincialisation of finance in them. It is found that in a large majority of the apex banks, the constitution is a mixed one, that is, both in the general body of the banks as well as in the directorate, there are individual shareholders as well as representatives of co-operative societies and central banks.

All apex banks both in British India and in the Indian States depend for their working capital largely on deposits from the affiliated co-operative societies as also from the public. It is, therefore, thought necessary to insist upon the maintenance of fund resources on a certain scale and in some Provinces the Government of the Province has prescribed definite rules with regard to the maintenance of fund resources. The period for which deposits are

accepted determine the maximum period for which they can lend out these borrowed funds to their clients, and in every Province the apex bank has fixed for itself a maximum term, beyond which no loans are, in general, sanctioned to the borrowing client. The following figures will clearly show the position and transactions of the apex banks in 1939-40—

Provincial Banks, 1939-40.

	In thousands of rupees
Working Capital—	
Share Capital	78,98
Reserve and other funds	1,15,54
Deposits and loans—	
from individuals	6,57,01
from Provincial and Central banks	2,97,37
from societies	1,01,46
from Government	10,87
Total	13,41,21
Loans made during the year to—	
Individuals	2,22,77
Banks and societies	4,83,17
Total	7,05,94
Loans due by—	
Individuals	31,51
Banks and societies	6,69,13
Total	7,00,64

While accepting deposits from co-operative banks and the general public, most of the apex banks have also dealings in current account with the latter. The Punjab bank does not encourage such accounts with individual non-members, as it does not wish to enter into competition with central banks. Apex banks also generally carry on ordinary banking business, such as collecting hundis and dividends from companies and collecting the pay and pensions of public servants. The provincial banks of Bombay, Madras and the Punjab have floated long-term debentures. The Bombay bank has so far issued debentures of the value of Rs. 9.8 lakhs and these debentures are recognised as a trustee security. The bank at Madras has floated debentures of the value of 2.18 lakhs on the security of a floating charge of the general assets of the bank, while the Punjab bank has issued debentures of the value of 5 lakhs. As in every banking institution, these banks also are frequently troubled with surpluses and deficits, though at different times in the different institutions. There is therefore intermingling of surplus funds between these apex banks, and during the period of shortage of funds, deposits are accepted from surplusing banks and some of them call for special season deposits allowing favourable rates of interest to the over the period of shortage. The All India Provincial Co-operative Banks' Association enables the member banks to ascertain with whom they are surplusing in the period and by correspondence to arrange for inter-provincial borrowings.

Overdues—Among the most important tests of the success or otherwise of a co-operative credit society is undoubtedly the promptness in repayment of loans by members and it is in this respect that one has to recognise that in

India, the societies have not attained any very great measure of success. On the 30th June 1940, the overdue loans in agricultural societies amounted to Rs. 10,70,76,092 as compared with Rs. 11,15,83,233 the year before, the working capital of the agricultural societies was Rs. 30,50,97,267; the loans due by individuals were Rs. 23,13,82,638. The overdue loans were therefore 35 per cent of the working capital and 46 per cent of the total loans due by individuals. The position is however rendered more serious when one realises that the figures are considerably obscured by book entries and extensions of the date of repayment and in some cases, by the farmers' borrowing from the sowcar to pay the society's dues and that the percentages represent merely an average for all-India. The following table shows the position by different provinces on the 30th June 1940.

Overdue Loans in Agricultural Societies, 1939-40

(In lakhs of rupees)

Province.	Working Capital.	Loans due by individuals.	Overdue loans by individuals	Percentage of overdue loans to	
				Working capital.	Loans due.
Madras	5,75	4,19	1,68	29	40
Bombay	3,12	2,41	1,35	43	56
Sind	78	58	47	60	81
Bengal	6,20	3,73	3,29	53	88
Bihar	1,43	97	92	64	95
Orissa	56	40	35	63	88
United Provinces	1,36	94	34	25	36
Punjab	6,48	6,00	74	11	12
Central Provinces and Berar	87	63	40	46	63
Assam	26	14	13	50	93
Mysore	51	39	24	47	62
Baroda	38	28	9	24	32
Hyderabad	86	58
Gwalior	22	45	32	1,45	71
Kashmir	52	38	12	22	32
Travancore	31	24	17	55	71
Others	90	83	10	11	12
Total	30,51	23,14	10,71	35	46

The position has since June 1933 grown more serious, since the fall of prices of agricultural produce and the world crisis and trade depression have reduced the repaying capacity of the agricultural borrower considerably and increased the terrible load of overdue loans in rural credit societies. This continued growth of overdue loans is an ominous portent and reflects very badly on the soundness of the co-operative structure. The loans having been based on the basis of the assets of members, the ultimate solvency of the societies is beyond dispute, but severe pressure on members and the consequent wholesale liquidation of societies would react very seriously both politically and economically. The causes that have led to this phenomenon, which menaces the entire existence of the co-operative movement are chiefly to be found in not basing the loans sanctioned on the repaying capacity of the borrowing member in sanctioning loans for unproductive though perhaps necessary social or domestic purposes or for the redemption of old debts and generally in the uneconomic nature of the agricultural industry. The loose scrutiny of the purposes stated in the loan applications and the absence of a careful watch on the way the loan is spent by the members, which must be the case, where almost every member is a borrower or a surety to other borrowers and where the societies are composed almost wholly of the needy section of the village, the well-to-do standing aloof, the

remissness in exerting pressure and in taking action against the defaulter, even when he is wilfully defaulting, add considerably to the growth of this menace of excessive overdues. The central financing agencies are more concerned with the assets than in the last resort are the security for their lendings and, with more funds than they could use, are more eager even than the Registrar himself for organising new credit societies.

Land Mortgage Banks.—The loans advanced by co-operative societies to their members and by the central financing agencies to their constituent societies are, from the very nature of the source from which they derive the bulk of their finance, for short or intermediate terms only. By concentrating upon the growth and multiplication of rural credit societies and thus upon facilities for short and intermediate term loans, the co-operative movement did not provide for the redemption of old debts or for increasing the earnings of agriculturists which alone would prevent any further increase in their debts and pave the way for the paying off of the old ones. It does not seem to have been adequately realised that the removal or the lightening of the heavy load of indebtedness does not depend so much upon the easy terms on which co-operative finance can be made available, as upon the ascertainment of the amount of individual indebtedness to the sowcar, upon so fully financing

the agriculturists that they could be prevented from resorting to the *sarfar* any more, and above all on making agriculture an industry sufficiently paying to leave a little saving after all legitimate current expenditure on agriculture and the household has been met, so that this saving could be applied to the liquidation of old debts. The mistaken notion associated with the start of the movement that co-operative credit could serve this purpose and which has clung more or less till now as evidenced by permitting this purpose to be regarded as a legitimate purpose for loans is largely responsible for increasing the load yet further. Short or intermediate term loans can, if judiciously employed, prevent any further increase in the burden, though even that in the present state of uneconomic agriculture seems scarcely possible; but it cannot leave any adequate margin of saving which could be employed to redeem past follies or misfortune. The *sarfar*, it is often forgotten, is the village retailer as also the purchaser of the villagers' produce and what he cannot recover from the borrower by way of interest or the part payment of the principal of the loans, he can more than make good on the three hing floor or in his shop. The co-operative movement by concentration on the credit side has attacked him on one front only, so that the risks of non-payment are saddled on the society while the profits of the merchant and the retail shopkeeper are still enjoyed by the *sarfar*, the attack ought to have been on all fronts. However, under the circumstances, the clarification of the situation of indebtedness is most desirable as a preliminary towards tackling the important questions of the redemption of old debts. The Indian Central Banking Enquiry Committee has wisely emphasised the need for a vigorous policy of debt consolidation on a voluntary basis and for exploring the possibility of a debt-relieving legislation to secure, if need be, the settlement of debts on a compulsory basis. A simple Rural Insolvency Act as recommended by the Royal Commission on Agriculture and endorsed by the Central Banking Committee will also be an important step towards liberating those who have already given up all their means, from the incubus of ancestral and old debts, so that at least they and their heirs could start with a clean slate. In any case, the need for long term loans to the agriculturists for land improvement and for the redemption of old debts is obvious, and it has now been recognised that the time has come for the provision of this facility by the starting of land mortgage banks.

There are three main types of such banks. The strictly co-operative type is an association of borrowers who raise credit by the issue of mortgage bonds bearing interest and made payable to bearer and is well illustrated in the German Landeshanken. The commercial type is represented by the Credit Foncier of France, which was set up for profit and declares dividends. The third type—the quasi-co-operative has a mixed membership of borrowers and non-borrowers, operating over fairly large areas and financed with share capital and on a limited liability basis. The banks organised so far in India are in a series of the co-operative type, though strictly speaking they belong to the quasi-co-operative variety, admitting as they do to the membership a few non-borrowing

individuals for attracting initial capital as well as business talent, organising capacity and efficient management.

At present there are 10 co-operative land mortgage banks in the Punjab. Two of these operate over whole districts, the rest confine their operations to a single tehsil. Bombay has 18 land mortgage societies, which have only recently started their operations. Bengal has 5, Assam has 5, while Madras has 114 primary land mortgage banks and a central land mortgage bank has been started recently. It is too early to pronounce on the success or otherwise of these few banks. Among the objects for which these banks advance loans are the redemption of old debts, improvement of land and method of cultivation and the purchase of land in special cases. The Central Banking Committee think however that for a long time to come the resources of these institutions will be mainly required for enabling the cultivator to redeem his land and his house from mortgage and to pay off his old debts. One feels, however, extremely doubtful whether the emphasis should not be laid on the intensive and extensive development of agriculture, since as pointed out above, unless agriculture becomes a paying industry, the redemption is impracticable and illusory. The bulk of the funds of these banks will have to be raised by debentures and for these purposes, there will have to be in the Provinces central land mortgage banks as in Madras and in Bombay Government will have also to render assistance to these institutions for the success of the debenture issue, and its guaranteeing the interest as in the Punjab ought to meet all reasonable needs, though in special cases there would not be much harm in the Government purchasing debentures of a certain value. While mutual knowledge of and control over one another among members is the consistent feature in the case of the unlimited liability credit society, the insistence in the case of a land mortgage bank with limited liability is on the capacity and business habits of the directorate, in order to ensure sound valuation of security, careful investigation of titles, correct assessment of borrower's credit and repaying capacity and on the efficient management of affairs.

The operations of the Land Mortgage Banks and Societies in India during 1939-40 were as under—

Number of banks or societies..	..	24
Number of members	92,110
Share Capital ..	Rs	10,50,746
Debentures from the public	2,42,81,600
Debentures from Government	8,42,200
Deposits	9,01,601
Reserve and other funds	10,50,746
Loans	3,15,72,212
Working Capital	6,26,67,417
Loans made to individuals	59,60,774
.. .. Banks and Societies	55,60,911
Profit	1,12,000

Propaganda, Education and Training. In the initial stages of the movement, it fell on the Registrar to carry on propaganda and to organize co-operative societies. For this purpose the assistance of non-official honorary workers was imperative and in the various Provinces a band of such workers was brought into existence.

ence, who as honorary organisers of the district or talukas actively co-operated with the officials in carrying on propaganda, organising new societies as a result thereof and looking after the societies so started in some measure. With the rapid growth of co-operative societies, however, it was felt that for the further propagation of the movement it was desirable to carry on work by the non-officials in a more organised manner and for that purpose co-operative institutes were started in the various Provinces. In some Provinces, like Bombay, these institutions are mixed institutions with a membership of individual sympathisers and workers and of co-operative societies. In others, like Madras and the United Provinces, individuals were not admitted as members and the institutions became provincial unions of co-operative societies. In some Provinces, like Bihar and Orissa, they became federations of co-operative societies, while in others, like Bengal and Assam, they are known as co-operative organisation societies. Whatever the exact form assumed by these provincial institutions, their functions were more or less the same in all Provinces, comprising propaganda and the focussing of non-official co-operative opinion on the various problems that confronted the movement from time to time. They have come to be regarded in an ever increasing measure as the third arm of the movement, the Registrar and his staff representing the administrative side performing more or less the functions assigned to them under the statute, the provincial bank with the central banks and banking unions representing the financial side and as such concerned more with the financing of the movement and the institutes, unions, federations or organisation societies representing the propagandist side and as such concerned more with educating popular opinion and representing non-official views to the authorities. A few years back, the All-India Co-operative Institutes' Association was established, with a view to co-ordinate the activities of the provincial institutes, to formulate non-official co-operative opinion on important co-operative problems from time to time and to encourage the growth of co-operative literature.

It was soon perceived that one of the serious handicaps to the successful working of co-operative societies was the ignorance of the members and the absence of trained men as office-bearers of societies. Illiteracy of the rural population, however, has been found too big a problem for these institutes and they have, therefore, attempted only to spread knowledge of co-operation and co-operative principles to the members of societies and to train up the office-bearers in various ways. Education has thus developed into an important function of these institutes. In Bombay, the Institute has created a special education board which maintains co-operative schools at different centres and conducts periodically training classes suitable for different types of workers and employees of co-operative societies. In the Punjab, however, co-operative education has been organised by the Co-operative Department, though the Punjab Co-operative Union renders active assistance therein. In Bihar and Orissa a permanent Co-operative Training Institute had been established at Sabour in the Bhagalpur Division which is controlled by a

governing body which includes the Registrar, and a few representatives of the Co-operative Federation. The Training Institute has now been transferred to Pusa. Madras has organised 6 training institutes. In the United Provinces, Bengal and the Central Provinces, arrangements for co-operative training and education have not yet been properly made, though there also it is the Department assisted by the provincial union which organises the training classes. The need for proper co-operative training and education has been felt in an increasing degree in recent years and the Central Banking Enquiry Committee has recommended very strongly the establishment of provincial co-operative colleges and an All-India Co-operative College for the higher training of more important officials in the Department, banks or societies. No action apparently has been taken till now on these recommendations, but there is no doubt whatever that any serious attempt at improvement of the co-operative societies in the country must include a proper organisation of co-operative education not only for the office-bearers of societies or the managers and inspectors of central and provincial banks but also for the inspectors, auditors and assistant registrars of the co-operative departments. The Government of India have for the last few years placed at the disposal of each of the Provincial Governments about one lakh of rupees which were being devoted to a better organisation of Co-operative training and education for the staff of the co-operative departments as also of other institutions.

In some Provinces, like the Punjab and Bihar and Orissa, the provincial union or federation has been actively associated in discharging the Registrar's statutory function of the audit of societies and the Second All-India Co-operative Institutes' Conference held at Hyderabad (Deccan) in 1931 also expressed an opinion that the Registrar's statutory obligation in this matter could be discharged by a system of licensing and that audit should be a function entrusted to the provincial unions or federations. If this idea of a uniform system of audit through the provincial unions be accepted, it will naturally follow that they will also have to assume the responsibility for supervision of the co-operative societies. The departmental audit or inspection by the central banks cannot dispense with the need of careful supervision, which to be effective must be from within and the provincial federation or union is obviously the best agency for this friendly and efficient supervision. The combination of the functions of audit and of supervision as suggested by the All-India Conference and endorsed by the Central Banking Enquiry Committee would mean improved efficiency in the working of the movement while de-officialising it considerably and giving it the popular touch it lacks.

Non-Credit Agricultural Co-operation — For some years past increasing attention has been directed on other forms of co-operation for the benefit of the rural population. Credit is but one of the needs of the cultivator, its organisation through co-operation touches but the fringe of the problem and different provinces have been experimenting upon the application of co-operative organisation to meet his different non-credit needs. The problems of irrigation, consolidation of holdings, improved sanitation,

lease or cattle insurance, dairying and supply of agricultural requisites and above all the marketing of agricultural produce have been therefore engaging the attention of co-operators and societies for these purposes have been established here and there and have been working with varying success. In a land of ignorant and illiterate agriculturists, it would appear wiser to adopt the rule of one village, one society. But the complexities of the non-credit forms of co-operation have induced the authorities to avoid the multiple-purpose or general society and to favour the single purpose society, and we have the curious spectacle of an agriculturist

being viewed as one person with a bundle of needs, each one of which it is proposed to meet separately. A single society trying to meet all the needs of the agriculturist would attack the sowcar on all fronts and would become a live force in the village which would tend to promote the ideal embodied in the famous phrase, Better living, better farming and better business. However, co-operative opinion in India has not yet fully accepted the wisdom of this and yet believes in the theory of almost watertight compartments. The agricultural non-credit societies in India on the 30th June 1910 were 17,843 distributed as under.—

Non-Credit Agricultural Societies, 1939-40

Province	Purchase and sale	Production	Production and sale	Other forms of co-operation.	Total
United Provinces	175	..	87	422	604
Punjab	60	19	104	164	356
Sind	2	..	15	30	27
Bengal	73	1,011	378	55	1,517
Uttar	28	..	828	1	857
Orissa	10	..	4	..	14
United Provinces	20	..	1,514	5,849	7,377
Punjab	16	506	1,902	178	2,602
Central Provinces and Berar	60	17	8	..	85
Madras	23	..	21	33	77
Bombay	11	25	42	104	182
Hyderabad	3,168	3,168
Assam	17	16	304	31	367
Total	504	4,781	5,217	6,841	17,843

Of these the important are the marketing societies particularly for the sale of cotton in India, and the consolidation holdings and better large co-ops in the Punjab.

Marketing Societies.—Marketing of Agricultural produce is the real crux of the whole question of rural prosperity and betterment and agricultural marketing is always more effective than any other marketing especially in India where the rural producer is illiterate and constitutes a small unit. Co-operative marketing has been accepted now as one of the most desirable means to work for. It is only the complexity of the working of co-operative sale societies, the difficulty of providing for marketing finance, the lack of expert knowledge on the part of co-operative officials and the lack of godown and storage facilities that have prevented the rapid multiplication of sale societies and their effective working. It is really in the development of this form of co-operative effort that ultimate success must be sought for in India, for credit alone could never bring comfort. Where it has been tried with success, the results have been extremely satisfactory to the members. The tremendous headway made in European countries like Denmark and in the United States of America in co-operative marketing organisation and the successful examples of the cotton sale societies in Punjab should arrest attention and induce concentration on the co-operative organisation of agricultural marketing. The jute and paddy sale societies of Bengal have not met with success. It is true, but the cotton grower in Gujarat and the Bombay Karnataka has reaped a considerable benefit from the cotton sale societies. Absence of fraud in weighing, adequate and high prices, insurance of the

produce against risks of fire, prompt payment of sale proceeds, financial accommodation till the produce is sold, information of daily price fluctuations in the Bombay market, supply of gunnies and genuine and certified seed, bonus and a dividend are no small gains to the agriculturist, who was otherwise at the mercy of the *adatyas* or worse still of his village sowcar. The cotton sale societies of Surat have recently combined in a federation which has taken over the co-operative ginning factories already started by the members. A few societies for the sale of other articles have also been organised in Bombay, such as jaggery, tobacco, chillies, paddy, onions and arecanut. Bengal has several jute sale societies with a Jute Wholesale sale at Calcutta and several paddy sale societies with a sale depot in Calcutta. The Punjab has several commission shops which provide storage facilities so that the grower could wait for better prices, but which sell to local merchants yet, rather than to the merchants at the port. Madras has a number of sale societies but their transactions are small and they have not yet made much progress. Recent financial co-operative marketing societies have been started with Government encouragement and assistance in Madras and Bombay, the results of the working of which will be watched with great interest by co-operators all over the country.

Consolidation of Holdings.—The law of primogeniture, by which the eldest son succeeds to the property of his ancestor, which is in force in some European countries, does not obtain in India. Each heir is given a proportionate share of each item of the inheritance.

property and not a share of the whole, equivalent to his portion. The result is that successive generations descending from a common ancestor inherit not only smaller and smaller shares of his land but inherit that land broken up into smaller and smaller plots. This continuous partition of each field amongst heirs leads to fragmentation, which is accentuated by the expansion of cultivation, irregularly over the waste, by purchase and sales, by the extinction of families in default of direct heirs and the division of their property amongst a large number of distant relatives, and by the break up of the joint family system and the custom of cultivation in common.

The disadvantages of fragmentation are obvious. A part of land is wasted owing to fragmentation being so excessive as to prevent any agricultural operations, and another part is lost in boundaries. Fragmentation involves endless waste of time, money and effort, it restrains the cultivator from attempting improvement, it prevents him from adopting scientific methods of cultivation, it discourages him from carrying out intensive cultivation, it enforces uniformity of cropping, and especially restricts the growing of fodder crops in the period during which cattle are usually sent out to graze on the fields. The economic loss due to this system can be easily imagined, and the only solution is consolidation of holdings. This most difficult, important and interesting experiment originated in the Punjab in the year 1920. The procedure adopted in establishing a Co-operative Consolidation of Holdings Society is to call together all persons directly interested in land in a given village, persuade them to accept the by-laws whereby a majority in a general meeting might approve a method of repartition, and then carry out actual adjustment of fields and holdings in such a manner that no single individual might have any grievance. As the result of patient work which has now extended over ten years, some very striking results have been achieved and the movement for consolidation in the Punjab has assumed the dimensions of an important agricultural reform. It is steadily gaining in popularity, and, as more staff is trained and the people become better educated to the advantages of the system, the figures for the area consolidated are mounting up year by year. This work began in 1920-21 and in the 10 years that have elapsed since then, 2,63,462 acres have been consolidated by the end of July 1930, out of the whole cultivable area of about 30 millions at an average cost of Rs 2.5 per acre.

In the Central Provinces some success in consolidation has been achieved in the Chhattisgarh Division where scattered holdings are particularly common and it is not rare to see 10 acres broken into 40 plots. The Local Government found it desirable to resort to legislation and passed the Central Provinces Consolidation of Holdings Act in 1925. Any two or more permanent holders in a village holding together not less than a certain minimum prescribed area of land, may apply for the consolidation of their holdings, but the outstanding feature of the Act is that it gives power to a proportion, not less than one-half of the permanent right-holders, holding not less than two-thirds of the occupied area in a village, to agree to the preparation of a scheme of consolidation which scheme, when confirmed, becomes binding on all the permanent

right-holders in the village and their successors in interest.

In Bombay a Bill was introduced in the Legislative Council in 1923 to deal with certain features of the problem. When this Bill was introduced a good deal of opposition was created and it had to be ultimately dropped.

There are 11 societies for consolidation of holdings in the United Provinces, and 11 in the Baroda State based on the Punjab model.

Rural Reconstruction—One of the main reasons why the achievements of the co-operative movement fall so short of the expectations of the promoters and workers lies in the extreme backwardness of the rural population and it is not too much to state that the ultimate success or otherwise of the co-operative movement lies bound up with general rural development and progress. So long as agriculturists remain steeped in illiteracy and ignorance, are heavily and almost hopelessly indebted, have a fatalistic and listless outlook on life and have an extremely low standard of living, carrying on agriculture with simple tools and implements in more or less a primitive fashion, no great approach to the ideals and the goal of the co-operative and all other rural movements is possible. The co-operative movement itself is indeed a great experiment in rural reconstruction aiming to protect the agriculturist from exploitation of the usurer, the middleman, dala and the merchant; but concentration on the credit side of the movement with but half-hearted attempts for the co-operative organisation of supply and marketing, a growing multiplicity of institutions for various purposes and above all the neglect of the educational, sanitary, medical and the social sides of village life explain very clearly why the achievements of the movement during the last 35 years have fallen far short of its objective. Rural reconstruction has, however, of late years claimed an increasing amount of attention, but so far attempts on a mass scale have not been made, what has been done has been individual effort—the efforts of individuals fired by the impulse of social service and moved by enthusiasm to utilise their opportunities to the best advantage by contributing to the welfare of the humble village folk. The best known of such centres is at Gurgaon in the Punjab. The work done there covers education, sanitation, medical relief, improvement of agriculture, female education and maternity welfare.

In the Central Provinces and Berar the local Government carried on similar work from November 1929. The later part of 1923 saw considerable impetus imparted to the cause of rural reconstruction in India. His Excellency, Sir Frederick Sykes, the then Governor of Bombay, concentrated on village uplift and carried on an intensive propaganda in that behalf which has led to the formulation of a scheme whereby the work is being carried on earnestly by District Committees under the guidance of the District Collectors, the work being co-ordinated by Divisional officers. The Punjab has appointed Mr. Brayne of Gurgaon same as Commissioner for Rural Reconstruction and Bengal has made a similar appointment, and it appears that Provincial Governments are devoting considerable thought to this very important work.

Better Living Societies—The Punjab has been responsible for introducing this very desirable type of co-operative society to promote better living among its members. There are about 300 such societies in that province and they have been doing quite important work in their own way. The societies do not collect an levy from their members, except the small entrance fee and they lay down a programme of work and make rules for carrying it out from year to year, violation of which is punishable with fine under the by-laws. Though these societies in the first instance have for their object the curtailment of ruinous expenditure on marriages and other social occasions, they have also helped in various other matters, so that apart from saving to their members thousands of rupees each year, they are contributing to the general village uplift in some measure. Some of these societies have levelled and paved and swept the village lands, some have promoted sanitation, some have induced the villagers to improve ventilation in their houses, some have repaired and roofed the village drinking well, some have arranged that all manure should be pitied, some have discouraged expenditure on jewellery, and some have stopped waste on farms. Thus in a variety of ways these societies generally have been great factors in the improvement of conditions in the life of the village. It is earnestly hoped that such better living societies will be started in large numbers in the various provinces of India or better still that the co-operative credit societies would take upon themselves the function performed by these societies and that the term better living be given as wide a connotation as possible so that the co-operative movement would be doing good to itself and the nation by carrying on the general work of village uplift, as well as its own special work of strengthening the position of the credit itself.

Urban Credit Societies—While the chief object of the co-operative movement was from the first to do service to the rural population, it must be remembered that the Act of 1912 created two classes of societies,—rural and urban—recognising thus the suitability of the co-operative method for solving the problems of an urban population also. At present there are in all 10,737 non-agricultural societies with a membership of 1,75,014. Of these 1,75,014 are urban societies, the rest being societies for rural population.

The important class of the urban population is that of the petty hant and traders, and though the co-operative banking system that has so far developed in India is quite well suited in many respects to the needs of the rural population, from the point of view of the urban population it is co-operative banking that is particularly needed. The importance of People's Co-operative Bank is proved for the benefit of the urban population, though any distinction of caste or religion is not a very great factor for the finance of the petty hant and craftsmen for the extension of trade and industries in and around the urban population. The principal object of the co-operative bank is short-term credit and it is in this way that it could the ordinary co-operative banks. In the absence of any such co-operative bank, it is also for the petty hant to finance small industries and to extend the scope of co-operative industries, which is a very considerable part in the

Industrial economy of India. Another very important function which falls to peoples' banks is the financing of the marketing of the products of the land from the field to the port or to the principal market centres and thus assist in the development of the internal trade of the country. It is only, however, in the Bombay and Bengal Presidencies that we meet with some good institutions functioning as peoples' banks. In Madras there are 1,161 non-agricultural credit societies but most of these are not real peoples' banks. The Punjab has 1,008 unlimited liability societies and only 216 with limited liability. Even here we hardly find any development of real peoples' banks. In Bengal the limited liability urban credit societies number 585 and though these societies seem to have won public confidence the more important of them are salary earners' credit societies. Some of the divisions especially the Chittagong division have several big concerns, however, working on sound lines. The question of starting Peoples' Banks in Bihar and Orissa has not yet been seriously taken in hand. In the Bombay Presidency, institutions with a working capital of Rs 20,000 and more are classed as urban banks. Since 1922 co-operators in this Presidency have been very keen on having a full fledged peoples' bank in every taluka town, for it has been realised that with the proper development of urban co-operative banks, there is no doubt that the various units will come into touch with one another and that mutual settlement of terms and co-ordinated and harmonious work will greatly assist the development of inland trading agencies. Peoples' banks are a repository of peoples' savings, a nucleus for co-operative activity and an institution giving facilities for internal remittance and it is quite necessary therefore that their share capital must be pretty large. In the Bombay Province on the 30th June 1931 there were 141 urban banks most of which are fairly successful. The total membership was 2,10,460, the working capital was Rs 5,07,412 and the reserve fund amounted to Rs 50,25,611. It can be said without exaggeration that the development of urban banking has been a distinct contribution of Bombay to the co-operative movement in India and other provinces might well follow Bombay's example in this direction.

An important variant of the urban co-operative society is the Thrift Society. The system adopted is to collect regular savings every month for a continuous period of two to four years, invest the collected amount to the best advantage and pay back to the subscriber his amount at the end of the term with interest. In many societies loans are advanced also but not exceeding a certain fixed proportion, usually $\frac{1}{2}$ of the deposit. The Punjab has about 1,000 such societies and the bulk of the members are school masters. There are about 125 thrift societies for women only having a membership of about 2,000. Madras has also more than 100 thrift societies and Bombay has half a dozen. Recently in the Life Insurance Societies have been started in Bombay, Bengal and Madras. The first such society was started in July 1929 and for a few months worked as a provident society collecting policy of Rs 150 to Rs 500 and then without medical examination, the policy was to bring life insurance within easy reach of

co-operative farming has hardly been touched and on the non-credit side the consumers' movement has made but meagre progress.

In 1928, the Royal Commission on Agriculture was appointed and co-operation formed only a part—though an important one—of its extensive enquiry. Recently, in consequence of the appointment of the provincial committees under the *Irish Central Banking Enquiry Committee* the co-operative movement in the different provinces has been surveyed. But the provincial committees, for obvious reasons, confined their inquiries to banking in relation to agriculture, small industries and trade. Thus only those aspects of the co-operative movement which have an intimate bearing on the credit needs of the population and the development of banking facilities have been examined, while the need for separate enquiries into the whole movement in the different provinces of the lines of those undertaken in C. P., U. P. and Madras and emphasised by the Royal Commission on Agriculture is still to be met. Bihar and Orissa recently got its movement examined by a committee; Travancore followed suit and Mysore too appointed a Committee which has published its report last year. The Government of Bombay convened in June 1933 a Round Table Conference of official and non-official Co-operators to discuss the problems that confronted the Movement in Bombay. As a result of this Conference, three Committees were appointed, one to examine the system of supervision over Co-operative societies by the Co-operative Unions in the Presidency, another to report on the best way to help the agriculturists in their times of falling prices and trade depression, and the third to examine the problem of extension of land mortgage banking on a Co-operative basis. These Committees have submitted their reports, their recommendations have led to a tightening up of supervision, extension of land mortgage banking and steps to meet the growth of overdue loans.

Recently the Government of Bombay appointed a small committee to inquire into the co-operative movement and to suggest how effective action could be taken to improve, extend and strengthen the movement. The report has been submitted and early Government action may be expected. The one welcome feature of the suggestions is the adoption of the multiple society as the primary unit in villages suggested by us for years and advocated strongly by the Agricultural Credit Department of the Reserve Bank of India. The reconstruction of the primary societies on these lines will be a great step in the right direction but cannot yield the fullest results unless the curse of illiteracy and ignorance is removed or mitigated by a strong and effective education in rural areas.

The growing difficulties of the Co-operative Movement throughout India in these times of depression and depression led the Government of India to hold an All-India Co-operative Conference at New Delhi on the 29th January 1934. In February 1936 and 1937, other Conferences of Producers met at Delhi and discussed the situation further.

It may also be mentioned that the Indian States were first introduced to the co-operative movement when it first came to India and the movement in some of the more important of the

States, such as Hyderabad (Deccan), Mysore, Baroda, Gwalior and Indore has made considerable progress, more or less on the same lines as those followed in the neighbouring British Indian Provinces.

The landmarks in the history of the co-operative movement in India are: the Co-operative Credit Societies Act of 1904, the Co-operative Societies Act of 1912; the MacLagan Committee Report, 1915, the provincialisation of co-operation, 1919, the establishment of institutes, unions and federations for propaganda; the Committees of Enquiry into the co-operative movement in several provinces; provincial legislation, the Report of the Royal Commission on Agriculture, 1928, Reports of the India Central and Provincial Banking Enquiry Committees, 1931; and marketing surveys, debt conciliation schemes, land mortgage banking and organisation of provincial marketing societies.

The movement has thus developed rapidly and the stages of its evolution may be briefly summarised as—agricultural credit; urban credit; central credit organisations, apex co-operative banks, propaganda by non-officials, non-credit agricultural co-operation, urban co-operative banking, long-term loans and debt redemption schemes; land mortgage banks, co-operative education, rectification and consolidation of the credit movement, organisation of supervision over primary societies and rural reconstruction.

At present the Provincial Governments have been seriously undertaking programmes in interests of the agriculturists. Money-lending bills have been passed to restrict the evils of usury and debt legislation has been or is being passed in Madras, Central Provinces, Bombay and a few other provinces so as to reduce agricultural debt and to bring it within the repaying capacity of the debtor. The strengthening and reorientation of the co-operative movement has also been taken earnestly in hand which would be by the conversion of the credit primaries into multi-purpose societies, by organising co-operative sale of agricultural produce and by promoting secondary occupations for agriculturists on a co-operative basis, change of whole emphasis of the movement from mere credit to the entire needs of the rural population. Active mass-scale efforts at rural reconstruction and at increasing the earnings of agriculturists represent the keynote of the present day task of the Co-operative Movement.

The titanic struggle in which the forces of barbarism have drawn the Empire has led concentration on war effort increasingly in this country on the part both of officials and officials and the drive that was taken earlier in hand a few years back towards the war and its problems and towards a recovery and expansion of the Co-operative movement now lacks force. But the same forces leading to an ever increasing industrialisation of India and an ever decreasing dependence on her increasing population on agriculture. In the midst of the War mill, it is hoped, the Government will undertake its march with greater vigour on the path that leads to the transformation of the debt-ridden ryots into a healthy peasantry with better farming, better business and better living, under the aegis of the co-operative movement.

These returns do not include the copies which any Auxiliary has supplied to its own or any other Auxiliaries during the year.

General Secretary for India and Ceylon The Rev. J. S. M. Hargreaves, M.A., M.B. & C. L.

BRITISH MEDICAL ASSOCIATION (Bombay Branch)—Founded 1886, to promote Medical and the Allied Sciences and the maintenance of the honour and interests of the Medical Profession. Secretary: Dr D. R. Bhargava. F.R.C.S. (Lond.) 'Dear Sir,' 25, New Queen's Road, Bombay 4.

CHILDREN'S AID SOCIETY was established in 1927 to help forward the operation of the Bombay Children Act by taking over responsibility for the maintenance of the Unruhkhadi Children's Remand Home for the organization of its staff and provision of suitable voluntary supervision with reference to the cases of boys released from detention with a view to their reformation.

the Bombay Auxiliary in 1813, the Madras Auxiliary in 1820, the North India Auxiliary in 1845, the Punjab Auxiliary in 1860, the Bangalore Auxiliary in 1875 and the Burma Agency was founded in 1880. The Bible or some portion of it is now to be had in over 100 different Indian languages and dialects and the circulation throughout India reached 731,246 issues in 1911. The Bible, Testaments, and Portions in the various vernaculars are sold at rates which the very poorest can pay, and at considerable loss to the Society. Gifts of English Scriptures are made to students who pass University examinations the New Testament and Psalms to Matriculates and the Bible to Graduates. (These gifts have been discontinued at present on account of the war)

Portions of Scriptures in the important vernaculars have been prepared in raised type for the use of the Blind and large grants of money are annually given to the different Missions, to enable them to carry on Colportage and Bible Women's work. Besides the British and Foreign Bible Society, there is Bible work carried on in India, and Burma in a much smaller way by the Bible Translation Society—which is connected with the Baptist Missionary Society—the National Bible Society of Scotland, the American Bible Society and the Tranquebar Tamil Bible Society.

abolish the organization with a view to the Government. Its work is to provide destitute children living from India, juvenile offenders from 3-20 of age and children 10 years of age and over, all of whom are under the Indian Child Welfare Act, Bombay City, India. President H. H. P. is the President of the organization.

grant of land in a Himalayan pine forest in Daburpur (Simla Hills) from H. H. the Maharaja of Patiala for a Sanatorium for Consumptives. His Highness also gave a donation of Rs. one lakh. In 1911 by special permission the Sanatorium was named "The King Edward VII Sanatorium". It has its special water works known as the Lady Hardinge Water Works, presented by the late Sir Chinubhai Mahdaval, Bart., of Ahmedabad. The Sanatorium has a Guest House: The Nisharwan Adul Guest House for visitors to Dharampore. It has accommodation for 100 patients including the special Punjab Block built from a grant of the Punjab Government and reserved for European patients. Most of the blocks and cottages are built by Parsis. The Sir Ratan Tata Charities donated large sums for the upkeep of the sanatorium from 1922 and in 1930 endowed the X-Ray and Electric Light Departments at a cost of Rs. 35,000. The Sanatorium has its own dairy and is called the Bai Pirojbai R. H. Patil Dairy. The Sir Chinubhai Mahdaval Dispensary has an out-patient department. The Recreation Hall is called "The Sir Gajinder Singh Recreation Hall" after the name of the late Maharaja of Patiala. Rs. 16,000 have been spent on the rent the site buildings etc., and the annual expenditure is about Rs. 56,000. The Senior and Junior Medical Officers are in charge of the Sanatorium. The office of the Society is situated at the Seva Sadan Building, Gandhi Bombay. Mr. S. P. Wadia is the Hon. Secretary and Mr. Piroshah P. Mahesh is the Hon. Treasurer.

EMPLOYERS' FEDERATION OF INDIA.—The Employers' Federation of India was registered in 1933 with the following among its main objects:—To promote and protect the interests of employers engaged in the trade, commerce, industries and manufactures of India, to promote or oppose legislation or other measures affecting their interests, to collect and circulate statistics and other information of interest to employers, to appoint legates and advisers to the International Labour Conference and to formulate opinions on the subjects coming for discussion before such bodies, and to present or oppose their recommendations, to secure concerted action on all subjects relating to the interests of its members; to counsel and support well-considered schemes for the welfare and uplift of Labour and establish harmonious relations between Capital and Labour; and to carry on propaganda for the purpose of educating public opinion with regard to the character, scope, importance and needs of industrial enterprises represented by the Federation.

Most of the leading employers' organisations in India are members of the Federation.

The officers for the year 1942 are —
President, Mr. A. B. Datta, D. J. P. D. P.
Vice-President, Mr. J. L. Datta, D. J. P. D. P.
Secretary, Mr. J. L. Datta, D. J. P. D. P.

The office of the Federation is at present located at 101, 102, Collegegate, Bombay.

EUROPEAN ASSOCIATION.—The European Association was established in 1883 under the title of "The European and Anglo-Indian Defence Association" and was re-established in 1912 under the title of the European Defence Association, the present title being adopted in 1913. The Association has for its major object the organisation of European influence in the political life of India. The Head Office (Central Administration) is in Sassoon House, 4 Lyons Range, Calcutta. *President* C. P. Lawson, M.L.A. *Vice-Presidents* M. A. F. Hirtzel, M.L.A. and A. McIntosh. *Hon. General Treasurer* R. S. Arthur, *General Secretary* Mrs. M. R. Grenyer.

INDIAN ACCOUNTANCY BOARD.—The Indian Accountancy Board is constituted under the Indian Companies Act VII of 1913-38, which was specially amended in 1930 in order to give effect to an All-India scheme of registration of public accountants and auditors and the creation of an Indian Accountancy Board to advise the Governor-General in Council on all matters relating to the regulation and control of the accountancy profession in India.

From 1914 to 1918 Local Governments granted both temporary and permanent auditors' licenses to persons to act as auditors of Public Companies, as the minimum qualification required, in view of the extensive bank failures of 1913. From 1916 to 1932 the Local Governments, and from 1932-34 the Central Government, granted such licenses to persons who had been awarded the Government Diploma in Accountancy, on the recommendation of the Accountancy Diploma Board of Portland.

WESTERN INDIA NATIONAL LIBERAL ASSOCIATION—(Founded in 1919)—The Association was formed, in pursuance of clause (b) of Resolution XI of the First Session of the All-India Conference of the Moderate Party, with a view to do sustained work for the political progress and the moral and material welfare of the people; to give expression from time to time to the considered opinion of the Party on matters of public interest; and to inform and educate public opinion in this presidency in support of its views, policy and methods.

The objects of the Association are the attainment by constitutional means of full Dominion Status for India at the earliest possible date. For the promotion of these objects, the Association shall adopt constitutional methods of agitation and work and shall foster a spirit of broadminded liberalism based on principles of liberty, equality and fraternity among the different classes and communities of the people. For the fulfilment of these objects the Association shall carry on educative and propagandist work by means of leaflets, pamphlets and other publications, (a) representations to Government, (b) meetings or conferences, lectures and all such methods as may be deemed practicable and expedient to educate public opinion, and (c) for advancing interests of the Liberal Party by organising and influencing elections to the legislatures, Central and Provincial, to Municipalities and District Local Boards.

The affairs of the Association are conducted by a Council consisting of 46 members who are elected every two years.

President. Sir Chimanlal H. Setalvad, K.C.I.E., LL.D. **Vice-Presidents.** Sir Cowasji Jehangir, K.C.I.E., M.L.A. Sir Vithal Chandra Varkar, Kt., M.L.A. and D. G. Dalvi **Treasurers.** J. R. B. Jeejeebhoy, A. D. Shroff and P. S. Bakhale.

Assistant Secretary. V. R. Bhende.

Office:—107, Esplanade Road, Fort, Bombay.

WOMEN'S INDIAN ASSOCIATION ("SESHADRI," MYLAPORE, MADRAS)—This Association was started in Madras in July, 1917, with aims of service.

Aims and Objects.—To present to women their responsibilities as daughters of India. To secure for every girl and boy the right of education through schemes of compulsory primary education, including the teaching of religion. To secure the abolition of child-marriage and other social evils. To secure for women the vote for Municipal and Legislative Councils on the same terms as it is or may be granted to men. To secure adequate representation of women on Municipalities, Taluk and Local Boards, Legislative Councils and Assemblies. To secure for women the right to vote. To establish equality of rights and opportunities between men and women. To help women to realise that the future of India lies largely in their hands; for as wives and mothers they have the task of training, guiding and forming the character of the future rulers of India. To band women into groups for the purpose of self-development and education and for the definite service of others.

It has 48 branches and over 4,000 members. Each branch is autonomous and works according to the needs of the locality.

The Association grants scholarships to girls, interests women in maternity and child-welfare work in the uplift of the depressed class and in other social and welfare activities for the general betterment of Indian society; has worked successfully for securing franchise for women in India, (see pages 93 and 94 of the Simon Report, Vol. II) and compulsory education for girls and also actually helped in the passage of Child-Marriage Restraint Act in the Assembly and the Acts for the Suppression of Traffic in women and children and the abolition of the Devadasi system, in the local legislature. The Association is an All-India body and has branches all over India, the largest being the Bombay Branch. The Association is affiliated to all the important progressive women's associations in India and throughout the world. It was the initiator of the All-India Women's Conference and the First All-Asian Women's Conference at Lahore. The Madras Seva Sudan and the Madras Children's Aid Society, and the Montessori School owe their origin to the efforts of this Association. The Association opened a Rescue Home to facilitate the working of the Rescue Section of the Immoral Traffic Act, enforced by Government. The Home was opened on 21st March 1934 by Lady Beatrice Stanley and is now under the Madras Vigilance Association.

YOUNG MEN'S CHRISTIAN ASSOCIATION.—

This Association, which was founded by the late Sir George Williams in 1844, is now a world-wide movement, well established in almost every country in both the hemispheres. The aim of the Association is, through its religious, social, educational, and physical work to answer the fourfold—spiritual, social, mental and physical—needs of young men and boys.

The Young Men's Christian Association, though relatively new to India, is spreading rapidly. The 'local' Associations are autonomous and governed by local Boards of Directors. These Associations in Convention elect a General Board which is responsible for the supervision and expansion of all forms of the Association work in India, Burma and Ceylon.

There are now 65 Associations in large towns and cities and many village Associations with many thousands of members of all races and creeds. The following Associations own one or more buildings which serve as the local headquarters: Allahabad, Alleppee, Bangalore, Bombay, Calcutta, Calicut, Coimbatore, Colombo, Coonoor, Delhi, Galle, Hyderabad, Jubbulpore, Kandy, Karachi, Kunnankulam, Kottayam, Lahore, Madras, Madura, Nagpur, Naini Tal, Ootacamund, Poona, Rangoon, Risalpur, Salem, Secunderabad, Simla, Trivandrum, Wellington. The others use rented or rent-free buildings.

The work of the National Council and of the local Association is carried on by numerous voluntary workers and Committees, assisted by 90 specially trained full-time Secretaries.

A feature of the Y. M. C. A. in India is the international character of its Secretariat. It is made up of 4 Americans, 2 Canadians, 6 Englishmen, 3 Scotsmen, 1 Swedish, 1 Anglo-Indian, 3 Burman and 70 Indians and Ceylonese.

The work of the National Council (excluding that of the 85 local Y. M. C. A.s) called for a Budget of Rs 71,029 and 12 annas in 1940. Of this sum Rs 21,000 had to be raised from the public in India.

The Headquarters of the National Council is 5, Russell Street, Calcutta. The officers are :—

Patron—His Excellency The Most Hon. The Marquess of Linlithgow, K.T., P.O., G.M.S.I., G.M.I.E., O.B.E., D.L., T.D., Viceroy and Governor-General of India.

President of the National Council—Dr S. K. Datta, Forman Christian College, Lahore.

National General Secretary of India, Burma and Ceylon—D. F. McClelland, 5, Russell Street, Calcutta.

The Bombay Association now possesses four well-equipped buildings—Wodehouse Road, Lamington Road, Rebsch Street and Reynolds Road. The General Secretary is Mr Joseph Callan. In connection with each branch there is a well-managed hostel providing accommodation for over 200 young men. These branches are managed by a Committee working under the Board of Directors. Each Branch organisation directs many and varied activities designed to meet the physical, spiritual, social, and mental needs of their members. A Welfare Service agency for labourers started in 1924 is now conducting eight centres, serving mill workers, Municipal mental employees, Port Trust and Railway employees. A programme of education, lectures, physical culture, play and general uplift, profitably fills up the leisure time of the workers and their families. The Association is responsible for the direction of three public playgrounds in the city, which are financed by the Municipality.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION OF INDIA, BURMA AND CEYLON—This Association founded in the year 1875 was organised nationally in 1896.

The aim of the Association is to unite women and girls of India, Burma and Ceylon in fellowship and mutual service for their spiritual, intellectual, social and physical development. The Association exists for women and girls of all communities. There are the following branches—General C.O., Schoolgirls C.O., Fellowship Groups, 23, Girl Guide Companies, 25, and Blue Bird Hostels, 11. The needs of girls are met by physical drill, recrea-

tion, clubs and classes, lectures, commercial classes, Bible Study and devotional meetings, and meetings for social intercourse. Hostels, some of them holding as many as 70 girls, are established where there is a demand for them and the Association, at present owns 21, including 8 Holiday Homes in the hills. These hostels accommodate working girls, teachers, nurses, students and apprentices. Rates vary according to the residents' salaries and accommodation, though all equally receive the benefits of a comfortable home, good food and wholesome surroundings. The Holiday Homes provide cheap holidays in healthy surroundings and also accommodate girls who work in the hills during the hot season. In addition to Holiday Homes, Summer Conferences are held annually at Anandagiri, the Conference centre owned by the Association, in Ootacamund and at Doon View, Mussoorie. Special Girls Camps are arranged from time to time in many centres.

Traveller's aid work is done in the large ports, especially Colombo, and a large number of transient guests and visitors are accommodated in the Homes in these centres. The Association also runs an Employment Bureau through the agency of which many girls find positions. The commercial schools train girls for office and business life. These large Associations are manned by trained Secretaries, some of whom come from Great Britain, America, Australia, New Zealand and Canada. Though the majority of staff members are found and trained in India. In many of the smaller branches where the work is of a simpler nature, it is carried on by voluntary workers who render faithful service year by year.

The Association, which is affiliated to the World's Young Women's Christian Association, is international and interdenominational. Full membership is open to all who declare their faith in our Lord Jesus Christ and desire to serve others in His spirit of love. A full membership is open to any girl or woman, regardless of what her religious or social views are, who wishes to join the work with fellowships of the Y. W. C. A. and declare her sympathy with its purpose, and to share in its activities.

The Patroness of the Association is Her Majesty The Marchioness of Linlithgow.

Copies of the Annual Report and other matters can be obtained from the Secretary, Y. M. C. A., 5, Russell Street, Calcutta. The Association is open to all who are interested in the work of the Y. W. C. A. and who wish to contribute to its work.

ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA.

The Association of British University Women in India was established in 1913. Its objects are —

(1) To facilitate intercommunication and co-operation between women of any nationality who are members of the universities of the United Kingdom, resident in India

(2) To provide a means of keeping in touch with the universities of the United Kingdom, by communication with the British Federation of University Women, and otherwise as may seem expedient.

(3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university women.

Membership is open only to those women who hold degrees in any university in the United Kingdom, or hold Oxford or Cambridge Honours Certificates: but Associate Membership is open to women who have studied at a British University for two years and each may admit as Honorary Members who have advanced the higher educational interests of women.

Association of British University Women
two branches. The addresses of the Honorary Secretaries are as follows —

Hony Local Secretaries.

Bombay Mrs W Martin, M.A., 10 Gowalia Tank Road, Bombay 7

The Delhi and Punjab Branches came into existence in 1918. The Calcutta and Bombay Branches are influential and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. All Branches have, for instance, made investigations on behalf of the Education Department, Government of India, the Calcutta University Commission, etc., and have supplied, through the International Federation of University Women, information on Secondary Education in India to the League of Nations. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products

The Bombay Branch has done good work in connection with the formation of the Social Purity Committee and has, through a special sub-committee, organised public meetings for women on subjects affecting their interests about which legislation was being or had been recently enacted.

A valuable part of the work of the Association was the establishment of Women's Employment Bureaus in Calcutta and Bombay. They were remarkably successful. The Bombay Bureau was eventually merged into the employment Bureau established by the Women's Council; the Calcutta Bureau has ceased to exist.

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

This Association is Federated to the "Federation of University Women in India," and thus forms one of the Units of the Indian Federation.

Federation of University Women in India.

The Federation of University Women in India unites various Associations of University Women throughout the country, its object being to promote friendship and understanding among University Women of all races resident in India and to further their common interests. It is affiliated to the International Federation of University Women which has a membership of over 60,000, representing thirty-three nations and which seeks by scholarships, exchange of teachers, group discussions and conferences to unite in common action and understanding the University women of the world.

The Federation in India is controlled by a Central Committee at present located in Bombay. It has branches in Bombay, Kodaikanal and Lahore, while women, eligible for membership, resident in places where no branch exists can be enrolled as "Scattered Members."

Church Organisation in India.

ANGLICAN.

Down to March 1st, 1930, the Church of England in India (and Ceylon), though possessing its own bishops and Metropolitan, was in the eyes of the law an integral part of the Church of England, and subject to the general supervision of the Archbishop of Canterbury. By the Indian Church Act and the Indian Church Measure passed by Parliament in 1927 this legal connection was severed, and on March 1st, 1930, for the fixing of which date provision was made by the Indian Church Measure, the Church of England in India and in Ceylon, in future to be known as The Church of India, Burma and Ceylon, and, for short, The Church of India, (or of Burma or of Ceylon, in those countries) became wholly responsible for the management of its own affairs, although, as it states in the Preamble to its Constitution, it has no intention or desire "to renounce its obligations to the rest of the Holy Catholic Church and its fundamental principles, but on the contrary acknowledges that if it should abandon those fundamental principles it would break spiritual continuity with its past and destroy its spiritual identity."

Anglican work in India dates from the first establishment of the East India Company in the 17th Century on the shores of India at Surat, Madras, and Bombay, where the servants of the Company were ministered to by a continuous succession of chaplains. The first chaplain was the Revd Peter Rogers, Surat, 1612. The first church built was St George's, Madras, in 1680, followed by Bombay Church, now St Thomas' Cathedral, in 1716. In South India the work of Danish and German Lutheran missionaries was assisted by the English S P C K (Society for the Promotion of Christian Knowledge), but missionary work was not attempted by the Church itself till the beginning of the 19th Century.

Like all other branches of the Anglican Communion the Church of India is episcopal. The first bishopric was not, however, founded until 1814 when the see of Calcutta was set up, the first bishop being Thomas Fanshaw Middleton. His jurisdiction at first included not only British India but the British settlements in Australia, the Straits, the Cape and St Helena's. At the same time India was divided into three Archdeacons, and two of these, Madras in 1835 and Bombay in 1837, were later erected into bishoprics. The three dioceses thus formed have been repeatedly subdivided, until in 1930 there were fourteen dioceses, the dates of their creation being as follows: Calcutta 1814, Madras 1835, Bombay 1837, Colombo 1845, Lahore 1877, Rangoon 1877, Travancore 1879, Chota Nagpur 1890, Lucknow 1893, Tinnevely 1896, Nagpur 1903, Dornakal 1912, Assam 1915, Nasik 1929. Plans are in hand for the formation of two more dioceses out of Lucknow and Calcutta. Rangoon, Lahore and Dornakal hope also to be divided shortly. There are assistant bishops in the dioceses of Lahore, Calcutta and Dornakal.

Rules for the government of the Church are contained in its "Constitution, Canons and Rules" adopted by its General Council in

session at Calcutta in 1930. All clergy before receiving a license from their bishop make in addition to an oath of canonical obedience to their bishop, a declaration accepting the Constitution, Canons and Rules, as well as a declaration concerning the faith and formularies of the Church. Lay members of the General and Diocesan Councils also make declarations of assent and acceptance. The government of the Church is through these councils, the General Council being for the whole ecclesiastical province of India, Burma and Ceylon. Its membership consists of the bishops of the province, and houses of clergy and laity elected by the diocesan councils. The Diocesan Councils consist of the Bishop of the Diocese and all its clergy, together with lay representatives elected by the parishes. To exercise a vote in the election of lay representatives parishioners must be adult communicant members of the Church. It is open to a diocese to add to these qualifications that of having contributed some specified amount to the expenses of the Church. In addition to these councils every parish has a Church committee or council with a recognized constitution and these are in many areas organised into district Church councils, particularly where Indian parishes are numerous. Again in addition to these councils the bishops of the province meet in Synod, with clerical and four lay assessors if a matter of faith or order is being dealt with, and the bishop of a diocese can at any time hold a Synod of his clergy. Determinations on matters of faith and order are made only by the House of Bishops of the General Council and cannot be made subjects of disciplinary action unless adopted in the form of a canon by the whole Council.

The additional title of Metropolitan was given to the Bishop of Calcutta when the sees of Madras and Bombay were formed. It is an ancient title similar to archbishop and indicates that its holder has jurisdiction over the other bishops of the province. Before consecration a diocesan bishop takes an oath of canonical obedience to the Metropolitan. Under the Constitution of the church bishops are elected by the diocese, subject to confirmation by the bishops of the province. In the Constitution, Canons and Rules, the Constitution consists of Declarations laying down the position of the Church of India as a part of the One, Holy, Catholic and Apostolic Church; the Canons lay down principles of government and organisation, the Rules arrange in detail for the carrying out of the Canons, and are more easily altered or added to than the Canons. The salaries and allowances of the Bishops of Calcutta, Madras and Bombay, have from the foundation of those sees been paid out of the Revenues of Government, as also in part those of the Bishops of Lahore, Rangoon, Lucknow and Nagpur. Down to 1930 these bishops were appointed by the Crown. Since 1930 the bishops of these seven dioceses are elected, and when the bishops occupying the first three sees in 1930 vacate their sees their successors will be paid in part only from a grant from Government for the

episcopal supervision of its establishment of chaplains. For the other seven bishoprics, and for any others, set up, Government is in no way responsible.

The Ecclesiastical establishment of the Government of India is an inheritance from the East India Company. That Company from the first provided chaplains for its servants. The chaplains of the present establishment are maintained for ministration to the Government's British born servants, civil and military. They are chosen by the Indian Chaplains Board sitting in London, are appointed by the Secretary of State, are posted to Dioceses by the Governor-General in consultation with the Metropolitan, and within their Dioceses are posted to stations by the Provincial Governor on the recommendation of the diocesan bishop. Their pay and allowances are wholly met by Government. In spiritual matters they are subject to the supervision and jurisdiction of their bishop, and while Government servants, civil and military, are their primary charge, they are the parish priests of the chaplaincies to which they are appointed and are responsible for the care of all members of the church in their parish except in so far as the Indian Members of the Church are cared for by missionaries or Indian clergy. Besides providing chaplains the Government of India, again following the practice of the East India Company, has provided or assisted in the provision of churches and their maintenance, and also of cemeteries where numbers do not warrant the provision of an Establishment. chaplain Government has assisted in the provision of clergy by grants-in-aid, and when from time to time the number of Establishment chaplains has been reduced special grants-in-aid have been granted. The Establishment and all grants-in-aid are subject to revision and are in fact revised from time to time. The latest retrenchment carried out in 1940, reduced the number of chaplains by twelve, and savings effected along with those under other heads, amounted to Rs 187 276.

(The Ecclesiastical establishment includes besides Anglican chaplains, Church of Scotland, Free Church, and Roman Catholic chaplains, for ministrations to members of those communities, and churches and grants-in-aid are provided or given on the same principles as for Anglicans.)

The special interests of those parishioners whose domicile is England in the continued use, should they so desire, of the services of the English Prayer Book which the Church of India is now free to alter at its discretion, are safeguarded by certain of the Government's interests together with other matters concerning the undertakings and relation of the Church of India to its chaplains and the Church are provided for by a set of Statutory Rules drawn up under the Indian Church Act. Members of the Church of England or any of the branches of the Anglican Communion are, while resident in India, full members of the Church of India, and are a most important part of the Indian Church, their numbers still in some places exceeding those of Indian members, and some stations being still exclusively European, although in the Church as a whole the number of Indian members greatly exceeds that of

Europeans. European clergy numbered 389 in 1939, and Indian clergy 710. Exact later figures are not available. There are no racial distinctions whatever in the Church. Indian clergy frequently preach or celebrate for European congregations, and in a few instances are in permanent charge of European parishes. The Indian laity though usually preferring services in their own languages are every where free to attend English churches, and to be enrolled, if they wish, as parishioners.

The education of European children, and more particularly the children of the Domiciled and Anglo-Indian community, has from early days been a concern of the Church. In addition to day-schools it has established over 70 boarding-schools for boys and girls, many of them in hill stations. The provincial Governments assist these schools with grants-in-aid both for building and current expenditure, just as they do all other schools, according to the rules of the education codes. The schools are inspected by Government inspectors. Indian boys and girls are admitted to these schools, but the number that may be taken is limited to a percentage fixed by the local Government. An appeal issued by the Archbishop of Canterbury in 1938 for the endowment of these schools had produced by June, 1939, just under £30,700. The fund is known as The Anglo-Indian Schools Fund and is still open for the receipt of donations. Indianisation of Government services, especially of the railways, customs and post and telegraph departments has severely hit the Domiciled and Anglo-Indian community, and the ability of parents to pay fees is steadily decreasing. Hence the urgent need for increased endowments. The existing endowments of all the schools yield an income of less than £1 per child per annum.

(The Church of India is not the only community responsible for European education in India. The Roman Catholics, the Church of Scotland and the various free churches provide schools for their children, and receive similar assistance from Government.)

The Government of India Act of 1935, section 83, provides for the continuance of government grants to European schools at a total figure in each province not less than the average figure for the ten years preceding 1933, unless the whole grant of a government to education is reduced, when the grant to European education may be reduced in proportion. And, as a result of the recommendations of a sub-committee of the Round Table Conference, provincial boards for Anglo-Indian and European Education have been set up, and also an Inter-Provincial Board, to consider and advise Governments on matters connected with the schools.

Missions.

In Malabar, on the south-west coast of India, there have been Christians certainly from the 6th century, probably from the 4th century and possibly from the 1st century A.D. They are called "Syrian" Christians owing to their connection with the Church in Syria. They do not appear to have attempted to spread the Christian faith in India. The Portuguese may therefore be regarded as the first missionaries

in India, and from their arrival at Goa the Franciscans and Dominicans who accompanied their fleets in large numbers threw themselves with great activity into the work of evangelism. The formation of the Society of Jesus led to one of its first members the famous St Francis Xavier being sent to Goa, where he arrived in 1541. Under his leadership the preaching of Christianity was carried on with great earnestness. The missionary work of the Roman Catholic Church thus begun has been continued, and at the present day the number of Indian members of that Church is given as 2,113,659 (Census 1931), to which may be added 654,939 Syrian Christians attached to the Roman Church. The number of independent Syrian Christians (Census 1931) is given as 525,607.

Protestant missions did not begin till the 18th Century, and as missionaries were not allowed to establish themselves in the Company's territories, they worked from Danish territory and in Indian States. These missionaries were Lutherans, but as stated above, were in the latter part of the 18th Century assisted with funds from England. Famous men among them were Ziegenbalg, Kiernander, Schultze and Christian Friedrich Schwarz. By the end of the 18th Century it is believed that there were in South India about 30,000 Lutheran converts. In 1800 the famous Baptist trio, Carey, Marshman and Ward established themselves at Serampore in Bengal (Carey had come to India in 1793). Men of humble origin and education, one was a cobbler, one a ragged-school teacher, and one a printer, they displayed great ability and enterprise, and threw themselves not only into evangelism but into the scientific study of India, its languages and culture, and its flora and fauna. Books and translations poured from their printing press. Carey was made professor of Sanscrit in Lord Wellesley's College for the training of civil and military officers.

The 19th Century saw a great increase in missionary effort of every sort. This was due to the opening of the Company's territories to missionaries by the Government of India Act of 1813, and it was only after that date that Anglican (Church of England) missionary Societies took up work in India, namely the Church Missionary Society and the Society for the Propagation of the Gospel, by sending as missionaries ordained clergy of the Church of England, those hitherto subsidised or sent by the S P O K (see above) being Lutherans. The first missionaries to arrive after the passing of the Act were American Congregationalists. The London Missionary Society were also early in the field and Presbyterians from America and Scotland soon followed. In the course of the century India became covered by a network of missions, engaged not only in evangelism, but in educational work in schools and colleges, in medical work and in industries. Among famous names of missionary educationalists are those of Dr. Duff of Calcutta, and Dr. Wilson in Bombay. In the education of women missions may fairly claim to have taken the lead. The total number of missionary societies from Europe and America working in India is now over 150. For consultation and common action there is a National Christian Council with headquarters at Nagpur, first organised in 1914, and in connection with

this there are 10 Provincial Christian Councils. Membership of these councils is by election or appointment by local churches and mission councils.

The Directory of the National Christian Council shows that the missions connected with it have 53 Colleges, 315 High Schools and about the same number of middle schools, 103 Teachers training institutions; 217 industrial schools, and very many primary schools; 250 hospitals and about the same number of dispensaries, 68 Leper institutions and 11 Tuberculosis Sanatoria, and 15 homes for the Blind or Deaf, 64 Agricultural Settlements, 31 Co-operative Societies; 40 printing presses; 36 miscellaneous industries. The Census of 1931 gives 3,002,558 as the total number of Protestant Christians in India, making the total number of Christians, including Roman Catholics, Romo-Syrians and Syrians (see above) 6,296,763, included in this total are 167,771 Europeans and 138,758 Anglo-Indians. The figures of the 1941 Census have not yet been published.

Reunion.

Since the Great War there has been widespread interest in India in the subject of the reunion of the separated Christian bodies. In South India the movement for union was started in 1919 by a group of Indian clergy. This has led to the preparation of an elaborate scheme of union the parties to which are Anglicans, Methodists and the already united South Indian United Church which consists of Presbyterians and Congregationalists. Much time and thought have been given to the preparation of the scheme, the problem presented by the task of reconciling Anglican, Presbyterian, Wesleyan and Congregationalist principles being of extreme difficulty.

If the scheme is accepted the four southern dioceses of the Church of India, Madras, Dornakal, Tinnevely and Travancore will be separated from the rest of the province and form part of the united Church, which is pledged to maintain episcopal government. The general principles of the scheme were approved by the Lambeth Conference (of Bishops of the Anglican Communion) in 1930, and it has now (1942) been submitted to the Diocesan Councils for their approval or otherwise, after which it will be submitted to the General Council.

The existence of a united church in South India consisting of Congregational and Presbyterian elements has been mentioned in the preceding paragraph. In north India there has been in existence for some years The Church of Northern India, consisting of similar elements. Since 1929 a further movement for a wider union in north India has been considered at a series of Round Table Conferences to which the Church of India has sent representatives.

Anglican Missions

In addition to the two principal missionary societies of the Church of England, the S P G (Society for the Propagation of the Gospel in Foreign Parts) and the C M S (Church Missionary Society) already mentioned, whose missionaries in India, Burma and Ceylon number (1930)—

	Ordained.	Laymen.	Women.	Total.
S.P.G.	79	23	167	269
C.M.S.	65	28	127	220+60

married women, there are also certain smaller, but important missions, namely The Oxford Mission to Calcutta working in Calcutta among students and also at Barisal, the Cowley-Wantage-All Saints Mission, working in Poona and Bombay, the Dublin Mission at Hazaribagh, the Cambridge Mission at Delhi, the Cawnpore Brotherhood, the Scottish Episcopal Church Mission, at Chanda C.P. the Bible Churchmen's Missionary Society and Nagpur missionaries in the Lucknow and Nagpur and Rangoon dioceses), the Christa Seva Sangha, Poona, 1927 and the Canadian Church Seva Sangha, Poona 1934, the Canadian Lahore Mission (4 ordained missionaries in the Lahore Diocese), the Church of England Zenana Missionary Society, in several dioceses, the Sisters of St Margaret (East Grinstead) in the Colombo diocese, Sisters of St. Denys (Warminster) in the Chota Nagpur Diocese, Sisters of the Holy Family, Naini Tal, the Winchester Brotherhood, Mandalay, and the Sisters of the Church, Mawmyo. The first two of these, and several of the others in the list, consist of communities of priests or sisters under religious vows. Members of the brotherhoods mentioned are in most cases not under life vows. The work and influence of these communities is a most important element in the life of the Church of India.

The Church of India has taken its full share in educational, medical and industrial work in India. Among colleges founded and managed by its missionaries St Stephen's, Delhi, St

John's, Agra, St Columba's, Hazaribagh, Christ Church, Cawnpore, and Trinity College, Cawnpore are well-known. A college at Trichinopoly has been amalgamated with the inter-denominational Madras Christian College. For the training of Indian and Anglo-Indian ordination candidates Bishop's College, Calcutta, serves the whole of India. In the various language areas are other colleges for the training of ordinands and lay church-workers through the medium of the local language. Among hospitals made famous by the work of the doctors in charge are those at Quetta (Sir Henry Holland) Bannu (the late Dr. Pennell) and St Stephen's Delhi (for women). The C.M.S. High School at Srinagar is distinguished among the many High Schools of the Church for the methods adopted to develop manliness and enterprise in the boys. Cawnpore in the north and Nazareth in the extreme south are well-known centres of industrial work and training. The Diocesan Press at Madras was built up into a very large and efficient institution by a retired C. M. S. Missionary. At Hubli, in the Bombay Diocese, S. P. G. missionaries have, since 1910, done extremely good work in charge of an Industrial Settlement (for the reformation and training of members of criminal tribes) committed to their care by Government.

Exact figures of the membership of the Church of India are not obtainable. From figures available there appear to be about three-quarters of a million (750,000) of which about a lakh and a half (150,000) are European and Anglo-Indian, dioceses, with large numbers of Indian Christians are Dornahat, Tinnevely, Travancore, Lahore, Madras, Calcutta, Lucknow, and Chota-Nagpur. The number of clergy, European and Indian, has been given in an earlier paragraph.

THE ROMAN CATHOLIC CHURCH.

The Catholic community is composed of the following elements.—

- (1) The "Syrian" Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. They were brought under allegiance to the Pope by the Portuguese in 1599, and placed first under Jesuit bishops and then under Carmelite Vicar-Apostolics. They are at present ruled by an Archbishop and three suffragan Bishops of their own Syrian rite.
- (2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.
- (3) European immigrants at all times, including British troops.
- (4) Modern converts from Hinduism and Animism in recent mission centres.
- (5) Recent converts from the Jacobite community in Malabar, of which 3 Bishops, 71 priests and some 28,000 laity have been received into the Catholic Church.

The Portuguese mission enterprise, starting after 1500, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation *de propaganda fide*, till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "Padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886 (amended by the Agreement of 1928, abolishing "double jurisdiction"). At the same time the whole country was placed under a regular hierarchy, which after subsequent adjustments now stands as follows:—

Under the Sacred Congregation of Extraordinary Ecclesiastical Affairs:—

The archbishopric of Goa and Damaun (having some extension into British territory) with suffragan bishoprics at Cochim and Mylapore (both in British territory).

Under the Sacred Congregation of Oriental Churches:—

The archbishopric of Ernakulam, with suffragan bishoprics of Changanacherry, Kottayam and Trichur.

The archbishopric of Trivandrum, with suffragan bishopric of Tiruvella.

Under the Sacred Congregation of Propaganda Fide:—

The archbishopric of Agra, with suffragan bishoprics of Allahabad and Ajmere and the Prefecture Apostolic of Indore.

The archbishopric of Bombay, with suffragan bishoprics of Poona, Mangalore, Calicut, Trichinopoly and Tuticorin, and the Missions of Ahmedabad and Karachi.

The archbishopric of Calcutta, with suffragan bishoprics of Ranchi, Dacca, Chittagong, Krishnagar, Dinajpur, Patna and Shillong and the Prefecture Apostolic of Sikkim.

The archbishopric of Madras, with suffragan bishoprics of Nellore, Hyderabad, Vizagapatam, Nagpur, Bezwada and Cuttack, the Prefecture Apostolic of Jubbulpore, and the Mission of Bellary.

The archbishopric of Pondicherry (French), with suffragan bishoprics of Mysore, Coimbatore, Kumbakonam, Salem and Malacca.

The archbishopric of Delhi and Simla, with suffragan bishopric of Lahore and the Prefectures Apostolic of Kashmir and Multan.

The archbishopric of Verapoly, with suffragan bishoprics of Quilon, Kottar, Trivandrum and Vijayapuram.

The archbishopric of Colombo (Ceylon), with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.

Three Vicariates Apostolic and one Prefecture Apostolic of Burma.

The European clergy engaged in India almost all belong to religious orders, congregations or mission seminaries, and in the great majority are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number over 2,000 besides which there is a body of secular clergy mostly Indian, etc., numbering about 2,400, and over 9,000 nuns. The first work of the clergy is parochial ministration to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people; their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, Loyola College, Madras, teaching university courses; besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education in 1936 exceeded half a million. As to missionary work proper, the country is covered with numerous modern mission centres, among which those in the Punjab, Chota-Nagpur, Krishnagar, Gujerat, the Ahmednagar district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplaincies are derived mainly from Europe, that is, from the collections of the *Society for the Propagation of the Faith* and of the *Holy Childhood*,

helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism, except for infants or at point of death, is administered except after careful instruction and probation. This, while keeping down the

record, has the advantage of guaranteeing solid results.

The Holy See is represented by a Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev. Archbishop Kierkele, D.D., appointed in 1931.

THE CHURCH OF SCOTLAND.

The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr Bryce landed in Calcutta, and organised a congregation of his Scottish fellow countrymen. The centenary of the churches in the three Presidency towns was celebrated, Calcutta, 1911, Bombay, 1919, Madras, 1921. There are 15 chaplains on the staff. Some of these are attached to the Scottish battalions in India, while the others minister to the civil population of the towns where they are stationed and to those living in the smaller outstations in their respective areas. In addition to the regular establishment, there are a number of ministers throughout India who are maintained by the various communities to whom they minister and by the Additional Clergy Societies in India. Missionaries of the Church also maintain regular services in English in many centres. There are three Presidency Senior Chaplains in charge of this branch of the Church work in Bengal, Bombay and Madras respectively.

The Mission work of the Church of Scotland dates from 1820, when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open schools where English was made the medium of instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. In the Punjab Evangelistic work is being carried on from eight centres, and the baptised Christian community now numbers over 30,000. Work commenced in Darjeeling in 1870 is now carried on throughout the whole Eastern Himalayan district, and there is a Christian community there of over 15,000. In the eight mission district of Calcutta, the Eastern Himalayas, Madras, Santal, Rajputana, Nagpur, Western India, and the Punjab there were at the end of 1938 over 70,000 baptised Indian Christians. In connection with these missions the

Women's Association of Foreign Missions does invaluable service in school, medical and zenana work, having in India 41 European missionaries, 163 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much for education in India. The Church in Bombay has six representatives on the Governing body of the Anglo-Scottish Education Society, and exercises pastoral supervision over the Bombay Scottish Orphanage. The now well-known St. Andrew's Colonial Homes at Kalimpong, though not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now over twenty cottages, and about 700 children in residence. The Church has many schools in all parts of its field, and it has also made a large contribution to the work of higher education in India through five Christian Colleges. The Scottish Church College, Calcutta, is well-known. The Madras Christian College, which has been rebuilt on a magnificent site at Tambaram and which has recently been the meeting place of the world Missionary Conference, is now under the direction of a Board representing several Missionary Societies. Other Colleges are Wilson College, Bombay, Hilsop College, Nagpur, and Murray College, Sialkot. The Church also carries on important medical work. There are nineteen Mission Hospitals at different centres, among which are four excellently equipped and staffed Women's Hospitals in Madras, Nagpur, Ajmer and Poona. Further information may be found in "Reports of the Schemes of the Church of Scotland," Blackwood & Sons, "The Church of Scotland, Year Book" and "The Handbook of the Church of Scotland in India and Ceylon."

BAPTIST SOCIETIES.

THE BAPTIST MISSIONARY SOCIETY OF GREAT BRITAIN.—Formed in 1792, largely through the efforts of Dr. Wm. Carey, operates mainly in Bengal, Bihar, Orissa, the United Provinces, the Punjab and Ceylon. The Baptist Zenana Mission and the Bible Translation Society have been united with this Society. The staff of the united Mission in India and Ceylon numbers 190 missionaries and 798 Indian and Singhalese workers. Connected with the Society are 487 Indian and Singhalese Churches, 313 Primary Day Schools, 25 Middle and High Schools, and 1 Theological Training College. The Church membership at the close of 1930 stood at 27,821 and the Christian community at 71,997. Amongst the non-caste people great

progress has been made in recent years, and many of the Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Cuttack, Patna and Delhi where there are hostels for the prosecution of this form of work.

EDUCATIONAL WORK.—Ranges from Primary School to Colleges. Serampore College with its Royal Charter granted by His Danish Majesty in 1827, and confirmed by the British Government in the Treaty of Purchase of the Settlement of Serampore in 1845, was placed in 1856 by the College Council at the disposal of the Baptist Missionary Society.

to become a part of its Missionary educational operations, in Arts and Theology. It was affiliated in 1857 to the newly-formed Calcutta University; reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theological Staff on an Inter-denominational basis for the granting of Theological Degrees to qualified students of all Churches.

In Arts and Science the College prepares for the Calcutta Examinations.

There is a vernacular institute also at Outback for the training of Indian preachers and Bible schools in several centres.

There are 10 purely English Baptist Churches connected with the Society, but English services are carried on in many of the stations. Medical work connected with the Society is carried on in 7 Hospitals. Two large Printing Presses for both English and Vernacular work are conducted at Calcutta and Outback. The Secretary of the Mission is the Rev D Scott Wells, 44, Lower Circular Road, Calcutta.

The Headquarters of the Mission are at 19, Fumival Street, Holborn, London. The total expenditure of the Society for 1939 amounted to £186,040 of which £69,724 was expended in India and Ceylon.

THE CANADIAN BAPTIST MISSION.—Was commenced in 1873, and is located in the Telugu and Oriya Country to the north of Madras, in the Kistna, Godavari, Vizagapatam and Ganjam Districts. There are 20 stations and 632 outstations with a staff of 85 missionaries including 8 qualified physicians, and 1,378 Indian workers, with Gospel preaching in 1,659 villages. Organised Churches number 136, communicants 32,129 and adherents 36,000 for the past year. 32 Churches are entirely self-supporting. In the Educational department are 415 village day schools, with 22,700 children, 12 boarding schools, 2 High schools, 2 Normal Training schools, a Bible Training School for Women, a Theological Seminary providing in all for 1,300 pupils. There are 6 Hospitals, two leper-asylums and an Orphanage. Village Evangelisation is the central feature of the Mission, and stress is laid upon the work amongst women and children. Indian Secretary The Rev G P Barss, Cocanada.

AMERICAN BAPTIST FOREIGN MISSION SOCIETY, organized in 1814, has Missions in Burma began 1813; Assam, 1836, Bengal and Orissa, 1836; South India, 1840. It owes its origin to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 32 main stations of the Mission in Burma, 11 in Assam, 10 in Bengal and Orissa, and 29 in South India, besides many outstations. All forms of missionary enterprise come within the scope of the Society.

The great work of the Mission continues to be evangelistic, educational and medical, and the training of the indigenous pastors, preachers and Bible-Women, and extends to

many races and languages. The most important result of its work in Burma has been the practical transformation of the Karens and the Kachins whose languages have been reduced to writing by the Mission. The Chins of the Chin Hill Tracts are also progressing along these lines under the influence of the Mission. The work in Assam embraces 11 different languages, and great efforts are being made amongst the employees of the tea plantations. The Mission Press at Rangoon is one of the largest, and the finest in Burma.

In the year 1939 the field staff numbered 273 missionaries, 6,357 indigenous workers. There were 2,890 organised Churches of which 2,302 were self-supporting. Church members numbered 3,16,021. In the 2,172 Sunday Schools were enrolled 1,06,201 pupils. The Mission conducted 2,139 schools of all grades, Judson College at Rangoon and the Agricultural School at Pymmana being among them, with 90,019 students enrolled. 13 hospitals and 34 dispensaries treated 15,323 inpatients and 1,10,533 outpatients. Christians of all communities among whom the Mission works, contributed over Rs 4,97,865 for this religious and benevolent work during the year.

THE AMERICAN BAPTIST ASSAM MISSION was opened in 1836, and has 11 main stations staffed by about 45 missionaries. There are 854 native workers, 1,137 organised churches, 73,174 baptised members, 378 schools of all grades including 2 High, 2 Normal, 3 Bible and 10 station schools. 4 Hospitals and 5 Dispensaries treated 2,255 in-patients and 20,703 outpatients during the year. Mission work is carried out in 11 different languages.

Treasurer and Corresponding Secretary · Mrs Marion G Burnham, Gauhati, Assam.

AMERICAN BAPTIST, BFNGAL-ORISSA MISSION.—commenced in 1836. Area of occupation Midnapore district of Bengal, Balasore district of Orissa and Jamshepur Town of Bihar. Work chiefly for Oriya and Santal peoples. Address Khargpur.

THE AUSTRALIAN BAPTIST FOREIGN MISSION—(Incorporated) Embracing the societies representing the Baptist Churches of the States of the Australian Commonwealth. The field of operations is in East Bengal. The staff numbers 19 Australian workers. There are 4,264 communicants and a Christian community of 9,024.

Secretary, Field Council The Rev W G Crofts, Mission House, Bursiri, P O Hatshibganj, Dist Mymensingh, E Bengal.

THE STRICT BAPTIST MISSION—Has 20 European Missionaries, and 228 Indian workers in Madras, Chingleput, Salem, Ramnad and Tinnevely Districts. Communicants number 1,666, organised churches 62, Day and Sunday schools 99, with 4,379 pupils.

Treasurer Rev D A Thrower, Kilpauk, Madras.

Secretary. Rev D A Thrower, Kilpauk, Madras.

PRESBYTERIAN SOCIETIES.

THE IRISH PRESBYTERIAN CHURCH MISSION.—Operates in Gujarat and Kathiawar with a staff of 34 Missionaries, of whom 11 are clerical, 16 Educationalists, 5 are Doctors and 3 Nurses. The Indian staff numbers 500, of whom 18 are Pastors, 97 Evangelists, 2 Colporteurs, 44 Bible-women, and 348 are Teachers. There are 23 Organised Churches, a communicant roll of 3,600, and a Christian Community of 9,008. In Medical work there are 5 Hospitals including one at Dohad and several Dispensaries, with 3,747 in-patients, 25,353 new cases, and a total attendance of 97,162. The Mission conducts 3 High Schools, 1 Anglo-Vernacular School, 1 Preparatory School at Parantli and 103 Vernacular schools affording tuition for 7,921 pupils; also 1 creche, 4 Orphanages, an Industrial School at Borsad, a Teachers' Training College for Women at Borsad, a Divinity College at Ahmedabad, and a Mission Press at Surat. The Mission has made a speciality of Farm Colonies, of which there are about a score in connection with it, most of them thriving.

The Jungle Tribes Mission with 4 Missionaries is a branch of the activities of the above, working in the Panch Mahals and Rewa Kantha districts, with Farm Colonies attached.

Secretary: Rev. George Wilson, B.A., Rajkot.

THE UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA.—The Sialkot Mission of this church was established at Sialkot in the Punjab, 1855. It is now carrying on work in eight civil districts in the Punjab and two in the North-West Frontier Province. Its missionaries number 81. Its educational work composes one Theological Seminary, one College, four High Schools, one Industrial school, 8 Middle schools and 88 Primary schools. The enrolment in all schools in 1941 was 10,488. Medical work is carried on through five Hospitals and 7 Dispensaries. The Communicant membership of the Church which has been established is 43,597 and the total Christian community 104,046.

General Secretary W. H. Merriam, M.A., American Mission, Gujaranwala.

THE AMERICAN PRESBYTERIAN MISSION operates in three main sections, known as the Punjab (1834), North India (1836) and Western India (1870) Missions. According to statistics for the year ending March, 31, 1941, the American staff, including women and special-term Missionaries numbers 225, and the Indian staff 978. There are two and thirty main stations and 202 out-stations. Organised churches number 116 of which 38 are entirely self-supporting. There are 18,710 communicants and a total baptized community of about 70,000.

Educational work as follows—Two men's colleges and an interest in the Isabella Thoburn and Kinnaird Colleges for Women,—students about 2,700; one Theological College, students 19 and an interest in Poona Theological College, two Training Schools for Village Workers; thirteen High Schools; two Industrial Schools; three Agricultural Demonstration Farms, four Teachers' Training Departments; The Miraj Medical School and an interest in the Ludhiana

Medical College for Women; 107 Elementary Schools; 139 Schools of all grades,—pupils about 12,570.

Medical Work—Eight Hospitals, Twenty-one Dispensaries and four Specialty Hospitals.

Evangelistic Work—211 Sunday Schools, with an average attendance of 6,177 pupils. Contributions for church and evangelistic work on the part of the Indian church, have increased slightly, and amount to Rs. 51,292.

The Hospital at Miraj, founded by the late Sir William J. Wanless and under the care of R. H. H. Goheen, is well-known throughout the whole of South-West India, and the Forman Christian College of Lahore, under the principalship of Dr. S. K. Datta, is equally well-known and valued in the Punjab. The Ewing Christian College (The Rev. C. H. Hazlett, 1st D. Principal) and Allahabad Agricultural Institute (Dr. S. Higginbottom, Principal) have grown rapidly in numbers and influence.

Secretary of Council of A. P. Missions in India—The Rev. J. B. Weir, Ph.D., D.D., "Lowrison," Dehra Dun, U.P.

Secretary, North India Mission.—The Rev. W. L. Allison, A. P. Mission, Mainpuri U. P.

Secretary, Punjab Mission.—The Rev. B. T. Schuyler, 3, Empress Road, Lahore, Pb.

Secretary, Western India Mission.—J. L. Goheen, LL.D., A. P. Mission, Sangli, S.M.C.

THE NEW ZEALAND PRESBYTERIAN MISSION.—Commenced as recently as 1910 at Jagadhri, Punjab.

Secretary. Rev. M. R. Robinson, Jagadhri, Dist Amballa.

THE UNITED CHURCH OF CANADA MISSION.—Commenced in 1877, has 13 main stations in Indore, Gwalior, Ratlam, Dhar, Sitamau, Bhopal and Banswara States. The Mission staff numbers 73, Indian workers 200. This Mission works in conjunction with the Malwa Church-Council and also the Ratlam Church Council of the United Church of Northern India, which reports for this part of its territory. Organised churches 61; Unorganised churches 3; Communicants 4,004; Baptised non-communicants 21,320; Unbaptised adherents 7,863; Total Christian Community 33,190.

Educational work comprises Elementary and Middle Schools for boys and girls; a High School for girls, an Arts College for students of both sexes (The Indore Christian College), a Normal School for girls, and the Union Theological Seminary. Women's industrial work is carried on in Mhow and Ratlam, and Vocational Training for boys is a feature of the Rasulpura Boys' School, where training is provided in printing, tailoring, carpentry and welding.

The medical work is large. There are three General Hospitals, where both men and women are treated, and five Women's Hospitals, and also a number of dispensaries in central and out-stations.

General Secretary of Mission—Rev A. A. Scott, M A , B Paed , D D , Indore, C I

Associate Secretary of Mission—Miss F E. Clearhuc, Kharua, C. I. (Via Mehidpur Road Station).

Secretary of Malwa Church-Council—Rev Jacob Masih, Indore, C I

Secretary of Railam Church Council—J. B McMillan, B A. Numuch, C I

THE CANADIAN PRESBYTERIAN MISSION operates in two sections, the Northern Section with headquarters at Jhansi in the U P, and the Central India Section, known as the Southern Bhil Field

In Central India the Mission comprises within its area the States of Alirajpur, Barwani, Jobat and Kathiawar also parts of the States of Jhabua, Chhota Udaipur (in the Bombay Presidency) and Dhar, Indore and Gwalior bordering on the Jobat-Barwani Road. The five central stations are Amkhut, Mendha and Alirajpur located in Alirajpur State, Jobat in the State of Jobat and Barwani in Barwani State. The staff consists of 16 missionaries and 50 Indian workers. There are several elementary schools in the area and a central Anglo-Vernacular School at Amkhut in which upwards of 300 children are being educated. At Amkhut also there is a Children's Nursery Home. At Jobat there is a General 60 bed Hospital with a Canadian Medical man, Dr W R. Quinn in charge.

There are in the district 7 organized and 2 unorganized congregations with a Communicant membership of 375 and a baptized community of slightly over 1,500.

Secretary—Dr. W. B. Quinn, Jobat, Central India.

The Jhansi Section formerly known as the Gwalior Mission was founded by the late Dr. J. Wilkie in 1905. There is now a staff of 9 missionaries and twenty-five Indian workers.

who are engaged in Jhansi city, Esagarh, Baragaon, Babina and the surrounding villages.

Activities include Anglo-vernacular middle schools for both boys and girls and hostels for Christian pupils in each. There are also an orphanage for children under school age, a dispensary. There is an agricultural settlement at Esagarh where the Mission has a farm of 1,200 acres.

There are two organised churches having a communicant membership of 150.

Secretary—Mrs Muckan.

THE WELSH CALVINISTIC METHODIST (PRESBYTERIAN) MISSION established in 1840 with a staff of 54 Missionaries and 1,200 Indian workers, occupies stations in Assam in the Khasi and Jaintia Hills, the Lushai Hills and at Sylhet and Cachar. The Khasi language has been reduced to writing, the Bible translated, and many books published in that language by the Mission. A large amount of literature has also been produced in the Lushai language. Communicants number 49,498; the total Christian community 128,291, organised Churches 802, Elementary schools number 682, Scholars 23,577, in addition to Industrial Schools and Training Institutions. 3 Theological Seminaries, Sunday Schools 1,033, Four Hospitals and several Dispensaries provide annually for more than 20,000 patients.

Secretary—Rev. G. Angell, Jones, P.O. Jowai, Shillong, Assam.

THE ARCOT MISSION OF THE REFORMED CHURCH—(In America) Organised in 1853 and occupies most of the North and South Arcot and Chittoor Districts in South India with a staff of Missionaries and Indian Workers.

The Union Mission Medical College for South India and a Union Mission Training School are located at Vellore, the headquarters of the Mission. The Union Mission Tuberculosis Sanitarium for S. India is near Madanapalle, Arogiavaram P O, Chittoor District.

CONGREGATIONAL SOCIETIES.

THE AMERICAN BOARD OF COMMISSIONERS FOR FOREIGN MISSIONS—The American Board of Commissioners for Foreign Missions of Boston, Mass, U S A has two large missions in India, the American Marathi Mission and the Madura Mission. The Marathi Mission covers a considerable portion of Bombay Presidency with centres at Bombay, Ahmednagar, Rahuri, Vadala, Sirur, Sholapur, Satara and Wai. It was established in 1813, the first American Mission in India. Its activities are large and varied. The staff for 1941 included 28 Missionaries and 506 Indian workers, operating in 11 stations and 187 out stations. There are 61 churches with 6,465 communicants. Besides conducting 6 secondary and training schools with 1,162 pupils, the mission has a large share in various union educational enterprises. There are 53 primary schools and 8 kindergartens with a total of 3,570 pupils. In the hospitals and dispensaries during the year, were treated a total of 73,673 patients. The mission has six major social service centres and four out-stations staffed by 135 workers. During 1941 these rendered various services to 811,701 persons.

Secretary. Miss E. Loleta Wood, Rahuri, Dist Ahmednagar.

MADURA CHURCH COUNCIL—Of the South India United Church. This body administers all affairs connected with the Church and with elementary education in the villages. It has five first grade boarding schools. The Secretary is Rev. Paulraj Thomas, B.A., B.D., Tirumangalam, Madura Dist.

MADURA MISSION SANGAM—This Sangam now carries on all the work formerly administered by the Madura Mission, except the American College. The institutions under the Sangam are—

The Pasumalai High and Training School for Boys, The Capron Hall Training School for Girls; The O. C. P. Memorial High School for Girls, Sakkikulam, Madura. The Union Theological Seminary, Pasumalai, The Lucy Perry Noble Institute for Women, Rachanapuram, Madura. The Wills F. Pierce Memorial Hospital for Men and the Hospital for Women and Children, The Trade School, Pasumalai.

Secretary—Rev E. E. White, B.A., B.D., Manamadurai, Ramnad Dist.

THE AMERICAN COLLEGE, MADURA—The American College, then located at Pasumalai, was affiliated with the University of Madras as a second Grade College in 1881. In 1901 the College Department was removed to Madura where for five years it was accommodated in what is now the Union Christian High School building. In 1909 the College was removed to its present site in Tallakulam on the north side of the Vaigai river. It was affiliated as a First Grade College in 1913.

In 1934 at the time of the centenary of the Mission, the American College became organically independent under its own Governing Council. In the same year it was granted affiliation as an Honours College.

The present College site comprises about forty acres. On the College grounds are located the Main College Hall, the Ellen S. James' Hall of Science, Binghamton Hall, the Chapel, Daniel Poor Memorial Library, Main Hostel, Zumbro Memorial Hostel, Dining Halls, Principal's residence, Warden's Lodge, four additional bungalows, and athletic fields.

AMERICAN MADURA MISSION—*Secretary*, Rev. John J. Bannunga, M.A., D.D., Pasumalai, Madura Dist., American College, Madura; *Edgar M. Flint*, M.A., Principal, Willis P. Pierce Memorial Hospital, Madura; *J. W. Wilder*, M.D., Medical Officer, Hospital for Women and Children, Madura; *Miss I. M. Roberts*, M.D., Medical Officer.

THE SCANDINAVIAN ALLIANCE MISSION OF NORTH AMERICA—The mission staff in Khandesh is represented by 20 missionaries and 71 Indian Workers. There are 717 Church members and 1,416 pupils in Sunday Schools. 35 Elementary Schools provide for 826 pupils.

Secretary.—Miss Olga E. Noreen, Yaval, Last Khandesh.

THE SWEDISH ALLIANCE MISSION.—Working among Bhils, Hindus and Mohammedans in West Khandesh, has 25 missionaries and 79 Indian workers. There are 8 congregations with a total membership of 1,372 of whom 711 are communicants. There are 9 Elementary Schools, 2 Training Schools and 1 School Homes. The pupils in all schools number 623.

Secretary.—Rev. Fredrik Franklin, B.A., Mandulwar, Dhadgaon, West Khandesh.

THE LONDON MISSIONARY SOCIETY.—Commenced work in India in 1798 and occupies 3 centres in N. India, 12 in S. India and 7 in Travancore State. The Mission engages in every form of Missionary activity.

UNION INSTITUTIONS.—With which the London Missionary Society is connected, and is a contributing Body. Number of Institutions 13, Schools, 6, Scholars, 2,081, Colleges, 8, Students, 1,281.

The European Staff of the Society numbers 80 Indian Workers, 2,592; Organised Congregations, 927, Communicants, 32,632; Christian Community, 210,207, Christian Colleges 1, Students 185, Training Institutions, 4, Students, 137, High Schools, 12, Boarding Schools, 23, Boarders, 2,081, Elementary Schools, 635, Elementary Scholars, 59,567, Head-Stations, 22, Out-Stations, 1,097. In Medical Work Head Station Hospitals number 7, Out Station Hospitals, 13, Dispensaries, 3, Number of Beds, 811, In patients, 11,525, Out-patients, 109,771, Doctors, 29 (including 8 Europeans), Assistants, 12, Nurses, 61 (including 7 Europeans); Nurses in Training, 83; Theological Institutions, 2; Students, 48.

The main centres of the Mission in N. India are at Calcutta and Murshidabad District, Bengal; L.M.S. work in the United Provinces has been closed but a Union Mission of the W. M. S., C. M. S. and L. M. S. has been opened in Benares City, of which the Rev. S. R. Holt of the W. M. S. is Superintendent. This Mission concentrates especially on work amongst pilgrims and students. Special efforts are made amongst the Nama Sudras. The S. India district and Travancore are divided into Kanarese, Telugu, Tamil and Malayalam fields with 22 stations and 1,095 out-stations. At Nagercoil (Travancore) is the Scott Christian College and High School with 971 students, a Church and congregation said to be the largest in India and a Printing Press, the centre of the S. Travancore Tract Society.

India—*Secretary and Treasurer*.—Rev. L. J. Thomas, 18, Lavelle Road, Bangalore.

Bengal Secretary.—Miss Olive Stellwell, 8, Ashutosh Mukerji Road, P.O. Elgin Road, Calcutta.

Benares Superintendent.—Rev. S. R. Holt, Ramkatora, Benares Cantonment, U.P.

ALL-INDIA MISSIONS.

THE CHRISTIAN AND MISSIONARY ALLIANCE.—Dates from the year 1892 under the name of the International Missionary Alliance, but a number of its missionaries were at work in the province of Berar much earlier. Work is carried on in the provinces of Berar, Khandesh and Gujarat. There is a staff of 46 missionaries and 114 Indian workers. The number of mission stations is 16, with additional out-stations. There is a Christian community of 2,500 adults. There are 4 boarding schools, two for boys and two for girls, two training schools for Indian workers. There are 27 organized congregations, including one English at Bhusawal.

Executive Secretary.—The Rev. K. D. Garrison, Ahola, Berar, C.P.

THE MISSION TO LEPERS—Founded in 1874

An interdenominational and international Society for the establishment and maintenance of Homes and Institutions for Lepers and of their untainted children, working in 20 countries but largely in India, Burma, China and countries in Africa Its work in India is carried on through co-operation with 30 Missionary Societies In India and Burma alone the Mission now has 32 Asylums of its own with upwards of 7,200 inmates and is aiding or has some connection with work for lepers at 22 other places in India Altogether in India and Burma over nearly 10,000 lepers are being helped

The Mission also provides for the segregation of the healthy children of lepers from their diseased parents More than 800 children are thus being saved from becoming lepers.

An important feature of the work of the Mission is the measure of successful medical treatment whereby early cases, both adults and children, are now benefiting

Most of the Mission's income is derived from voluntary contributions Some funds are raised in India and Burma but the bulk of the money expended by the Mission in India and Burma is received from Britain, although the provincial Governments give regular maintenance grants

There is an Indian Auxillary of the Mission to Lepers of which Lady Lumley, The Hon'ble Lady Hope, Lady Stewart and Lady Twynam are Vice-Presidents

Hon Treasurer—William McIntyre, c/o Macneil & Co, 2, Farlie Place, Calcutta

THE SEVENTH-DAY ADVENTIST MISSION.—The Seventh-day Adventists commenced mission work in India in 1893, and now employ a staff of 698 workers, European and Indian, including 178 ordained and licensed ministers. Evangelistic and educational work is conducted in sixteen vernaculars, beside work for English-speaking peoples in the large cities. For administrative purposes, there are five branch organisations located as follows:—

Seventh-day Adventist Mission—Western India. (Pastor F. E. Spiess, Superintendent.) **Office Address:** Salisbury Park, Poona.

Seventh-day Adventist Mission—Burma. (Pastor E. M. Meleon, Superintendent.) **Office Address:** 68, U Wisara Road, Rangoon, Burma.

Seventh-day Adventist Mission—Northeast India. (Pastor F. H. Loasby, Superintendent.) **Office Address:** "Baragain", Ranchi.

Seventh-day Adventist Mission—North-west India. (Pastor O. O. Mattison, Superintendent.) **Office Address:** 23, Curzon Road, New Delhi

Seventh-day Adventist Mission—South India. (R. H. Pierson Superintendent.) **Office Address:** 9, Cunningham Road, Bangalore.

The general headquarters for India, Burma and Ceylon is located at Salisbury Park, Poona. G. G. Lowry, President; A. F. Tarr, Secretary and Treasurer (Office Address: Post Box 15, Poona). On the same estate is an up-to-date publishing house devoted to the printing of health, temperance, evangelical and associated literature. (Address: Oriental Watchman Publishing House, Post Box 35, Poona).

A large number of day and boarding vernacular and Anglo-vernacular schools are conducted in different parts of the country; and at Vincent Hill School, Mussoorie, European education is provided, a regular high school course, with more advanced work for commercial and other special students, being available. In all the denominational boarding schools increasing emphasis is being laid on vocational work, the students being required to share in the domestic work of the institution, and in many cases, to engage in some trades or other work.

Five physicians, and a number of qualified nurses are employed, regular medical work being conducted at thirty-two stations.

The baptized membership (adult) is 7,311 organized into 149 churches; and in addition a substantial community of enquirers is receiving systematic instruction. 472 Sabbath Schools are conducted with an enrolled membership of about 13,000.

The Bombay address is No. 16, Club Back Road, Byculla.
